This volume records the adventures of two bird hunters in Texan bogs, and a dog who was with them. It is written by Dr. A. C. Peirce and evidently illustrated by himself. It is a humorous and laughable account of the way in which a Northern man went to Texas, where he found a companion to act as a guide in bird ranging. Without experience in these parts, he believed that his companion would tide him over the difficulties of the situation and be of great service in the campaign. The adventures which they met with were thoroughly characteristic, and were enjoyed by the two hunters much more in retrospect than in reality. The dog had a great deal to do in plunging the hunters into difficulties, and wherever they went they had a fresh experience. The volume is very pleasantly and agreeably written. It is full of unexpected humor, although the language is frequently more expressive than choice. No one who takes it up will be likely to leave it unread, and if it does tell one much about what can be hunted in Texas, it is full of amusing experiences on the part of those who are trying to have a good time. The book will make its way wherever it has a chance, and Dr. A. C. Peirce may well take rank among the amusing and comical writers of the day.—*Boston Herald.*

# Camp-Fire Flickerings.

"That reminds me."

## MY CHANCE ACQUAINTANCE.—VII.

We were sitting on some drift wood by the lake one pleasant Sunday morning enjoying a delicious sun bath; absorbing as much of the cool, invigorating breeze which was blowing from Lake Michigan as convenient without labor on our part and speculating on which one of the many sailboats in sight would first arrive at the pier. Conversation was spasmodic, it ebbed and flowed very irregularly, then finally dwindled to a dead stop. A little water snake slid out from under the pile we were occupying, and gracefully skimmed its way over the light rippling waves to another of its hiding places where it disappeared. Slight as was the circumstance it waked up the company and furnished a prolific theme for some heated talk.

For sometime snakes were energetically discussed, from the monster sea serpent down to the insignificant hair snake. There was quite a difference of opinion in regard to hoop-snake and hair-snake, but it was decided by a large majority that there was no such a reptile as either one or the other. The minority, however, were not satisfied; they never are; and as is generally the case claimed "ignorance," "fraud" and "cheating" on the part of the other party. The defeated ones appealed to the old gentleman. He was busy, having trouble with his ancient and constant companion briarwood, which was acting in a very unbecoming manner and entirely outside the rules and regulations laid down for the government of all properly disposed briarwoods. The old man said it was "clogged," "wouldn't give down." With the aid of a piece of wire, stripped from an old broom, communication was established with the bowl through the stem, a lighted match applied, a young volcano started, peace established and all was serene once more.

After a few vigorous puffs which sounded like the snort of a locomotive getting under way, the old man got started and unloaded as follows:

"You fellers ask about snakes, I don't like 'em; they're a mean, low-down, sly, slimy, crawlin' set. Give me a gun and a good knife and I ain't afeerd of anything that runs the woods in Michigan; but when it comes to snakes, I weaken every time. There's a creepy, crawly sort of a feeling comes over me and I feel as if there was about a million web-footed spiders with ice cold feet had got under my shirt and was having a regular go-as-you-please race all over me from the back of my neck to the end of my big toe. Ugh! I hate the entire sect and wish the hull lot could be run through a grist mill roller process and then dumped into thet lake.

"You see that bit of a hay field over there between the foot of the bluff and the lake? Well, that's a great place for the nasty critters, and when I'm haying there I always keep a good look out for 'em; often wish I'd six eyes in my head, two in the back and one in each ear. One time I was a-raking hay there, both ears and eyes wide open, I seed one of those tarnal hoop-snakes come a-rolling down the bluff, coming straight for me like a streak o' lightning. I'd jest time to jump one side when he was up to me and as he whizzed past I chucked the rake into the center of the ring. I'll be durned if he didn't fasten to it, and away they rolled snake and rake, over and over, round and round until they splashed out of sight into the lake. Ever see my rake agin? Well, yes, three or four days arter it come to the top, but it was all *swelled up big as my leg.* Don't know what become of it, I darsn't touch it, feared I'd get pisined too; 'spose it either drifted out to the big lake or got water-logged and sunk.

"See that scattering bunch of rushes over yander? Well, the water's shaller where the rushes are; but jest over the other side the bottom slants down quick into about eight or ten feet of water. On that slant used to be a famous place to ketch yaller perch, croppies and rock bass. I've taken boat loads away from that place. One summer years ago a big pickerel almost pestered the life out of me there. You see jest as I'd get nicely settled and the perch a-bitin' good, that infernal pickerel would come nosing round and scare 'em all off. I hooked him several times but he'd break my hooks or bite my line off. I got real riled up arter a while, and made up my mind that Muskegon county weren't big enough to hold us both; the county would have to be enlarged or else one of us would have to move on. I studied over that quite a bit and finally thought that moving the county line, even if it could be done, wouldn't change that 'ere bank; and as he seemed to have a particular hankering fur that spot,

and as I couldn't emigrate very well as I'd made a payment and a small clearing, I 'lowed I'd either capture him or drive him away. But jest how to do the job I couldn't make out; the water was too deep to spear him, the hooks and lines I had were no good; he'd either break or bite 'em off. I told Bill, one of the fishermen down at the mouth, about my trouble.

"'Oh," he said, "it is easy enough; here, take these big hooks and this new line; they'll hold; needn't be afraid of 'em; go home, get a piece of small wire 'bout two feet long; shove one end of the wire through the eye of one hook; then double the wire. This will bring the hook in the center of it. Then hand over hand twist the wire tight for about four inches; then slip on the other hook; then twist the wire together the hull length, and fasten it well to the line. He can't bite the wire off nor break that 'ere line. Git a good, strong, short, stiff pole; be sure the hull rig is well fastened together. Then take a tough piece of pork rind about five or six inches long; cut it as near as you can into the shape of a minner. Into the head of your bait fasten well the upper hook. Stick the other hook fast where it happens to come; and when he comes fooling around agin give it to him. When he takes it, don't be in a hurry, let him have it for about five minutes; he'll go to the bottom to enjoy it; let him get all the comfort he can out of it. When you do pull, give her a good hard yank to set hook in him good. He'll thrash round a good bit, but will soon tire hisself out. Don't be in too big a hurry 'bout gittin' him into the boat; take yer time, he's your fish."

"I went home feeling first-rate and the next day rigged up according to directions and rowed out to the old place and started in fishing for perch; got a few, then they quit biting. I put my perch rig in the bottom of the boat and dropped my hand-made bait overboard. It hadn't been in the water three minutes when I could feel something were at it. I slacked up on the line; he gobbled the bait and slowly went to the bottom. I kept still as long as ever I could hold in, all the time a-chucklin' to myself how slick I'd got him and what fun I'd have kicking him when he were in the boat. With a yell I couldn't smother and a yank that fetched him to the top of the water, I started the circus.

Corn cobs and grasshoppers! how he did go on! That 'ere blarsted pickerel acted as if it were a thirteen-ringed show, that he was the only actor able to be out, and without any help he'd got to do the hull performance alone and keep up the reputation of the greatest show on earth. Round and round, up and down, this way and that, he made all the figgers in multiplication table, all the letters in the alphabet, United States and Chinee. I stood up in the boat and encouraged him best I could. I hollered and cheered, swung my hat and yelled 'Go it, old feller; you're a good un. Hu-rah! that's the boss jump. Ah, you're a dandy; for pigeon wings your equal ain't on earth nor in the water. Oh! yes, you've got good teeth, needn't show 'em; but yer can't phase that are wire, and you're my huckleberry and I knows it. Won't let me ketch perch here, eh? Don't you wish you'd emigrated? What! giving up, are ye? Gittin tired, eh? er have ye got some new devilment to trick me with? Going to the bottom to rest? I guess not; reckon I'll take ye in out o' the wet.'

"I started to pull him in; couldn't budge him. I pulled and pulled this way and that; it was no go. I made the line fast to the boat, pulled up the anchor, and rowed; all the same I couldn't raise him. I took hold of the line and pulled the boat right over him; I could see he had wound and twisted that line around so many weeds, had got it so tangled up with them during that circus performance, he could'nt git away, nor could I pull him up. I worked till I got tired, then reached down as far as I could, cut the line and pulled ashore feeling dreadful tired and mad enough to do murder.

"You can bet I were ashamed to take that line back and tell how I come out, but it had to be done. Bill said, 'Let him rest a few days; he'll work the line free; then ef you'll row the boat, do as I tell ye, and give me a basket of taters next fall, I'll ketch that fish and you may have him; no fish no taters.' I took him up mighty quick; ef he'd said ten bushels I'd a bargained with him, I felt that vexed and put out.

"About a week arter Bill come up; he'd jest such a rig as I'd used. I rowed him out to the spot and anchored the boat. Says he, 'How's the water over thare?' 'Shaller and full of weeds', says I. 'How is it over yander?' 'Full of deadheads and snags.' 'Well, what is it over that way?' 'Forty feet and clear as a quill.' 'All right; now let's get some perch.'

"They bit lively till we'd about half a bushel; then quit. 'He's here," says I. 'Good,' says Bill; 'lift the anchor, take the oars; hold the boat still until I tell ye to pull away; then, man, if you can row, row for all there's in ye; make her jump for that deep water; don't stop, keep her a-going, ef ye have to go round and round in a ring.'

"Bill made two or three throws and wriggled the bait; then it were plain something was after it. Mr. Pickerel grabbed it, Bill let out line, Mr. P. went to the bottom to enjoy it; he were let rest about three minutes.

"'Are ye ready?' says Bill.

"'All right,' says I.

"'Then pull away,' and I did. Jest as the boat started Bill gin a powerful yank and my old enemy came to the top in great style. 'Hurrah!' says I.

"'Shet yer mouth and row, pull. Make her hump, lift her out of the water ef yer can,' yelled Bill.

"Fur as much as ten minutes he kept me hard at it; all the time he held Mr. P. right up to the top of the water; wouldn't let him dive a bit. At last I were told enough and I was glad to hear it, fur my wind was gone and I was wet with sweat as ef I'd bin in the lake.

"'Now,' says Bill, 'he's out of wind. I'm going to pull him alongside. You stand ready with that gaff hook, and mind you git a good hold on him well up to his tail, and then we'll lift him into the boat; and as soon as he touches the bottom of the boat whack him over the head with that club; don't give him a chance to jump, but knock the flip out of him.'

"Bill worked him alongside. I got a good hold and we lifted him into the boat. Pound him? Well I guess I did; forgot all about being out of wind a-rowing. I gin him a dozen powerful whacks on the back of his head. He were a dead fish.

"Bill said he were a beauty, biggest pickerel he'd ever seen, would weigh nigh to forty pounds, and said, 'Now ye can git yer lost hooks, for there's a piece of the wire in his mouth.' Bill pried his jaws open with the club, I stuck my hand in, got hold of the wire and pulled out—what? Jewsharps and jumping jacks! a hull handful of wiggling, twisting, squirming, nasty hair-snakes!! The line I'd used was a hair line and every hair had turned into one of them blasted, slimy little cusses. Some of 'em were five or six feet long. Oh! but I were tired. I'd jest strength enough left to tell Bill to take the oars. 'Set me ashore quick as ever yer can, take the hull mess out of my sight and I'll make yer taters ten bushels if it takes the hull crop.'

"I hurried home, drank about a quart of tansy tea to distract my attention and to switch it off on to another subject, but I didn't quit dreaming about snakes for more'n a week, and for much as a month when I'd think of 'em in the daytime my knees 'd wabble and them 'ere web-footed spiders would have a free-for-all race all over me. Geewhitaker but I *do* despise the hull lot of 'em."

A. W.

# Game Bag and Gun.

## MASSACHUSETTS AND MAINE.

THE storm of Sept. 20 helped the shore birds a little, and a number of flights are reported. In the vicinity of Ipswich Bay and Parker River at Byfield there has been an abundance of rail within a few days and the gunners have been after them. A few teal are coming into the creeks and coves. The other day a flock of fourteen teal came into Parker River. They were at once met by Mr. B. P. Rogers, of Byfield, his son and his nephew. They approached the flock as carefully as possible, firing at a given signal. They took twelve birds out of the flock with first and second barrels. Mr. Rodgers is an uncle of Mr. Claude Tarbox, and like the rest of the family, he is a gunner and an excellent shot. Mr. Tarbox has been out one or two mornings after partridges. One of the first mornings after the season opened he tramped for several miles and back almost home without a bird. He was tired and disgusted. But all at once up went a flock from right behind the stone wall, almost within gunshot of his own door. He got two of them, and then begun to make up his mind to gun nearer home. On Friday morning he was again out bright and early, with a little Yorkshire terrier he owns. That dog loves to hunt partridges. He put up one that morning and his master got it. This bird also was only a few rods from home for Mr. Tarbox. E. M. Gillam, commercial editor of the Boston *Advertiser*, has been out once or twice after partridges from his home in Reading. He has obtained a bird or two each time, but finds them very wild and hard to approach for young birds.

Reports from Maine continue to show the excellence of that State as a shooting and fishing region. Mr. Henry Whitmore, of the Boston *Herald*, is back from Camp Alerton Lodge, Mooselucmaguntic Lake. He did not find the fishing all that the enthusiast might expect, but was well pleased, on the whole. His best morning out was 12 trout that weighed 6lbs. He landed doubles once, and Mrs. Whitmore, who was with him, did the same, a nice feat for a lady. Mr. Charles Keyo, of the Southern Pacific Railway office, is also back in Boston again. His vacation he spent at the Mountain View House, Rangeley Lake, as usual. His brother is employed there. He took his sister, a miss in her teens, with him this time. The young lady had the fun of seeing a deer. They went up the Kennebago stream in a boat in the morning, and there on the shore was a beautiful doe that gave the young lady a fine view of herself before taking to the woods. But speaking of deer in that section, brings to the front what I saw in a Maine newspaper the other day. Capt. Fred. C. Barker was coming down the lake with one of his steamers when they sighted a deer swimming in the water. At first they tried to catch her from the steamer, but the creature proved to be able to turn such short corners that the attempt was abandoned, and a boat was lowered. Capt. Fred. got in with Mr. George Bearce, of Lewiston. They soon overtook the deer and tried to secure her with a rope. But they could not succeed in that even. They then seized her bodily with their hands and soon had her in the boat, after being nearly capsized once or twice. They took her on board the steamer and up the lakes to Rangeley. The animal, once conquered, did not seem to be greatly alarmed. At the town she was admired by everybody as much as they desired, one New York lady desiring to take her home, but this could not be done legally, under the Maine game laws. After some hours of petting and admiration the doe was set at liberty and, with tail in the air, she disappeared in the woods.

Mr. L. Dana Chapman, with Dame, Stoddard & Kendall, is back from the Megantic Club preserve, where he is much intererested as one of the directors in the new fish hatchery. He says that the club is having a most prosperous season, the club houses being full nearly all the time with guests, greatly pleased and desiring to come again. A very full quota of sportsmen is expected as soon as the season on big game opens, Oct. 1. No deer shooting has been allowed during the close season, and they are very plenty. Partridges are also plenty. Operations at the new fish hatcheries will be commenced early next month. Charlie Barrett, of Rangeley, has been engaged to take charge of the business of obtaining trout and eggs this fall. Another lot of landlocked salmon from the State nurseries at Lake Auburn will be put in this season. The landlocked salmon that were put into some of the ponds of the Megantic preserve last season have been heard from. Several been caught this summer by the guests of the club, but liberated after being examined. They are found to have made good growth.

Mr. A. R. Justice, of Philadelphia, had the excellent luck to shoot a bear on the club's preserve the other day. I am told that it was not shot from a trap either, as some of the feats of bear shooting are often managed, to the great credit (?) of sportsmen.

Mr. N. G. Manson, Jr., of Bellows & Manson, has been back from Camp Leatherstocking, Richardson Lake, for a few days, but has returned to camp again. He had an important case in court on his hands, that had to be attended to. He reports the season a very quiet one at the head of the lake. Mr. Sam Betton, of Philadelphia, for so many years a camper there, has not been there this season. Dr. Haven, with his friend, is in camp. J. Parker Whitney, who wrote those admirable articles on salmon fishing in salt water for the FOREST AND STREAM last winter, is at his beautiful camps at Mosquito Brook. I understand that he is to remain a few weeks longer only. There are a number of guests at the upper dam, and they come and go. Occasionally a big trout is taken from the pool below the dam. Otherwise little fishing is done. Mr. Manson knows where to find them and has had all the trout desired for the table. Partridge shooting has been good for such hunters as are reasonable and want a few for the table. He will probably remain till the open season on big game. His friend Mr. Bynner and wife of Cambridge, will come out, and their places will be filled by other guests.

Mr. J. A. French, of French's Hotel at Andover, and for several years manager at the Upper Dam Camps, is now reckoned as the champion sight-seer of the region. He was coming out from the South Arm the other day, with one of his teams. When near the top of Cedar Hill a moose with a fine pair of antlers appeared in the road ahead of the team. He moved on ahead for a short distance and turned out into the woods. Mr. French passed the spot and got off for another look. The moose appeared again, within easy gunshot. Alas! it was in close time, and besides Mr. French had no gun. The big tracks of the moose have since been shown to guests as proof of Mr French's statement.

Camps and camp companies are the order of the day in Maine, and a good many such companies are being formed. One of the latest mentioned is not yet named, but it includes some of the brightest dry goods merchants in the trade. Indeed it might well be called a dry goods camp, though it promises to be considerably larger than a dry goods box. As for the goods that go into the camp, it is fair to suppose that they will all be dry goods, for the gentlemen who make up the company are all temperate men. The camp is to be located at East Sebago, on the beautiful shore of Sebago Lake. Mr. Wm. H. Fisher, with Harding, Whitman & Co., says that the camp is to be purely for hunting and fishing, but that it will be thoroughly furnished in the direction of hunters' and fishers' comfort. Each owner is to have his own room and locker. The best of spring beds and mattrasses are to be provided. The company includes G. W. Snow, with Jordan, Marsh & Co.; C. A. Deane, vice-president of the Hollingsworth & Whitney Paper Co.; William Whitman and Edgar Harding, of Harding, Whitman & Co.; C. R. Benson, of R. H. White & Co.; Herbert Dumaresq, son-in-law of Eben D. Jordan; Charles B. Gookin, of Joy, Langdon & Co.; Judge S. A. Bolsten, municipal judge of the Roxbury District; Wm. A. Paine, of Paine, Webber and Co., and Wm. H. Fisher as mentioned. The camp is being completed, and is to cost a specified sum, still probably not a man in the company will be content till it has cost double that sum.

Mr. King Taylor has just returned from a couple of weeks' outing in Maine, where shooting and fishing were his chief sources of amusement. He had good luck. C. H. Cook, with Bliss, Fabyan & Co. with his friend Mr. H. F. Lowell of Boston, has just returned from his vacation in Maine. They went to Cathance Lakes, some 15 or 20 miles northeast of Machias. There are two lakes of that name; Little Cathance and Big Cathance, at the head of the Cathance River. They had very fair partridge shooting, though the trees were thick with foliage. They saw several deer but did not shoot them, for it was not yet open season. Mr. Cook believes that deer can easily be taken in that part of the country in the open season, and is only sorry that his vacation could not have been extended till after Oct. 1.

Great expectations are hovering over the open season on big game in Maine, commencing Oct. 1. Hundreds of Maine, Boston and New York sportsmen will avail themselves of the shooting privileges in that State, if we may judge by the reports from the camps and hunting resorts. Many of the accommodations are already full, at the more noted resorts. I hear it mentioned every day, among sportsmen who have visited that State almost every year for a long time, that they are afraid to go there for hunting this fall; the woods will be so full of gunners, many of them careless and inexperienced, especially near to the more noted and more accessible resorts. Many of the old hunters will seek for some quiet nook that the local papers have not yet made famous.

Mr. Daniel Gunn, the veteran printer and lover of the rod and line, went to his former fishing grounds in Nova Scotia for sea trout this year. He went by rail to Antigonish, and then crossed over the country to the vicinity of New Harbor. Here he found his usual excellent sport, fishing only with the fly. He took eighty sea trout in all, and all of them of good size. He landed five doublets, but does not mention any startling catches, such as the FOREST AND STREAM has before heard from him. The country fishermen, and some of the sportsmen who come there—be it said to their shame—take trout any way they can get them, with bait, or with nets or spears. Mr. Gunn usually surprises them with his success, and he believes that his lessons in fishing the better way have not been wholly lost upon the natives. Concerning the would-be sportsmen he has not as much courage.

Some men are fishermen always, and they manage to get a good deal of sport out of it, be it fishing for cunners off the rocks at the seashore, or be it angling for trout at the Rangeleys, or even for the lordly salmon in New Brunswick. Mr. Charles S. Robertson, of the insurance brigade in Boston, is one of these sportsmen. One of his latest exploits is fishing for smelt at Hull. A couple of Saturdays ago he went in the afternoon with the result of seventeen dozen alone, and the Saturday previous, with a couple of friends, thirty-seven dozen were taken.

SPECIAL.

**"The Art of Wing Shooting."**

FOR the small sum of 7 cents, the cost of mailing, Mr. Alex. S. Thweat, Eastern passenger agent of the Southern Railway, will mail a copy of "The Art of Wing Shooting," by William Bruce Leffingwell, to any address. This book, which is described by its author as "a practical treatise on the use of the shotgun, illustrating by sketches and easy reading how to become an expert shot," does all that is claimed for it. In the hands of a beginner, one who is anxious to learn, it will of course accomplish more than if the reader were a shooter of some standing; but Mr. Leffingwell treats of his subject scientifically and shows, by means of diagrams, that he is not merely an exponent of theories; hence, what he has to say is worthy of the attention of the more experienced hunter. The book is copiously illustrated by cuts of varying degrees of excellence, many of which have long been familiar to the shooting public.

Mr. Thweat's address is 271 Broadway, New York city.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## CHICAGO AND THE WEST.

[*From our Staff Correspondent.*]

CHICAGO, Ill., Sept. 21.—The Chicago *Inter-Ocean* of Sept. 15 had the following in regard to a late game dinner held up in the pine woods:

Last Sunday Mr. C. L. Ryder, the manager of the Hotel Gogebic, entertained his many guests with a game dinner that was worth coming many miles to enjoy. The *menu* was printed on two heavy pieces of birch bark, adorned with a real partridge feather. The brook trout, black bass, venison, duck and partridge were all indigenous to Gogebic, while the meats and fish for the dinner were all supplied by the visitors at the resort.

The *menu* was as follows:

SOUP.
Game.
FISH.
Steamed Brook Trout.
Baked Black Bass.
ROASTS.
Saddle of Venison, hunter style.
Mallard Duck.
ENTREES.
Gogebic Partridge, à la Preusser.
Charlotte of Apples, port wine sauce.
VEGETABLES.
Baked and Mashed Potatoes.
Baked Sweet Potatoes.
Green Corn on Cob.
Green Peas.
RELISHES.
Celery. Cucumbers. Olives.
DESSERT.
English Plum Pudding, brandy sauce.
Lemon Pie. Mince Pie.
New York Ice Cream.
Coffee. Tea.
Bent's Crackers and Cheese. Fruit.

The manager of the Hotel Gogebic is one more of those who needs a copy of the *Game Laws in Brief*. Mr. Ryder was for a long time passenger agent of the Lake Shore & Western R. R., and was well posted on the resources of his country. It is singular he does not have in mind the venison law in the north peninsula of Michigan, but I am loath to believe that he would knowingly serve illegal venison on the table of a hotel whose best support should be expected from gentlemen sportsmen. The latter do not kill nor eat illegal venison.

### Bear.

Mr. Andrew McAush, in company with Messrs. J. C. Farrar, S. Hamilton and J. C. Armstrong, were this summer in the Nepigon country and penetrated far to the north of those waters. They had grand sport with the big trout, and a local cigar store shows as curiosities in its window two tremendous trout skins uniquely mounted on birch bark, those being among the most valued trophies of the trip above mentioned. The gentlemen brought back with them a little black bear cub, which at last accounts was doing well. They killed the cub's mother.

Gen. Nelson A. Miles, Commander of the Department of the Missouri, U. S A., starts for the West this week with Mr. Frederic Remington, the artist. They go to New Mexico and Arizona, or even to New Zealand if they do not earlier find the object of their search, which is nothing less than large, juicy, succulent bear.

Mr. Jacob Steinmann, of Mands. Butler Co., Ohio, is not so particular as Gen. Miles. Almost anything goes with him. He writes:

"As a party of us are going to take a hunt this fall, and as we can't decide where to go to, I was advised by the readers of your paper to write to the editor of the FOREST AND STREAM, and if you please write and tell us of a place where we can find bear, deer, ducks, turkeys, quail and game like that. We were talking of going to Florida and hunt in the Everglades. Please give us your opinion about Florida."

Florida might do, but I fear that even that luxuriant country would hardly produce all these sorts of game in any one locality. The Indian Nations would come very near to it, say between the Cimarron and Canadian rivers. If the gentlemen should go to Fort Smith, Ark., they could get near enough to what they wished, either in the Nations or western Arkansas. They might get their outfits confiscated in the Nations by the U. S. soldiers. I would rather chance that part of the country for a general hunt such as seems to be wanted here, than the Everglades of Florida, which latter might prove a serious undertaking.

### Whether He Lives or Not.

Patrick Galvin of St. Paul was found last week with a bullet hole in his forehead, probably a self-inflicted wound. The Minneapolis *Tribune* says: "The wound was found to be a very dangerous one, but is not thought to be fatal. The loss of sight in the right eye will no doubt follow, whether the patient survives or not." I do not know whether the *Tribune* states this on a medical or on a journalistic basis, but it is safe on its facts if the man dies.

### A Cyclone on Horicon Marsh.

*Sept. 28.*—What with the Northern forest fires and the Southern floods, we seem to be having rather an *annus mirabilis* in this section of the country. The latest thing in Western weather has been the terrible wind storm which during the past week crossed the States of Iowa, Minnesota and Wisconsin, and has since then created havoc on the Great Lakes. This cyclone has perhaps a hundred deaths to its credit, and it came near making news in the line of sporting journalism. Had it veered 200yds. to the south, at the point where it crossed the Horicon marsh of Wisconsin, it would have torn the club house of the Horicon Shooting Club into fragments, and at least seriously injured some of the fifteen shooters who were in it at the time.

This storm occurred on last Friday night, and as I happened to be up at the club at that time I was able to see personally what a wind storm can do when it tries. We all went to bed early that night, intending to get up at 3 or 4 o'clock the following morning in order to get an early stort for our duck shooting. It was about midnight when the storm struck us, and in about three minutes thereafter there was not a soul left in bed. The club house seemed every moment on the point of going to pieces, and for a few minutes hung about evenly balanced against the push of the wind. The roar of the storm was like that of a distant railway train, to quote the words of an ordinary newspaper report of a cyclone, to which I can testify as being accurate enough by way of description. In a few minutes the club house floors were afloat with water, and the most popular costume among the duck shooters seemed to be a *robe de nuit* and a pair of hip boots. The club house, however, withstood the storm, which did not strike it with its entire strength, though a small sleeping-house near by was blown entirely to pieces. On the following morning the track of the storm could be traced plainly for more than ten miles across the country. The sturdy oak timber on the hills was torn and twisted in every direction. Many orchards were torn up and one farmer lost both his house and barn. No lives were lost in that part of Wisconsin so far as we learned, except those of a couple of hundred of sparrows which were crushed by the wind under the eaves of a barn. A bushel or so of these birds were found dead along the side of the barn in the morning.

The great storm did not seem to affect the duck shooting much, as it did not pass far enough to the north to start the northern flight down. It apparently drove most of the ducks from the upper end of the Horicon marsh down to the south end, and no very startling bags were made on Saturday. Mr. Howard Bosworth, of Milwaukee, was high bag with 47 birds, and Mr. Robert Rom, of the same city, was next with 45 birds. Gov. Peck, of Wisconsin, shot on his favorite bog, about a quarter of a mile from the boat landing, and made a bag of 20. The Governor is a very ardent duck shooter, and slips off to the Horicon Club, of which he is a member, whenever the cares of the State allow him a little time to himself in the shooting season. He is a rattling good duck shot, using a 10-gauge gun and black powder, but just now is about converted to the nitro powder idea. Gov. Peck is a very popular member of the Horicon Club, and whenever he comes up he is by tacit consent given his stand on the bog above mentioned. This is the place where he killed 69 ducks one day last fall, and where he expects to do it again. It therefore bears the name of the "Governor's bog."

The ground of the Horicon Marsh has not been in the best condition yet this fall for snipe and no very heavy bags have been made, my own of 22 birds being the best yet, although on the same ground a year ago I bagged 50 jacksnipe one afternoon. The entire marsh is alive with yellowlegs, and I suppose one could kill a thousand of them a day if he cared to.

A bag of 33 chickens was made on the opening day within three miles of Horicon club house by Mr. Thomas Hanson, of Milwaukee.

### Dakota.

At this writing the special car tourist sportsman is reveling in the grouse and wildfowl shooting of Dakota. There is nothing wrong in the special car tourist idea, but there is very much that is radically and absolutely wrong in the way this idea is carried into effect. The Dakota laws are in no way more openly or contemptuously violated than by the so-called Eastern sportsmen who go out to see how much they can kill each day. I hear that last week one of these special cars was searched at Minneapolis and over 300 chickens found aboard it. Again I repeat that the town of Dawson, on the Northern Pacific road, will very well bear watching in this regard, and I believe that the Northern Pacific road could do no better business action than to station a proper official at this or similar points to stop the unrestricted violation of the Dakota law.

### Wrong Font.

A late issue of a Chicago publication remarks that a man by the name of Ehlers of Chicago, had been killing illegal prairie chickens in central Illinois. Mr. Henry Ehlers, one of the best known sportsmen of Chicago, and winner of this year's championship of the Illinois Association, feels hurt at an assertion which might be taken to apply to himself. Mr. Ehlers wishes to say, what in view of his reputation it is unnecessary to say, that he has not this year or any other been shooting illegal prairie chickens. The Chicago paper got into the wrong font, probably.

### Heathen Near At Home.

A friend remarked to me last night that an acquaintance of his who works on South Water Street told him that he had spent the last day or so in packing quail, all of which quail were of course illegal. Yesterday a member of a South Water street commission house told me that never in the history of the street had there been so much illegal game sold as within the past year and a half. He said that the street now was overflowing with illegal game. I would gently suggest to the Illinois State Sportsmen's Association, and to city warden Blow, who has been doing such excellent work in punishing violators at different points in the State, that there are plenty of heathen near at home.

### Wisconsin Deer.

There should be excellent deer hunting in Wisconsin and the North Peninsula this fall, provided one hits just the right section where the game has been driven in and not driven out by the forest fires. I would not advise any one to go to Florence this fall, as late reports say that the deer have been driven from that section. On the other hand I believe that State Line and the Lake Vieux Desert region will be excellent deer country for October.

A party of thirty-one deer hunters from Ohio left Chicago this week, bound for Metropolitan, Michigan. There would seem to be enough of them to keep the deer from getting lonesome.

### West.

Mr. Charles Norris, of the Big Four Railroad, leaves this week for Missoula, Montana, where he will hunt and fish in the Bitter Root range, certainly a most pleasing trip to look forward to. Mr. Norris was fortunate this summer to kill a black bear in Florence county, Michigan, the said bear having showed a disposition to pick huckleberries in the same patch with Mr. Norris and his friends.

If a wanter wants any thing and asks for it in FOREST AND STREAM he always gets what he wants. Lately I had occasion to inquire for Colorado deer conntry in favor of Mr. W. J. Letts, of Sedalia, Mo. And now comes Mr. W. J. Dixon, the same an old time FOREST AND STREAM man, and writes as follows, from Cimarron, Kas.:

"I am going to Colorado to hunt on my old stamping ground, and I have offered to take Mr. Letts and party in with me, and written to them in full. Referred them to you as knowing me. The Kickapoo won't open this fall, I fear, so I am going to play with my Mexicans.

"I like what you write always. You are a nice man. If you want to come to me in Colorado I can make you smell old times at White Oaks."

I print what Mr. Dixon says in full because there are so few men who think I am a nice man that I look on the statement as a matter of news. I am not at liberty to state just where Mr. Dixon intends to go, but he says there is nothing but deer. Mexicans, turkeys, antelope, prairies, mountains and cañons in that country, and that it has material for a dozen stories to the square mile. I wouldn't mind getting tangled up with W. J. out in that country myself.

The following succinct paragraph I take from the daily press:

GRANTSBURG, Wis., Sept. 26.—Peter Anderson and his brother, while out bear hunting near Mud Hen Lake, mistook a squaw for a bear. Both shot and both bullets took effect. The squaw was 100 years old.

This certainly is brief enough to suit the most exacting editor, though it seems to leave much to the imagination. One could wish to know whether the hunters shot the squaw on the supposition that she had lived long enough, then alleging the excuse that they mistook her for a bear. It would seem to be more humane to let centenarians, even Indian centenarians, live on as long as they want to, after getting such a good start. But there is no real excuse for joking over so serious a matter. A squaw does not look like a bear to the eye of any hunter fit to carry a rifle in the woods. The same painful lesson is again brought forward that no man should fire at a moving object in the woods or anything else, without knowing clearly what it is, and without intending to kill it. We are left to infer that the victim in this case was killed, although the correspondent who sends the dispatch neglects to commit himself on this important point. One or more persons are killed every fall in Wisconsin and Michigan by fools who carry rifles and shoot at anything they see moving, but still this particular brand of fool appears to be perennial and flourishing.

### Snipe.

The fall flight of snipe has made its appearance well to the south of Illinois and Indiana. Two guns bagged eighty snipe at Calumet Lake two weeks ago. The Desplaines Valley has shown some very heavy bags. One of seventy odd birds was made by a single gun one day last week near Lockport. Mr. Frank Bissell and a friend got a fair bag at Water Valley on the Kankakee last week. In my talk with Mr. Henry Ehlers last week he told me that he killed twenty-eight blue-wing teal and fifty-eight snipe one morning last week on the Kankakee, killing twenty-three jacksnipe without a miss. Mr. Ehlers used a 10-gauge gun on snipe, which accounts for the twenty-three. He killed seventy woodcock along the Kankakee on one trip this summer, using the same 10-gauge gun. I am trying to persuade him to use something else.

Mr. Chas. Hallock, the veteran of all veterans in matters of sportsmen's journalism, is in Chicago to-day on his way West to Hallock, Minn., where he has large landed interests. Mr. Hallock will enjoy a little of the fall at its best in the Northwest, and will then move to the South with the flight of the fowl, spending the winter in North Carolina. He tells me he has not spent a winter in the North since 1882, by which it may be seen he knows how to live.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—*The sale of game should be forbidden at all times.*—FOREST AND STREAM, *Feb. 10.*

CHICAGO, Sept. 26.—*Editor Forest and Stream:* I have been much interested in the articles which have appeared in your valued paper regarding legislation prohibiting entirely the sale of all kinds of game. This has been a favorite idea of mine for several years. There is no question in my mind that the indiscriminate sale of game, and the consequent incentive to market-hunters to kill all they can, will in a very short time cause the extinction of nearly all kinds of game. If there are any true sportsmen who have not yet made up their minds on which side of this question to array themselves, I would ask them to take a trip up and down South Water Street in this city at any time during the open season, and if the piles of ducks, partridge, quail, prairie chickens and all sorts of game do not make them strong advocates of the new principle, I will be out of my reckoning.

There is another feature of this matter that I have not seen touched upon and which I think could be used as a strong argument, which is that such enormous quantities of game as are dumped on the Chicago market in the fall, particularly ducks, partridge, prairie chickens and quail, cannot help but cause a large difference to the farmer in the price that his poultry brings in the market. Let all farmers know this and it is my opinion that you will have an ardent supporter of the new plank in every one in the land who raises poultry to sell.

E. T. D.

*Editor Forest and Stream:*

I hope you can spare me room in your columns to voice my sentiment in regard to the total prohibition of the sale of game. I am heartily in favor of it, as every American who claims the name of sportsman should be. As has been said, "the wedge that FOREST AND STREAM has started must be driven home."

One of the mistaken arguments against the prohibition of the sale of game seems to be that it will place game more in the hands of the rich. This is not so, for the law prohibits no one's shooting game, while it does prevent the rich from obtaining it out of season.

No true sportsmen will kill more game than he can dispose of, for it is against his principles, and besides he knows he is injuring his own prospects for the future. He does not find enjoyment in shooting into bevies of birds and slaughtering them by dozens. Such men do very little toward the extermination of game. It is the market-hunters who are doing the harm; they use guns that are almost cannon; net the birds; and employ all such illegitimate means of procuring game in large quantities. If the sale of game were stopped this slaughter would cease, and game would then be killed merely by the lovers of the gun.

I think that the prohibition should be made to include the law that no game should be taken out of the United States to stock foreign countries, for our game must be kept here and protected.

ITHACA, N. Y.

**Handsomest Passenger Train in the World.**

THIS is the popular verdict on the Pennsylvania Limited and one who sees the train now in the brightness and freshness of its new equipment will fully endorse it. The new cars, the compartment car just introduced and the other distinctive features make it the most luxurious train in the world and the only perfectly appointed limited express. It leaves New York at 10 A. M. every day for Chicago.—*Adv.*

## WITH THE DOG HANDLERS IN DAKOTA

In the gray dawn of an August morning, at an hour when the people in the great cities take their sweetest slumbers, I stepped off a west-bound train of the Northern Pacific at Eldridge, N. D., where, through the kindness of Mr. W. W. Titus, supplemented by the brothers Frank and George Richards, all well-known handlers and trainers, I was to enjoy several days' chicken shooting. They had extended an invitation to me some weeks before my arrival. Mr. Titus was waiting for me at the depot, notwithstanding the grim earliness of the hour, and my visions of renewing pleasant sport with the chickens began to forthwith take definite form. The opportunity to shoot with a good handler is not an every-day occurrence. Handling and training are a profession. Therefore, when a handler gives a guest some days' shooting, it is much as if a business man would turn over his plant for the pleasure of his guests.

Eldridge is an ideal town for a chicken shooter. There were in it six houses all told, of which three were empty. The hotel was quiet and homelike, far superior to the average hotel of the country town.

As I say, I found Mr. Titus awaiting me. After a greeting whose cordiality and sincerity there was no mistaking, he said: "We'll go over and get breakfast. The team and dogs are all ready for us to start."

This gave me a realizing sense that I had stepped out of a sleeping car into a chicken shoot quicker than ever before in my experience. I thought it was most exceeding early for a start, but learned that it was a later start than common, Mr. Titus often beginning his preparations as early as 4 o'clock. This was quite necessary, as I learned later, if much work was done. The days were distressingly hot, only the morning and evening hours being available for work. The sun rose like a huge ball of fire, angry red, as it mounted upward and burned out the fog and mists; the temperature steadily increased in warmth till it became oppressive. At 9 to 10 o'clock the morning's work was considered as ended. After that till the cool hours of the evening, it was useless to attempt to shoot.

After breakfast the start was made. Mr. Titus had a buckboard on which was securely fastened a large crate for carrying the dogs. Under the seat was a two-gallon jug of water, and of water the dogs drank great quantities on those hot days. The sloughs and small streams were thoroughly dried out weeks before by the intense heat, therefore water must be carried.

Some visiting sportsmen were in the party, six of us all told, of whom five had guns, Mr. Titus electing to handle the dogs—wisely, I thought, as two guns shooting together are ample for all purposes. Of course there were the usual incidents of two or three frequently shooting at the same bird and the backwardness caused by everybody insisting that everybody else should shoot, for there was not the semblance of a hog in the party. It was as pleasant as could be. As nearly as I can now remember, we bagged about sixteen or eighteen birds that afternoon.

I shot a 12-bore Parker hammerless, kindly loaned to me by Mr. Hough, whose fertile pen sheds so many good things each week for the readers of FOREST AND STREAM. It has 28in. barrels, light in weight and rather straight in the stock. I had had some very encouraging experiences with it at the traps. It was a wonderfully hard hitter. To my mind the question was settled—it was I and the gun on one side and dead chickens on the other, the quantity only measured by my forbearance. It was a settled matter, but I did not take any one into my confidence. The demonstration would be much nicer and easier. The only tinge of unpleasantness was the certain fate of the birds, and whether my forbearance would be great enough to leave any chickens in that whole region. It's so easy to kill a chicken, you know! But Dr. Mead and I soon had an opportunity. The dog pointed nicely a bevy of three-quarters grown birds, lazy flyers, going away by ones and twos with a deliberation which seemed fatal to them when two men with pretty guns were standing close by. I think the Doctor got two after some rapid firing. I think I got one in four shots.

This is rather a colorless manner of describing the death or escape of birds. Shorn of the embellishments of "the cataleptic point," "the roar of wings," "the ring out of the Damascus barrels," "the cloud of feathers," etc., a chicken story becomes commonplace. But to enumerate the points and misses, the kills and good finds of the dogs, the good shots and poor ones, etc., would require much space, so I will dwell more particularly on the most prominent features of the work.

Mr. Titus had in his string a bitch of most extraordinary chicken qualities. Her work to the gun, too, was most pleasing. Often she sook casts from a quarter to a half mile wide, and showed great judgment in beating the ground. When she found birds there was no anxiety about her stanchness. Her point was a fixed quantity till her handler went up to her. She was quite expert in roading, too. One misty morning she roaded a running bevy across a large stubble, across a down wind, nearly a quarter of a mile. That morning young Mr. Peck of St. Louis, a most genial and talented young gentleman, did some excellent shooting with his 16-gauge, the birds being in some grass and rising one or two at a time within easy range.

But the last morning had the best shooting in it. For a windup, Mr. Titus took out some of his best dogs and the most promising ground was chosen for work. Soon the bitch aforementioned had a bevy of five birds, all of which we bagged. She found birds in rapid succession thereafter, and when we had bagged a dozen we concluded we had enough and thereupon stopped shooting.

I arrived the second day after the season opened, the opening day being Aug. 20, and there was then a perceptible diminution in the birds' numbers. Bevies were badly broken, and some were quite destroyed. All the larger towns had swarms of shooters who were abroad on the opening day and they made a most apparent effect on the birds, as shown in their lessened numbers. The practice of shooting for big bags is most baneful in the destruction of game, and measures for protection are not at all equal to the measures for destruction. The laws and their enforcement in game preservation are but little more potent for observance now than they were years ago, while the destroying agencies—the increase in numbers of shooters and dogs, and improved guns and powders—bas been very great.

The chicken crop this year was remarkably good. While the long dry season was seriously damaging to the farmers' interests, it was a great one for prairie chickens. Still it was not uniformly so. In some districts the birds were scarce. The same reason was given for their scarcity as for their abundance, namely, the dry season. Some farmers say that there was no water for the birds to drink, and hence they died of thirst. The young birds could not fly to the water courses, and some nights but little if any dew fell. The explanation is a novel one to me.

What impressed me most of all during my tour through Minnesota, the Dakotas and Manitoba were the vast changes which time, settlement and civilization have wrought in the past few years. In the flourishing city of Winnipeg Mr. Thos. Johnson assures me that it is not many years since he shot ducks where the city hall now stands, in the heart of the city.

The changes have been great in the game regions of Minnesota and the Dakotas. These States fifteen years ago, outside of a few small business centers—distributing points of a sparsely settled region—were mostly unbroken prairie, the slow and laborious task of reclaiming it from the wilderness having hardly well begun. The pioneer farmers were mostly immigrants who came from the different countries of Europe, striving in the face of hardship and poverty to gain ownership of a home and a farm. It was almost a foreign land so far as its inhabitants were concerned. Some sections were settled by Russians, others by Norwegians, Swedes, etc., and few of them could speak English. The native-born American set comparatively little value on a farm in the wilderness when the ownership was contingent on so much hard labor and deprivation through a term of years, and truly the struggle for a home through hot summers and cold winters, made, as it was, against the further disadvantages of poverty, was a hard one. But those days were grand ones for chicken shooting in that region. The cultivated fields were far apart and uninclosed. Little groves of trees of two to five years' growth marked the domiciles of the settlers, or where some one had attempted to settle, for abandoned claims, landmarks of blasted hopes or ruined fortunes, were not infrequent.

Generally, when one left the vicinity of the small towns, not more than four or five groves could be seen from horizon to horizon. It was no uncommon thing to find long stretches of prairie where there were no settlers. Still the best shooting was near the attempts at cultivation, for the farms were roughly tilled as one would readily imagine of a region where everything was in the rough stage of primitive beginnings. Dug-outs, hovels, shanties and makeshifts were far more common than were houses.

The crops were favorable for the chickens. Wheat was, as now, the most important one and best liked by the birds. It was the most common crop. Oats and flax came next in value, and a small acreage of corn was grown. For oats the chickens have little liking. Wheat is their favorite grain food. The best shooting was always in the vicinity of the wheat fields after the prairie food became scarce with the advent of fall; then they would congregate where the food supply was most abundant. In some sections they were so numerous that in taking a turn about one field a shooter could get all the sport he could reasonably desire in a morning or evening. A field, it should be remembered, was commonly a quarter or an eighth of a section, sometimes a half section. There was seldom a fence to obstruct the shooter's course. The unclaimed prairie and the cultivated farm had no visible line of separation save that between the golden color of the grain and the green of the prairie. Wagons could be driven across country almost anywhere, although as a matter of course it was not just nor lawful to drive through the farmer's standing grain, but to this matter many shooters gave little heed or thought. Yet the farmers were extremely liberal in those days. They permitted shooters to enjoy every reasonable privilege in shooting on their farms, but their kindness was often abused. Shootors would drive through standing grain and generally treat the farmer more as an intruder than as the legitimate owner of the soil. Though there was a trespass law it was little considered. Farmers were busy men living an earnest life, and often they had an imperfect knowledge of the English language, if they had any at all. When their rights were infringed by trespassers, they showed their resentment chiefly by vituperation and choler. It was a loss of time to attempt to arrest the trespasser, for he might be twenty or thirty miles away. On the hard, level roads of the prairie, it was no uncommon occurrence for a party to drive fifteen to thirty miles when chicken shooting. The farmer's most immediate knowledge of town characteristics were chattel mortgages, the highest prices for provisions and the lowest for wheat. If the trespasser was a city sportsman, for the farmer it was an easy deduction that all city sportsmen were alike.

I well remember in 1880 while shooting chickens near a wheatfield in Minnesota, the sudden dawning of an irate farmer in my immediate vicinity, and the issuance by him of a most peremptory order to vacate. On expressing a willingness to comply, but a desire to know why so much harshness was used, he explained that about a half hour before a shooter had killed one of his young turkeys, and as he approached, the shooter had run away, got into his wagon and escaped. As the turkeys were close by, it gave some color to his suspicions that I had designs on them. I pleaded not guilty, but he said, "You look very much like the feller that killed and stole my turkey. Mebbe you didn't, but I'd rather you'd leave anyhow. I'd feel better if you wasn't around." I left.

The farmers, however, when civilly approached and their rights given the value and respect due them, are the most obliging of men. I never knew one to refuse shooting privileges if permission was asked courteously, unless he had suffered from some depredations from shooters.

A noticeable feature of chicken life fifteen years or less ago was the large numbers of old birds, cocks, often found by ones, twos, and sometimes in small packs. They were quite abundant and often lived in territory apart from the hen and her brood. Compared to the present time, there was but little cunning in their habits or effort at self-preservation, whether the birds were old or young. In one season's shooting, in 1880, I saw chickens go to a grove but once, and then it seemed by chance, not intention. Now, they readily seek protection in cover and show much the same cunning in avoiding danger that the ruffed grouse does.

I remember one flock of old birds which Mr. Titus found a few times when I was with him. They were extremely alert and wary, rising well out of shot when we approached them. They had a systematic plan of escape. Their first flight would be for the center of a large "breaking," as a field whereon the sod is turned for the first time is called. Thence they would run to a large dense grove close by in which they were quite safe. If pursued then, all the difficulties of ruffed grouse shooting were encountered. We pursued the birds once in the thicket. The dog roaded them well and prettily across the thicket, but the birds flushed wild ahead out of sight. We did not get a shot. Another day when we found them they flushed wild from their feeding grounds as we approached, as was their habit. They took a flight to the middle of the breaking and then stood studying us carefully. We thought that by getting between them and the thicket we would intercept them and change their flight to the open prairie, where in the grass they would have no prearranged plan of defense and would be our birds. We performed our part of the plan fairly well, but the birds flew out of sight.

I believe that heredity and experience are greatly changing the habits of chickens for their own preservation. The multiplication of dangers has made them wiser. Not only are there many more shooters, but there is comparatively little cover in the open prairie. The grass is shorter and lighter. What were vast prairies ten to fifteen years ago, at the present time are one unbroken succession of farms, side by side, cultivated to the boundary lines. Fences are not so common as one might imagine. Many well-tilled farms have no apparent boundary line save that made by the plow. Still, there are many sections wherein are large tracts of country sparsely settled, particularly in North Dakota. However, in my experience there in August, we found nearly all the birds in the vicinity of the grain fields. For the best shooting the grain fields must be surrounded by open prairie, on which, about one hundred yards more or less from the edge of the stubble, the best course lies for hunting, and the dog beats out the ground well on either side of the shooter as he drives along.

By the way, the only proper manner in which to hunt chickens is with a horse and wagon if one makes any distinction between labor and sport. It is a most toilsome task to hunt chickens afoot. Wise reader, did you ever kill twelve or more chickens on a hot day, put them in your game sack and then carry them two or more miles home? If so, you know the regrets that one feels at having killed them. How heavy the birds grow; then they get heavier. They give a pendulous sway back and forth in rhythm with each step, and as the shooter becomes more fatigued the birds sway harder Perspiration runs galore. Aside from their own weight they are awkward and difficult to carry.

The handlers kill very few birds. There seems to be a belief prevalent among many of the farmers at Eldridge that with a wagon load of dogs a trainer must necessarily kill every bird in the country. For business reasons, the handlers killed few birds. Every diminution in their numbers made it so much more difficult to get points for their young dogs, and points they were after.

But the spirit of exclusiveness is in that section as in many others. Farms are being posted. Prohibited ground is constantly enlarging. It will not be many years before the game preserve will have superseded the wild hunting grounds.

B. WATERS.

## GOOD WORK WITH THE .22.

OKANAGAN, Wash., Sept. 9.—*Editor Forest and Stream:* As last Monday was a red-letter day, I took my Stevens favorite .22 rifle and went over north of the mill to an Indian ranch to get some oats.

A short distance before I got to their camp, Frank came to a point. I rode up near to where he was, and sat on my pony and watched. Soon a sharptail grouse stuck its head up out of the bunch grass and began to walk away from the dog. I got down, took a shot at its head, which I hit, and it began to flutter at a terrific rate. Soon as many as fifty flew up all around me and crossed over the swale to the edge of the timber. I followed them over and soon Frank came to a point. I saw the bird, which I shot through the neck, when the others flew further up into the timber. When I went to gather my bird, I saw another lying about four feet from the one I shot at. It was shot through the body. I started on down the meadow, and flushed one that lit in a tree, and I killed it. There were three shots and four birds.

I gave them to the Indian, and started back across a mountain, and had not gone far when Frank put up six blue grouse, and I got three in three shots. After drawing my birds, I went on and soon he put up another flock. I got three of those at three more shots. I now had six, all shot through the head; ten birds at nine shots. That was the best score I ever made with a rifle, and I was feeling fine over it.

I had not gone very far when Frank came to a point, and as it was different from a bird point, I got off from my pony and walked up to the dog. He would not move. I stood and looked very carefully and soon saw a fine buck, just as he got up. I raised my rifle, and I aimed to break his neck near his chin. When I fired, away went the deer. I went back, got my pony and rode out on to a ridge, where I had a fair view of the mountain side. I could see nothing of the deer. I then took a circle and soon Frank struck his track, which he was anxious to chase. I had to speak very sharply to him, but when I did so he steadied down and tracked slowly. I soon came to a point of rocks which I had to go around. Frank went over them, and when I came on to the ridge again I could not see the dog and thought that, as it had been so long since he had had a run, he had made up his mind to take the run, then the whipping. After waiting and listening for a little while, I whistled. Soon Frank came from my right. He was licking his chops and wiggling his tail, and started right back. I followed him, and there lay a big four-point buck, dead. I cannot remember any time in my life that I have been more pleased. I cleaned my deer and then went back and stepped the ground, and found it to be as near 130yds. as I could step it. The bullet had passed through the side of the neck and in between the point of the shoulder, passed through the large veins just above the heart, cut one rib in two and passed out behind the shoulder.

I use the .22 long rifle cartridge, which is cheap, and the best shooting cartridge I have ever tried.

LEW WILMOT.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## THE ALL-AROUND FALLACY.

*Editor Forest and Stream:*

From time to time communications have appeared in your columns advocating all-round arms, but from the diversity of opinions expressed it would seem that no approximate standard of excellence has yet been reached and accepted by the great body of sportsmen. Since gun powders and lead have been used under the light of modern science it has, I believe, generally been understood by those who have hunted and shot both large and small game, that where count is wanted to the exclusion of the other essentials of outdoor sport, one must choose the arm in proportion to the work to be accomplished.

There is such a wide difference between hunting bear, elk, squirrels and rabbits that to attempt to harmonize the sports and class them under one head seems idle folly, and to seek for a weapon suited to all is error. True, you may kill an elk or a squirrel with the tiny .22cal., and you can annihilate both with the .50cal., but the number of times you miss on the large game with the small bullet is offset by the mutilation of the lesser game by the use of the large bullet. Therefore, when you attempt to strike a medium of size in caliber for universal use you simply reduce the extremes with no desirable gain in the results sought to be attained.

Perhaps to some extent the same rule may be applied to shotguns, although there is this broad distinction between the two arms, namely, the rifle carries its entire weight and diameter of projectile in one body of lead, while the shotgun in different bores may use the same sizes in shot in different quantities, bulk and weight, thereby multiplying power for distribution over desired area rather than concentrating force as exemplified in the rifle. Theoretical aberration respecting the power of the shotgun has had considerable to do in over-weighting many fair upland shooters; and I believe less is known through practical test of the power of the smooth-bores, choked and cylinder, by the owners thereof than is understood by riflemen of the uses and power of their favorite arm. My acquaintance with riflemen inclines me toward the opinion that almost invariably they fairly estimate the uses of the large and small calibers, but that only a small proportion of the advocates of 10-gauge shotguns for general shooting have ever tested the power of the 16-gauge or know its capacity in the hands of a decent wing shot.

For years I have annually spent a large portion of the summer and fall months with gun and rod, and single-hander or canoe. I have looked for the all-round rod, all-round boat, and gun, and met with undesirable results, and I feelingly express my belief that such a factor among the impedimenta of sportsmen has not been produced. As it seems impossible to build a boat that will successfully combine the good qualities of the hunting canoe and the yacht, or to interbreed the draft horse with the racer with good results, so an unsatisfactory arm must result from a combination of extreme qualities in a sportsman's gun. Several of your correspondents have suggested the three-barrel as embodying the essential qualities sought after, but—omitting to point out how this grouping of the two arms eliminates the extremes of bore and caliber incident to each—combining shotgun and rifle in one arm does not solve the problem, unless perhaps you join two rifle barrels of different caliber with two shot barrels of extreme bores, and then I presume no sportsman will call that combination the *sine qua non*. It is a piece of ordnance I do not wish to pack around the country. Choosing the arm for the work you desire is probably a safe procedure where excellence becomes paramount.

The advocates of the three-barrel have hit the mark very nearly in combining any satisfactory qualities where pure sport is sought in a country of miscellaneous game, but it is also an undesirable combination where you are in pursuit of any one species of game. In mountain-climbing for large game the shot barrels and ammunition becomes a serious load to carry, and useless; while in marsh or bay shooting the rifle, if of large caliber, is undesirable. But as constituting a very enjoyable weapon for a day's hunt when recruiting, and enjoying nature, and out after anything upon which to test your skill, and to tone up the nerves, a three-barrel in the small gauges becomes a very handy and effective piece.

Last season I used a 7lbs. 3oz. gun, 28in. barrels, 16-bore shot, .32-20 rifle—combination arm that afforded considerable pleasure. During a two-months' outing I shot many varieties of game with it in a manner quite as satisfactory as to be expected within the capacity of one arm. One shot barrel was closely choked and a killer at and even beyond 65yds., while the other barrel, being a perfect cylinder, scattered fine shot just about right for woodcock and reed birds; and this barrel not only threw the large sizes shot excellently, but it carried an ounce ball with fair accuracy up to 100yds., and proved itself on more than one occasion a paralyzer to deer. The little .32cal. bullet was perhaps equally as effective when nice shooting was desired, for you could bring down a squirrel, a shy duck, or raise the fur on a cotton-tail. Yet with its many useful qualities, this arm is by no means to be called an all-round, as one who has hunted bear and elk, as well as shore-birds and grouse, can readily comprehend. Nor will a larger shot bore, united with a greater caliber of rifle, approximate what is required.

When in good shooting form I can derive greater satisfaction with a sixteen-bore gun than with a twelve or ten gauge, and for obvious reasons the light caliber bullet is desirable for small game. The lighter weight of the small gauge and its ammunition becomes a consideration at the close of a long day's tramp and the satisfaction of bringing to bag by increased exercise of skill in the use of a small shot bore is a mental gratification. By these paragraphs it will appear that the combination possesses merit as a hunting piece for miscellaneous sport in certain localities, but for mountain work probably a .40 or .45-caliber repeater is preferable, while for wild fowl shooting solely, a good twelve or better a ten-bore gun with well choked barrels is the proper implement.

The interchangeable barrel system adverted to by some of your correspondents is, I take it, worthy of consideration from the standpoint of economy, but intrinsically the arm must be judged by the sportsman in the field, where it is used and wanted at an instant's notice. The hunter of big game who combines with his large-caliber rifle a 20-bore shot barrel for use upon an occasional grouse when the pot needs replenishing, and also to have in reserve at short range a ball of tremendous power, cannot in reason claim he has an all-round tool, excellent and admirable as such a weapon is for its designed purposes, to the exclusion of the wants of the hunter of small game who takes an occasional shot at deer. Here are the representatives of the two classes of men with requirements diametrically opposed and to whom no common rule will apply and no intermediate averaging of extremes will satisfy.

CAYUGA.

## FOR MINNESOTA GAME PROTECTION.

ST. PAUL, Minn., Sept. 24.—*Editor Forest and Stream:* The Minnesota gunning season opened on the 1st inst. Reports from the various sections show game up to a general average, and fine sport. Ducks and chickens are plentiful, and market-hunters are already sending in their consignments to the cities. The dry summer season was of especial advantage to the young broods, though the recent terrible forest fires in the north destroyed a large amount of game in our best game reserves and burned over the feeding grounds.

But there is not in any State east of the Rockies to-day better fishing or gunning than in Minnesota. I have learned that since the new Board of Fish and Game Wardens was formed by legislative enactment in 1893, appropriating $15,000 yearly for their maintenance, a new life has been given to the better protection of our game, and that the laws are being rigidly enforced. But I have observed several points in which their efficiency may be increased, and through the columns of the local press I am advocating the formation of a voluntary auxiliary aid to the constituted authorities in the shape of a State Game Protective Association, similar to the ones in Delaware and elsewhere, in which any citizen of the State may join. Possessing as we do a most favored territory for the further propagation of game, aided by the large natural nucleus which we have, I am very desirous of seeing stringent yet beneficial laws for our own protection.

Minnesota is yearly overrun with sportsmen tourists from other commonwealths, whose dogs and guns, should all the present advantages now accorded them be continued, would soon deplete our game, as their effect is beginning to tell already. Our fast increasing rural population has limited our game reserves to more narrow confines, and though "we may wish to be hospitable, we cannot be expected to furnish game from our own storehouses to all the United States gratuitously."

By the formation of the proposed society and requiring a license fee from all non-resident gunners, as in Delaware, and also by exacting a license fee from all dealers and shippers, holding transportation companies amenable for violations on their part, the cash receipts from all memberships, fines and licenses would be an available sum for the purchase of other game to be turned loose in the State.

For all members to possess powers as constables, authorizing them to make arrests without warrant for all known violations of the game laws, would prevent to even a greater extent gunning out of season and other improper practices. There is nothing in these suggestions to meet the disapproval of any one who has the interests of our game supply and laws at heart, and the hearty support the FOREST AND STREAM has always given to game interests in all localities has been, and is, a source of much encouragement to workers with this end in view. We may, therefore, hope for your indorsement, for you have many readers in the Northwest, and your teachings have given us a great incentive in this useful work.

WILLIAM L. TUCKER.

## PIKE COUNTY (PA.) NOTES.

MILFORD, Pa., Sept. 28.—Pike county shooting season under the special law, applicable only to this county, is open for squirrels Sept. 1 to Dec. 15; rabbits; Oct. 15 to Dec. 15; quail, Oct. 15 to Dec. 1; ruffed grouse, Sept. 15 to Dec. 15; deer, Oct. 1 to Dec. 1; woodcock, July 4 to Dec. 15. By this it will be seen that squirrels, woodcock and grouse (or as they are here called pheasants) are the only game that may now be killed legitimately.

Of these, squirrels are exceedingly scarce, usually attributed to the abundance of beech nuts in the western portion of this county, and the adjacent parts of Wayne county, which attract the squirrels to that section in quest of the more desired food.

This season has been notoriously poor for woodcock, but the sportsmen are looking forward to better bags during the flight season.

A heavy fall of snow during the early part of April last is believed to have destroyed a great many nests and young, if not in many instances killing the old birds.

Grouse are quite plentiful on the unburned grounds; but taking our woods as a whole, these noble birds are rapidly decreasing in numbers. Never in the history of the country has such an area of our forests been swept by fire as during this spring and summer. Occurring, as it did, in the nesting time of the grouse, hundreds of their nests and thousands of their eggs were destroyed. The old birds from the burned woods have sought the shelter and "shack" of adjacent unburned patches, making them more plentiful there, and that fact creates the false impression of a general abundance of grouse.

Large bevies of quail have been seen at various points, and, although never very good in this section for years past, the prospects appear to be that they will afford some fine sport when their season opens.

Rabbits, like the grouse, are all driven to the unburned grounds and are very plentiful there. Even thus early in the season they are a frequent annoyance to the owners of young or inexperienced bird dogs.

The indications for deer are very good. Although driven to the unburned grounds for better cover and protection, the fire does not destroy them, and the spring-burnt woods afford them most excellent pasture and browsing. A great many have been seen during the summer by berry pickers and others, and from all the hunting centers we hear of abundant deer signs. Not only is their presence known by signs, but this town knows of at least three deer already killed from two to four weeks before the open season. This killing was not chance work, but the deliberate effort of lawless parties that call themselves sportsmen, and seem to find no greater pleasure in the capture of game than when taken out of season or by foul, unsportsmanlike and illegal means.

Our people, who do not wish to witness the total extermination of game, are almost unanimously in favor of but one open season for all kinds, so there can be no pretext of gunning for some bird or beast permissible under the law, when in fact they are shooting game of all descriptions that chances to come within range of their guns. It is an undoubted fact that the marked scarcity of woodcock this past season, and the consequent small number of gunners seeking them, has been a great protection to the young grouse.

Another conceded necessity of our Pennsylvania game laws is a provision for game constables. As the law stands to-day, it is simply anybody's business to see to its enforcement, and as usual, "what is everybody's business is nobody's business," and as a consequence, no matter how just and proper our laws may be, no private individual cares to take upon himself the responsibility of their enforcement. We have already cited three cases of killing deer before the season was open, which fact is known to a dozen parties; that in two of the cases the Sunday law was violated, which is as publicly known, and can add that at least one-half of the birds sold in the local markets are snared, and that the fact is well known. Still an arrest for a violation of the game laws is of rare occurrence. A competent officer, to whom these facts could be presented, would do more to preserve our game than a volume of laws with no positive duties of enforcement.

The Shohola Falls property comprising about 8,000 acres is located in the interior of the county and has always been as it still is, the choicest hunting territory that we possess, yielding more and a greater variety of game and fish than any other private property of similar extent, yet in spite of the liberality of its proprietor, Garret W. Hart, in permitting all reasonable and legitimate sporting in proper season, the beneficiaries of his liberality are the first to abuse it; and in spite of his individual efforts to preserve his game for legitimate profit to the neighborhood guides, they are the lawless ones that, for a small consideration, will join their equally ungrateful patrons and shoot, snare, trap, fish or hunt, in or out of season, and thus "kill the goose that lays the golden egg." Personal observation, and all reports, indicate that this region will afford ample sport for deer, grouse, woodcock and ducks, this season, if the poaching pot-hunters do not get in their work of destruction too early and too actively.

PIKO.

### The Massachusetts Deer Law.

WHITMAN, Mass., Sept. 17.—*Editor Forest and Stream:* A recent article in your paper regarding Massachusetts deer is entitled to some comment from residents of this State. The article spoke of a deer running wild in Massachusetts, and expressed surprise at it, but if the writer were to spend a week in Cape Cod and listen to the baying of the dogs as they chase "short-tail foxes," he would not be at all surprised that deer are found off the Cape.

All the game law there amounts to you could put in your eye and then could see the reason they go fox hunting. If you are on the Cape and hear the dogs running toward the ponds, and then hear a gun, the thing to do is to get as near the place of shooting as possible, and at dark you will see some one carrying home the biggest fox you ever saw. I do not mean to say that all fox hunting is after deer, but I am willing to say that two-thirds of the hunters go out with no idea of bothering after a fox at all. They are after deer. I asked a friend who lives on the Cape how he liked the deer law, and his answer was that the present law is just what the residents wanted. They have the hunting all to themselves. They are right there all the time where the deer are, and the law keeps outsiders out of the woods.

Deer were quite plenty ten years ago. Where have they all gone now? Many of the local hunters say they have been destroyed by fire, but it was not by forest fires. The fire that destroyed the deer had to have buckshot in front of it. A few may have been killed by fire, but deer are not fools to stand still and be burned when there is plenty of water near at hand, as there is on the Cape, where there are 300 lakes and ponds.

A great friend of mine pointed out to me on the street not long ago a man that had killed nine deer in one fall on the Cape three years ago.

You will do me a great favor if you will publish part or all of this letter. I am not ashamed to sign it with my name.

WM. WEDEN.

### Mercurial Ointment for Guns.

ROCHESTER, Sept. 12.—*Editor Forest and Stream:* I wish through your valuable paper to inform the sporting fraternity that if they desire to keep their guns in trim and free from rust there is nothing that seems to be such a specific and preventive of oxidation on steel and iron as mercurial or "blue" ointment (*Unguentum hydrargyri*) applied in small quantity both externally and inside the barrel.

Surgeons have long been in the habit of using it on their surgical instruments to avoid rust. It is astonishing how small a quantity will answer.

There is also another benefit to be derived from its use. Mercury does not have the least affinity for steel or iron, but it does have for lead, and this quality is of great value to the rifleman, in case a rifle is leaded, as by amalgamating the lead it causes it to lift from the creases and it can easily be wiped out.

In the old muzzleloader the leading of the barrel did not occur to a great extent, as all the balls were surrounded by a patch of cloth and the lead did not come in contact with the barrel. It is different with the modern breechloader. It is best to say to those who contemplate using this material that after standing a few days with the ointment in it, the barrel will appear to be badly rusted, owing to the lifting of the lead in the creases. Wiping out will dispell all fear. A gentleman who has spent some time hunting in the jungles of India stated that nothing so effectually prevented rust on his guns as this material. The writer has used all kinds of oil and grease on his gun, but mercurial ointment is superior in his estimation to anything else.

It is his custom after having cleaned the gun and wiped it with the ointment to ram the greased cloth into the breach and put another at the muzzle. This, however, is not necessary if the arm is kept in a place of ordinary dryness. Guns with brass trimmings should not be treated with it.

J. H. B.

[Mercurial ointment has been used to prevent rust on shotguns for many years, and as suggested by our correspondent, is very effective.]

**Chickens, Ducks and Geese**

are going to be very plentiful along the line of the Northern Pacific this season. Make your arrangements to go and get some of them. Send Charles S. Fee, General Passenger Agent, St. Paul, Minn., 4 cents in stamps for "Natural Game Preserves of the Northwest."—*Adv*

## TEXAS AND THE SOUTHWEST.

Col. T. H. Micheljohn, A. B. Critzer, Wm. Simms, Constant Leroux and Charley Campbell, all violent hunters who have their abode in San Antonio, went in the neighborhood of Victoria in search of prairie chickens. It was a great party in more ways than one, as all are fine hunters and good shots. They did not find chickens as the entire country was flooded by recent rains. They report thousands of plover and curlews and a good flight of bluewings, and not being too proud contented themselves with the latter birds.

### Ducks at Corpus.

A private letter from Corpus Christi gives me the welcome information that the web-foots have seriously invaded the coast, the lagoons on Padre and Mustang island being literally alive with waterfowl. The crop of plover this fall is enormous, while the curlew and ibis overrun the entire coast. The shooting at the Oso has not yet commenced, but the local sportsmen are wishing for a stiff norther in which to inaugurate the duck season.

### Buffalo Again.

A friend of mine living at Del Rio writes that he heard three cowboys, whose names he did not secure, converse about the alleged buffalo herd that it is claimed by several parties to have been seen in the valleys of Val Verde county. They spoke of the matter in a natural way, wondering why some one did not hunt them. They all three had seen the herd and agreed that it consisted of about thirty head, including a few calves. One of the cowmen stated that the animals were not very wild, he having ridden as close as 100yds. to them.

### Another Heavy Rain.

Ordinarily the above heading means but little to people who live in a country where Jupiter Pluvius has his abode, but down here it means a good deal. It means good grass and water for cattle and game. It means money in the sportsman's pocket, and then he can hie himself to the wilds and once more press the turf as of yore and hear the beautiful note that Bob White clucks forth. In short, it means a good time for every one. Plenty of deer, turkey, doves, quail, etc., to say nothing of ducks and snipe.

The 22d of September brought us a root-soaking, invigorating and drenching rain, which lasted two days, filling every water hole and swamp and lake within a radius of 100 miles of San Antonio. Our favorite resort, Mitchell's Lake, nine miles south of the city, has opened shop again, the first time in three years, and the boys are pounding away at bluewings and plover.

### A Rare Point.

As a knot of San Antonio sportsmen were exchanging experiences the other evening at one of our fashionable clubs, the conversation turned upon curious points that had been seen by those present. I remembered a curious case where I saw four dogs on a stiff point on a covey of quail at exactly 12 o'clock at night.

It was on Dec. 31, 1890, when a party consisting of Hon. S. G. Newton, Peter Shields, George Paschal and Oscar Guessaz went to Mitchell's Lake to hunt ducks. Each one had his dog with him, intending to take a turn at Bob White after the morning flight was over. The party arrived at about 4 P. M., scattered over the lake and returned to the club house for supper. After supper, it being a bright moonlit night, "Barney," a good soldier whose duty it was to keep poachers out of the preserve, proposed a 'possum hunt, stating that the "woods were full of 'em." Accordingly we started, and in an hour we had a half-dozen fat and juicy 'possums to take back to camp. As we neared the club house, and about 200yds. from it, we missed the dogs, and not wishing them to be scattered all over the country, we proceeded to hunt. Presently we came upon one, then another, and finally the whole party of dogs was seen—all rigid as statues—all pointing as hard and as faithfully as they knew how.

"What do you reckon they've got?" queried Newton as he stopped.

"The 'Colonel' certainly has something," came the tremulous voice of Judge Shields. "I never knew the 'Colonel' to lie in my life."

"I'll bet a thousand they've got a possum," said Geo. Paschal.

"Guessaz, punch him out."

I did not like to disturb the dogs, they made such a beautiful picture. But I took out my watch and looked at it.

"This is a splendid inaugural for the new year, gentlemen," I said, holding out my Waterbury for inspection. "A beautiful point the first thing in the new year is a good omen, and I doubt whether any other knot of sportsmen have ever been so fortunate to see three setters and a pointer pointing at 12 o'clock at night."

I then stepped gently forward between two of the dogs and a large covey of quail whirred away into the moonlight.

A point on quail at 12 o'clock midnight on Dec. 31, 1890. Wasn't that nice? Texas Field.

### Vermont Game Notes.

Highgate, Vt., Sept. 26.—*Editor Forest and Stream:* My Forest and Stream pen I find on examination has become very rusty from disuse. Had I taken it with me into the northern wilds I might have kept its nib well polished by sending you occasional items.

Your lusty "shout" "Stop the Sale of Game" has been heard far and wide, and has become a strong plank in the platform of the sportsman's creed. It is a re-echo of the faint cry made by the writer in the Dominion Gun Club's alliance nearly a decade of years ago. It then had but few friends outside of that club of sterling sportsmen "The St. Huberts," of Ottawa, Ont., but now thanks to your efforts, the great majority of gunners in that country are following your call—ready to do battle for the cause—all glory to the Forest and Stream say we all.

Small game is plentiful this season in this section of Vermont. Good bags of ruffed grouse and gray squirrels are being made by the initiated—those who can shoot straight. One young sportsman brought in twenty-two grouse in two afternoons' outing.

A large number of woodcock bred here, but most of them left on their southward migration before the beginning of the open season, Sept. 15. The recent heavy storm has, however, brought in a good flight of northern bred birds. They arrived here thin in flesh, but a few days in our succulent covers will put them in fine condition. Then Bruce M. will be on duty every week day until the next cold rain arrives, which will start *P. minor* again on his southern journey.

One party a few mornings ago brought in three foxes, and as soon as the white frosts arrive the hounds will be out bright and early in full force.

A buck doe and two fawns have roamed around quite near here this summer, so far unmolested.

The sharp-tail grouse and quail that were turned out in this State last spring, if reports are true, have materially increased in numbers, as coveys of young birds are frequently seen.

The Forest and Stream should start and lead the cry against the "posting" and making "private preserves" of woods and waters that have been stocked by the State with fish and game as a benefit to the general public.

Stanstead.

## STILL-HUNTING ON THE OSWEGATCHIE

As the time draws near for my usual hunting trip my mind goes back to last year's outings in the Adirondacks, and I feel constrained to tell my brother sportsmen of the success our party had while at Sternberg's, St. Lawrence county, near the headwaters of the Oswegatchie.

There were seven of us who arrived at the Inlet House at 4 P. M. on Oct. 8, and next morning at 7 o'clock started on our first hunt. A gentle rain had fallen through the night, and it was an ideal day on which to still-hunt the monarch of the forest, whose quick ear will catch the sound of a careless step or a broken twig at a seemingly impossible distance.

My experience on this occasion was no exception to the rule, for after my lunch near a cool spring at mid-day I started over a rocky knoll toward a hardwood ridge, where later in the day I expected to find a deer feeding on the fallen beechnuts and perhaps surprise him with a .40-70; but while picking my way over the rocks I slipped on the treacherous leaf mold, and in trying to gain my equilibrium a small stick broke under my feet with a sharp snap, and the next instant I heard a thump, thump, thump, at my left and caught a parting glimpse of three white flags as they passed out of sight at least twenty-five rods away.

Upon examination I found where the deer had been lying down in the edge of an old windfall about twenty rods from the broken stick.

Space forbids my telling the many experiences of the day as related by the different hunters when gathered around the glowing wood fire after supper. It is enough to say that Clint O. paid the penalty that we had previously agreed should fall upon the slayer of the first peer.

The next day Will L. drew the lucky number and brought in a fine doe before 11 A. M., and on Wednesday he broke his previous record by reaching the hotel at 10 A. M. with a fine spike buck on his back. Plenty of deer had been seen and several shot at by the members of the party, and many were the excuses invented for not having brought them to bag.

Thursday morning Mr. Butry was called home by a telegram, and as the "kid," his son, could not be induced to hunt anything larger than grouse, our party was reduced to five active members. There had been no rain since Monday and the woods were getting too dry and noisy for still-hunting, so we spent most of Thursday and Friday canoeing and making snap shots with the Kodak of the beautiful scenery on the river and adjacent lakes.

Saturday morning dawned windy with a light rain, which lasted until 10 A. M., and made good hunting for the rest of the day. Three more deer were added to our string that night; the first, a spike horn stopped by a .40-70 from the little Daly at 9 A. M., was credited to me; the second, a large doe at 10 A. M., to Rath, and last, but not least, a 150-pound buck at 4 P. M., to Goodman, making a grand total of six deer in six days, and every one killed in a sportsmanlike manner; that is, by still-hunting—no hounds or jack lights were used.

On Sunday afternoon the team came in from Benson's Mines to take out Goodman and Ditmars, who had made arrangements for only ten days' absence from home, and were obliged to reach there Monday.

We all came out to see them off. The luggage and deer were soon safely loaded, and as they drove away amid many expressions of regret, Dell cast a longing look behind, and, as he afterward informed me, then and there made a mental resolve that another year he would break a few more links from the "chain of business" and stay until the balsam-laden air should affect his appetite to such an extent that mine host Sternberg would deem it necessary to advance the price of board.

The following week very little hunting was done; the leaves were so dry and crisp that the running of a ground squirrel could be easily heard at a distance of 50yds., and it was almost impossible to jump a deer near enough to catch sight of it, to say nothing of getting a shot. Our time was spent in cutting up and jerking the meat of the five deer already killed, shooting a few partridge and ducks, and in unsuccessful attempts at still-hunting in the early morning, when the dew rendered the work one degree less noisy. Lastly in being delightfully lazy. Rath, who by the way when on the tramp possesses the energy of a locomotive at 90lbs. of steam and the throttle wide open, brought in from one of his twenty-mile constitutionals a large fox.

Only one more deer was added to our string, a large doe, which, as she was killed on Saturday morning, furnished us with fresh venison for our sportsmen friends at home.

On Sunday the team came in to take us out to Oswegatchie. Our journey home was an uneventful one and we reached there safely on Monday. Hector.

### Rail and Gray Squirrels.

Elkton, Md.,—The reed bird and rail bird season opened in this county Sept. 3, but for the first two weeks of the season there were no big bags of rail on account of low tides; thirty-six birds by John Morgan being the best I have heard of. Reed birds are more plentiful than I have seen them for the last eight years. They are in splendid condition and are being slaughtered by thousands. The prospects for quail and rabbit shooting are fairly good this fall; gray squirrels are not near so plentiful as they were two years ago, but enough can be bagged to make a pot-pie, if you go about it the right way. E. S. G.

## GROUSE AND GRAY SQUIRRELS.

There are three requirements absolutely necessary to the complete enjoyment of a hunting trip. Their importance from the writer's point of view is, first, to go where there is a generous supply of the game sought after; second, to be well fed, and third, to be comfortably housed. Of course there instantly comes to the mind of the reader all those minor features which go to make up the fullness of those perfect trips, the memory of which will linger till the last spark of life burns out. Without these minor features the trip may often be a success, without any of the three first mentioned it never can be. And now to tell you of a trip which will amply fill all these requirements.

The ruffed grouse and gray squirrel shooting in the territory about Springfield I believe is not to be excelled in southern Vermont. Springfield village lies in a deep valley on the Black River, about four miles above its mouth, where it empties into the broad Connecticut. It is surrounded by hills on every side, which are plentifully covered with excellent grouse cover and heavy timber in which lurks the wily gray. Every grouse hunter knows that this bird flies the swiftest and strongest of any of our game birds, and the fact that he is rarely found elsewhere than in thick cover, which offers only snap shots, makes his capture a feat of which any man may well feel proud. To be a successful grouse hunter one must have a quick eye, a steady nerve and no small degree of skill as a wing shot. A good grouse dog greatly increases the chances for a good bag.

In this part of the State we had a mild winter without many crusts or deep snows, and the hatching season this spring was exceedingly dry and the birds have done well; reports from every side indicating that the coveys are numerous and large. There are not many good grouse dogs in this place, which is all the better for visiting sportsmen.

The gray squirrel shooting, which is always good here, is exceptionally fine this year, strings of twenty to a single gun having been made in an all day's jaunt, and two or three hours' work almost any day will bring to bag from six to ten, if a man understands his business. Still-hunting is the method employed by all the local sportsmen.

First class foxhounds are owned in town and devotees of this sport can find ample opportunities for indulgence in their favorite sport.

With the first fall of snow the rabbits (*Lepus americanus*) have to take it. Many of our local sportsmen own good rabbit dogs, and as the rabbits are very plentiful this form of sport offers great inducements to all who love the music of the hounds.

There is a good hotel and Springfield is easily reached from New York and Boston, by the way of Charlestown, N. H. and stage. W. W. B.

### Game For Middlesex Fell.

Melrose, Mass., September 19.—*Editor Forest and Stream:* Since the appearance of the note in your issue of 15th inst. signed J. M. P. as to the colonization of the Mongolian pheasant in the above public reservation, I have made inquiry from a high official as to the movement, and find that the properly constituted authorities are greatly averse to such colonization on the ground that the pheasant wars with native birds. Now as this is news to me I would like to learn through your valuable paper what kinds of native birds the pheasant is on such bad terms with, and in what manner it is antagonistic.

I have been a close observer of this variety of game bird for a number of years in England and have failed to see him show any combativeness to any other variety of bird except a few blows against a game chicken, but this was accounted for by the pheasants being hatched under game hens and growing up with the game chickens. Evidently "familiarity breeds contempt." If it is true that the pheasant is antagonistic to native birds, either game or others, I should be sorry to see him colonized where he would do as much mischief as he might in the future in our Massachusetts reservations; it is well for our commonwealth that the proposed colonization of any foreign species be carefully investigated by competent persons or it may turn a greater curse than the gypsy moth or English sparrow.

There seems to be a strong probability that the reservations in Massachusetts will be gradually stocked with such native land and water fowl as there is any hope of successfully colonizing, after which some attention may be given to the introduction of desirable foreign species.

Comedy.

[The Mongolian pheasant is commonly thought to be a somewhat combative bird, and the cocks fight among themselves during the breeding season. At the same time, it is to be said that there seems to be in the country on the northwest coast where these birds are now enormously abundant, no diminution in the numbers of the grouse which are native to that region. We do not believe that the objection advanced by the authorities quoted in "Comedy's" letter is a valid one.]

### New Rifle Sights.

We present herewith illustrations of two new Lyman sights. The first is a hunting sight, similar to the original ivory bead except that it has the windgauge principle added. This addition will make the sight very useful for long-range work, and will also render it easier of perfect alignment with the rear sight. It is operated by the thumb screw shown on the right side, one complete revolution of which moves the sight nearly a degree on the vernier.

The second is a patent target sight with reversible aperture and globe which can be quickly changed. The pin head is finer and better adapted for delicate target work than that in the Lyman combination sight.

### A New Hammerless.

The long expected Remington hammerless shotgun is now ready for the market. It is made in two styles with automatic and non-automatic ejectors. The guns are fitted with damascus barrels, choke-bored, English walnut stocks, half pistol grips, rubber butt plates, checkered fore-ends, case-hardened frames and mountings, automatic safeties, Purdy fore-end snaps, triple bolt, top snap, extension ribs with bite and flat matted ribs.

The automatic ejector retails at from $67.50 to $247 50, according to grade, and the other at from $45 to $225.

The low price of the guns, in connection with their workmanship and shooting qualities, will undoubtedly make them very popular with sportsmen.

### A Bleached Partridge.

*Editor Forest and Stream:*

While hunting recently, in the vicinity of our beautiful Lake Kenosha, I was much surprised and pleased when, after a successful shot, my pointer Don delivered to hand a partridge of unusual color. An examination showed it to be a young female, nearly grown, of perfect form, but almost entirely buff or yellow, the color varying from light underneath to darker shades on its back, the tail and lower wing feathers being of ashy hue, tinged with the prevailing buff. It is a beautiful and remarkable specimen of nature's entire departure from its law of regular coloring, for it does not show any of the colors ordinarily appearing on its species. Regarding it as truly a *rara avis*, I have placed it in the hands of a sportsman friend who is skilled in the art of taxidermy.

Impressed on my mind, often to be reviewed and reenjoyed, are the conditions and incidents of this day's shooting. It was a perfect day, filled with the beauty and richness of late September. I had the companionship of a friend, with whom I have spent many enjoyable and successful days afield, but from whom I had long been separated. We found an abundance of the noblest of our game birds in close proximity to my home in a large city.

This particular bird was captured on a sunny hillside, covered with birches with an undergrowth of graceful ferns and netted vines, skirted by a cool swamp of dense growth, making a natural home for the ruffed grouse. It is a beautiful spot, as the hill's summit affords an excellent view. Nestled at its base, lies one of the loveliest of lakes, fringed with tall pines whose graceful forms are mirrored in its clear depths. The surrounding hills and intervening dales, the woods, fields, and a distant river view all combine in enchanting scenery. The eager but cautious trailing of the dog, the staunch point, the flush at command, the swift flight stopped by the intuitive shot, the well obeyed order to "fetch," and the reception of the prize, are the incidents highly appreciated by all experienced sportsmen and were often repeated during the day.

I have found partridges this season in greater numbers than I have ever before seen them in this section. The occasional day spent in hunting them has been keenly enjoyed, also rewarded by renewed health, frequent game dinners for ourselves and sometimes for the friend who is "chained to business;" nor has the sick neighbor been forgotten.

D. S. Short.

Haverhill, Mass.

### Stray Partridges.

Preston, Conn., Sept. 27.—*Editor Forest and Stream:* It would seem by this item that there are at least one brace of ruffed grouse in this vicinity.

On Wednesday a brace of partridges were started from the shrubbery on the grounds of W. H. Prothero, Greene avenue, and directly on starting, one of them flew against the house and lay in a dazed condition for a short time. Its mate circled back, and waited till it was able to proceed, when they flew directly across the city and disappeared in the suburbs. They appeared in good condition. Queer place for them, nearly in the heart of the city.

E. M. Brown.

### Carrier Pigeon Shot.

Moorefield, W. Va., Sept. 20.—*Editor Forest and Stream:* On Sept. 2 Mr. G. C. Cunningham, who lives near here, saw a bird on his barn he took for a hawk. He sent some one out with a shotgun to kill it. When the bird was picked up it proved to be a carrier pigeon. On one of its legs there was a metal tag, which has been lost, bearing the inscription "J. C. B., 7-2 94."

Perhaps the publication of this letter in your columns may result in the discovery of the owner of the pigeon.

A. R. Hack.

### Game in Central Pennsylvania.

Clearfield, Pa., Set. 24.—*Editor Forest and Stream:* The prospects for a good season for game in central Pennsylvania are bright. Black and gray squirrels are reported plenty. Grouse wintered well and their drumming on the hillsides promises good sport. Very few deer were killed last fall, and as a result they are reported fairly plentiful in the game woods.

Frank T. Harris.

### The Outlook in Virginia.

Surry, Va., Sept. 26.—*Editor Forest and Stream:* As the hunting season is now open for most kinds of game to be found in this section, I write you something in regard to it.

The deer season opened Sept. 1, and since then several have been killed near here. Old sportsmen say they never saw as many before. The turkey season opens Oct. 1, and there seem, from all indications, to be numbers of them. Squirrels can be found in large numbers. Sora have been very plentiful in our market this season, and while I am writing I can hear the constant roar of guns shooting them. If you know of any one that wishes any information about hunting in this section you can refer them to me.

A. B. G.

### Long Island Game Prospects.

Port Jefferson, N. Y., Oct. 1.—The ducks are coming this way thick and fast. I have been watching them for the past three weeks, and find that there will be quite a great many for the first of the season's shooting.

I think that the rabbit hunting will be very good this fall on the Island, but quail will not be very plentiful. There are an abundance of partridges (ruffed grouse) this season.

F. B. R.

### Rather Read It Than Eat.

Port Jefferson, N. Y., Oct. 1.—*Editor Forest and Stream:* As I continue to read your valuable paper, I become more and more impressed with it. Like a great many other men I think that if one does not have the time to go hunting and fishing as much as he would like he should take the Forest and Stream and read about what his brother sportsmen are doing. There is a great deal of consolation in this. I had heard a great many people speak of the Forest and Stream being such a valuable paper, but did not know its worth until I began to get it from our newsdealer; but now I would rather go without my meals than to be without it.

F. B. R.

### Prairie Chickens.

Recent reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway, 207 Clark street, Chicago.—*Adv.*

# Sea and River Fishing.

## ANGLING NOTES.

### Smelts, Black Bass and Trout.

Mr. Edwin Hallam, writing from Detroit, Mich., asks the following questions:

"In some of your notes not long ago you spoke of cutting up fresh-water smelts for bait. I think it was in July. Will you state in your notes in Forest and Stream how you catch smelts in July. Do you use a net or hook and line; if a hook what size and what do you use for bait? Do you have to fish for them in deep water or shallow? Any information on this subject will be read with interest.

"Do black bass (small-mouth) feed on smelt to any extent?

"Do the rainbow and brown trout feed on smelt if they have the opportunity to do so?

"Can rainbow trout and the native brook trout be raised in the same brook successfully, or will the rainbow eat the native trout? If so how have these facts been proven in wild brooks or in inclosed ponds where it was the survival of the fittest, or of the largest and strongest fish?

"Will black bass continue to increase in numbers in streams where they have been once introduced or are their numbers limited to the food supply?

"Do the black bass do as well in running streams as they do in ponds or lakes?

"These are a lot of hard questions for you to answer."

The smelts that I referred to as being used, when cut up for bait, were caught in the deep water of Sunapee Lake in June and July, with hook and line. To be exact the water was from 58 to 63ft. deep. In August, 1890, I took the bottom temperature at this very place and found it 52° Fah., while at the surface it was 68°. In many places the bottom temperature is 42°, and in one place it has been found as low as 38°, making it ideal water for smelts. The tackle used in catching smelts is a hand line of small size, although the size is not material, and a fine leader 9ft. long. Have the leader tied with loops, three in numbers, exclusive of the two end loops for attaching snelled hooks. To one of the end loops of the leader fasten a sinker of sufficient weight to take the line quickly to the bottom. A pear-shaped sinker, with wire swivel and 1¼oz. in weight, is what I have used. Fasten three snelled hooks number 9 or 10, to the three loops in the leader and your smelt line is complete. Fish very near to the bottom and be constantly on the alert, for smelt bite very delicately and it requires some experience to hook them. For bait, use earth worms until you get a smelt, and thereafter bait the hook with pieces of cut-up smelt, which they seem to prefer to any bait which can be offered to them on a hook.

Black bass do not feed to any extent on smelts, as they inhabit different portions of the water of a lake in which both fish are found. Comparatively the smelt is a deep-water fish and the black bass a shallow-water fish. In the spring when the smelts run up the tributary streams to spawn, the bass have not come on to the shores and shoals to spawn, so they do not meet as a rule, yet occasionally a bass has been found with smelt inside of him.

Without doubt the brown trout and the rainbow trout would feed on the smelt if they had the opportunity, but I know of no water containing smelt in which the brown trout has been planted, or in which the rainbow trout has been planted and known to remain.

Rainbow trout and native brook trout cannot be raised in the same brook for the reason that 99 times out of 100, the rainbow trout will go down stream and disappear for good when planted in Atlantic coast streams. They disappear when they are two years old as a rule, but there are a few streams in which they have remained and grown to good size.

Jordan has declared, finally, that the rainbow trout and the steelhead trout (once called the steelhead salmon, and this name is retained in the books to-day) are one and the same. The steelhead "ascends the rivers to spawn, and then runs out to sea again." (See my note in Forest and Stream of Aug. 4, this year.) This will account for the rainbow trout taking French leave of the streams when planted on the Atlantic coast. All trout are cannibals to a greater or less degree, depending upon the food supply and circumstances.

People are often exercised about the native brook trout being eaten by other fish, and in their solicitude they overlook the fact, or refuse to recognize it, that an old *fontinalis* is about as voracious for its size as any of the trout family, barring the brown trout, which grow so much more rapidly than the native or any other trout, that they are masters of the situation when planted with other species of the family. One has only to observe the small mouth of the rainbow trout and the large mouth of the native trout, *fontinalis*, to determine which would suffer in a personal encounter. I know of one pond in an Adirondack preserve where the rainbow trout has been confined with the native trout, and the forester in charge has told me that he never discovered that one species preyed upon the other; but they may have done so for all of that.

Black bass will continue to increase in numbers in a planted stream if the water is suitable, but the matter of food is all important as it is with the well-being of any species of fish in any water. A fish can starve for lack of food as well as a man or a horse, but it will be longer about it, for there is some little food in the water under most conditions, and there is none at all in the air under any condition. Black bass fry when first hatched will eat one another, and there is no reason that I know of why an adult bass will not eat the young of the species rather than starve. It is simply wasting fish to plant them in any water lacking suitable food for them, and, I may add, an abundance of it.

Black bass will do better in a large stream than in a small pond. Naturally they are "big water fish" and they require plenty of room to be at their best. Black bass are not migratory in the sense that anadromous fishes are migratory, but they are great rovers at some seasons of the year provided they have the opportunity. Black bass have been widely distributed by the building of canals, by Fish Commissions, and by individuals; probably no other fish has been so generally planted in new waters, for they were not natives to the waters of New England or the Eastern Middle States, where they are now found in ponds without number, but I believe that the original home of the black bass was the Great Lakes, their tributaries and connections. Scores of small ponds have been planted with black bass that will never amount to anything as fishing water. For a time they have flourished and then fallen to decay. A remnant of bass may remain, for you cannot get entirely rid of them, but they are so few and far between that these little ponds can no longer be called good ponds for black bass fishing. Many mountain trout ponds have been ruined in this way, for while the black bass craze was at its height, the fish were planted right and left, without any sense or judgment. What has been done in this direction cannot well be undone, but in the future more care will be exercised in planting black bass in new waters.

### Making a Black Bass Pond.

Mr. Lingo, of Denison, Texas, also desires some information, as follows:

"We are organizing a club here for the purpose of building a lake for boating, picnics and fishing, especially for fishing, and more especially for black bass and croppie. The only place near here where we could secure any body of water has no running water, and we would have to depend upon surface water for the pond. We can cover about twenty acres of land with water and the water at the dam would be about 15ft. deep and the slope would give a fall of one foot in a hundred. We would drain about 200 acres of grass and timber land; the land sandy and rocky. Do you think black bass would do well in such a lake? Bass seem to do well here in some river bottom lakes that overflow every few years, and where the water is not over 3 to 5ft. deep. All the little streams near here have more or less bass in them and the lake could be stocked with fish from these streams. The land we would use is now in timber and we would cut everything out, leaving more or less shade entirely around the lake. We do not wish to go to the expense of making the lake and then find it useless for fishing."

On the broad principle that all so-called game fishes require living water in which to thrive and multiply it would be a useless expense to make such a pond as is described in the query, for as I understand it there is no certainty that the water in the pond can be regularly renewed and aerated before it becomes stagnant.

If there was a certainty of sufficient water to keep the body of the pond in motion through the overflow, such a pond would not be fit for fish until several years after it was made, as the decomposition of the vegetable growth in the overflowed land would kill more hardy fish than the large-mouth bass, which is the black bass of Texas.

I knew of a somewhat similar pond to the one proposed that was made here in the North with the exception that it was made in the mountains and included several small springs. In the main the pond was dependent upon water from the mountain shed, although the springs were supposed to keep it alive.

Among other fish introduced were bullheads, and the decomposition of the covered timber land killed every living thing in the water. After two or three years the pond, after repeated cleanings, became clear and the little springs did what was expected of them; but Mr. Lingo has no spring for a starter as I understand him.

I have a letter from a friend in Texas, in which he describes Eagle Lake, about 75 miles west of Houston. He says: "The lake is in the open prairie, surrounded by live oak trees, and covers about 3,000 acres. It has been known to me ever since I lived in Houston, and I have heard that it was full of black bass, but as I also heard that it was not protected and that it was seined, I never cared to visit the place. The lake was recently purchased by a farmer who invited me to visit him and fish his newly acquired water. I found the lake covered with weeds and lilypads from one end to the other. Not 100ft. square of open water to be found anywhere on which to cast a fly. I had taken nothing but a fly-rod with me, for when I was in Maine last time I shipped all my rods back by express, and they had not been taken from the store to my house when the fire occurred, so they were destroyed.

"At the second or third cast I hooked a big bass which went into the moss which grew near the surface, and away went my rod in more pieces than when it left the maker's hands.

"The old fisherman with us said the only way to catch bass was with an outfit he gave me after my rod was smashed. This consisted of a cane pole about 20ft. long with about 4ft. of line and a big spoon at the end of it. He coolly informed me that he had brought it along to be used after I had broken my rod. It was no pleasure for me to fish with such a pole among lilypads and moss, but I 'yanked' two bass before night weighing from 1½ to 2¼lbs. each. The lake varies from 2 to 6ft. in depth and has a good gravel and sand bottom, and is no doubt full of fish. It would be a lovely fishing spot if the pads and moss could be cleaned out, but I imagine it would be very expensive to get rid of these nuisances, and then would they not spring up again?"

Naturally they would spring up again, and this description of a Texas bass lake—nearly as much moss, weeds and lilypads as water—serves to describe other lakes in the State about which I have heard. So that the big-mouth black bass will live in waters in Texas that we would consider in a colder climate to be very unsuitable for game fish, but they will not live long in dead water.

### Landlocked Salmon for Lake George.

Dr. Tarleton H. Bean, Assistant in charge of the Division of Fishculture, U. S. Fish Commission, writes me that the carload of fingerling landlocked salmon for Lake George, N. Y., will be planted between Oct. 1 and 10.

Already there is a widespread interest taken in the experiment of stocking the lake with this choice food and game fish, and I believe all the conditions are favorable to the success of the plant.

### Heavy Salmon Gut.

In one of my notes in this column I said that we did not get the stoutest and best salmon gut on this side of the ocean as a rule. For this I was criticised, although I could have proved that I was right, for we do not pay 25 cents and over for a single strand of gut, but a tackle dealer and importer wrote me lately: "Really heavy salmon gut is hard to get. We sent to England for some and they replied that they had none to spare from the local trade."

A. N. Cheney.

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

In the last issue or so of Forest and Stream I have been writing about Phantom Lake and the little village of Mukwonago, 86 miles north of Chicago, on the Wisconsin Central road. I have always had the idea that the word Mukwonago had in its meaning something to do with frogs, but Mr. Dan Camp, of Mukwonago village, son of one of the old settlers, is quoted to a different effect in a late issue of a Chicago daily. Mr. Camp's remarks are as follows:

"How this village came to be called 'Mukwonago,' which means in Pottawatomie 'the place of bears,' I have heard my father relate many times as we sat before the great fireplace in our old log cabin not twenty rods from where now stands the *Chief* office. My father, H. H. Camp, came to Mukwonago in '36, riding an Indian pony all the way from Hamburg, New York State. He with two others were the only 'palefaces' here in the spring of 1836, but the Indian village, Mukwonago, contained 1,200 souls, and was perhaps the largest Pottawatomie Indian village in the Territory. The village was a straggling row of wigwams along what is now the main street of the village, some along the river banks, and the chief, who indulged in the luxury of four squaws, had his tepee just north of the Phantom Inn, near the outlet of Phantom Lake. This lake was called 'Nish-ko-Tash,' or clear waters. The level plateau where the Pickering cottage stands was a favorite camping place of the tribe. The Indians remained here more or less until the early '40s, and during the winter of '38 there was an old Indian across the Fox River in the heavy timber, an Indian whom the tribe held in high reverence—a sort of medicine man. He was much bent with age, the only Indian, father says, whose hair was white with age. He claimed to be 150 years old. Father is certain he must have been nearly as old as he claimed. In course of one conversation, and after father had made him a present of some tobacco and, I apprehend, a little firewater, he told the story of 'the place of bears.' Long ago when he was a young brave, there came a year when there was no rain and game fled the country, making it hard for the tribe to get any big game such as bear, elk and deer, and the tribe, or this branch of it, which at that time was camped near what is now Rochester, divided up their hunters, sending some up the valley of the Rock River, others up above the portage of the Wisconsin and Fox rivers, and some even went as far to the westward as the Mississippi for large game for winter supplies. All came back empty handed. As the party which had been sent to the north came down the trail leading from the direction of Waukesha they struck the highlands where this village now stands, which were thickly studded with great white oaks. Now these great trees on the highlands extend their roots straight down into the earth, where they were supplied with moisture. They were green and fresh and bore large quantities of acorns, a food that bears greatly like. Here they found countless numbers of bear, fat and sleek, and they killed a great many with spears and arrows—in fact, they slaughtered so many that it was impossible to carry them to their village. So they piled them up—over eighty—around a big white oak near here and concluded to move their entire village to this place, which they did, calling it 'Mukwonago,' or 'the place of bears.' This was the version given to my father fifty-six years ago by the old white-haired Indian, so that I may safely say the village has borne the name it bears for a century and a half, or before Milwaukee was thought of or the name of Chicago even spoken. This is why Muk-won-a-go is known as the oldest Indian village in Wisconsin."

The above lends a new interest to the sleepy little village near which the annual Camp Forest and Stream has been located for several years. There are more bass there now than bears, however.

Mr. F. B. Davidson, of Chicago, writes me:

"The trip I took down the Kankakee River proved void of results as far as the number of fish caught, as I struck the stream just after the high rains we had, and found the water very high and muddy, and from what I can learn the river is still in the same condition.

"I received a letter yesterday from Mr. C. C. Heimbaugh, of Momence, in which he informs me he has been appointed fish warden, which I was very glad to learn, as the services of a warden are badly needed on the Kankakee, and he is one man among ten thousand for the position. I have known him a good many years and know that he is a conscientious, energetic man, and I anticipate good results from his appointment."

All that Mr. Davidson says in regard to Mr. Heimbaugh I can cordially indorse, and I hope that under his care the good fishing of that famous stream may be made better. It has always been much subject to illegal methods of fishing. The popularity of the Kankakee with Chicago anglers dates back within the past five years, it being then brought into considerable mention by Forest and Stream.

### Mascallonge.

Within the past week two very fine mascallonge have come down from Lake Vieux Desert, caught by Mr. W. T. Holley and his party. One fish weighed 35½lbs. and the other 31½lbs. The smaller fish was a beauty, a perfect specimen of its kind. It had been packed in moss and had not been near any ice, so that the colors remained as fresh and distinct as in life.

From now on until the snow comes the mascallonge will be at its best in the Wisconsin lakes. I have sent three parties up for October trips, and if with the deer and mascallonge they cannot have sport enough to satisfy the most exacting taste, I am sure I do not know where they can find what they want. E. Hough.

909 Security Building, Chicago.

## THE PRIEST.

"William, fetch the priest!"

It was Admiral Sir John Hopkins of H. M. steamship Blake who thus commanded his canoeman.

It was an altogether strange and unexpected request for such a vigorous man to make, and under such circumstances. He certainly seemed to be in no immediate need of a spiritual adviser, for he was at the moment skilfully landing a fine salmon toward a convenient place for gaffing; hence I interposed with the query:

"What on earth do you want with a priest?"

Sir John's benign countenance lost for the moment its look of anxiety, and his eyes twinkled merrily as he replied:

"Why, to administer the last consolation, don't you know? We call the club with which we stun our salmon 'the priest.'" The point was obvious.

As the fish was being tenderly placed in the canoe I asked another question:

"Why do you gaff the salmon at all when you have a priest handy?"

This time Sir John was at a loss to know why I asked such a question, so I explained.

I rarely have my salmon gaffed; it is a disagreeable sight and a cruel operation, and it badly disfigures what is otherwise the most beautiful object the angler ever sees; the gorgeously brilliant silvery-purple king of fishes as he appears when first taken from the water. The fish also keeps much better when not torn by the gaff.

I have found that with a little extra care and patience the salmon may easily be led past my assistant, who wades into the stream a short distance, and stands ready with a short, slightly curved club; the fish is carefully raised to the surface of the water, and a little tap on the nose does the work in a trice; the victim instantly turns on his side without a struggle, a finger is placed beneath the gill cover and all is finished. It is better than either gaffing or netting, and is practicable in all except very swift water.

The following is an extract from a letter sent to me by Flag Lieut. H. G. Sandeman of the Blake, under date of July 20, 1894, and from the Restigouche; Lieut. Sandeman had also been fishing with us earlier in the season on the St. John at Gaspé. I quote:

"The Admiral and myself have just come down from the Restigouche after five days of splendid sport. The Admiral killed fifteen salmon, and I killed twelve, besides a goodly number of grilse. I have followed your plan of forsaking the gaff and using the 'priest,' and I did not lose a single fish by so doing, although some of them were pretty heavy, from 24 to 31lbs."

However, every salmon angler knows with what grim delight the old "gillie" puts the steel into his victim, and I presume my plan, if adopted, would lose lots of pleasure for him who plays second fiddle to the fly-fisherman.

J. F., Jr.

Boston, Mass., Sept. 24.

## DOWN THE BAY.

"Hello, 1953?"

"Yes, what's wanted?"

"Is H. there?"

"Yes, eight here. Who is this?"

"Scott."

"Oh, yes. What's on your mind?"

"Well, Bill and I are going down scup-fishing to-morrow, will you go?"

"Will I? What's the use asking such a question!"

"Well, meet me at the store as early as possible."

So I met "Scotty" at "the store," and a little while after we were on the car bound for the "shanty."

Now, the shanty is a neat little cottage situated on the west bank of Pawtuxet Cove, and fortunate is the fellow who gets an "invite" to come down and spend a day or two. Things are done up brown. We found the shanty still there, and after straightening up a little, took one of the boats and rowed up to the "village" for supplies. When we went down to take the boat again, one to see us would have thought we were going on a week's cruise, but we knew what a hole there is under a fellow's belt after a day on the water, and then Bill is a terror for stowing away grub.

When we reached the cottage S. started a roaring fire in the little stove, while I overhauled the tackle. Pretty soon S. asked if I wasn't about ready to eat, and looking up saw him sitting at the table calmly eating our clams.

"Look here! What have you done, cooked the clams?"

"That's what," said he, "and they are pretty fine at that."

Supper over and the dishes washed, we took the lantern and went after shrimp, but as the tide was nearly out, had poor luck, and decided to wait till morning. We went back to the shanty, told yarns and waited for Bill. It grew late. Bill didn't materialize. We both got about asleep, when the door opened and in walked the night owl, and before we were awake began to show up a new lancewood rod.

"That beats a split-bamboo all hollow," said he. "Right," says I, and S. said nothing, but got out Bill's old split-bamboo, which was broken a short time before in a fight with a tautog, and suggested that we fix it up. That is just like S. The more rods he can have sticking out from a boat, the better he feels. The rod was soon patched up, and S. suggested we climb up and turn in. Bill lulled us to sleep with tales of his trip abroad, and we don't know how many we missed. When I came to S. was prancing around and Bill was trying to find his boots in the dark. When we got down stairs S. had the Hamburgers sizzling, and began to tell B. what he had missed by not being on hand for supper, but he made up on the breakfast, and long after S. and I had finished, kept filling up, making the excuse that we were in too much of a hurry to eat.

Breakfast over, dishes washed, and a good mess of shrimp caught, we loaded the little sail boat with our traps, and stood away for Long Meadow. The bay never looked prettier. White sails dotted the surface here and there—cats, sloops and now and then a big schooner tacking down the channel, with the sun just coming above the horizon, and the clouds scurrying away, made a panorama of never-ending interest. The fishing grounds were soon reached, anchor cast and everything made snug. On the way down we had rigged up for scup, and soon had the lines over. Probably a good many of the Forest and Stream brothers know all about this delightful fishing, but for those who do not know just the style of tackle I will explain.

A light bass rod makes the prettiest rod, and a good braided linen line is the proper line. Some use a double leader and others none at all. For hooks we use a small Carlisle with double gut snood. S. and B. both use a spreader to keep the hooks apart, but I prefer to attach mine to a leader much in the same manner as a fly-fisherman, excepting that the hooks are nearer together. There is only one objection to a light rod, we have to use a fairly heavy sinker when the tide is going out and it is difficult to tell when one has a bite.

As usual S. was the first to catch, but only secured a cunner (or chogset as we call them here). B. followed with a small tautog. Then S. brought in a scup and it rather looked as if I was "skunked." But a little while after they began to run and we soon had the fish bag nearly filled with the handsome fellows. A little astern of us a chap was fishing for squit, and when he at last secured a strike, S. and I immediately rigged for squit. A large hook is needed for this fish, say a 4-0 Carlisle or a No. 18 Cincinnati, either to gimp or treble gut. About 6 to 8ft. up the line is fastened a large float. The hook is baited with a number of shrimp, and after casting out the line is run out and the float left bobbing up and down. Our floats bobbed up and down all right but we didn't get a strike. It grew rough, too, and one after another the boats pulled up and stood away. It grew too rough to fish in comfort in a small boat, and we too pulled up in a little while and, before the wind, scudded away toward home. Now and then a heavy sea broke over us, wetting everything, but with reliable B. at the tiller we felt secure. Twice the sea "pooped" us, and poor B. in the stern sheets got the full benefit of the salt bath. My, how that little boat did pitch and roll. I began to think of Block Island and the seasick time we had there, when Bill said he was glad we had a good headway or he should be keeled over, but we reached the shanty with no mishap, and after a short smoke, a change of clothes and a few more yarns, I left S. and B., boarded an electric and "stood up" for home. Tode.

Providence, R. I., Sept. 24.

## CAUGHT BY A FISH.

Jamestown, N. Y., Sept. 28.—*Editor Forest and Stream:* When a person starts out to catch a fish it seldom happens that the fish catches him. Yet this was the case of Peter Willman, of Jamestown, N. Y. Chautauqua Lake, near that city, is noted the world over for its large and fine mascalonge, sometimes weighing as high as 50lbs., and it was with one of these monster "lunge" that Mr. Willman had his experience. This is the story as told me by an eye witness:

Mr. Willman and Mr. Wilson, a friend of his, went up the lake to troll for mascalonge. The day was fine, the waves were dancing in the noonday sun as these two friends stepped into their little trolling boats and rowed out on to the lake. They had fished for some time and were some distance apart trolling over the weeds around a small island near the center of the lake. Mr. Willman had his trolling line tied to his leg. On a sudden he felt a mighty pull at the other end of the line, as if he had hooked a mule that pulled at the halter. He hung to the seat of the boat to keep from being pulled overboard. After a time the fish eased up and Mr. Willman began to haul in line. The fish came along all right till he saw the boat, which seemed to excite him somewhat, and he suddenly made up his mind that he would go the other way, which he did till he came to the end of the line, when he did not stop, but towed the boat around for a while. He soon tired of this and Mr. Willman pulled him up again and succeeded in hauling him into the boat. Then a fierce struggle took place. Some of the time Mr. Willman was on top, sometimes the fish. Both got excited and capsized the boat.

Here the advantage lay with the fish. He towed Willman away from the boat and proceeded to do him up with the line. He swam around and round his body, passed between his legs till he had him laced up like a shoe. In the meantime Willman had taken a death grip on one of his oars that was floating by. Wilson saw the struggle that was going on and started to the rescue. When he arrived on the scene Willman was out of sight. He saw the handle of an oar come up which he grasped, and pulled up and found Willman holding to the other end for life. His eyes were set and as he pulled him into the boat his head fell back and to all appearances life was extinct. Wilson went to work to bring him to, which he succeeded in doing in a short time. He unwound the line from Willman's body and legs and then turned his attention to the fish which was out with about fifteen feet of line. He landed the fish, which was nearly exhausted by its efforts to drown Willman and regain his liberty. Only for the timely arrival of Wilson, Willman's name would have been McGinty. The fish weighed 38½lbs. The above may read a little fishy but this scene actually happened on Chautauqua Lake September 12, 1894.

Frank W. Cheney.

### "Surf Fishing in New Jersey."

Morristown, N. J., Sept. 27.—*Editor Forest and Stream:* Mr. A. N. Cheney certainly gave us good measure when in this week's Forest and Stream he so graphically described the every-day "angling" editor of the daily paper.

It was too bad he had not made the acquaintance of the scribe who sent you the valuable note of Mr. William W. Hart's "Surf Fishing in New Jersey." That Mr. H. did catch some 3lbs. bluefish we are not called upon to doubt, but that is not "good surf fishing." That he, however, cast 250ft. into the surf with a "light surf pole, common bass line and reel and an 8oz. sinker," I feel somewhat competent to deny.

How few people realize that the majority of summer fishermen who "do" their vacations on the Jersey coast never cast over 100ft., and that if any one will measure off 250ft. accurately, he will then for the first time realize how much further the measured distance is than the one he guessed at over the water. Your correspondent was possibly competent to write of "plaice, a large species of flounder," and why, pray, did he not stick to what he knew instead of inflicting such stuff on an unsuspecting public? To me, one of the great features of Forest and Stream for over twenty years past has been its reliability, and it seems an injustice that such a report as the above should go unchallenged. Let this be my excuse for writing.

Big Reel.

### Oil in the Delaware.

Newark, N. J., Sept. 28.—*Editor Forest and Stream:* In your last issue I noticed a communication in regard to the emptying of waste oil by the Standard Oil Company into the Delaware River and its tributaries. I spent a week in the stream when shad were running in the Delaware River in that vicinity, and was surprised to find that the fish caught in the river were unfit for food or at least were not palatable to any one who knows what shad ought to be. The flesh had a most disagreeable taste, although the fish were fine looking when taken from the water. I find upon inquiry that this was the experience of many who caught or purchased fish, and the cause was alleged to be the oils which the refineries were emptying into the river. It seems to me that a condition of this kind calls for some summary action, on the part of some one, as the continual pollution of the river in this manner will eventually destroy the fish as an article of food, if not permanently annihilate them.

L. D. H. Gilmour.

### Ouananiche Scores.

Some recent catches at Lake St. John are the following: Sept. 12, at Grand Discharge, Walter A. Wood, Jr., Hoosick Falls, N. Y., 12 fish, largest 4½lbs., total catch weighed 191bs.; G. H. Nicholls, Jr., also of Hoosick Falls, caught same day 15 fish, largest 4lbs., total weight 21lbs.; F. W. Rawle, of Philadelphia, 11 fish, largest 3lbs., total weight 19lbs., caught at Isle Maline; Dr. Samuel Smith, of Ballston Spa, N. Y., 12 fish, largest 4lbs., total weight 20½lbs., caught at Grand Discharge; Sept. 14, Wm. Ghidden, New Castle, Me., 66 fish, largest 5lbs.; total weight 91lbs., caught at Grand Discharge.

### An Episode of the Drouth.

*Editor Forest and Stream:*

'Twas one evening last June when on my trip from North Creek to Newcomb, I stopped at Minerva over night and wandered down Jones's Brook to catch a few trout for my supper. I had taken about thirty and returned most of them, and by this time was fishing on the first flat through the meadow.

Working up in a stealthy manner where the brook bent sharply making a deep hole under the near bank, I skipped my fly across it. There was a splash as of a muskrat, a gleam of a brown back; I struck and missed him. Once again I tried the same tactics, and again I struck, to have my line fly up, parted in the middle. 'Twas one of horsehair, made by Mr. Jones, and must have been cracked, as I never felt the fish at all. When I returned to the house and told my tale, they wanted to know what the fish would weigh. Not over an ounce from a pound and a half.

The last of July I was up again and the boys told me two of them had a hold of my fish but he broke away.

I went down and tried him with fly, worm and grasshopper, but he would not rise.

Last week I stopped off on my return from Newcomb. Jones and one of the boys were out picking up apples. "Well," said Jones, "they ketched your trout." "What did he weigh?" "Pound and seven ounces." "Who caught him?" "Some of the boys down the road." "How?" "Turned the brook, stirred the water in the hole, and caught him with their hands. Never saw the brook so low." H. C. KIRK.

NORTH FERRISBURG, Vt, Sept. 20.

### New Hampshire Bass.

THE WEIRS, N. H., Sept. 19.—*Editor Forest and Stream:* The chain "busted" the other day, and as a consequence I am up here getting courage for another term of imprisonment, during which memories of the past and FOREST AND STREAM will be my only comforts.

The lakes hereabouts are at their best now, especially the bass fishing to be had in them. Remote parts of Lake Winnepesaukee, such as Green's Basin and around the islands toward the eastern shore, furnish the best black bass fishing; but the man who has only a few days or hours to spare for his favorite fish, will find sport plenty good enough right around here. The lower end of the channel which connects Lake Winnepesaukee and Long Bay, so called, is considered one of the best places for bass. Helgramites and live frogs are the favorite baits used by local fishermen. The lake trout season just closed has been a very successful one.

Gray squirrels, as well as partridges, seem to be quite plenty this season. The latter may be found around the wild apple trees in the woods already this early in the season, which to me seems earlier than usual, but the dry weather we have had may have something to do with it.

MATTERHORN.

### Vermont Fishing.

HIGHGATE, Vt., Sept. 26.—*Editor Forest and Stream:* Fishing in Lake Champlain and in the small lakes in the interior has on the whole been good, but in many of the streams poor, owing to the sawdust nuisance, which is turning many of our clear, sparkling, laughing streams into mere sewers of reeking filth, full of malaria and disease. It remains to be seen what our Legislature will do during the coming session to remedy this evil.

STANSTEAD.

### Held for Trial.

A VERMONT paper has the following item: "N. P. Leach is a terror to the breakers of the game and fish laws. Last week he caused Hugh Green to be placed under $300 bonds, and Timothy Shaughnessy under $100 bonds, to appear before the County Court for using explosives in Fairfield Pond."

## The Kennel.

### FIXTURES.

DOG SHOWS.

Oct. 2 to 5.—Danbury Agricultural Society, at Danbury, Conn. C. M. Rundle, Sec'y.

Oct. 30 to Nov. 2.—Terrier Show, by New England Kennel Club, at Country Club, Brookline, Mass. D. E. Loveland, Sec'y, 128 Tremont street, Boston.

FIELD TRIALS.

Oct. 23.—New England Field Trial Club, Members' Sweepstake. A. R. Sharp, Sec'y, Taunton, Mass.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells Sec'y.

Nov. 16.—Eastern Field Trials Club, at Newton, N. C. All-Aged, Eastern Subscription and Selling Stakes. Entries close Oct. 1. W. A. Coster, Saratoga Springs, N. Y., Sec'y.

Dec. 17.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

### Spaniel Club Meeting.

A MEETING of the American Spaniel Club was held at 20 Irving Place, Sept. 27. Present, Messrs. A. C. Wilmerding, in the chair, E. M. Oldham, S. J. Bradbury and R. P. Keasbey.

Minutes of the previous meeting were read and approved. The auditing committee reported that on account of the absence in Europe of the treasurer it had been unable to hold a meeting. Voted that the report be accepted and the committee be continued. The committee on revising the classifications reported progress and stated that now that the fall shows were over new classes would be submitted at once. The secretary was instructed to write Dr. Edw. A. Smith, requesting him to give the American Spaniel Club an order on the Westminster Kennel Club for the $100 deposited by him with that club and subsequently donated to the Spaniel Club for a special prize trophy. Meeting then adjourned.

### Annual Collie Sweepstakes.

*Editor Forest and Stream:*

The attention of collie breeders is called to the fact that entries for the sweepstakes must be made on or before Nov. 1. Any collies born in the United States or Canada between June 30, 1893, and July 1, 1894, may compete. Entry fee $5, to be paid to the secretary of the Collie Club at the time of entry; $50 will be added to the stake. Entry blanks can be procured by application to J. D. SHOTWELL, Sec.

ORANGE, N. J.

## POINTS AND FLUSHES

[*By a Staff Correspondent.*]

MR. WELLS, after the Manitoba trials, spent some time camping on Steel River, where he enjoyed some excellent fly-fishing for trout. He is now a most enthusiastic angler. By the way, it is not generally known in the canine world that, beside his accomplishments with the dog, gun and rod, he is a renowned amateur oarsman, holding at one time the championship of Canada. But all these are good enough in their way if cricket is not mentioned. In cricket he revels. At the bat he is a power. The Saturday after the trials at Morris, there was a cricket match at Winnipeg between the English and Canadian teams, the former being of men born in England, and the latter of men born in Canada. Mr. Wells was one of the chosen for the Canadian team, and the latter gave them an exhibition of cricket playing which won the game.

I had the pleasure of seeing Mr. Wells play.

The game is quiet, and save for the prancings of the bowler, is at times sleepy.

When the umpire makes a close decision the players do not turn to and lick him, which in a manner detracts from the spirit of the game.

The batting looks easy, but I am told that it is not so, there being a number of scientific swipes and swats and slams and cuts which one must become proficient in before he can hope to have the confidence of his fellow players or the public. When at the bat, I am told it is not a good time to sleep. The ball is liable to take off a leg or foot, or at least knock off some chunks of a fellow.

The bowler casts the ball from him unreservedly. He takes a fierce run, halts suddenly, describes a mighty segment of a circle with a stiffened arm, then lets the ball go; then the batsman must do the rest if he can. Mr. Wells did very well till he knocked the ball in the air, careless-like, then somebody caught it careless-like, then another man began to bat in Mr. Wells's place.

Mr. Wells was fortunate in not being one of the ill-fated party of three which were lost in the canoe trip up the French River, *en route* to Lake Nipissing. He had a most pressing invitation to join the party of three, namely, Messrs. D. M. Christie, A. B. Northwood and G. F. H. Rispin, on their trip. He preferred the fishing on Steel River. In Winnipeg he learned of the death of the party by drowning.

### Chicken Shooting.

Before going to Winnipeg, I had a few days' shooting at Eldridge, N. Dak., with Mr. W. W. Titus and the brothers Mr. Frank and George Richards, all of whom had strings of dogs in training. Chickens had been plentiful before the season opened, but the destruction of birds was so great during the first days of the open season that they ceased to be plentiful.

The city shooter can no longer be justly accused of being the man who kills the chickens. The local shooters are many in every town. They are numerous enough to shoot out all the country adjacent to their towns.

The Messrs. Richards and Mr. Titus were killing few birds, for they wanted them alive to train their dogs on. Yet in a few days the coveys were broken or destroyed entirely by outside shooters.

I would like to give an extended description of the work of their dogs, particularly of two, Minnie and Mattie, both great performers on chickens, but as some of their dogs will run in the field trials, I thought it better to refrain.

The days were fiercely hot, greatly trying to man and dog. The work was done in early morning and evening. Sometimes Mr. Titus was up about 4 A. M., and was driving across the prairie at an hour long before city people were up. From 10 till 5 there was no attempt at training, as it was so hot that no dog could work.

---

While I was in Winnipeg, I was the guest of Mr. Thomas Johnson, who made my stay there of the pleasantest. Being something of a patched-up wreck when I left Chicago, from the effects of a violent attack of pneumonia, my stay in Winnipeg brought renewed health and strength, the larger part due to Mrs. Johnson's excellent cookery. Few sportsmen are blessed with a wife who is ever amiable, thoughtful, devoted and skillful in housekeeping, and who loves dogs, yet Mr. Johnson is so fortunate.

While Mr. Johnson has given up field trials, temporarily I hope, his enthusiasm in dog matters is unabated. In his kennel is a litter of pointer puppies, lively, neat, promising fellows, clean of skin and sound of limb, healthy and strong, and withal sensible. They are far removed from the weedy, highly nervous and erratic beings which are the results of modern breeding skill, and which are expected to point birds. He also has a few black setters, strong, industrious fellows of the Beaudesert strain. But the pride of the kennel is Pitti Sing, now advanced in age so far as the years are a measure, but as bright of eye and swift of foot as when she was a puppy. Age has not shortened her range nor lessened her interest, though she is now about ten years old.

A curious train of circumstances led to her recovery yesterday. On Monday night last, while exercising her on the prairie, by an oversight she was lost. Soon afterward a diligent search was made for her, which was renewed on the next morning. The whole country for miles around was thoroughly searched without finding her. It seems that after being lost she took the Canadian Pacific Railroad east to Bird's Hill, about ten miles away, where the brakeman of an incoming freight train picked her up and brought her to Winnipeg in the caboose. There was a young man aboard who fancied Pitti Sing's looks, and he persuaded the brakeman to give her to him. After inspecting Sing's clean, sound teeth he decided that she was a puppy. In Winnipeg he took his prize to show to a friend of Mr. Johnson, and she was recognized at once. A message was thereupon sent to Mr. Johnson by his friend, Mr. Philips, requesting him to call. The latter had lost the pointer dog Lonsdale a few days before, and a reward had been advertised for his recovery. Mr. Johnson's man had met a boy leading the pointer presumably to safer quarters and secured possession of the dog. Mr. Johnson thereupon went to Mr. Philips's office to announce the recovery of Lonsdale and was agreeably surprised to recover Pitti Sing at the same time, a most fortunate ending, as the reader will appreciate when told that dog thieves are numerous in Winnipeg.

The city buildings were plainly in sight two or three miles away, on the grounds where Mr. Johnson conditions his dogs and where chickens were found in numbers sufficient for good shooting. Both the square and sharptails are found. The former is gradually driving the latter further north and taking possession of the feeding grounds. Mr. Wells informs me that the sharptails have been seen east as far as Port Arthur. Sportsmen inform me that the squaretails, in this climate, gradually acquire a growth of feathers on the legs and toes, much the same as the sharptails.

This is a city of sportsmen. All sorts of healthy sport flourishes. Boating, cricket, bicycling, base ball, polo, golf, etc., have hosts of admirers. Every one seems to be some kind of an athlete or proficient performer. Curling is the great winter sport, and the admirers of all other sports join in paying tribute to this greater one. I would like to give a description of the trophies which Mr. Johnson has won in the great curling matches, he being mighty in skill in curling, but space forbids.

As for the shooters, they are legion. But the laws are good and the game violators are comparatively few. Good game laws supplement good effort and intention, hence game is abundant. B. WATERS.

WINNIPEG, Man., Sept. 12.

### Absurd Fallacies.

*Editor Forest and Stream:*

In a recent issue of a rather new monthly devoted to hygiene appeared a paper entitled "The Animal Parasites which we Obtain through Our Food," from which the extract below is culled as being of interest to lovers of our favorite, the dog. Where ignorance is bliss it is cruel to awaken interest and acquaint dogdom with the terrible dangers confronting those who permit man's faithful friend to live in juxtaposition with him, unless disinfected *secundem artem*. It is now in order to organize a plant in each city under the authority of the Health Board, where our dogs shall receive the proper and necessary hygienic preparation for association with man, or, alas! we may yet discover that he and his parasites must be condemned to extermination. Oh, tempora! oh, mores, cave canem. SAMUEL L. FORT.

[*Popular Health Magazine, June issue, page 337.*]

We have perhaps not noticed that the odor of meat brought our favorite dog into the dining room. He is practically a member of the family and petted by all, none except the scientist looking upon him as anything except a most faithful friend, old Dog Tray! The scientist, however, is hard-hearted enough not to appreciate this friendship, and believing the proper place for a dog is the cellar, the barnyard, the dissecting room or the dog-pound, he hygienically looks upon the dog as his enemy. Nevertheless, some of you do not share these opinions, and as the dog comes to you, you pet him and allow him to sniffle and lick your hand. But let us look for a moment at the animal parasites which the dog has given you during that short caress.

Beloved old Dog Tray has in his nose a parasite about two to five inches long, a so-called tongue worm (*Linguatula rhinaria*); in sniffling and licking your hand he has deposited there some microscopic eggs, and the next time you take a piece of bread you will transfer these eggs on the bread to your mouth. The eggs will be swallowed and the germ will bore from your digestive tract into your liver, and there develop into a parasite about ¼ to ½in. long.

Or in caressing the dog you have unconsciously gotten a flea or a louse upon your hands, perhaps under your fingernails, and later you have swallowed that. It may now be a comforting thought for you to know that inside of that flea or louse there lives the larval stage of a tape-worm (*Dipylidium caninum*) with which you have become infected. But that is not all.

The most dangerous animal parasite which man has, is a so called hydatid, which is the larval stage of a small tapeworm (*Tœnia echinococcus*), found in the dog. From the very nature of the habits of the dog we must not be surprised to find the eggs of this tapeworm upon his coat Petting him, you get these eggs upon your hands; from your hands to your mouth is but a short distance; you swallow the eggs and have become infected with the dreaded *echinococcus*. The echinococcus develops in your liver, in your lungs, in your brain or elsewhere and you suddenly discover the fact too late—perhaps it is not you who discovers it after all, but the physician who makes your post-mortem, that the dog is your enemy rather than your friend. I am not now referring alone to the miserable collections of animated bones and dog skins which wander into our city from Virginia and Maryland, but I refer to mamma's darling little poodle as well. In fact, from statistics it appears that this hydatid parasite to which I refer is most frequent among the dirty Icelanders who live in the same huts with their dogs, frequently sharing the same plate, and next in frequency in women who keep pet lap dogs.

---

The following refutation will be found interesting:

*Editor Forest and Stream:*

It is doubtful if any country of equal intelligence has been the subject of so many groundless scares regarding the dog as the United States, for which a portion of the newspaper press is largely responsible. The above is a fair sample of how this is accomplished. "Dog Tray" is evidently the representative of the common house dog, the dog every one cherishes—and yet, sad to relate, according to this account, one is led to infer that "Dog Tray," *i.e*, your family pet, has parasites not only in his nose and his "internals," but in every flea and louse that may happen to roam over his back; and what is more, that you, his owner, will get tapeworm from your dog—only (blessed fact) you may never know it, nor your friends either, unless with scientific forethought you provide for a post mortem examination! Is it not wonderful that with these pests everywhere—for no one regards a tapeworm as a special friend—the dog of the country and the people of the land are not "devoured of worms?"

After careful examination, extending over years, it has been found that only the smallest fraction of mankind in civilized countries are infected with tapeworm. Echinococcus disease is common in Iceland, it is true. It is extremely rare in the United States and Canada, and diligent search in museums and medical literature reveals the known existence of only 85 cases in all up to date. From this any sensible person will see how slight are the chances of being infected with echinococcus disease; and in reality this is the form of parasite one is most likely to get from the dog. The forms of tapeworm that infest dogs are not those that live in the intestines of men, and *vice versa*.

There is a closer relationship between the parasites of sheep and those of the dog. It is possible for the dog to become infected from sheep, even the heads of sheep, so that we cannot sanction the general feeding of dogs on uncooked sheeps' heads. Again, sheep may be infected from dogs, so that in all districts where sheep are kept largely dogs should be carefully dosed for tapeworm, whether showing symptoms or not. But as for human beings becoming infected with internal parasites under ordinary circumstances—the chances are simply infinitesimal. Are kennel men and those that associate with dogs closely more infected with parasites than other people? Are they generally of the "lean and hungry" kind, such as they would likely be if they each harbored a few tapeworms?

How then do people get tapeworm? By eating meat either raw, which is common in certain parts of Europe, or meat insufficiently cooked, neither of which are common practices in America. Such parasites as those referred to in the article quoted are, so far as man is concerned, mere pathological curiosities. Several, in fact most, of the works on human pathology do not refer to them at all; while most veterinarians never saw a specimen of those forms referred to in the magazine article in the dog.

Most of the parasites of the dog could not live in man, even if he swallowed them abundantly—a fact not commonly known to the general public. Such writing as the above in would-be scientific journals is calculated to mislead, arouse prejudice and produce groundless alarm.

But "Old Dog Tray" has survived many attacks, and he is to-day more firmly established in the life of the home than any other animal and than ever before.

WESLEY MILLS, M.D.

MCGILL UNIVERSITY, Montreal.

### Thieving at Dog Shows.

*Editor Forest and Stream:*

I desire through the columns of FOREST AND STREAM to express my condemnation and detest for what I term "the dog show thief," the dishonest individual who makes a practice of "exchanging" chains and other articles when you are not present to sanction the transaction. This purloiner saw fit to "exchange" with me last week at Providence, R. I., when I was absent from the show, by relieving me of a nickle-plated regulation chain which cost me $1.50 and leaving in its place a rusty 25-center.

The old saying is, "Fair exchange is no robbery," but the exchange which the light-fingered person made with me must be put down as an intentional theft. It would be well for the superintendents of shows and their corps of attendants should give this matter more of their attention and institute some method whereby the exhibitors may not be relieved of their nickle-plated ornaments. ROBERT LESLIE.

LYNN, Sept. 22.

# DOG CHAT.

## Blue Dog Laws.

Another peculiar phase of the dog question in Providence is furnished by the experience of a lady who was arrested for not paying the license of a dog that she did not own. This lady incurred the ill-will of one of the police officials, and this official, after trying in various ways to annoy her, hit upon the plan of having her arrested on a charge of keeping an unlicensed dog, he having seen one about her house. Reporting the fact to the dog officer and representing that the case could be proven, a warrant for the woman's arrest was issued. She went to court and pleaded not guilty. The dog officer in the meanwhile had discovered that the woman had been made the victim of a conspiracy and offered to go on her bond to save her from being placed in a cell. The woman, who owns considerable property, hearing of this, told the court she could furnish her own bond. She was allowed, however, to leave court without this formality. Afterward it was found that the officer who had been responsible for the charge had no evidence to support it, and the dog officer caused the case to be discontinued and the State will stand the costs. The possibilities of the dog law in Providence seem as far-reaching as a Russian ukase.

## The Terrier Show.

This interesting undertaking of the New England Kennel Club has been lost sight of somewhat in the hurry and bustle attending the Toronto and Providence shows, but now that these events have become history, terrier men can look forward to this unique affair with pleasant expectation. The Country Club at Clyde Park, Brookline, near Boston, will hold a Fall meeting at which there will be pony races, steeple chases, gymkahrn races, polo, golf, etc. Several of the members are also officers of the New England Kennel Club and the latter club determined to take advantage of the occasion to hold a terrier show there Oct. 30 to Nov. 2. All breeds of terriers are provided for with prizes of $10 in challenge and $10 and $5 in open classes. The entry fee is $3 and entries close Oct. 13 with D. E. Loveland, secretary, 125 Tremont street, Boston, Mass.

To provide further amusement for the visitors the N. E. K. C. will have whippet racing and sheepdog trials. Rather than engage a team of whippets to give exhibition runs the members thought the sport would be more interesting if they ran their own dogs, and to that end have been negotiating with whippet owners for the purchase of some fast dogs, and several orders have been sent to England. If they are successful in procuring the right dogs the sport will be introduced in such a manner that it is bound to become popular. The training of these dogs will be found not the least enjoyable part of their ownership. Owners of whippets as well as those wishing to purchase some in time to start in their races should at once communicate with Mr. Loveland, who will give full information as to where these dogs can be purchased and particulars of the races. To start the sport properly it would be advisable to engage some one who is conversant with the rules and able to arrange a satisfactory handicap. The sheepdog trials should also prove interesting if properly conducted, and owners of trained sheepdogs are especially requested to make these trials a success by sending their entries as early as possible. It would be better if the club would announce definitely, at an early date, what the stakes will be both for whippet racing and the trials. Mr. Mortimer will judge the terriers. Without prejudice to Mr. Mortimer, whose ability in this direction cannot be questioned, would it not be better to try some new man with one or two of the breeds? We want some new judging material, and such shows are just the ones in which to enter the judicial aspirants.

Mr. Schell, of San Francisco, seems to be getting into hotter water. He has been arrested for hitting his whilom friend Mr. Henry Huber with the butt end of a pistol. It will be remembered Mr. Huber brought the charges before the Pacific Kennel Club upon which Mr. Schell was expelled and his appeal is now under consideration by the A. K. C.

Mr. "Bob" Armstrong, of the Cragston Kennels, has returned from his short visit to the old country. He took in some of the shows and admits he enjoyed himself, which is stating it mildly.

The humorous editor of the Grafton *Record*, North Dakota, visited the Manitoba Field Trials at Morris, and his impressions are related in the *Manitoba Free Press*: He says: "I took in the field trials at Morris the other day. Mr. Morris was not at home, but a big man with a bald head was there running a hotel, which was the same thing to me. I got there too late for dinner and too early for supper; this bothered me most of the afternoon, but the excitement of a field trial of chicken dogs somewhat deadened the pain. I did not take my dog; he has only been in this country about one year, and I want to teach him the difference between a wood pile and a sage hen, before I try to secure the Derby from the Queen's own boys. About 3 P. M. the secretary got on the top of a billiard table and said it was time to start. I had two friends with me and we started with the rest in a contracted buggy that had fallen away. The springs of this buggy were choke bored and if we had broken the law on the domain we would have been well shaken before taken. We rode about three miles when the judge stood up and waved a white flag. Two dogs were let loose, and their trainers with toy shot-guns followed them as close as possible, and when a dog came to a stand they broke into a swift run as if they wanted to pot-hunt the birds. But I found out they didn't give two whoops for prairie chickens, it was points they were after. The judge and clerk, and FOREST AND STREAM and *American Field* representatives kept their horses right on to the wheel of the dogs, but the rest of the procession was supposed to keep back a few paces, which suited our bay horse. After a pair of dogs had shown what kind of stuff was in them they were called in, rubbed down like a trotting horse, packed in cotton and two more let out. They all ran like chain lightning, and when they found chickens acted like grown up people picking up money. They must have thought their owners couldn't hit a flock of haystacks, as they always let the birds fly away. A nice old gentleman from Vermont took the Derby prize with a fine pointer, whose honest work pleased every one. I thought I would buy a dog to take home as a souvenir, and I picked out a small, tired-looking dog with one eye gone. The man who owned him said if I wouldn't say anything about it I could have him for $900. I bought two eyebrows for fifty cents and will work hard to get the rest of the dog before I am called in. Another man in the party spoke of buying a dog, but he was put to sleep by something he heard drop before he had time to ask prices."

The Pacific Fox-Terrier Club seems to be an active body, and must be doing good work for the breed on the coast. The second division of their Produce Stake closed the other day with thirteen entries of bitches whose produce will compete at the Pacific Kennel Club's show in 1895. The club is anxious to have a show of fox-terriers, and have been in negotiation with the horse show people to hold a show of terriers in connection with the horse show, and this may be done. A pleasant feature of the recent meeting of the club was an exhibition of members' dogs under twelve months old. Such gatherings and the opportunities for discussion and comparison they afford are very commendable and worthy of imitation by the specialty clubs. At the next meeting there will be a competition for members' dogs under six months of age.

The Collie Club should bestir itself and draw the attention of Canadian exhibitors of collies to the advantages to be gained by membership in that club. Two medals offered by the club at Toronto went a-begging.

A rather unkind letter reflecting upon the management of the Toronto show and Mr. Stone especially, appeared in last Wednesday's Toronto *Globe*. Mr. T. G. Davey and the pointer and setter judge Major Taylor, came in for more or less hard knocks. In looking through the catalogue we find that the number of prizes awarded to Forest Kennels in setters (Mr. Stone's) were one third in English setters, one first in Irish setter novice bitches, and one first in Gordons, with the well known Wanda, out of eleven entries. This scarcely looks as if he had made plans to get a judge that would adjudicate upon the owners rather than the dogs. Such a letter published so conspicuously and containing such audacious accusations of dishonesty on the part of the judge should not pass unchallenged, or serious harm will be done the future interests of the show, as is unquestionably the purpose this writer had in view.

Mr. W. Norman Higgs's mastiff bitch Brampton Beauty has been returned to England by Mr. Winchell. Since her arrival at Mr. Winchell's kennels last January, she has raised one litter by his champion Black Prince. It was Mr. Higgs's intention to have her returned as soon as she was first served by Black Prince, but, fortunately for the mastiff interests of America, he allowed her to raise one litter before she was returned. Brampton Beauty was again mated, last month, to Black Prince, and was at once returned to England, probably in whelp. She is the first bitch of any breed that has been sent from England to America to be bred to an American-bred dog.

Another case of dumb rabies is reported to have occurred in the Philadelphia district. During the summer a young greyhound was sent out to the Chestnut Hill Kennels to board. The dog did not seem unwell on arrival, but on trying to examine the animal Mr. Jarrett was badly bitten through the thumb at the base of the nail. The dog developed a *bona fide* case of rabies and died in a few days, but our "nonchalant" friend is still very much alive and looks as happy as usual.

The reason Trim B., the Gordon, was not noticed at Providence show was that he was at home, sick. In that case he should have been marked absent in the judge's book. Several of the Gordons were tagless and benched in various places, and this we remarked in our report.

Mr. Geo. F. Reed's experience with the express companies was bad enough at the beginning of the Providence show, his beagles being on the way from 8 A. M. Monday to Tuesday, 7 P. M., the beagle classes being held over till Wednesday on their account. But our friend's latter end was worse than his first. He shipped his dogs for home on Friday at 7 P. M., but they did not reach Bartow, Vt., until Monday morning and one of the dogs was nearly dead when the crate was opened. Naturally Mr. Reed feels disgruntled and "will find out what is the matter if it takes four dogs to pay for it."

The Netherwood Farm Kennels of Plainfield N. J. have had in training four setters owned by Mr. S. J. Kiernan, of Elizabeth N. J. who disappearsd about two months ago. His dogs were attached for expenses and will be sold by auction the latter part of October. The dogs are Gamester; a black, white and tan dog by Dad Wilson, reserve N. Y. 1894. Duke of Alma, black, white and tan dog by Roderigo. Mat Noble, a black and white bitch and a young bitch by Nimrod—Dominican, a very promising one. All are broken and thoroughly good shooting dogs. With them will be sold some first class young pointers and English and Irish setters ready to go to work and some young puppies. The event will be made the occasion for a little reunion at the farm and all who are interested in dogs will be welcome. Further particulars will be adverstised later.

The young collie Doon Perfection is starting off well in his career as a stud dog. He is credited with siring eighteen pups in one litter.

There is no lack of opportunities to start a good kennel of St. Bernards in England just now. In addition to the disposal of Mr. J. F. Smith's kennel of smooths, Mr. Thos. Shillcock of Birmingham is selling off his grand kennel, among which are the noted Duke of Maplecroft, champion Young Bute, Duke of Firmont, Marvel, that used to be in the New York St. Bernard Kennels, and Donnybrook Fair. Mr. John Storey, who purchased champion Princess Florence from Mr. Shillcock after her return to England, is also disposing of his kennel, among which are Princess Florence, who has just whelped a litter, which will be welcome news to those interested in this grand bitch, Goldfinder, Earl of Shrewsbury, Marchioness of Bute, etc.

A very noted young collie dame, whose reputation has been made upon the boards and not in the sawdust ring, has arrived from England to take her part in the performances to be given by the Sandow troupe. Miss Scottie is said to be a most intelligent and well-trained animal, and if she cannot write, her education in reading, arithmetic and spelling has not been neglected. She is also fond of card playing, and can take a hand at "Nap," invariably winning her tricks when the cards are right, and will, no doubt, while over here, be initiated into the mysteries of draw poker. She also identifies figures named but once by the audience, adds and subtracts any number of figures, tells the time, distinguishes colors, and so on. How she does it is best known to her master, but that she is a very clever collie there can be no doubt. She is by champion Metchley Wonder out of Lady of the Lake (own sister to champion Edgbaston Fox) and therefore can claim relationship to a number of collies in America.

Students of our business columns will find much to interest them this week. The return of Mr. Thomas to England affords an opportunity to secure a good team of winners. Ducking men should read Mr. Mallory's announcement and sportsmen who want a handy food to take South should read what Austin & Graves say about it. Then the Nassau Hardware Co. afford an opportunity to "collar" your dog in the latest fashion. We often have inquiries for trained spaniels, and J. H. Royce offers sportsmen a chance to secure a brace; Terra Cotta Kennels offer greyhounds; C. S. Weldy, well bred poodle puppies; Oak Grove Kennels, Irish setter pups by champion Kildare; F. L. Cheney, trained Irish setters; C. T. Brownell, Gordon setters; W. L. Manderson, terriers and other breeds; H. Parton, trained pointer; H. Harvey, Irish water spaniels that should be snapped up; E. E. Beach, fox-terrier puppies; Mrs. X., Three Pines Kennels and W. Priest offer St. Bernards; Hill Hurst Kennels, brown French poodles. In the stud are offered Terra Cotta Kennels' Gem of the Season; C. T. Brownell's Gordon setter Trim B., and Hill Hurst Kennels their crack poodle and wire-haired fox-terriers, Cribbage, Oakleigh Bruiser and Brittle.

Advertisers are realizing that if they want anything in the canine line this journal affords the best medium through which to procure it. C. M. Reynolds wants a trainer for field dogs, also a trained partridge and a rabbit hound; W. H. Hutchinson, foxhound for coon.

## A Stray Shinplaster

**Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.**

The question as to whether a collie's ears should drop *forward* or *outward* is exercising the argumentative minds of collie breeders on the other side. As far as we can gather, the basis of argument that the tips should fall forward is an "anchor to windward," thrown out by the *fin de siècle* breeders of collies whose ears are pricked when at home and next door to it when shown. The old and true style of ear that dropped outward should be good enough and not so risky in attainment. The remarks made by "Segusian" in *Scottish Fancier* this week come with timely force: "There is a certain school that is spoiling our collies, and giving them heads and ears altogether foreign to the breed—long, narrow heads with straight faces—*i. e.*, without the gentle rise from between the eyes upward that gives the true expression—and high set ears, more like what is wanted in a terrier than in a collie." Further on he alludes to the new school as the "English Brummagem."

There is something about Danbury show that appeals to the average dogman—why we cannot say. It cannot be on the score of good management though perhaps it may be on account of the go-as-you-please air that seems to pervade the entire conduct of the show, which element would appear to extend even to the issue of its premium list, that is if such a thing is in existence and we believe it is, for we published a letter sometime since, alluding to a class for "wire-haired cockers." We have, however, received no word of the show from its enterprising secretary; nor have few others, as far as we could find. If Danbury is an A. K. C. show this year it should be made to live up to its rules and display a little interest in the dogmen who live outside the county limits. The show takes place this week, but although we have written for particulars we are as yet (Monday), uncertain when the show commences. As another instance of the go-as-you-please tactics of this show, we can name three men who were asked and expected to judge, but it is finally settled that Mr. Mortimer will fulfil this task. Still we all like to go to Danbury, and if you don't enjoy yourself it is not the fault of Mr. Sears or Mr. Read.

We would implore our *Week Ahead* contemporary not to worry its prophetic soul. FOREST AND STREAM contained a full report of the A. K. C. meeting in its last week's issue, and if the Chicago postal authorities do not realize their responsibilities in due time our esteemed contemporary is welcome to the use of it, even if it does leave it a week behind.

We should have said that Mr. Comstock's Irish terrier Crate was in whelp to his champion Boxer IV. when she died, and not Valley Boxer. Mr. Comstock has not yet been obliged to go out of his own kennel for stud dogs.

The crack St. Bernard bitch Alta Bella died recently from an attack of colic. She was one of the best St. Bernard bitches ever benched and was certainly a credit to her noted parents, Alton and the well known champion Bellegarde. She was owned at the time of her death by her breeder, Mr. Norris-Elye. Her long list of winnings included the 100-guinea challenge cup (twice). She was just over 7yrs. old when she died.

Mr. Alex. S. Thweatt, Eastern passenger agent of the Southern Railway Company, sends us the following notification, which has been issued to all agents, baggage-masters and conductors on their roads: "Commencing Oct. 1, 1894, and continuing until March 31, 1895, dogs of sportsmen and hunting parties will be transported free, in baggage cars, over the lines of this company when accompanied by the owners or caretakers, but at their own risk. Only one dog to be transported free for each passenger; additional dogs to be charged for as per instructions in clauses i and j, page 22, of rules and regulations governing the baggage department, in effect May 1, 1892."

We regret to hear of the death of Mr. E. Probert, who died at Canton, O., very recently. Exhibitors of a few years ago will remember him best as an exhibitor of toy spaniels, and later as manager of Mr. Cook's mastiff kennels at Canton, O., in the days of his Moses, etc.

At the meeting of the Canadian Fox-Terrier Club held during Toronto show the following officers were elected for the ensuing year: Honorary President, A. D. Stewart; President, A. A. MacDonald; Vice-President, R. Gibson; Secretary-Treasurer, H. P. Thompson; Executive Committee, F. S. Wetherall, H. A. Fraser, James Lindsay, B. H. Ross, J. O. Bennett, R. Gamble, P. J. Smyth. Truly a representative list of Canadian fox-terrier men. The club is flourishing, and during the meeting six new members were elected.

We should like to have the poodle awards at Toronto, wrongly credited to Woodbury Kennels, explained. Our awards were taken from the judge's book, and every other journal giving the awards at Toronto has been led into the same error. Who changed the awards after the third day of the show? When the classes were judged, Morey Kennels' Cigarette was marked absent.

Dr. Sauveur, the owner of the Seminole Kennels, called upon us last Thursday. The owner of the collies The Squire, Golddust, and Irish setters champion Tim and champion Laura B., as well as half a score of other celebrities, seems as devoted to the "fancy" as ever, and his friends will be pleased to hear that his kennel is doing well. He has had trying periods, like every true fancier, and one of these happened about a month since. A very fine collie was sent out to the kennels by a friend, a well known lawyer in Philadelphia. Not long afterward this dog developed a sure case of dumb rabies. While in this condition one of the vets. called in to examine the dog, opened the door of the yard where the dog was kept, when the animal made a blind rush, and biting two collie pups that happened to be around, ran full tilt against a wall. The dog was secured and finally shot. The two pups, which were as the apple of their owner's eye, developed unmistakable signs of dumb rabies and had to be

destroyed. The loss was severe, as they were by Golddust and the best the Doctor has yet succeeded in breeding.

While moving and arranging the new kennels at the farm one day during the summer, and while his manager, Will Connors, was away, the handsome kennels on Seminole avenue caught fire and the kennel compartments and the run fences were destroyed. Dr. Sauveur was the only man on the place at the time and his first thought was for the dogs. Rushing to the kennels he opened all the kennel doors and released the dogs, turning them across the broad hallway that runs through the center of the stone building, into the office. The fire engines were called but arrived too late to save the woodwork of the kennels. A log that had fallen out of the fire under the cooking boiler caused the trouble.

---

It will be remembered that we spoke of the importation of the noted great Dane Ajax, by Mr. T. B. Burnham, who keeps his dogs at the Hempstead Farm Kennels. Ajax was sent down there as soon as he landed, and shortly afterward slipped his collar, and no one has been able to catch him since. The dog has been seen several times around Hempstead, but cannot be caught. From all accounts and his foreign record this dog is too good to lose, and every effort should be made to catch him, even if Mr. Mortimer has to employ an interpreter. The dog escaped during Mr. Mortimer's absence in England.

---

Mrs. Peary, who recently returned from the Arctic regions, where she left her husband, Lieut. Peary, to pursue his explorations, has presented to the Philadelphia "Zoo" two Esquimau dog pups. The mother of these pups was used to draw the sledge containing Mrs. Peary's baby daughter, who was born in the highest Arctic circles.

---

Late accounts say that champion D'Orsay's leg has been set by Mr. Sewell and is expected to be almost as good as ever. Our telegraphic communication of this accident gave no particulars of the catastrophe. It seems Mr. Redmond and his dog were out for a ramble, when D'Orsay caught sight of a rabbit. The latter made the best of his way to the edge of a cliff and doubled sharply. This move fooled the crack fox-terrier, and unable to recover himself in time, fell over the cliff, dropping a distance of 60ft. to the sands below. His near foreleg was badly fractured. For the sake of this good and true fox-terrier enthusiast, Mr. Redmond, we trust his dog will still be able to show a good front.

---

There was some slight objectiou to the source of evidence against Mr. T. A. Howard in the "bribery case" brought up before the A. K. C. at its late meeting. Although Mr. Howard gave the evidence himself in a letter which he was rash enough to write to a contemporary, it was thought better to consider the case with the direct evidence contained in the original letter written to Mr. Elliott. This has been obtained and is now in the possession of the A. K. C.

---

### N. E. K. C. Terrier Show.

Since the issue of the premium list, the following changes and additions have been made in the classification: Fox-terriers—Class 17, puppies, dogs (smooth), prizes $5 and $3; Class 17A, puppies, bitches, same money; Class 22, puppies, dogs (wire-haired), prizes $5 and $3; Class 22½, for bitches, same money; Class 22A, novice, dogs and bitches, prizes $10 and $5. Class 22B, smooth and wire, for dogs and bitches having won but one prize; prizes $10 and $5. Class 22C, for dogs and bitches never before exhibited; prizes $10 and $5. Scottish terriers—Class 27, challenge dogs, prize $10; Class 27A, bitches, same money; Class 29A, American-bred dogs, prizes $10 and $5; Class 29A, for bitches, same money. Specials—$10 each for the best Dandie Dinmont dog and bitch; $5 each for second best dog and bitch. (Heather Kennels will not compete for the above specials.) In all breeds puppy classes will be divided where five of either sex are entered. The Boston Terrier Club offer $10 each, for best dog and bitch. Open to members of the B. T. C. only.

---

Seminole Kennels are negotiating for the purchase of the celebrated collie champion, Metchley Wonder. Of course this grand collie is getting along in years, and that he is loaded down with honors is known to every collie student. The dog can be secured at a reasonable price, and his prospective owner thinks that his appearance on American benches would be a fitting close to such a notable career, and afford American breeders of collies an opportunity to see an animal that has made such a name for himself, and, we might add—his various owners. If he comes over it is not intended that he shall be shown for competition.

---

It is reported that Mr. Fowler, owner of the Oak Grove Kennels, Moodus, Conn., is becoming tired of running such a large kennel, and intends to dispose of the crack Irish setters that have made the Oak Grove Kennels so rapidly famous in the past few years. All signs point to the Seminole Kennels as the future home of this grand lot of "reds," at the head of which stand champion Kildare and Queen Vic.

---

Portland, Ore., fanciers will hold a show next spring; their dates will be chosen to follow Los Angeles and San Francisco, and as Seattle is expected to fall in line after Portland a nice circuit will be the result. Portland held no show this season for the reason that it was too late when the two clubs in that city consolidated. Now that all matters at issue have been satisfactorily arranged, and as the fanciers with one accord are anxious for a show, the members of the kennel club feel justified in going to considerable expense in arranging a show that will be a credit to the city.

---

There have been several inquiries recently about the Bay City Kennels, of Bay City, Mich., and a letter from Mr. Bousfield shows us that the kennel is still very much alive. Their breeding stock has been doing well, and they have on hand now puppies of all ages from such matrons as Lady Taylor, combining the blood of Plinlimmon and Nero III., the sire of Sir Bedivere; Miss Rosebud, an imported bitch of exceptionally good blood lines, as she is by champion Hesper out of Sunrise, she by champion Guide, and bred to their St. Augustine, has thrown very fine smooths. Another litter is from Queen of Contoocock and Lord Dante. Queen is by Parson out of Juno, litter sister to the great producing matron Judith. One of Queen's former pups is Emperor of Contoocock, that took a first at the Specialty show last May. Two rough bitches by St. Augustine out of Lady Taylor, are also in whelp to Lord Dante. Lady Taylor, who is brimful of quality, is offered for sale in whelp to Lord Dante. The dogs are all in good health and we are pleased to hear of the success the kennel is having in its breeding operations.

---

It is with sincere regret that we receive Mr. C. E. Bunn's notification of the death of the crack mastiff bitch Lady Coleus. This grand bitch stood at the top of her class and apart from her intrinsic value, her loss to the breed in its present unsettled condition is one very difficult to repair. Such animals are object lessons to the young breeders—we are speaking generally, for really there seems to be few if any young or novice mastiff breeders at present. Lady Coleus was a very robust mastiff and while in Mr. Bunn's possession was never sick a day or missed a meal. Her only trouble was a few warts on the back that at times were unsightly. On the night of Sept. 24, Mr. Bunn fed her himself; she was well, playful as a kitten and cleaned up her dish. Next morning she was found dead in her kennel and Mr Bunn presumes the cause of death was heart disease. In writing us Mr. Bunn further remarks: "Now the hard part of it all is that four weeks ago Coleus was bred to Leamington, and on opening her after death I found her to be in whelp, carrying five pups. If she had lived to have reared this litter I would have been satisfied, but as it is now my disappointment is keen. However, I am used to losing them and am not discouraged. I yet have a kennel equal or better than any, and have some youngsters better, I think, than any I ever bred."

Mr. Bunn certainly has had some hard knocks lately, the loss of Ormonde and Caution's Own Daughter being especially severe. A few more men with our Peoria friend's grit and determination in the mastiff fancy would soon lift that grand breed to a better and more popular position. Lady Coleus's career is well known; how she was imported by Mr. E. H. Moore, then sold to Mr. Whitney, of Rochester, N. Y., and when the Flour City Kennels were dispersed, purchased by Mr. Wade, and finally found her way to Mr. Bunn's kennel. She was whelped Aug. 1, 1887, and was by champion Beaufort out of Vistula.

---

### The All-Aged Stake at Manitoba Trials.

*Editor Forest and Stream:*

In reply to Major Taylor's contention that Ticked Boy should have divided third in the M. F. T. All-Aged Stake, I have to say that had it not been for his rank piece of work, flushing and chasing in the first heat, he would certainly have been placed higher.

When accepting the position of judge, I asked the secretary to let me know whether the committee wished me to have a free hand or to go according to rule, referring him particularly to the clause which reads, "All dogs must be thoroughly broken as a matter of course." The reply was that they would prefer my sticking to the rules. I might say that, apart from this, I think an all-aged stake should be for broken dogs. Youngsters of course must have a little latitude. Mr. Stoddard, the owner of Ticked Boy, is at one with me in this point, I believe. I was sorry to have to be severe on so promising a youngster: he is just over the Derby age, I understand.

As to Mr. Waters's contention that Ightfield Diana should

THE SKYE TERRIER CHAMPION OLD BURGUNDY.

First, Toronto, 1894.

Owned by Mrs. E. M. Williams, Oakville, Ont.

have also been in third money, I have not so good a case; but still I think Allene had a shade the best of it. She ran good, consistent heats throughout. Her work was not of the high order shown last season on quail, but still it was good. In the first heat she got two points to her opponent's nothing. Diana went very poorly for the first half, but ranged out well toward the end. Diana, in her second heat, did some bird work that, in my opinion, was not equaled by any dog in the Stake; but in the next heat she did rather poorly again. Taken altogether, as I said before, I think Allene had the best of it.

If I made a mistake I hope Messrs. Adamson and Stoddard will forgive me, and put it down, not to any bad intention, but to that inborn prejudice which makes some of us think there is no dog like the English setter.

In justice to Major Taylor and Mr. Waters, I must say that the dogs were put down rather hurriedly after lunch on the second day, and I believe they were not up to see the work by Ticked Boy spoken of. W. B. Wells.

Chatham, Ont.

---

### Short-Sighted Policy.

*Editor Forest and Stream:*

In your issue of Sept. 23, in Dog Chat, you have a short paragraph about the action of the Bloodhound Club in withholding entries for Rhode Island show. With that paragraph in the main I entirely agree, but must explain that the entries were not withheld because of the small value of the prize money, but simply because of the lack of proper classes. There was only one class, dogs and bitches mixed. The committee had been written to, and entries promised had proper classes been made, and the Bloodhound Club would also have offered special prizes, but the members did not feel inclined to run the risk, perhaps, of having a good bitch defeated by a moderate dog, owing to the refusal of the Rhode Island committee to arrange proper classes, as they did after solicitation, for other breeds, the members of the Bloodhound Club decided not to go to the trouble and expense of exhibiting at a show where the breed was evidently not thought of sufficient importance to warrant the making of separate classes. I would have made six entries of bloodhounds myself. To show the short-sighted policy of the committee in not making proper classes, Mr. C. A. Shinn, of Philadelphia, has a letter in a contemporary, in which he says: "If the Providence authorities had made suitable classes for Skye terriers, I would have made 26 entries. As it is, I only sent a pair." C. A. Lougest, M.D.

Sept. 27.

---

### The Gordon Setter Trials.

*Editor Forest and Stream:*

After due consideration, it has been decided that the Gordon Setter Field Trials at Assonet Neck, Mass., upon the grounds of the New England Field Trial Club, will be held after the Members' Stakes of the club have been run off there on Oct. 23, 1894, probably next day. This will necessitate the closing of our entries earlier than had been hoped; but, as notice was given some time ago, Gordon owners have had all the time possible for preparation.

Stakes will probably be $100 for first, $60 for second, and $25 to $40 for third—more if possible, but dependent on number of entries. Entry fee, $5 to nominate and $10 additional to start. Open to all Gordons. Please send in your entries as soon as possible to James B. Blossom,

President Gordon Setter Club of America.

New York City, Sept. 29.

---

### Pointer Club Meeting.

*Editor Forest and Stream:*

The Board of Governors of the Pointer Club of America held a special meeting for the purpose of arranging and offering two special stakes, particulars of which are as follows: Special Produce Stakes of the Pointer Club of America for 1896. Open to all. Entry fee for dam $3. The breeder or subsequent owner of the puppies shall pay an additional fee of $1 for each puppy entered for competition. Puppies not to be less than six months old when shown. The proceeds to go to the three best puppies entered and shown. The entry of dam to be made within fifteen days after whelping, between the dates of Sept. 1, 1894, and Sept. 1, 1895. To be competed for at such show as the Board of Governors of the Pointer Club may select. Fifty per cent. to go to the first, 30 per cent. to the second, and 20 per cent. to the third. Entries are to be made not later than Sept. 15, 1895.

Grand Annual Pointer Sweepstakes.—Competition open to all. For pointers born in the United States and Canada between the dates of Sept. 18, 1893, and Sept. 15, 1894. Entry fee $3, to be paid to the secretary of the Pointer Club at the time of entry. The stakes to be divided into four prizes of 40 per cent. to first, 30 to second, 20 to third and 10 to fourth. Stakes to be competed for at the Westminster Kennel Club's show in 1895. Entries close Nov. 1. Entry blanks will be furnished by the secretary, 106 East Twenty-third street, New York, on application.

The meeting was to have been held at the American Kennel Club rooms and the notices sent out were so worded, but owing to a misunderstanding the Board adjourned to the office of President John S. Wise. The members present were Messrs. Wise, McAlpin, Lewis and Webster. All present thoroughly indorsed the plan for the year, and the secretary was authorized to issue circulars to all interested in the welfare of the pointer.

The club feels that it has done the right thing and is now ready to have its action approved by a sweeping flood of entries in these stakes. The board adjourned.

Frederic S. Webster, Sec'y.

---

### Specialty Clubs and Dog Shows.

*Editor Forest and Stream:*

No dog show can expect to be a success without the assistance and co-operation of the kennel press, and the favors received from them in connection with the recent exhibit of the Rhode Island State Fair Association added materially to the number of entries and the interest manifested. To Forest and Stream no little of this credit is due, and I desire to thank you for your many kindnesses. I would also like to say a word just here in connection with the specialty clubs, to which you have referred recently. I took great pains to write to every specialty club that I knew of. Two responded promptly and well. Too much cannot be said of the Fox-Terrier Club and their efficient secretary, Mr. Smith, by whose efforts one of the finest exhibits of fox-terriers ever seen in this country was brought out. The Boston Terrier Club did remarkably well for a young organization. Of the others but two saw fit to even answer the letters. The Pointer Club declined to offer specials for good and sufficient reasons. The Bloodhound Club desired to offer specials, but their answer was delayed to such a time that the conditions they asked could not be accorded. I sincerely regret that this was so, for I believe they would have made a good and attractive exhibit. Had the specialty clubs of this country the life and energy displayed by the Fox Terrier Club, it would be necessary to hold specialty shows exclusively, for there would be no building sufficiently large to hold all the entries for one show. It is only through the agencies of these clubs that the interest in the various breeds may be advanced, and I trust you will keep the clubs aroused to the necessity of letting the outside world know what they are doing. S. H. Roberts.

Providence, R. I., Sept. 25.

---

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Count Antonio, Foreman III. and Jennie V.* By N. Wallace, Farmington, Conn., for black, white and tan English setters, two dogs and one bitch, whelped June 10, 1894, by Antonio (Roderigo—Bo-Peep) out of Maud Noble (Rowdy Rod—Pearl Noble).

*Tunxis.* By N. Wallace, Farmington, Conn., for lemon belton English setter dog, whelped June 10, 1894, by Antonio (Roderigo—Bo-Beep) out of Maud Noble (Rowdy Rod—Pearl Noble).

BRED.

☞ **Prepared Blanks sent free on application.**

*Sis Judy—Patsy Bolivar.* Mrs. Nellie Crut's (Cincinnati, O.) pug bitch Sis Judy to Eberhart Pug Kennels' Patsy Bolivar (Eberhart's Cashier—Flossy C.), Aug. 15.

*Lady Verne—Bradford Ruby II.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Verne (Joe II.—Maudie) to their Bradford Ruby II. (champion Bradford Ruby—Puss B.), Aug. 9.

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Cashier's Daughter.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Cashier's Daughter (Eberhart's Cashier—Flossie II.), Sept. 17, five (three dogs), by their Happy Toby.

SALES.

☞ **Prepared Blanks sent free on application.**

*Lord Moughlow.* French curly poodle, whelped June 4, 1894, by Moughlow out of Queen Zip, by Eberhart Pug Kennels, Cincinnati, O., to Dr. Copeland, same place.

*Good Boy.* Silver fawn pug dog, whelped July 8, 1893, by Eberhart Pug Kennels, Cincinnati, O., to Chester Bolles, Springfield, Ill.

*Billy F.* Silver fawn pug dog, whelped June 22, 1894, by Happy Toby out of Clara Belle, by Eberhart Pug Kennels, Cincinnati, O., to W. S. Faber, New York city.

*Twinkle.* Silver fawn pug dog, whelped July 8, 1893, by Happy Toby out of La Belle Senora, by Eberhart Pug Kennels, Cincinnati, O., to Miss Ginnie Muhlenburg, Charleston, W. Va.

---

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

Fox-Terrier, Philadelphia.—1. A maintains that the fox-terrier is one of the oldest breeds of dogs and was known in England 150 years ago. B argues that they are a modern breed, not more than twenty-five to thirty years old, and bred from a cross of foxhound and bull-terrier. Which is right? 2. B also claims that the fox-terrier has a chronic affliction called the itch, which A repudiates. Ans. 1. The fox-terrier, as we know the breed at the present day, is derived from the terriers which were used in the Belvoir and Grove kennels of foxhounds, and of course intermingled in turn with the terriers from other fox-hunting kennels; but those named are the main and best known sources. These terriers during the last century were no doubt the old English black and tan terriers, which were used on all kinds of varmints, but must not be confused with the black and tan terriers of this day, being cobbier, lower to the ground, thicker and shorter in the head and drop-eared, as all terriers that go to ground should be. These dark-colored terriers were mixed with the old white English terriers, and probably to beagles to produce a color that could be better distinguished in covert or drain. In the early part of the century there were dogs in the Belvoir Kennels that could be shown as good fox-terriers at the present day. As soon as shows were instituted in England, in the very early 60s, attention was drawn to these terriers, and from Old Jock and Old Trap, dogs which came from the Belvoir Kennels, and Grove Nettle from the Grove Kennels, most of the present day strains are derived. The two former were said to come

from black and tan stock. A is nearer right, and B is certainly wrong. The fox-terrier is only a modern made breed in so far as by careful and judicious selection certain characteristics have been fancified—such as length of head, straightness and narrowness of front, ear carriage, etc. We should say that the fox-terrier represents, as a whole, one of the oldest known breeds of dogs, and cannot be called a modern manufactured breed. 2. Fox-terriers are no more subjected to itch, if by this you mean mange or eczema, than any other breed of dogs, and less so than many of them.

J. F. C. G., Philadelphia, Pa.—I have some beagle pups twelve weeks old. One, at the age of eight weeks, after suffering with worms was suddenly taken with severe pains, and in his agony tried to bite the wire fence of his kennel yard. After suffering until afternoon he died in spasms, snapping his jaws until he had the saliva worked into a froth. Yesterday a sister to the above dog was heard to bark and whine (as a grown dog will that is chained and wishes to be let loose), beginning at 4:30 A. M. I arose, let them out of the kennel into a large yard that I have, when she ran to the front and began digging and barking. I saw there must be something very wrong and sought to pacify and at same time learn the trouble by picking her up, when she fastened her teeth in my thumb. She didn't attempt to chew it, simply fastening her teeth and holding on. I diagnosed worms, gave a dose of Glover's vermifuge, but no result; then gave bolus of santonine, one grain, with no help, and followed this with about 75 minims of sweet oil in which was incorporated about 12 minims of paregoric. After the bolus of santonine she vomited her food (sixteen hours after having eaten it) in the condition it was before eaten. Food consisted of stewed onions and what appeared to be cooked fat, and was fed without my knowledge and consent. I feed stale bread saturated with meat juice or milk. The barking whine began immediately after contraction of the muscles of the stomach, which was similar to contraction of muscles of forearm and came at regular intervals of about 25 seconds and lasting 5 to 7 seconds. During intervals of rest she would either lay curled or outstretched, or stand with head hanging as if in the attitude of sleep. In her paroxysms she would either trot about aimlessly or stand and pivot on her hindlegs. Her back was slightly arched with hindlegs drawn under; tail, when she was at rest, hung down as it would ordinarily, but when in pain would stand out straight or erect and swing to and fro. She would frequently snap at her sides and likewise at myself, tin plate, etc. She licked an iron screen several times. When standing quiet a bilious fluid ran from her mouth without any apparent inconvenience or effort on her part, on several occasions. The barking whine was continued from 4:30 A. M. to 6:30 P. M.; when I dispatched her. She passed nothing but some urine, and this only twice. Was this rabies or colic? I diagnosed the trouble as colic, produced by acute indigestion, caused by food on a worm-inflamed stomach. My wife diagnosed it as rabies and has grave fears for my safety. Ans. Acute indigestion with gripes (and probably convulsions). Treatment: hypodermic of morphine 1-16gr., repeat in one hour if necessary. Dose of castor oil. Apply mustard to the abdomen.

W. R. H., Rome, N. Y.—My six months old foxhound puppy is very thin. He has grown very fast, but for the past month does not have his usual appetite, and when out for exercise seems weak and lacking in spirit. Otherwise he seems well, his coat being in good condition, his eyes bright, and except for his extreme thinness and languor, I see nothing the matter with him. Ans. Treat for worms. Afterward give the following mixture:

℞. Ferri phosph.....3i.
Tr. nucis vom.....mxxxvi.
Liq. arsenicalis.....mxxiv.
Aq. ad.....ʒvi.
Mix. Give one tablespoonful twice a day. Also give a dessertspoonful of cod liver oil twice a day.

S. T., Pawtucket, R. I.—The beagle Imogene (91472) is by Frank Forest, Jr., out of Quaboag Belle, by Larry out of Louie, by Royal Krueger out of Betsy, by Rock II out of Bell; Frank Forest, Jr., by champion Frank Forest out of Juno II., by Dan out of Auena, by Jacko out of Fan; Dan by Judge out of Dot II., Frank Forest by Riot out of Skip, by Hector out of Shoo-Fly, by Victor out of Beauty; Riot by Rattler out of Spider, by Rally out of Dolly; Larry by Rock II. out of Topsy, by Ring out of Bell, by Racer out of Tara; Rock II. by Rustler out of Vic.

O. E. W. Newkirk, Okla.—Unless you can secure the names of your bitch's sire and dam, also grandsire and granddam, you will be unable to register her get. If she wins two firsts at recognized shows she can be registered irrespective of pedigree. We forward you by mail the A. K. C. register blank which gives you full information on this point.

Reader, Hillsboro Bridge N. H.—Tan markings are usual on Llewellyn setters, the color being generally black, white and tan. The blue, lemon or orange beltons are indicative of Laverack blood. Please sign your name when you write again.

J. M. P., New London, Conn.—We do not know where you can procure a Chihuahua dog, perhaps a "kennel special" would help you.

T. H. T., Seattle, Wash.—There is little likelihood of bringing the tips down. You might try a small piece of leather glued to the under part of tip, and constant manipulation with the thumb and finger may drop them slightly.

---

In the course of progress incident to a largely increased use of machinery and mechanical appliances, another business which has languished somewhat of late years and gives few indications of any future improvement is that of the naturalist. Naturalists had entomological collections in their front windows, and made, oftentimes, a good living by the scientific stuffing of birds. They sold these for household ornaments, especially in parlors. Sometimes the objects were protected from the ravages of the atmosphere by glass cases. The window of the naturalist was always a place of attraction for small boys who lived in the neighborhood, and many lessons in natural history, which could not be taught in schools, were imparted in this way to the members of the rising generation. Nowadays there are but few naturalists in New York. Nearly all the fur-bearing animals and feathered birds are used for purposes of adornment, especially by women. Mink and beaver skins are no longer popular as parlor ornaments, though stuffed birds in glass cases are occasionally to be seen.—*New York Sun.*

### Western Massachusetts Fox Club's Meet.

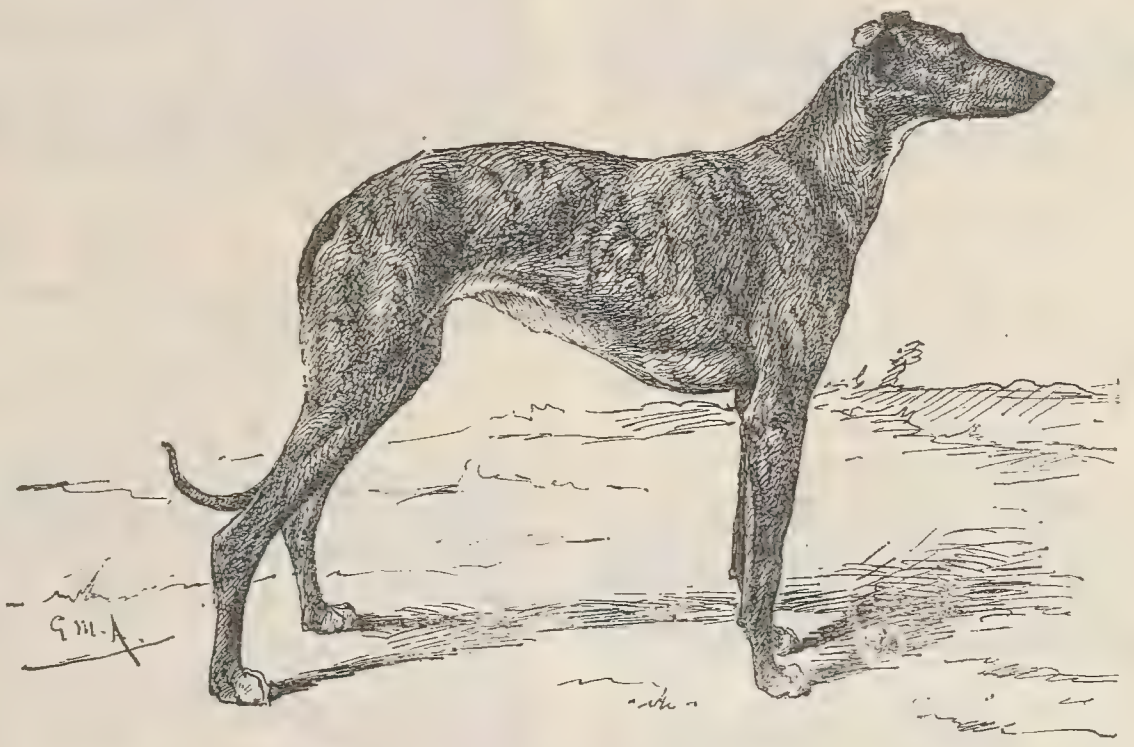
*Editor Forest and Stream:*

It has been decided by the executive committee of the Western Massachusetts Fox Club to have their seventh annual meet Wednesday and Thursday, Oct. 31 and Nov. 1 in this place. The committee have, after due consultation of the almanac, made special arrangements with the Weather Bureau to have two days of fine weather for this season's hunt, the past two seasons having been decidedly unpleasant. It is expected, and due preparations are being made to make this gathering the most successful one thus far, not only as to the increased numbers of hunters and foxhounds present, but in other respects. Our local nimrods have augmented the number of dogs in the past year, and many noted fox hunters with their hounds have informed President Roraback of their intention of being present to participate in this season's hunt.

The club to-day is in a very flourishing condition, and with its 250 or more members will make a fine showing at this gathering.

The hotel accommodations will be all the most exacting can expect, as with the New Park Square (which was destroyed by fire just previous to the last meet), which is in first class shape, will be enabled to meet all demands made upon it, while the other houses will be up to their usual first-class condition to entertain all their old and as many new friends as may demand their attention.

Many of the visitors last season were entertained by resident members of the club, and the acquaintances and friendships thus formed will be ones of pleasure and lifelong friendship. The club is always ready and pleased to receive and entertain visiting sportsmen, and all members of the guild will find the latchstring without—and as President Roraback in his genial manner says—the more the merrier—and a pleasant time will be assured to all who love the chase and the "merrie baying of the hounds." WORONOCO.



Westfield, Mass., Sept. 29.

### A Noted Beagle Kennel.

To one who loves a dog because it is a dog, and especially if that dog be one of the hound family, there are few more pleasant means of spending a half holiday than a ramble through a good beagle kennel. The other day, in response to an oft extended invitation from Mr. Kreuder, president of the National Beagle Club, we ran out to his place at Nanuet, N. Y., celebrated as the scene of the National Beagle Club's field trials the past three years.

The kennels are pleasantly situated in an apple orchard, the main building being 130ft. long, containing thirteen rooms 10ft. square. The main kennel yard, liberally shaded by old apple trees, is 85×130ft., and in this yard the pack of old dogs roam at will. Half the yard is covered with rough brush and weeds which afforded grateful retreats during the intense hot weather the last few months. At the back of the building are four separate yards for puppies, each yard being 80×10ft., with shade trees in each, and a large yard adjoins where a large half-grown pack runs at will. The lower part of the main building is reserved for brood bitches and their puppies.

MR. L. C. WHITON'S SPINAWAY.
First in Challenge Class, New York Show, 1894.

Old champion Frank Forest, looking as strong as a two-year-old and in rugged health, is the first to greet us; then our old friend champion Lou gave a whimper, whether of recognition or welcome mattered not to us as long as she was looking so well. Another good-looking beagle in the pack was Little Frank, by champion Frank Forest, a winner in the 1893 trials. He is handsomely marked and well formed. Marvel is a big hound, well calculated to push through any cover and suit the advocates of a 16 inch standard. He is, we are told, a good hunter, and it is a pity he is not an inch lower, as he is well put together. Among the others are Millie, Fanny K. and Madeline. Fanny is well known, being a frequent winner at the shows. Gay is a bitch that her owner will depend upon in the trials and said to be a great hunter.

In the back yard were a lot of youngsters about 7 months old, and we soon picked out Emeline II. as something that in spite of her present shyness is likely to make a name for herself when shown, her beautiful expression, ears and front combined with an almost faultless body command notice even in a bitch so young. She is by Frank Forest out of Norah K., and a granddaughter of the noted Emeline. She will be a 14½in. beagle and is probably the best that this kennel has yet bred. Norah's Girl is another of this litter whose prettiness and sweet expression commands attention. Dandy K. is a racy looking pup out of Zillah, by Frank Forest; a little long-headed to suit the sawdust ring. There were youngsters of all colors and degrees of excellence here and one would be difficult to please, indeed, if he could not find one to fill the bill either for field or bench.

In one of the compartments was a litter of four, eight weeks old, by Roy K. out of Grayburn Daisy, prettily marked, but of course too young for anything but speculation in futures. In another compartment was Belle II. with a month old pup by Roy K., whose sad expression and upturned eyes reminded one of a canine Evangeline, if one could imagine such an animal. A smart little Lonely pup nursing with this one looks like making something good. Fanchette, that ran in the trials, was nursing a litter of six pups, three days old, and Norah K. was attending to another family by Roy K., one week old, and Mr. Kreuder is looking for an Emeline III. here. The family likeness that runs through this strain is very noticeable.

Out into the front yard again after inspecting the "dip" tank, filled with a decoction that is "good" for fleas, mange, and other ills of dogdom. The dogs all get a dip in this every week, and their freedom from sores, etc., shows that prevention is better than cure. Again we had a look at the "entered" hounds and noticed Lonely looking well and likely to have another litter soon. Roy K.'s antics attracted our attention next; he is in fine condition and fit to go on the bench or in the field any moment. He is siring some good stock just now and proving a useful dog.

Time passed and we could only spare a few minutes for a look at Mr. Kreuder's first kennel, built years ago by his father; turkeys and chickens find an asylum there now. Down below the orchard is a stream in which the dogs can take a splash, and further off is the hospital. "But I've not used it for more than a year," says Mr. Kreuder, and we were glad to hear it. Such buildings should be a part of every well regulated kennel. It is now in order to say that the kennels were sweet and clean, and this we can do with a clear conscience, for every thing was spick and span, for though Mr. Kreuder is away from home a great deal, he has a good kennel man and an able lieutenant in Miss Kreuder, who takes a great interest in the "merrie" beagle. A parting chorus that rang in our ears until we reached the din of the city, brought a very pleasant afternoon to a close. H. W. L.

### Coomassie.

*Editor Forest and Stream:*

In a recent issue I noticed your remarks about this celebroted greyhound. In reading about her I was reminded somewhat of her career, and while I have not followed the coursing news very much, I certainly thought Coomassie died two or three years ago. Now I am not a surgeon, but I should think there would have been little or no difficulty in identifying the right Coomassie, inasmuch as, if my memory serves me right, after winning the Waterloo cup two successive years, she broke a leg while in trainigg, and I should think there would be a strong probability of there being some signs of the fracture even at this late date, as the bitch must have been three to six years of age at the time the accident is reported to have occurred. Such an accident may never have occurred, but it was a common impression in the east of England at the time, where local interest was great.

COMEDY.

Melrose, Mass., Sept. 26.

### The American Coursing Board.

*Editor Forest and Stream:*

Dr. Q. Van Hummell in your issue of Aug. 25 asserts that same of the statements from my pen, in regard to the American Coursing Board—his own individual scheme—are not correct. He fails, however, to state wherein they are not so.

As to the charge that I voted for the change in Rule 18. I did so vote, but fail to see what that has to do with the subject under discussion. Since he has asked me to give my reasons for changing my opinion on this subject I will do so. After more deliberate consideration of the matter I concluded that I had erred in voting for the change. At some future time I will be pleased to go into details and show him why I came to this conclusion.

My assertion that the motion of T. W. Bartels was pigeonholed has not yet been refuted. The Doctor states that Mr. Watson asked that a reasonable time be allowed for discussion. That is true; but does the Doctor maintain that sixty days or more is a reasonable time?

The Doctor attempts to sidetrack the question, and bring in other issues. I have made no personal attack. I simply contended that the American Coursing Board was not conducted in an open-handed, fair way. The statement has not been successfully contradicted. Let him confine himself to the subject and I will promise to do likewise.

In support of any charges, I say that the action of the president of the Board, in regard to the motion made by T. W. Bartels, was not fair. The Doctor asks me, "by what rule of order he can ask a vote upon an original motion, to which an amendment has been offered, before the motion has been voted on and either accepted or voted down." I make no such contention. I do contend, however, that "no amendment can be offered to a motion until it has been stated by the presiding officer (see Robert's Rules of Order—Cushing's Manual, Jefferson, etc.)." In the case under discussion, I contend that the motion made by T. W. Bartels, and seconded by J. H. Watson, was not stated by the president until the last of July; that the amendment of Dr. Van Hummell was offered before the motion had been stated, and that having been offered before the motion was stated that it was out of order and should not have been entertained by the president. Will the Doctor kindly show me some authority to the contrary?

He informs us that he knew nothing of the motion until June 30, at which time it reached him in the "wilds of Michigan." Does this not savor of the wilds of Michigan?

In common with the other members he saw it published in the issue of the *American Field* of June 30. If this surmise is correct, then I would inform the Doctor that publishing the motion in that journal does not constitute "stating the motion."

Within thirty minutes after receipt of the motion on June 30 by the Doctor he informs us that he wrote out his amendment and sent it to Mr. Lowe, although the amendment as sent out to the members by Mr. Lowe bears date of July 10; quite a difference between thirty minutes and ten days, is there not? If the amendment of June 30 was proper, what excuse is there for withholding it for thirty days before sending it out to the members? Is it fair to conduct matters in this manner? (I don't think that the Doctor asked for any reasonable time for discussion). I do not think it fair to withhold any motion or amendment for thirty days or for twenty days, as the date of the amendment would seem to indicate the time it was withheld.

As to my statement, "why offer any amendment, etc.," quoted by the Doctor, I would state that I intended to use the words, "practically the same," in place of "just." The only excuse I have to offer the public for inflicting them with such nonsense is that I wrote my article hurriedly (in a little over 30 minutes) and in that way the error crept in.

As to the presidency of the American Coursing Board, I

sincerely thank the Doctor, through your columns, for his proffered support for the position, but must decline with thanks. I am not a member of the board—don't know whether I could be, even if I desired to, as I don't own any club—and at present time do not desire to become a member. I prefer to be a free lance.

In conclusion, I would suggest to the Doctor that he answer the charges as to the American Coursing Board and how matters are conducted, and not try to sidetrack the issues by an offer of the presidency of "his individual scheme."

L. F. BARTELS.

KIT CARSON, Col.

## HUNTING AND COURSING NOTES.

There was some coursing a couple of weeks since at Ocean View, Cal., while the thermometer registered 90 to 95° in the shade! Competition must have been hot. Such sport (?) is brutal.

The well-known greyhound Midnight, which was sent out to the coast, if we mistake not by Mr. H. W. Smith, of Worcester, Mass., has, according to *Breeder and Sportsman*, just been purchased by Mr. Hugo McCracken, of San Francisco. Midnight is by Friday Night out of Mother Demdike, and is the sire of such noted greyhounds as Skyrocket, Shortstop, etc.

The greyhound Waratah, that was imported by Mr. Lopez, of San Francisco, from Australia, is a son of Livingston, whose daughter Bloomer, as told in these columns, won the Australian Waterloo cup. Another daughter of his, Belgravia, was successful in the same stake in 1892, and Livingston himself won the Cup in 1887. Waratah has run well forward in several events since his arrival in California and no doubt his blood will prove valuable to California breeders.

Mr. Basil Hayman will judge the Altcar Club meeting at La Crosse, Kan., on Oct. 30, in place of Mr. E. H. Mulcaster.

An adjourned meeting of the National Beagle Club of America will be held at the A. K. C. rooms, 44 Broadway, New York, on Thursday, Oct. 11, at 3:30 P. M. The members are requested to be present.

Mr. Frederic S. Webster, of New York, will represent the Northwestern Beagle Club as delegate to the A. K. C. Intending nominators should bear in mind that the entries for the trials to be held by this club will close Oct. 20, and those who desire further information should write Mr. Louis Steffen, 781 Third street, Milwaukee, Wis.

# Yachting.

## FIXTURES.

OCTOBER.

6. Cor. Phila., Sweeps, Del. River 20. Cor. Phila., Club, Del. River.
13. San Francisco Cor., Final Sail.

### New British Yachts.

ACCORDING to the following extract from the *Field*, a fair amount of building is already assured, with the certainty of more orders later on:

It is satisfactory to be able to announce that the great interest aroused in yachting this year has already resulted in a good number of orders for new boats being placed with Clyde designers and builders. Of these, the most important is the first-class racing cutter of about 160-rating which Mr. Wm. Fife, Jr., is to design for Mr. A. B. Walker, owner of the 20-rater Thelma. A vessel of this size might be built at the famous little Fairlie yard, but to launch her on the shallow foreshore would be an impossibility, so her construction is to be intrusted to Messrs. Inglis, at Pointhouse, the builders of Calluna.

The 40 rating class is to receive an addition from the design of Mr. G. L. Watson to the order of a brother of the owner of Thelma. Mr. Watson is also engaged upon the designs of a 20-rater for the Emperor of Germany, which is to be raced in British waters.

The class specially characteristic of the Clyde, the 10-raters, is not, as far as yet known, to be enlivened by the addition of any new boats. Mr. Arthur (formerly owner of Phantom) has abandoned his intention of building, and Dakotah's wonderful powers have fairly frightened all other yachtsmen. If this class is to be kept on the programme next season, it will need to be under handicap conditions. With the addition of Dora, five boats would be available, and, their various merits being now well known, it would not be difficult to handicap them so as to produce good sport.

For the Irish class of 6-raters, Mr. Watson is designing a new boat to the order of Mr. R. B. Burnside.

The 5-raters here this season have had most frequently to go along with the cruising tens, but it is intended to elevate them to the rank of a class by themselves next year.

Mr. Alex. Scott, having decided to sell Almida, has ordered a first class racing 5-rater from Mr. Fife, which when launched, will be known by the same name as the present boat. Several other fives are talked of though none are yet actually on order.

In the 23ft. class Mr. R. M. Donaldson is to replace Norka with a new boat; but the owners of Vida and Thaber consider their present craft good enough for another year.

There is a feeling among some of the experienced boat sailers that a new length class of 20ft. l.w.l., and with 450 to 500sq. ft. of sail area, would suit the wants of many men better than either of the existing classes, and it has been arranged to hold a meeting at an early date to consider the matter.

The 1-raters and 0.5-raters, so popular at other yachting centers, are attracting a good deal of attention here, and a move has been made toward forming a club for the special purpose of promoting match sailing in the evenings with boats of these ratings.

In addition to the yachts already mentioned, Mr. Watson has on hand designs for a 40-ton cruiser for Sir Richard Bulkeley, Bart., a fast cruising cutter for Mr. H. M. Williams, a 2.5-rater for Shanghai, and, in his capacity as designer to the Royal National Lifeboat Institution, a new lifeboat for Blackpool.

As regards steam yachts, Mr. Peter Coats, of Paisley, has just instructed Mr. Watson to design for him a vessel of 450 tons, and Mr. Alex. Scott is negotiating for one of about 40 tons.

### Massachusetts Y. C.

BOSTON—DORCHESTER BAY.

*Saturday, Sept. 22.*

THE last race of the Massachusetts Y. C. was sailed on Sept. 22 over the Dorchester Bay courses, an open race. The wind was light S.W. and the times were:

The judges were Messrs. A. J. Clark and W. B. Crosby.

### Knickerbocker Y. C. Ladies' Day.

COLLEGE POINT—LONG ISLAND SOUND.

*Saturday, Sept. 22.*

THE Knickerbocker Y. C. concluded a successful season on Sept. 22 with a ladies' race, in which 19 yachts started. The course was a six mile triangle, two rounds, sailed with a good S.W. wind, the mes being:

| | Length. | Start. | Finish. |
|---|---|---|---|
| FOURTH CLASS—CABIN SLOOPS. | | | |
| Edith, G. A. Cooper | 32.07 | 3 25 00 | 4 52 07 |
| Allace, A. N. Holden | 30.00 | 3 25 00 | 4 57 35 |
| Yolande, A. E. Keeper | 31.05 | 3 25 00 | 5 04 30 |
| Pirate, E. C. Hogg | 28 09 | 3 25 00 | 5 10 30 |
| FIFTH CLASS—CABIN SLOOPS. | | | |
| Bacchante, G. Wagner | 27.00 | 3 25 00 | 5 08 00 |
| Nanita, H. Stevenson | 32.06 | 3 25 00 | 5 06 00 |
| SIXTH CLASS—OPEN CATBOATS. | | | |
| Truant, W. H. Titus | 29.06 | 3 35 00 | 4 57 00 |
| Leisure, F. B. Myrick | 31.03½ | 3 25 00 | 5 05 07 |
| Ann, D. H. Burdett, Jr | 31.00½ | 3 35 00 | 5 08 30 |
| SEVENTH CLASS—OPEN CATBOATS. | | | |
| Aache, E. A. Fairchild | 26.00 | 3 35 00 | 5 06 30 |
| Melita, O. H. Chelborg | 22.07 | 3 35 00 | 5 12 45 |
| Themis, A. F. Petry | 21.00 | 3 35 00 | 4 57 01 |
| Florence, J. G. Honey | 21.06 | 3 35 00 | 5 17 00 |
| EIGHTH CLASS—OPEN CATBOATS. | | | |
| J. I. M., J. I. Merritt, Jr | 33.00 | 3 35 00 | 5 11 00 |
| Annie Seaman, C. Coughtry | 32.00 | 3 35 00 | 5 03 45 |
| NINTH CLASS—CATBOATS. | | | |
| Gladys, C. W. Schelsenger | 35.00 | 3 35 00 | 5 15 30 |
| Violet, G. A. Wieners | 21.00 | 3 35 00 | 4 47 21 |
| TENTH CLASS—OPEN SLOOPS. | | | |
| Flora, F. G. Pauly | 35.00 | 3 24 00 | 4 40 00 |
| Gem, C. L. Strollmeyer | 23.00 | 3 25 00 | 4 53 00 |

The winners are: Fourth class, Edith; fifth class, Nanita; sixth class, Truant; seventh class, Themis; eighth class, Annie Seaman; ninth class, Violet; tenth class, Flora.

### Shamrock—Elsiemarie.

THE postponed match between the schooners Shamrock, W. P. Ward, and Elsiemarie, J. B. King, was finally sailed on Sept. 24; a quick and exciting race in a good breeze. In addition to the private stakes, the Larchmont Y. C. added a cup costing $100. The wind was fresh from N. W. in the morning, and the Eaton's Neck-Stamford-Hempstead course was selected, thirty-six nautical miles. The steam yacht Jessie, C. H. Murrary, acted as judges' boat, carrying Messrs. Augustin Monroe and A. Marshall: and the start was signaled at 11:35. Elsiemarie went over at 11:37:50, but Shamrock was in trouble and did not cross till 11:43:19, with a handicap of 3m. 19s. The first leg, of 15½ miles, was a broad reach, and the start was made with ballooners set, spinakers being tried later on, and taken in and reset as the wind hauled. Elsiemarie sailed fastest off the wind, and at the turn had a long lead, the times being: Elsiemarie 1:28:37, Shamrock 1:42:32.

The next 7 miles was to windward, and when settled down to her work, Shamrock began to make up for lost time; and at Stamford mark she had cut in two her rival's lead, the times being: Elsiemarie 2:58:08, Shamrock 3:04:16.

On the reach of 10 miles to the Hempstead mark with too much wind for club topsails and with sheets in, the two showed nearly even, the times at Hempstead being: Elsiemarie 3:57:30, Shamrock 3:04:18.

The last 3 mile leg was to windward; and this time Elsiemarie made a gain of 3 minutes, the finish being timed: Elsiemarie 4:26:41, Shamrock 4:35:51.

The final times were:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Elsiemarie | 75.60 | 4 48 51 | 4 48 51 |
| Shamrock | 73.18 | 4 55 51 | 4 53 26 |

The other two matches, between Queen Mab and Wasp, Viator and Atlantic, have been declared off.

### Beverly Y. C.

MONUMENT BEACH.

*Saturday, Sept. 22.*

THE 219th race, sail off for second class pennant, in Buzzards Bay, was sailed on Saturday, Sept. 22, in a light southerly wind. The second class boats not eligible to sail for pennant sailed a separate sweepstakes of their own. Linotte led during most of the windward work, but as wind lightened Kalama went by her. Gymnote won easily in the sweepstakes.

| | Length. | Elapsed. |
|---|---|---|
| PENNANT RACE. | | |
| Kalama, Chas. Brewer | 23.07 | 2 12 27 |
| Linotte, W. P. Wilson | 23.02 | 2 16 07 |
| Anonyma, F. L. Dabney | 23.08 | 2 25 38 |
| SWEEPSTAKES. | | |
| Gymnote, W. E. C. Eustis | 23.08 | 2 19 21 |
| Bernice, J. G. Young, Jr | 23.04 | 2 20 29 |
| Mist, G. H. Lyman | 23.09 | 2 22 11 |
| Ulula, W. H. Winship | 22.04 | 2 25 41 |

Kalama wins the championship. Gymnote wins the sweep. Course 10¼ miles. Judge, A. H. Hardy.

### Yorkville Y. C.

NEW YORK—EAST RIVER.

THE Yorkville Y. C. sailed its last race of the season on Sept. 23, the wind being fresh S.E. The times were:

| | Length. | Start. | Finish. |
|---|---|---|---|
| CLASS A—SLOOPS. | | | |
| Maud | 27.02 | 12 21 15 | 3 09 00 |
| Cygnet | 27.09 | 12 24 15 | 3 23 00 |
| CLASS B—SLOOPS. | | | |
| Zetes | 22.07 | 12 23 00 | 3 37 15 |
| Tip Top | 19.10 | 12 22 00 | 3 40 30 |
| Gypsy | 20.05 | 12 26 00 | Not finish |
| CLASS C—CATBOATS. | | | |
| Little Dean | 16.05 | 1 05 30 | Not finish |
| Belle | 15.06 | 1 05 35 | 3 56 30 |

The winners were: In Class A, Maud; Class B, Zetes, and Class C, Belle.

### Lynn Y. C. Expert Cup.

LYNN—BOSTON HARBOR.

*Saturday, Sept. 22.*

The last race of the Expert cup series was sailed on Sept. 22, the wind being fresh N. W. at the start, but dying down to a calm before the finish. the times were:

| | Elapsed. | Corrected. |
|---|---|---|
| Alpine, S. J. Blethen | 1 36 35 | 1 03 58 |
| Irene, Gordon & Co. | 1 32 30 | 1 07 10 |
| Astria, R. M. Benner | 1 37 08 | 1 09 11 |
| Black Cloud, Taylor & Putnam | 1 35 15 | 1 11 11 |
| Sans Pareil, R. Auger | 1 49 05 | 1 16 50 |
| Alice, L. P. Lynch | did not finish. | |
| Nellie Farley, E. C. Smith | did not finish. | |

### Quincy Y. C.

THE last race of the Quincy Y. C. was sailed on Sept. 22 in a light S.W. wind. It was practically a resail of the race of Aug. 25, in which Mudjekeewis was disabled and White Fawn went to her assistance. The times were:

| | Length. | Elapsed | Corrected. |
|---|---|---|---|
| FIRST CLASS. | | | |
| Beatrice, John Cavanagh | 26.03 | 2 34 30 | 2 03 45 |
| White Fawn, A. E. Jones | 24.10 | 2 37 00 | 2 04 45 |
| Mudjekeewis, Davis & Abbott | 25.09 | 2 38 12 | 2 06 56 |
| Moondyne, A. J. Shaw | 24.08 | 2 42 22 | 2 09 56 |

## YACHT NEWS NOTES.

On Sept. 23 a private match was sailed between Penguin, Mr. Geo. A. Brightson, and Alga, Mr. J. Littlefield. Penguin is a centerboard sloop, probably one of the fastest of the Ellsworth boats, though she has never been raced steadily, and Alga is the first of the Burgess 46-footers, a keel cruiser designed for the late Mr. C. A. Longfellow. The course was from off the Atlantic Y. C. house, around Southwest Spit and the Bell Buoy off the Hook. Alga made a good start, in a fresh S.W. breeze, and led easily over the course, winning by about 5m.

An interesting race was sailed on Sept. 22 by the catboats Mary and Almira, for a $50 cup offered by Com. Tyson, of the Riverside Y. C., the course being six miles to windward and return from Little Captain's Island. Mary sailed much better after some recent alterations, and beat Almira by 4m. 56s. corrected time:

| | Elapsed. | Corrected. |
|---|---|---|
| Mary, W. Ellsworth | 2 57 07 | 2 57 07 |
| Almira, W. H. Hanan | 3 02 12 | 3 02 03 |

Mr. Arthur Binney has purchased the interest of the late George A. Stewart in the firm of Stewart & Binney, and will continue the business of yacht designing at the same office, 181 Tremont street, Boston.

The Boston *Globe* of Sept. 23 contains a careful and complete summary of the local races of the new knockabout class, the results being tabulated in a very effective manner.

Messrs. McIntyre and Kirk, at Quincy Point, have already hauled out Jubilee for the winter and will also haul out Pilgrim. The latter has turned out quite a success as a steam yacht.

About fifty members and guests of the Atlantic Y. C. sat down to a good dinner at the club house, Bay Ridge, on Sept. 26, the dinner being tendered to the flag officers of the Seawanhaka Corinthian and Larchmont clubs, in recognition of the courtesies extended to the Atlantic Y. C. on its annual cruise last July. Messrs. George and Howard Gould were also invited in the expectation that they would be back in New York in time for such an official welcome from the club, of which both are members, but they did not arrive in time. Com. Banks presided, and the whole affair passed off very pleasantly. Vice-Com. Ketchum made some very pertinent and appropriate remarks concerning Vigilant and her owners.

Captains Haff and Jeffrey arrived at New York on Oct. 1 on board the Berlin. The tug Ida L. Tebo, with a party of yacht skippers, met them at Quarantine and took off Capt. Jeffrey, but Capt. Haff continued on to the pier at New York, where his wife was waiting. A hearty welcome had been prepared for both captains at South Brooklyn, but they went at once to their homes at Islip and Bay Shore.

The St. Augustine Y. C. house was wrecked by the cyclone of Sept. 25, and much damage has been done to yachts and boats on the Florida coast.

The annual meeting of the Sewaren Land and Water Club was held on Sept. 29 at the club house, Sewaren, and the following officers were elected for the ensuing year: Pres. (commodore *ex officio*), Wm. M. Ballard, launch Elthilda; Vice-Com. (vice-commodore *ex officio*), F. D. Wright, cutter Vala; Sec'y, L. Bruce Fulton; Treas., F. A. Sollace; Governors for three years, Charles W. Ballard, launch Elthilda; D. G. Whitlock, cat Monsoon; House Committee, Charles Badgley, R. G. Clarkson, G. L. Boynton, E. D. Ruggles, C. M. Cooper; Committee on Constitution and By-Laws, Charles Badgley, L. B. Fulton, William F. Martin; Committee to Prepare New Sailing Rules, D. G. Whitlock, Thomas W. Hawkins, R. G. Clarkson. An informal reception was held in the club house after the meeting.

The Paris *Figaro* is the authority for a statement that Satanita has been sold to a French yachtsman, who will race her in the Mediterranean; and also that three of the British 20-raters will be purchased by other French yachtsmen for the same purpose.

Meneen, the Herreshoff 2½-rater, owned by Mr. Hardie Jackson, has won 46 prizes about the Solent this season.

On Sept. 18 Vigilant was hauled out for the winter at Fay's yard, Northam, Southampton, while Atalanta will winter in the docks at the same port.

The following yachts and launches will be hauled out for the winter at Charles L. Seabury & Co.'s yards at Nyack-on-Hudson: Steam yachts and launches—Allegra, Anemone, Claymore, Nereid, Margaret, Satellite, Marjencha, So So, Cricket, Palos, Xiphias, Hirondelle, Charlietta, Daisy, Delma and others. Sloops, etc.—May, fin-keel yacht Trust Me, Kabeyun and others.

Asphodel, 20-rater, designed by Mr. Watson this year, has been sold by Prince Henry of Battenberg, and will leave for the Mediterranean.

Dacotah, the Herreshoff 10-rater, has a record for her first season of 33 starts, 25 first prizes, one other prize, and £274 winnings. Her nearest competitor is the Fife boat Lilith, with 32 starts, 11 firsts, 10 other prizes, and £137. Sula, the Watson boat, stands 26 starts, 2 firsts, 6 others, and £35. Dacotah also won two challenge cups.

Admiral, steam yacht, is at Lawley's yard, to be lengthened about 16ft. in the bows.

The Minneapolis M. Y. R. A. brought off a race in the 40in. class on Sept. 23 in a strong westerly breeze, the course being about three-eighths of a mile to windward. Two boats competed, Minerva, J. Hadden, and D. H. E., E. F. English, the latter a new boat which was only put in the water about an hour before the race. The models carried full lower sail. After an even start Minerva drew ahead, D. H. E. being delayed to trim sheets. On getting under way again she ran past to leeward. Minerva was holding the wind better, however, and when she went about had a good lead, which she increased considerably toward the finish, D. H. E. getting into trouble with her automatic rudder. Minerva sailed very steadily all through, doing much better work than heretofore. The new boat showed good speed, and when in trim will likely prove equal to beating Minerva.

The autumn race of the Corinthian Y. C. of Philadelphia will be sailed on Oct. 6, starting off the club station, Essington.

On Sept. 26 the Manchester (Mass.) Y. C. elected the following officers: Com., A. Walpole Craigie; Vice-Com., F. L. Ames; Rear-Com., John A. Barnham, Jr.; Sec'y and Treas., Chas. A. Cooley, 3 School street, Boston; Meas., Edwin P. Stanley; Delegate and Chairman Regatta Committee, Alex. H. Higginson.

On Sept. 26 Capt. Isaiah Conover, of Atlantic City, was found dead in his boat. The yacht was sailing alone about Absecom Bay, when she was boarded by another boatman.

The Massachusetts Y. C. closed its summer quarters at Rowe's wharf, Boston, on Sept. 29, and will open its winter quarters, 15 Hayward Place, Boston, on Oct. 6. The floats at the landing will be kept until Oct. 10, and the quarters at Dorchester will remain open until the same date.

# Canoeing.

### Paddling on the Snohomish and Snoqualmie.

THE double-bladed paddle is not a popular appendix to a canoe in western Washington waters, therefore when I chartered a Siwash *canim* for a voyage up the Snohomish and Snoqualmie, last summer, my Indian vendor, in classic Chinook, said it was *hy-as kul-tus* and insisted on my taking the venerated single blade. So we, for my wife formed one of the crew, compromised matters by taking both.

The climax of "canoebial" bliss is probably reached in a narrow, light craft, wherein one can recline against a back rest and dip the long double blade with nonchalant ease, hour after hour, in smooth water, as distinguished from being twisted through the shoulders in driving the single blade in troubled currents. But when you have a sizeable craft, fairly well water-soaked, and a vicious current to combat, the aboriginal tool becomes a very serviceable implement, and the fun of canoeing resolves into genuine solid work. Out on the waters of the Pacific Northwest you meet with considerable of that kind of work (with brief interludes for contemplative ease) when you assume the task of ascending a current. But once the headwaters of the rivers are reached and the descent begun, and the sport then becomes water tobogganing of the most exhilarating kind.

Our canoe was built by a family of the Tulalip reservation, after the manner of the Siwash, from a cedar log, having an over all length of 18ft., beam 32in., amidship depth of 13in. and being entirely open. It was an example of pure carving and exquisite model. The Siwash are expert modelers, having a keen perception of the art of design according to nature's methods, for they create without the aid of a small working model or drawing, and build for the uses intended, hence there will be found slight differences or modifications of the type, according to localities or tribal symbolisms prevailing all along the coast of the North Pacific. The accompanying drawing of sheer plan and midship section illustrates certain peculiarities in type of the larger and sea-going canoes, ranging from 30 to 60ft. in length, in which these amphibians of the west coast brave the seas from the Columbia to Alaska.

In the smaller and river craft, such as we used in our cruise, the forward overhang is less pronounced, and instead of the well defined cutwater the bow is curved more in conformity with the civilized spoonbill type. The usual method of building is to dig out the body, fill with water and throw in hot stones until the water boils and softens the wood, when spreaders are put across and the topsides are pressed out until the desired width and rise of sheer are obtained. Then with hatchet and knife the irregular outlines are softened into a graceful contour, the body scraped and polished, and the final touches of ornamentation wrought according to the legendary and artistic qualifications of the artisan. In addition to their expertness as marine architects and builders, the Siwash are born cruisers, and during probably more than half of their existence are afloat; at all times of the year, and on all the waterways of the country west of the Cascades, you can meet whole families with their camp outfit in their canoes drifting and paddling wherever fancy dictates.

The Snohomish is a powerful river formed by the union of the Skykomish and Snoqualmie, and has a length below the junction of some twenty odd miles, emptying its waters around a series of deltas by four mouths into Puget Sound at the city of Everett. It is navigable for small steamers and is influenced by tides throughout, and for a large part of its length pierces a dense forest of cedar and fir. The Skykomish is navigable for extremely light draft boats up to near the foot hills, and then becomes a torrent of white water, having

its source in the Cascades, and offers many miles of down hill sport. There are a few settlements scattered along its banks, and several fine ranches below the range, but its headwaters traverse a primeval country. The lower Snoqualmie is kindly disposed toward the voyager, but its headwaters are not commended to the canoeman. Upon the upper river are two magnificent waterfalls, the lower one making a sheer plunge of 265ft., and there trout fishing is good and well rewards the bearer of a rod for a trip into the picturesque cañons of the foot hills.

We embarked in the Ee-na, jargon for beaver, at Everett, one lazy day in the latter part of August, and dipped our paddles in the flood tide setting up the Snohomish, joining company with the hump-back salmon that had commenced running to their spawning beds lying beneath the shadow of Index Peak. The river fairly swarmed with the eager fish. The hump-back salmon, *Oncorhynchus gorbuscha*, represents one of the supposed five varieties of salmon on this coast. Every two years it ascends the rivers from the ocean, in countless numbers, to spawn, and after consummating the act of maternity the majority die, while the remainder struggle back to salt water in a mutilated condition. Such is the belief prevalent on this coast.

It had been told to me that the "humpy" traveled about three miles per day, and partook of food during its spawning journey, but could not be prevailed upon to take a baited hook. I soon satisfied myself on the latter point, but by various devices succeeded in capturing various specimens of both male and female at frequent intervals and examined their stomachs. Those fish taken near the Sound contained food and evidences of digestion; further up the river digestion seemed imperfect, while near the headwaters shrunken stomachs and torpid conditions prevailed. I bottled various specimens of viscera, and on my return submitted them to several crude microscopical and chemical tests, but with imperfect results, yet enough was adduced to warrant my inference that if a careful investigation under some scientific method was conducted interesting results would follow.

My observations on the daily progress of the salmon showed an average of about three miles per each twenty-four hours. The ratio of speed seemed to differ according to the condition of the water and the fructiferous state of the female, hence the foregoing average has been predicated on a numerous series of calculations dating from salt water to the spawning beds. Many of the Indians believe that distance cuts no figure in the duration of the journey, but that as the salmon always return to spawn in the place of their nativity, they hover around the mouths of the rivers awaiting the development of the eggs, and knowing the points to which they will ascend, time their movements accordingly. Sex is strongly marked in the external form of the "humpy." The female is of fair symmetrical contour, but the male, particularly after entering fresh water, shows the hump largely developed, which, with the peculiar hook of the mouth, detracts from beauty of form.

At frequent intervals along the river banks, at the bends, we noticed camps of Siwash engaged in seining the running salmon and curing them for market and home consumption. As an Indian's gastronomic tastes are always opposed to a white man's, so in this instance he prefers the flabby, feverish, insipid flesh of the male "humpy." But neither is a running female taken in fresh water a white man's delicacy measured by an epicurian standard, and only when taken in salt water are the females, rarely the males, adapted to canning. Just previous to the run I saw fishermen seining them out of the Sound, making single hauls of the seine in which thousands were taken, and then counted into the cannery scows at one cent each fish averaging 6lbs. No stretch of the imagination is needed to predicate the fate of the salmon on such wholesale depletion.

After passing the Pilchuck, which empties into the main river at Snohomish City, the salmon trout afforded some sport with a light rod, baiting with salmon roe. These trout become so voracious as they follow the gravid salmon, that they will seize the eggs as ejected by the females. They are strong and gamy, and put up a good little fight before they succumb to the resilience of the bamboo or lance. Trout—and there are several varieties in the State—will at certain seasons take a fly either in river or lake. Sometimes, however, they are coy, but the salmon roe, which is about the size of a pea, fastened to the point of the hook, is a lure they cannot resist.

There is something commendable in this to an angler who is after grub. I recall many days back East when I have sallied forth with a book stocked with a dozen kinds of flies, and have whipped a stream or tried a pitch into a good-looking pool, drew blanks, put on a different gang of flies, still no strike, and so on through my list. At last, after an expenditure of time and patience, I perhaps struck the correct combination and a trout. So far I have not duplicated similar experiences on this side of the range. When I have dropped a fly into a likely looking bit of water with no results, I have not wasted time in going through a gaudy assortment of tinsel and feathers, but just simply put on two or more of the sticky, pink-tinted salmon eggs, and right speedily my rod tip bowed its approval.

The ascent of the Snohomish was made in a leisurely manner. Ranch eggs, butter and milk were obtainable at convenient intervals, wild berries grew in profusion along the banks, and camp sites were numerous. Frequently we toyed with the current, hugging the shore now on one side to avoid the main stream and then shooting across upon reaching a bend where the waters ran plump into the bank, throwing back eddies that would catch our craft and make it spin as we allowed it to follow the whirl and converge toward the vortex, in pure abandon to a motion that was enjoyable without exertion on our part. And then we would exclaim, "How nice," and probably madam would say, "Don't you wish we could continue this all the time?" until at last with prompt authority I would say, "Well, let us get a hustle," and then the paddle would drive the canoe out of the charmed circles of the dancing eddies, and once more point upward. But as time was not of the essence of our contract we cheated the current by camping over on the ebb tide and sought the advantage of the flood in the upward journey.

There was plenty of company along the Snohomish. Little puffing sternwheel steamers frequently bore down on us, or one would come up astern, giving us a spiteful wash and congratulatory toot at the same time. Anon we ran the gauntlet of a log drive or raft that ran along under the impulse of gravity and a momentum commanding a wholesome respect. But the most frequent traveler was a canoe similar to our own model containing a Siwash outfit of picturesuue vagabonds dressed in garbs as vivid in coloring as a Canadian forest in autumn. A coast Indian is a lazy fellow except when in a canoe. Seated in his shapely dugout, he wields a paddle all day long easily, gracefully and persistently, and Mrs. Siwash ably backs him on the job.

One day after entering the Snoqualmie we passed a point where a Siwash, his klootchman (squaw) and three little smoke-dried kids had camped. They were embarking as we passed and hailed us in the coast jargon. We had perhaps a dozen yards the start as they dipped their paddles and started in for a race. Now, I had theretofore hugged the delusion that I was no slouch with a paddle, and my wife used one with power, but those troublesome natives pulled up on us, held the boats level for a few yards, and seemed likely to pass. We had held near the shore with the advantage of slack water and a lighter boat, and settling down to the work the boats fairly flew along together. Occasionally the Siwash would shout a guttural command to his squaw, who would bend on a little harder with her paddle, and then turn toward us with a grin on her huge mouth that divided her swarthy face into two segments of smoked bacon, as she would guy me in pure Chinook. For 200yds. we kept the pace, and as my arms began to unjoint there was a splash and yell from the Tulalip craft that called a halt. One of the little Siwash imps in leaning too far out had gone overboard, greatly to my gratification, as it called off the race.

My wife uttered a cry, fearing the little tot would drown. "Don't worry," I said, "the water is cold enough to paralyze a white mortal, but that little greasy scamp is in his element, so just watch the proceedings." Two strokes of the paddles and the canoe swung into position, when the Indian grabbed the child by the hair and swung it sprawling into the boat, and as it lay sputtering on its face the fond parent raised its arterial circulation by a stimulating application of he paddle.

"What a shame!" said my wife. "Which?" I asked, "the providential immersion of the kid that saved us the race, or the fanning it got from the paddle?"

A summer cruise in western Washington is delightful. No rain falls and the temperature is always agreeable. Dry camp sites abound, and the subject of a camp site along the streams piercing the mountains and forests presents some features that veteran outers will appreciate. Fir bark is the greatest fuel for the camp-fire known, and during the dry season great blocks of the hard, resinous covering, a full foot thick, can be split from a standing dead giant, and which when piled against a back log and touched off, burns with a vivid flame and heat that will evoke savory odors from broiler and coffee pot, in less time than is required with the oak and maple of the East.

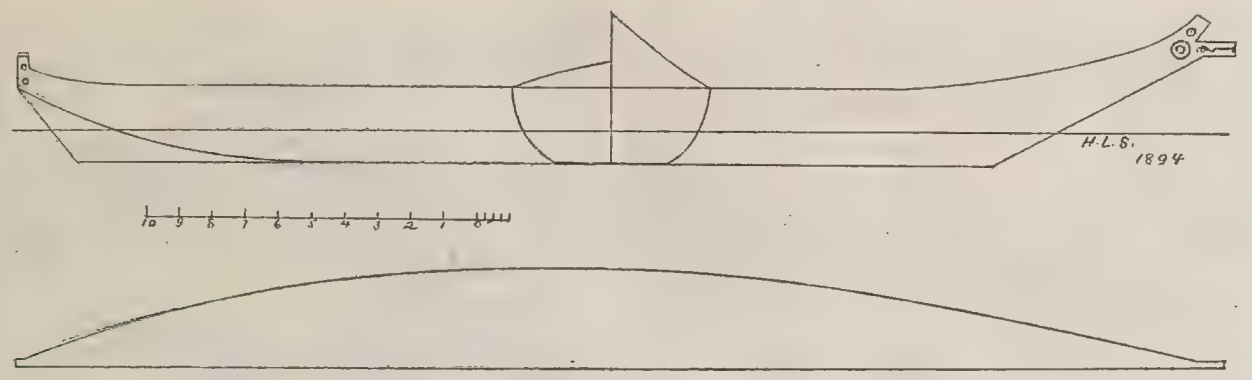
The scenic display along our route was entrancing. The peculiar situation of winter and summer, side by side, without encroaching on each other presents a startling as well as novel picture to a newcomer from the Eastern States. Throughout the broad basin of the Sound, summer exists nearly the year round, and the flora is dressed in a garb of brightest green, while overlooking the lacustrine stretches are the snow-capped summits of the Cascades on the eastern boundary and the ice-bound Olympics on the west, whose towering peaks gleam in the sunlight with the iridescence of the opal. We never wearied in gazing upon majestic Rainier, and the lordly Baker, whose alabaster summits rise superior to the environment in ever-varying effects of tinting under changing atmospheric conditions, whether viewed beneath the glare of a mid-day sun, under the shadow of a cloud screen, or dimly veiled in the pale light of a full moon.

While it is not an extensive voyage up the Snohomish from its debouchure into the Sound to the forks of the Skykomish and Snoqualmie, yet the distance as the crow flies is increased by the windings of the stream. But the Snoqualmie is the more serpentine and this crookedness augments length over an air line. The broad valley of the latter contains several fine hop ranches, and many little towns lie close to its banks, but for the most part the great forest prevails. And what forests! Everybody has heard of the big red woods of California, yet the gigantic sequois of the valleys of the Sierras are immense only in their individuality; they excite wonder, but do not impress one with the awe-inspiring grandeur of a Washington forest. Along the upper Snoqualmie the firs and cedars reach to a height of 300ft., straight as a plumb line and 40ft. in circumference, growing closely together. It is this density and close matting of great trees that appals one. How the soil can support such growth is a marvel. The sun never pierces through the closely-packed tops, hence one moves in a subdued twilight when passing along the trails in daytime.

It is extremely difficult to penetrate these forests except along a trail. There is such a mass of fallen timber and underbrush to be encountered that it makes the heart sick and limbs weary. One can easily climb over a log in an Eastern forest, but to surmount one of these prostrate leviathans requires a ladder. I had heard that darkness can be felt and I appreciated the fact one night when having journeyed off the river through the forest trail night caught me in the depths of the great woods. Dark? Well yes! I felt it settle on me and gather around my course like a mantle. Nothing was visible, no glimpse even of a star spangled sky overhead, and every three steps my outstretched hands would touch the immense trunk of one of those mammoth trees; and then I would feel my way around it, grope a nother dozen feet and run into another huge cylinder of bark and wood.

It is a little bit uncanny prowling along the forest trails alone at midnight, when the cry of a cougar, or the sniff of a bear causes your flannel shirt to seem filled with prickers, and makes you wish for daylight and a chance with your repeater, or better still desire a comfortable couch beside the camp fire.

We found some shooting for the pot along the route, mainly grouse, which are quite double the size of the Yankee "partridge." But game is not so plenty along the rivers as a few years ago, still there is sport enough to satisfy a reasonable demand. The legislature has enacted some stringent and fair game laws, but in the foothills they are a dead letter. Deer shooting out of season and dynamiting trout are common infractions among the lawless gangs that infest the headwaters of our mountain streams, but perhaps after the scarcity of game is fully felt, as it soon will be, sufficiently to stir up the public, then we may hope the ornamental game wardens of the State will become induced to look after the matter.



We lingered a few days around the great falls of the Snoqualmie and then made a peregrination along the south fork to the upper falls, where we pitched our tent and idled a few days. But the charm of primeval nature has sustained a check by the inroad of the iron horse that unloads excursionists from the cities of the Sound, thereby converting these magnificent retreats into mere public resorts. Nothing shocks the senses of the sportsman cruiser as the advent of the Sunday excursion train with its motley crowd of basket carriers, sandwich stuffers, beer gluttons and loads of beer, into the halls of nature's select wonders. They are not outers but rioters. The charm of nature in repose is broken and violated by their carousals, and the sanctity of creation profaned by the empty liquor flasks and debris of the lunch baskets strewn in their wake. Such is the experiences of Niagara, Montmorenci and Taughannock, and a similar fate awaits the matchless falls of the Snoqualmie.

Two weeks had slipped along since we left the "City of Smokestacks," before we turned the Ee-na's prow on the downward glide. Where is there a canoeman who has not discovered that a mile does not contain 5,280ft. when sliding down a gallant current? Distance cards or time tables become base frauds when one is on the charming slant, and so both my wife and myself are ready to asseverate that from the lower Snoqualmie Falls down stream to the Sound, by canoe, the distance is not one-quarter of the three-quarters of a hundred miles laid off on the map. To-pographical engineers are sadly lacking in veracity and accuracy, in computing up current and down current distances from the same scale, in any table to be used by a canoeman.

Aside from the Columbia, where one can spend weeks in traversing hundreds of miles of fine canoe water, there are several splendid rivers for moderate cruises in the sound country. Among them one of the most delightful is the Skagit, but its bold current and length precludes a comfortable ascent except by easy stages, and to enjoy canoeing thereon one should convey his canoe by rail and Indian pack to the head waters, or buy a dugout there from a native, and then make the long descent. Way up among its headwaters lies a pretty lake, just beneath the towering glaciers of Mt. Baker, where the trout are large and plenty, and are ready to extend a courteous and cordial invitation to the cruising readers of FOREST AND STREAM to pay them a summer visit.

CAYUGA.

EVERETT, Wash., August.

SIWASH COAST CANOE.—36ft.×6ft.×2ft. 2in.—PUGET SOUND, WASHINGTON.

## Mr. Howard's Racing.

SOME further particulars of Mr. Howard's sailing at the B. C. A. meet are given in the following letter to the *Field*. Dr Hayward is an old and experienced canoe sailor:

Mr. Howard is so able and so ready an exponent of the merits of his canoe Yankee that I am convinced he will take in good part a few reflections of criticism from an unprejudiced spectator. A busy man's affairs get into such a grievous tangle during a three weeks' holiday that I have only just been able to overtake my accumulated boating literature, and, therefore, have only to-day seen the last two *Fields* which instigate the following remarks:

I grant, in the first place, that Yankee was the best racing canoe at Salcombe, and I can quite believe she is the fastest canoe on long courses at present in this country. She is handsome, handy, and admirably handled. Now, *per contra*:

The Yankee required as much and as lengthy handling on shore as she did afloat. Canoeists with plenty of time and enthusiasm may like to spend hours tinkering with their ships ashore; but much makes too big a hole in a fortnight's holiday. To be engaged in "repairs" while others are sailing, while the tide is wasting, or after the first gun has gone, is an experience which palls on constant repetition. Yankee's mast and spars required repeated whippings; the steering gear wrecked on three occasions in my observation, and I believe at several other times; the various suits of sails came on and off like the disguises of a quick-change artist. I pass over the fact that the boat is so thinly built as to require very careful treatment ashore, and that she will not stow away a tobacco pouch; for one does not expect strength or comfort in a racer, but she should be able to stick to her center-plate.

Again, Yankee is a slut in stays; whatever way she may have on, when the helm goes down she gets in the wind, stops and shivers, and, if among waves or in any way blanketed, a ruinous stern-board is required.

Yankee's behavior during the race for the Salcombe Town cup on Aug. 14 was a revelation to many of us, and quite destroyed a half-formed intention of mine to order a similar craft. Had you been on the markboat, Sir, you could not have helped joining in the laughter, although it was rather rudely loud and prolonged; and I am sure you would have also joined heartily in the cheers at Mr. Howard's pluck and endurance, which followed.

As the Yankee did not return from the run up Southpool Creek anxious inquiries were made, and we heard that she had been in all sorts of trouble. However, later on we saw her beating down the harbor, and when opposite the committee boat, she capsized and turned bottom up. The prolonged and frantic but unavailing efforts to right her which Mr. Howard made, terminated in the wreck blowing ashore and in the crew's severe and in my opinion undesirable exhaustion and numbness. Now, suppose there had been no convenient shore or other refuge, say in mid channel, across which Mr. Porter, in a small Mersey canoe, has just again sailed from Folkstone to Boulogne!

To save space, I will now briefly refer to Yankee's exploits in racing at Salcombe. In the race on Aug. 10 for a valuable silver cup presented by Mr. Fred Evans, M. C. C., for canoes and canoe-yawls, Yankee was 13m. late at the start, carried away her steering gear on the second round, and was last boat but one. In the race for the Salcombe cup on Aug. 14, Yankee came to utter grief, as stated. On Aug. 15 Yankee did not race, although entered. For the Lough Erne cup on Aug. 16, there was exactly the weather for Yankee. As officer of the day, in the absence of my superior officers, I strained my powers to the utmost to wait for Yankee, recognizing that Mr. Howard had sailed in one of the canoe-yawls during the ladies' race. This race finished by a quarter past three, and at four o'clock all the competitors for the Lough Erne cup were present except Yankee. I informed them I should not take the time by the town clock of Salcombe (plainly visible to all), but would go by my watch, which was ten minutes later; even then I waited another ten minutes before firing the first gun, the hope of seeing Yankee appear supporting me against the grumbling of my assistants on the flagship. Yankee sailed a real good race. Between Rogue and Yankee at the finish there was 12m. 19s.; by Y. R. A. allowance Rogue would have had to give Yankee rather less than 4½m; this would make Rogue winner by 7¼m. If, however, we consider the times taken to do the course, we find:

Rogue.....2 10 10 Yankee.....2 12 57

Therefore, had Yankee made a good start, she would have won the cup. Yankee sailed an impromptu match with my canoe Banshee not a speedy boat, and only possessing a short slide. The Banshee was well sailed by Mr. G. Y. Laws, and won by a few seconds. There was a fair breeze; Banshee led on the run, was passed on the reach, and came ahead again on the turn to windward.

The only other race was that with Mr. Brand's ½-rater, and here Yankee's run of bad luck changed.

The system of corrected time to which Mr. Howard alludes as customary in America, must encourage slovenly starts, and, if it permits a racer to be 20 minutes late at the start without penalty, the flukiness of sailing races is indefinitely increased.

Your editorial remarks about the undesirable nature of races between canoes and canoe-yawls for valuable prizes were justified by our experiences at Salcombe. On two days out of three the yawl can give the canoe much more than her Y. R. A. allowance, and a ½-rater like Spruce III., can beat both craft by 5 times that allowance.

Of course every boat has its day; Yankee had hers when the match with Spruce III. came off, and it is curious to notice that her habit of late starting stood her in good stead on this occasion for once. The wind was very light and fluky and the tide on a strong flow; Spruce, starting early, drifted past the markboat, and could not beat back for some long time. Yankee came fussing out of Milbay between the signals, and just drifted to the line in time.

It would, as you remark, be better if the Lough Erne Cup were confined to canoes or canoe-yawls; but the deed of gift (ill-omened word!) distinctly forbids this.

Other reflections occur to me with regard to our late meet, and if you will give me space for a future letter they shall be registered therein. This letter is intended as a criticism on Yankee's performances at Salcombe, as they appear to

JOHN D. HAYWARD, M. C. C., late hon. sec. B. C.A.

LIVERPOOL.

## Red Dragon C. C.

A SPECIAL race was sailed by the Red Dragon C. C. on Sept. 29. The breeze was strong from the east, kicking up a very heavy sea. These conditions seemed to suit the sharpie canoe Smuggler very well, as she won with a long lead.

Start 4:10. Finish in the following order: Smuggler, A. S. Fennimore; Kielow, T. W. Myes; Ted, M. E. Gray; Fineen, J. M. Hamilton. Ted won the prize for junior sailing. The canoe-yawl Jack-Pot had a sailover, as she was the only yawl entered.

An error has been found in making up the times for the mosquito class race of Sept. 15 which gives the race to Mr. Cook's No. 11, Riverton Y. C., instead of Vixen, Corinthian Y. C., Atlantic City.

## CANOE NEWS NOTES.

Every great river has a certain individuality, the study of which is a most fascinating pursuit, and one that has attracted canoeists from the earliest days of canoe traveling. No craft is so perfectly fitted for river exploration as the smaller class of canoe, open or decked, and it is to these little ships, and the enthusiasts who introduced canoeing, that the world is indebted for much of its knowledge of such rivers as the Rhine, the Danube and the Mississippi. One of the most interesting of the smaller American rivers is the St. John, which winds through Maine, New Brunswick and Lower Canada, with a maze of tributary lakes and streams. This river has found a fitting historian in Mr. J. W. Bailey, who has described it most carefully and minutely in a little book entitled the "The St. John River," issued by the Riverside Press, Cambridge. The book is not a story of a cruise, but a detailed description of the river and its scores of tributary streams. We can recommend the St. John River to all who are looking for waters suitable for canoe cruising; and we can also recommend Mr. Bailey's book as a complete and satisfactory guide to the river.

All of those questions which a novice in canoeing asks of the old hand are answered clearly and briefly in a little pamphlet by Mr. C. B. Vaux which forms one of the "Athletic Library" series published by A. G. Spalding & Bros., New York. The many points involved in chosing a canoe and learning to use it are very fully covered by Mr. Vaux, and in a way that is easily understood by the most inexperienced tyro.

The Illinois Pure Aluminum Co. of Lemont, Ill., is now offering a stock size of aluminum hunting boat, built in three sections, the dimensions being, length 11ft. 9in., beam 32in. The weight is 50lbs. without fittings and 65lbs. with fittings but without oars. The same company is making a specialty of cooking utensils of aluminum, among them being a camp outfit. The outfit for a party of six weighs but 13½lbs.

The fifth year book of the Humber Yawl Club, of Hull, England, is quite as artistic and interesting as any of the previous issues, and is well worth the attention of all canoe yawl sailors. As usual, the cover is the work of Mr. H. B. Hewardine, who has quite surpassed his previous efforts. He also contributes a page of very artistic comicalities, a dinghy race of Brownies. Mr. Alfred Strange has a couple of sketches of his "Cherub" in Dutch waters, that of the boat reefed down in the Zuyder Zee being of the sort that warms a canoe-yawler's very heart. Mr. G. F. Holmes contributes some sketches from the Holland cruise of 1893, including a series which depict the sorrows of a deck hand on a canoe-yawl. Mr. E. G. Hewardine has a page of sketches of home scenes. The designs are, as usual, an important feature, the present number including the c b. canoe-yawl Kittiwake, 18ft. long, 5ft. 3in. wide and 16in. draft, designed by Mr Holmes, the designer of two smaller canoe-yawls, Ethel 2 and Swan, 15ft.×4ft. 6in., also by Mr. Holmes, and another of his efforts, the 10ft. dinghy Dogfish, a compact and serviceable little craft. There are also two other designs for canoe-yawl dinghies, one 9ft. long and the other 6ft. 9in. The club has sixty members and a fleet of sixty boats, mostly canoe-yawls, keel and centerboard. The book is published only for private circulation.

A correspondent who is planning a long canoe cruise of 1,000 miles or more, is desirous of obtaining information of some western river that is suitable for canoeing, with good shores for camping and some fishing and shooting.

# Rifle Range and Gallery.

## The Winans Trophy.

WE call the attention of our expert revolver shots to the fact that the limit of time in which this trophy is open for public competition will expire on Dec. 3, 1894. On this date it will become the property of W. E. Petty. Mr. Petty has now held it nearly three years against all competitors. He is to be congratulated on his past successes, but we hope that some one of our many experts will come to the front before the time expires in order to make Mr. Petty's ownership more solid, if nothing more.

## New York Schuetzen Corps.

The New York Schuetzen Corps, Capt. Henry Offerman, brought the season shoot for the year 1894 to a close at the Union Hill Schuetzen Park on Friday of last week. The attendance of the members at the shoot on Friday was not as large as expected. The prospective trophy winners, however, were out in force and shot with diligence throughout the afternoon. The programme for the season consisted of ten medals on the ring target and seventeen medals on the bullseye target. The medals on the ring target to be divided among the members having made the greatest number of points during the season. The medals on the bullseye target to be divided among the members making the best center shot on the 4in. center. A member winning a medal on the bullseye target would not be eligible for a medal on the ring target.

After the close of the shooting on Friday the members adjourned to the "Castle," while the shooting committee entered into the labor of going over the records of the season, selecting the highest scores, and measuring the bullseyes to locate the best centers. The canvassing of the ring target resulted as follows: First medal, Philip Feigel; second, August J. Christian; third, H. W. Lemcke; fourth, John G. Tholke; fifth, Fred Plump; sixth, John Bunz; seventh, Henry Buttfer; eighth, John D. Wilkens; ninth, Henry Strate; tenth, Henry Lohden.

The best center shot was made by Barney Zettler and measured 19 degrees. The other medal winners came in the following order: E. Bindenwaldt, Dr. Chas. Grosch, Jacob Schmitt, Fred Facompre, Fred Schmidt, John N. Hermann, B. Walther, J. H. Hainhorst, Wm. Hahn, Ernest Kuhlmann, H. Brunke, Henry Hoops, Hugo Krobel, E. Meyn, J. C. Bonn, Henry Hanschen.

After the committee had finished its labor in the committee room, the Captain marched the company and guests into the dining hall, where a lunch was awaiting the hungry riflemen. The absence of mine host Krobel created a void which was feelingly alluded to by Captain Offerman. John Stimmel was another absentee whose presence was much desired. Following the lunch came the usual interlude of toasts and speeches. Excise Commissioner Wm. Dalton, of New York, was a guest of the corps, and during the afternoon indulged in a few practice shots. Mr. Dalton made some good centers, and demonstrated the fact that he is not a novice in the use of the rifle. The following appended scores were made by the members participating in the shoot on Friday:

Ring Target—B. Walther 210, John C. Bonn 204, Fr. Schmitt 203, C. Grosch 201, J. Schmitt 199, P. Feigel 194, W. Hahn 191, B. Zettler 191, H. B. Michaelsen 189, A. J. Christen 188, J. G. Thoelke 184, H. Buthfer 182, H. Hanschen 180, A. W. Lemcke 173, F. Facompre 173, John D. Wilkens 171, H. F. Meyer 170, John Bunz 165, Wm. Krumsick 158, F. Plump 157.

Man Target—C. Grosch 58, P. Feigel 56, F. Schmidt 54, A. J. Christen 52, F. Plump 52, J. G. Thoelke 50.

Bullseye—W. Hahn 3, H. B. Michaelsen 3, H. F. Meyer 3, J. C. Bonn 2, B. Walther 2, W. Krumsick 2, H. Meyn, J. D. Wilkens, B. Zettler, H. Hoops, F. Dange, H. Hanschen, J. F. Cordes, G. H. von Deilen, W. Schults, G. H. Wehrenberg, Cord Meyer, Capt. H. Offermann, J. F. Cordes, J. N. Herrmann, A. Brunke, J. Gobler, J. H. Klee, A. H. Sievers, A. W. Lemcke, F. Facompre, J. Schmitt, R. Lohman, J. Wilkens, H. Buthfer, A. J. Christen each 1.

## Revolver Shooting in England.

A good day brought out a lot of good scores on Sept. 19 at the North London Rifle Club. Both Rand and Winans made highest possible scores, but the former only in the handicap, not for the championship. Below are details of score in the 20yds. revolver competition:

| | | | |
|---|---|---|---|
| Walter Winans | 777777—42 | Brading | 677756—38 |
| Rand | 767777—41 | Capt Heath | 776675—38 |
| Capt Peters | 776776—40 | Skilton | 577757—38 |
| Major Palmer | 677757—39 | Capt Richardson | 666747—36 |
| Lowe | 565777—38 | Dr Howe | 575477—35 |
| Carter | 676577—38 | Denyer | 664674—33 |
| Andrews | 667757—38 | Major Barrington | 664657—33 |
| Capt Cowan | 777566—38 | Knapp | 434556—27 |

The scores for the revolver championship of the club now stand:

| | | 20yds. | | | 50yds. | | | |
|---|---|---|---|---|---|---|---|---|
| Walter Winans | 42 | 41 | 41 | 40 | 40 | 40 | 30 | 29—303 |
| Rand | 42 | 41 | 40 | 40 | 39 | 39 | 28 | 27—296 |
| Andrews | 42 | 40 | 39 | 39 | 38 | 37 | 29 | 29—293 |
| C F Towe | 40 | 40 | 40 | 39 | 39 | 39 | 27 | 27—290 |
| Skilton | 40 | 39 | 39 | 39 | 39 | 38 | 27 | 27—288 |
| Major Munday | 39 | 39 | 39 | 38 | 37 | 36 | 28 | 27—283 |
| Capt Cowan | 38 | 38 | 38 | 38 | 38 | 37 | 27 | 26—280 |
| Capt Richardson | 38 | 36 | 36 | 36 | 35 | 34 | 27 | 25—267 |
| Carter | 37 | 38 | 36 | 36 | 36 | 36 | 24 | 24—267 |
| Clementi-Smith | 35 | 34 | 34 | 34 | 31 | 30 | 29 | 28—256 |
| Ashby | 36 | 35 | 34 | 33 | 32 | 32 | 28 | 25—255 |
| Dr Howe | 38 | 35 | 34 | 33 | 33 | 31 | 23 | ..—227 |
| Luff | 34 | 33 | 31 | 31 | 31 | 30 | 26 | ..—216 |
| Capt Jones | 33 | 32 | 32 | 30 | 29 | .. | 22 | 19—197 |
| Baxter | 36 | 35 | 33 | 32 | .. | .. | 25 | ..—136 |
| Knapp | 37 | 29 | 27 | .. | .. | .. | 25 | 23—131 |
| Thompson | 36 | 34 | 30 | 30 | .. | .. | .. | ..—126 |
| Lieut Wilkin | 38 | 34 | 33 | .. | .. | .. | 20 | ..—125 |
| Capt Peters | 40 | 33 | 33 | .. | .. | .. | 25 | ..—133 |
| Varley | 38 | 37 | .. | .. | .. | .. | 22 | 22—118 |
| Major Palmer | 39 | 37 | 33 | .. | .. | .. | .. | ..—119 |
| Capt Heath | 38 | 38 | .. | .. | .. | .. | 25 | ..—101 |
| Frost | 33 | 32 | .. | .. | .. | .. | .. | ..— 64 |
| Howard | 33 | 29 | .. | .. | .. | .. | .. | ..— 62 |
| Major Shoolbred | 37 | 22 | .. | .. | .. | .. | .. | ..— 59 |
| Ridgway | 32 | 25 | .. | .. | .. | .. | .. | ..— 57 |
| Dr Orton | 33 | 24 | .. | .. | .. | .. | .. | ..— 57 |

For the handicap tournament Mr. Rand and Mr. Winans are the only two shots left in. Andrews, to whom Mr. Winans gave 4 points, being beaten, and Lowe with 4 points being out, the remainder are given many points up to 15. Those beaten on Sept. 12 were C. F. Lowe, Garrud, Napp, Luff, Capt. Peters, Polson, Capt. Richardson and Treadwell. Those beaten on Sept. 19 were Andrews, Capt Heath, Denyer, Fratzman, Dr. Howe, Capt. Jones, Ricketts and Skilton. There therefore remain in to shoot next time Winans, Rand, Evans, Barrington, Brading, Carter, Gould and Major Palmer.

## New Jersey Guardsmen.

Teams of ten men representing companies A, B, C and D of the 2d Regiment N. J. S. N. G. met on the Holden range, Paterson, on Sept. 22. The competition was for the silver regimental trophy which is shot for annually. The distance was 200yds. The contest was close between Cos. A and C. The contest was won by Co. A on the score of 267. Co. C was one point behind with 266. Scores:

| Company B. | | Company D. | |
|---|---|---|---|
| Lieut Reynolds | 4445544—29 | Sergt Woods | 4444444—28 |
| Sergt Shannon | 3444442—25 | Lieut Barker | 3334554—27 |
| Sergt Robinson | 3434553—27 | Pvt Wilson | 3343404—21 |
| Pvt Chandler | 3443323—22 | Sergt Yerbury | 5435442—27 |
| Pvt Woods | 3433444—25 | Pvt Hutschmidt | 4444444—28 |
| Musc Daly | 4333544—26 | Capt Ross | 3043433—20 |
| Pvt Ladwig | 4344334—25 | Pvt Wickware | 3243144—24 |
| Pvt Barmore | 4443354—26 | Sergt Malcolm | 4023444—21 |
| Pvt Knibbs | 3344545—28 | Corp Bush | 2445444—27 |
| Pvt Hunzieker | 0434444—23—256 | Sergt Briggs | 4345453—28—251 |

Companies A, B and C will shoot another match on Oct. 6, same place, for the Old Battalion trophy held by Company C for the last six years.

| Company A. | | Company C. | |
|---|---|---|---|
| Sergt Brooks | 2433243—21 | Pvt Weston | 4442535—27 |
| Pvt Foster | 4554444—30 | Lieut V'n Walrav'n | 3455444—29 |
| Pvt Rebbeck | 4454443—28 | Pvt McCue | 2534234—23 |
| Musc Welcher | 4443454—28 | Sergt Nolan | 2454444—27 |
| Corp Newby | 4444454—28 | Corp Whitt | 4020333—15 |
| Pvt C Gallagher | 4344444—27 | Pvt Vonau | 5444444—29 |
| Pvt Blake | 5444443—28 | Corp V'n Walrav'n | 3454444—28 |
| Corp McCloud | 3433323—21 | Sergt Deitrich | 5544445—31 |
| Pvt J Gallagher | 4154434—28 | Pvt Ransom | 4444454—29 |
| Lieut Fairhurst | 4543444—28—267 | Pvt McCarthy | 4344445—28—266 |

Companies A, B and C are located in Paterson and Company D comes from Passaic.

## Schlicht Rifle Club.

West New York, Sept. 25.—The weekly medal shoot of the Schlicht Club was held in the Schlicht gallery yesterday. Medal winners: Geo. Schlicht 241, champion medal; Jacob Diehl 233, first class; Jacob Schlicht 229, second class; Henry Aufderheide 230, third class; Aug. Tribout 202, fourth class. Scores: Aug. Tribout 202, Wm. Schlicht 229 Geo. Schlicht 241, Chas. Meyer 232, Geo Dorr 231, Aug. Meyer 230, Jacob Schlicht 229, Jacob Diehl 233, Fred Lambrix 204, Conrad Schlicht 207, Geo. Reichert 207, Capt. J. Dedrick 223, Henry Aufderheide 203.

## Greenville Rifle Club.

Greenville, N. J., Sept. 28.—The Greenville Rifle Club held its weekly gallery shoot on the club ranges last night. Sixteen members were present and participated in the competition for class prizes. Scores:

First class: Purkees 240, Collins 237, Scheeline 236, Plaisted 236, C. Boag 232, Robidoux 228.

Second class: Chavant 237, Gotthardt 236, Agneau 235, Chase 234, Charlock 233, Spahn 232.

Third class: Graef 225, Hill 223, Holzapfel 223, Renker 224.

## Cincinnati Rifle Shooting.

Cincinnati, O., Sept. 23.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions 200yds., off hand, at the standard target. Owing to a fitful wind blowing from about all points of the compass, some very unaccountable shots were made. The scores:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Gindele | 8 | 9 | 7 | 9 | 8 | 10 | 9 | 8 | 9 | 6—83 |
| | 9 | 9 | 8 | 9 | 9 | 7 | 10 | 7 | 9 | 8—85 |
| | 9 | 10 | 7 | 6 | 10 | 5 | 0 | 6 | 10 | 8—81 |
| | 8 | 9 | 7 | 9 | 7 | 8 | 9 | 9 | 7 | 6—79 |
| Payne | 8 | 6 | 8 | 9 | 7 | 10 | 9 | 8 | 6 | 9—80 |
| | 6 | 6 | 6 | 8 | 10 | 6 | 8 | 10 | 7 | 8—75 |
| | 9 | 10 | 9 | 5 | 6 | 6 | 9 | 8 | 6 | 4—72 |

## RIFLE NOTES.

The Greenville (N. J.) Rifle Club will hold a two days' gallery tournament on Nov. 10 and 11. The programme will contain eighteen prizes on the German ring target ranging from $30 down to $1, tickets 3 shots, 50 cents. A special prize, an elegant diamond trophy, valued at $35, will head the list of premiums for most points made during the tournament. This prize alone will be worth a hard struggle to win and should be the magnet to bring all of our local experts into the competition. The Greenville club house is fitted with four fine ranges, each 8ift. long. The club, although young in years, has gained an enviable reputation in the past for its hospitality and good fellowship in entertaining brother riflemen and forwarding the interests of rifle shooting.

The Zettler brothers inform us that the interest in the coming championship match, which takes place Nov. 6, is booming. The prospects are that the entries will exceed that of last year. This leads us to remark that rifle matters in all parts of the country are showing a decided improvement. Our correspondents all speak favorably of the conditions of rifle interests in their several localities and look for a decided improvement with the opening of the season of 1895.

On the Pacific coast even the ladies are becoming enthusiastic over the rifle. At a meeting of the California Schuetzen Club at San Rafael some days since Miss Lizzie Utschig, daughter of that old veteran John Utschig, made 115 points out of a possible 125 on the German ring target.

The international festival which takes place in July, 1895, is already having its effect upon our local societies. The Zettler Bros. report that their gallery ranges will be occupied nearly every night during the coming winter by different societies in order to get their members into shooting form for the coming season.

We have before us three targets make last week using Troisdorf nitro. One of the targets contained twenty-five shots all inclosed in a rectangle 4⅞ by 6¼in shot from machine rest using lead bullet; distance 200yds. Another 10 shot group was contained inside a rectangle measuring 4⅞ by 4⅛in. Another target made from muzzle rest at the German Ring target, twenty-five shots were all inside the 19 ring. This targets foots up a total of 560 points averaging 22.4.

We have had inquiries as to whether the California Powder Co's. Nitro "(Peyton)" powder was in the market or not? We have not seen this brand of powder in the hands of riflemen except in the government cartridge. So we are inclined to the belief that it has not yet reached the open market.

Our Paterson, N. J., correspondent Wm. Dutcher, in writing of the Paterson Rifle Club says: "There has been less shooting in Paterson this season than there has been in many years. Dull times and the enforced idleness of our shooters through lack of work has kept the rifles in idleness as well." Of the future he speaks with the spirit of hopefulness from the fact that the hoodlums are going, etc.

L. P. Hansen and Frank C. Watts will shoot off their return match one hundred shots each in the Newark Schützen Park on Saturday of this week. The "Old Obediah" expects to dine at the expense of brother Hansen after the finish of this contest. Hansen says, nay Obed.

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

Oct. 3-4.—Reading, Pa.—Independent Gun Club; targets.

Oct. 3-5.—West Newburgh (N. Y.) Gun and Rifle Association tournament. Last day live birds. W. C. Gibbs, Sec'y.

Oct. 10.—Little Rock, Ark.—Little Rock Shooting Association's fall tournament; targets. Paul Litzke, Sec'y.

Oct. 10-11.—Interstate Manufacturers' and Dealers' Association's tournament, under auspices of the Palmetto Gun Club, at Charleston, S. C.

Oct. 11.—Lewiston, Me.—New England Shooting Association championship tournament, under auspices of Androscoggin Gun Club.

Oct. 13.—Ashbourne, Pa.—Ashbourne Gun Club; targets. E. Bilting, Jr., Sec'y.

Oct. 18-19.—Elizabeth, N. J.—Elizabeth Gun Club's annual tournament. Live birds second day; lunch and loaded shells on the grounds.

Oct. 22-24.—Emerald Gun Club tournament, at Dexter Park. Targets and live birds. Dr. G. V. Hudson, Sec'y, 9 Madison street, New York.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica.

Oct. 25.—Richmond, Me.—New England Shooting Association championship tournament, under auspices of Richmond Gun Club.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

April 3-5.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York.

May 14-16.—Dayton, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

June 19-21.—Cleveland, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

Hartford, Conn., Sept. 22.—The Colt Hammerless Gun Club held its annual meeting to-day and elected the following officers: President, A. C. Collins; Vice-President, J. A. Pitkin; Secretary, M. F. Cook; Treasurer, W. R. Hopkins; Captain, Fred Manross, and Mr. L. C. Grover with the above officers, form the executive committee. The club is in better condition than ever before; we have a good club house, one of the best grounds and a balance of $300 in the treasury. We have taken in 18 new members during the year, making a total membership of 131. The club is also interested in game protection, being the pioneer of starting last winter and spring quite a boom in quail purchasing for stocking purposes. The club bought 600, and liberated them in the spring; other clubs and parties took up the scheme and bought many more. The club always stands ready to furnish financial help for conviction of any game law violation.

M. F. Cook.

Capt. Brewer is anxious to shoot a race at targets with "anybody in the world" for $250 a side. What he has to say about it is told elsewhere.

Wednesday, Sept. 26, was by no means a favorable day for live bird shooting; a dull sky, chill air and a strong northeast wind being the order of things in the way of weather. It was on this date and under the above circumstances, that Robert A. Welch of Philadelphia, killed 89 live birds out of 100, defeating William C. Downing, Jr. by 9 birds, and won for the seventh consecutive time the Riverton Challenge plate. The match took place on the grounds of the Riverton Gun Club, the conditions being 100 live birds per man, 30yds. rise, 50yds. boundary. Ths birds were a lively lot and were aided by the strong cross wind.

Highgate, Vt.—Last May a silver medal was given here, to be shot for under the following conditions: Open to all trap-shooters residing in the State, to shoot at 10 bluerock targets thrown from unknown traps, Association rules to govern, the winner to defend it against challengers; to shoot the following Thursday after receiving challenge, and the one winning it the greatest number of times by Oct. 1 to own the medal. Thos. Anderson will become the owner of the said medal, with an average of about 80 per cent.—Stanstead.

The Birmingham Rod and Gun Club, of Birmingham, Ala., which was organized quite recently with H. H. Mayberry, President; Jas. Stratton, Vice-President; Dr. H. J. Allen, Secretary, and R. H. Bough, Manager, has secured the old baseball park on the Lake View dummy line for practice grounds. The club has twenty-five members, all heartily interested in the work they have mapped out, which in part is to work for the betterment of the game laws and protection of game.

Gus. L. Becker holds the championship badge of Utah. A handsome gold medal donated by Browning Bros., of Ogden. The badge to become personal property had to be held against all comers for one year. This Becker did with a Winchester lever action pump gun and machine loaded shells. Among other shots he defeated J. M. Anderson, formerly of Kansas City, Mo., but now of Salt Lake, three times for the medal.

The Elizabeth Gun Club, of Elizabeth, N. J., will hold a two-days' tournament at live birds and targets on October 18 and 19. This shoot will be a sort of a house warming, the club having taken possession of new grounds located within 10 minutes' walk of the depot at Elizabeth. W. M. Parker is secretary of the club.

Des Moines, Ia., Sept. 25.—C. M. Grimm and C. W. Budd shot a friendly race yesterday at 50 live birds per man for the price of the birds. Grimm won, killing 46 to Budd's 37; the birds were a strong lot. Budd was using a new gun that he had shot but a short time, and seemed unable to center his birds, whereas Grimm was centering his birds well, killing them close to the traps.—S. S. S.

The Marlin Fire Arms Co. of New Haven, Conn., have just made and delivered three rifles for Miss Annie Oakley. The rifles, which are beautiful weapons, are two .44s and one .38 calibre; and have been made expressly for Miss Oakley to use in "Miss Rora," the play she will star in in England this winter. She sails for the old country early in November.

B. T. Langcake and Frank Bray shot a match on Wednesday, Sept. 26, with J. B. Collins and Richard Dwyer, the shoot taking place at Maspeth Park, L. I. The match, which resulted in a tie, was at 50 birds per man, 100 to the team; the score stood: Laycock 45, Bray 38; total, 83. Collins 40, Dwyer 43; total, 83.

In a recent live bird shoot which took place at Mifflinton, Pa., the following scores were made: No. 1, 10 live birds: Gumbes 9, Adams and Kreegar 8. No. 2, miss and out: Adams 7, Kreegar 6, Gumbes 5. No. 3, 25 live birds: Gumbes 24, Kreegar 23, Whiteman 22, Brewster 21, Adams 19.

An all-day shoot will be given on Saturday next, Oct. 6, by the New Brunswick Gun Club at their grounds in New Brunswick, N. J. The chief event of the day will be a team race, fifteen men on each team, between the New Brunswick and the Dayton Gun clubs; each team shoots at 450 targets, 30 per man.

On Thursday, Oct. 4, there will be an all day live bird shoot on the Climax Gun Club's grounds at Fanwood, N. J. Shooting commences at 10 A. M sharp. The main events are a 10-bird, $10 entrance, 3 moneys sweep, and a free clambake for the shooters.

Adam Heilman, of Pekin, Ill., defeated Gus Walport, of Spring Bay in a live bird match on Tuesday, Sept. 25. The contest took place at Pekin and was at 100 live birds per man, $100 a side. Score: Heilman 94, Waifort 91.

The Lake City Gun Club, of Warsaw, Ind., held a very successful tournament on Sept. 12 and 13. The attendance was good and the shooting at live birds and targets thoroughly enjoyed by those present.

The Green Ridge Gun Club, of Scranton, Pa., is figuring on a 25-live bird race in which the three first prizes will be $500, $300 and $200 guaranteed.

The programme of the Emerald Gun Club's three days' tournament is noticed elsewhere. Given fine weather the event is certain to be a success.

Edward Banks.

## Emerald Gun Club's Programme.

The programme issued by the Emerald Gun Club of New York for its three days' tournament at Miller's Dexter Park on Oct. 22, 23 and 24 is a varied one, and contains events at targets of a size that should suit both amateur and expert, in so far as both could be suited. The following from the programme shows that the Emeralds are thinking of the amateurs: "To encourage the amateur the Emerald Gun Club adds 10 per cent. of net purse to the regular 10-bird events for a fifth money, provided there are 25 or more entries in each of such events, so that 6 out of 10 divides something."

Oct. 22, "New York day," contains 12 events calling for 180 shots; two events are at unknown angles and two, both 20-target events, are shot under expert rules, use of both barrels. The events on this day are respectively dedicated to twelve New York gun clubs. The second day, Oct. 23, is termed "New Jersey day," and has a programme, the duplicate of that arranged for Oct. 22, each event being dedicated to some New Jersey club. Targets at 2 cents each will be deducted from the purses; all guns stand at the 16yds. mark; empire targets will be used on both days.

The third day, Oct. 24, is live bird day, the main event being the Empire City handicap. The conditions of this contest are handicaps from 26 to 33yds. rise, 25 live birds per man, from 5 ground traps, gun in any position, boundary approximate 80yds.; class shooting, 4 moneys, 4 misses out, entrance $10 and the price of the birds. The first 15 birds of this event will form another event with an extra entrance of $5, 3 moneys, straight shooting, high guns to get the money. Entrance to either or both optional. Forfeit of handicap, $3, to be sent to G. V. Hudson, M.D., recording secretary of the club, 9 Madison street, New York. Entries to both events close when first gun is fired. In case the handicap is not finished on Oct. 24, the event will be concluded the following day, and the balance of that day devoted to various events at live birds, miss and outs, etc. To the purse in the Empire City handicap the Emerald Gun Club adds $100.

## Brownsville Beats Ripley.

Brownsville, Sept. 29.—After much bantering the Brownsville and Ripley gun clubs met in a friendly contest on last Thursday to decide as to the superior skill of the two clubs at the trap, the Brownsville team carrying off the honors as well as the handsome bouquet prepared, we were told, by the young ladies of Ripley, and just here will say that we are glad to see the ladies manifesting so much interest in our shoots, for their presence is always an inspiration to the young men of Brownsville. Both teams did well when you consider the fact that we are but novices at the trap, none of us having ever had any experience in shooting at inanimate targets until this season. Two of the Brownsville team lost a shot by not being familiar with the workings of their new pump guns, they failing to throw a cartridge in their guns when called to the score. The Brownsville Club have adopted yellow as their color, and with just a little more practice, when you see a yellow streamer fluttering at the score, you may expect to hear the old familiar cry of "dead." Each club was represented by 9 men, 12 targets per man, known traps, known angles. The following is the score:

| Brownsville Team. | | Ripley Team. | |
|---|---|---|---|
| Tyns | 111111111111—12 | Palmer | 001110010110— 6 |
| Cooper | 111000111111— 9 | Fisher | 111100110111— 9 |
| Moorer | 111111011111—11 | Moorer | 111111111110—11 |
| Moses | 111000111111— 9 | Anthony | 111111111111—12 |
| Tucker | 001111101111— 9 | Scott | 111111111111—12 |
| Riddick | 111111000111— 9 | Scott | 110101101110— 8 |
| Bennett | 111111111111—12 | Kirk | 111111101011—10 |
| Moses | 111111111111—12 | Ganse | 110110101110— 8 |
| Moorer | 111010111101— 9—92 | Hatton | 110111100010— 7—83 |

Brownsville.

## Evil Spirit Et Al.

Chicago, Sept. 27.—An impartial look at the recent sections of the career of Dr. Carver, alias Evil Spirit of The Plains, would indicate that he would better pause and make medicine. Jimmy J. A. R. Elliott took three falls out of him straight, and Billy O'Fallon Crosby, just a plain farmer boy, with no fringe on him, got one decision out of three last week. The scores of the series being: Carver 93, 95, 95; Crosby 95, 89, 92. We will be glad to see some of these good people come to Chicago, but I fear me we will not see so many 95 scores there.

E. Hough.

## Central New York Trap-Shooters.

Rochester, N. Y., Sept. 39.—The sixth meeting of the Central New York Trap-Shooters' League was held on the new grounds of the Rochester Rod and Gun Club, Sept. 25 and 26. The meet was a great success, as are all of our League shoots. The main interest centers on the team race and individual championship race. At this meeting two other events were advertised to take place: S. Glover and E. D. Fulford were matched for a 100-target race for $25 a side, while E. C. Meyer and Geo. Corning announced that the second of their series of 100 bird races for $100 a side each race would come off, but Mr. Corning did not put in an appearance. Glover shot in fine form, defeating the Utica champion by the excellent score of 94 to 88. Fulford claims he has not become accustomed to the new stock recently fitted to his Greener.

Among the out of town shooters were T. H. Keller, of the U. S. Cartridge Co.; Paul North, of Cleveland, O.; D. C. Smith, of Hamilton, Ont., and champion of Canada; E. F. Hammond, of Buffalo; Messrs. Brown, Hobbie and Kendall, of Binghamton, and all the well known cracks from Utica, Syracuse and Auburn.

Rochester still leads in the team race for the League trophy, Utica, the nearest champion, being 11 birds behind, Syracuse and Auburn being a tie, 23 birds behind. There are two more meetings of the League, one at Utica in October and the other at Syracuse in November, the trophy goes to the team making the highest aggregate score in the eight contests.

In the individual championship race T. H. Kaller made a clean score of 25, taking first money, but he is not in for the championship prize. In this contest the best six scores out of eight count for the trophy.

Here are the scores:

*First Day.*

No 1, 15 targets: Kendall 13, Brown 12, Brigden 12, Carr 14, Tuttle 14, Meyer 12, Banks 8, King 9, Hobart 12, Hammond 12, Detroit 12, Glover 14, Fulford 14, T. H Keller 13, Byer 10, C. W. H. 9, Borst 12, Lane 14, North 13, Slocum 9, Worth 11, Bishop 12, Skinner 8, J. Riss 10.

No. 2, 20 targets: Fulford 17, T. H. Keller 12, Kendall 15, Tuttle 17, Carr 18, Brigden 17, Meyer 17, Hobart 13, Worth 12, Brown 17, C. W. H. 14, Glover, 18, Hammond 20, Borst 16, Slocum 18, Bishop 17, North 15, Byer 17, Detroit 15, Lane 18, King 14, Skinner 14, T. Lane 12.

No. 3, 20 targets:

There is a gentleman in this vicinity who originally hailed from England, who has the reputation of raising and trapping the best lot of pigeons in this country, and many and various have been the "cracks" that this great pigeon grower has made concerning his birds and their shot-proof proclivities. He recently made the assertion that neither of the champions, Elliott, Carver nor Brewer, nor any other "bloomin' champion," could kill 9 ont of 10 of his birds. A little correspondence with Mr. Elliott just after his victory over Carver brought an offer from Jim to shoot against 100 of the Englishman's birds, American Association rules, and kill 90 of them for $250 a side and all the gate money, allowing the Englishman the privilege of handling his birds to suit himself. The writer called upon the Englishman and offered to post Elliott's money, but it was no go. He simply flunked, and while many around here think the Englishman had the best end of the match, all unite in guying him for not clinching the match after blowing so "bloomin' 'ard." Elliott says if there is anything he would particularly delight in doing it would be to kill some birds that an old country bird handler considered invulnerable. At present, however, it seems that the Englishman prefers to keep his birds. Probably they are pets or family relics.

Mamaluke.

## Carver vs. Crosby.

St. Louis, Mo., Sept. 25.—Fresh from his three straight defeats by Elliott in Kansas City, Dr. Carver came to St. Louis to shoot a series of three 100-bird races. the best two in the three for a stake of $200 a side, with Wm. Crosby, of O'Fallon, Ill. The shoots took place on Sept. 22, 23 and 24, and resulted in Carver's taking the two last, Crosby winning the first. The scores were: First match, Crosby 95, Carver 93; second match, Carver 95, Crosby 89; third match, Carver 95, Crosby 92.

Crosby is an O'Fallon, Ill., boy, but has spent much of his time in St. Louis. He is 28 years of age, and has been shooting matches since he was 15 years old. Among his individnal matches, of which he has won 17, he won the Southern Illinois championship, and the championship of the Rocky Mountain Association. Detailed scores of the second and third matches are given below:

*Second Day.*

## Chattanooga Gun Club.

The Chattanooga Gun Club, the organization under whose auspices the Interstate Manufacturers' and Dealers' Association gave a tournament in Chattanooga Sept. 19 and 20, is comparatively a baby in age, being yet barely twelve months old. In pluck and go it is the equal of nine out of ten clubs in the States, as evidenced by the way in which its executive officers took hold of and carried out to such a successful termination the tournament above referred to.

Its officers are: F. I. Stone, President; D. J. O'Connell, Vice-President; Wm. White, Secretary, and F. H. Woodworth, Treasurer. All these gentlemen are first-rate shots, but Mr. Stone's bent is more to hunt quail than smash targets. Messrs. O'Connell, White and Woodworth shot right along with the boys, the last named in particular striking a gait that was fast enough for anybody. The club includes among its members many other enthusiastic sportsmen, and will no doubt soon become a factor of some magnitude when it comes to forming a Tennessee State Sportsmen's Association.

The photograph, from which the accompanying cut was made, was taken at the tail end of the third day's shoot. The programme had been shot out, and Captain Brewer, whose well-known form will be seen seated in the chair alongside Elmer Shaner, who presided over the pulling apparatus *pro tem.*, was waiting to give his exhibition of fancy shooting which brought the three days' tournament to a close. Taking these facts into consideration, the number of shooters present is flattering to the club. An examination of the guns in the hands of the shooters will show that doublebarrels and pump guns were pretty evenly divided. The picture is not unlike many others of a similar nature, and only those who took part can actually realize "the fun we had."

Of the historical features, so prominent around Chattanooga, none are visible in the photograph. It was a necessity that the photographer should stand with his back to Lookout Mountain, while Mission Ridge lay away off to his right hand. On the actual scene of the tournament no fighting took place, all the struggles in that section being practically confined to the south bank of the Tennessee River.

AT THE CHATTANOOGA TOURNAMENT, SEPT. 21.

## Audubon Gun Club.

Grand Crossing, Ill., Sept. 19.—Scores made by Audubon Gun Club, 15 live birds per man, allowing birds as handicap:

Wilcox wins tie for last month and Mussey wins this month's shoot.

Ravelrigg.

## Capt. Brewer Speaks.

Capt. J. L. Brewer is in New York and is anxious to get on a match or two. In this connection Capt. Brewer desires Forest and Stream to place him on record as follows: To shoot any man in the world a match at targets, known traps, unknown angles, 500 targets per man, for a stake of $250 a side.

As regards live birds, Capt. Brewer wants to know what has become of J. A. R. Elliott's promise, made to him at the Memphis shoot, that in event of his (Elliott's) defeating Carver he would shoot J. L. Brewer a series of three matches, 100 live birds per man, $250 a side per match, the matches to be shot in the East. Capt. Brewer says he's ready whenever Elliott is. He also wants to hear from Frank Parmalee regarding a match that was to take place between the two in Chicago next November, Parmalee agreeing, when at the Knoxville shoot in May, to shoot Brewer a race and also to match C. W. Budd against him for $200, both matches to take place in Chicago during the month of November.

## Carver and Elliott to Shoot Again.

Kansas City, Mo., Oct. 1.—Dr. Carver and J. A. R. Elliott will shoot another match on Oct. 11, 12 and 13 for the live bird championship of the world and $400 a side. Articles of agreement were signed yesterday.

## Lynchburg Gun Club.

LYNCHBURG, Va., Sept. 27.—The Gun club held its weekly shoot on the 25th, the following scores being made:

The club shoots next Tuesday, Oct. 2, at the fair grounds under the auspices of the Lynchburg Fair Association. A number of visiting shooters are expected and arrangements are in progress to make it an interesting affair. F. M. D.

## Lenone vs. Post.

WILLARD'S PARK, N. J., Sept. 27.—The following interesting match was shot recently on these grounds. The score was a tie up to the twenty-fourth bird, Lenone finally winning by two birds, as Post dropped his twenty-fourth and twenty-fifth. The same parties will probably shoot another race shortly on the same conditions, but for an increased stake. Score:

Match, 25 live birds, $25 a side, 28yds. rise, modified Hurlingham rules, 50yds. boundary:

*Trap score type—Copyright, 1894, by Forest and Stream Publishing Co.*

| | |

Referee, Capt. Money; handler, Boyle; trapper, Wm. Hill.

Sweep No. 1, 10 live birds each, lowest man to pay for the birds:

| | | | |
|---|---|---|---|
| Lenone | 0211011111— 8 | Money | 1111111111—10 |
| Morfey | 1122111111—10 | | |

Sweep No. 2, 7 birds, $5, ties miss and out, three last men allowed one miss to count as a dead bird:

| | | | |
|---|---|---|---|
| Money | 2112111—7 2 | Post | 1222220—6 2 |
| Morfey | 1122111—7 0 | Hopper | 0212110—5 11 |
| Lenone | 1101210—5 20 | | |

Money and Post divided first money, Hopper taking second money on the shoot-off with Lenone.

Sweep No. 3, 7 live birds, $5 entrance, Lenone and Post allowed one miss as a dead bird:

| | | | |
|---|---|---|---|
| Morfey | 0212012—5 | Money | 2111211—7 |
| Lenone | 0210212—5 | Post | 1022112—6 |

Under the terms of the handicap Post divided first money with Capt. Money, Lenone taking second. DUTCHER.

## Leavenworth Gun Club.

LEAVENWORTH, Kan., Sept. 21.—At the medal shoot yesterday afternoon the trophy was carried off by Walt Keller with a clean score. The shooting was above the average. Following were the scores:

| | |
|---|---|
| Keller | 1111111111111111111111111—25 |
| Sexton | 1111111111111111011111101—23 |
| McElroy | 1110101111110111111111110—21 |
| Schmelzer | 0111011011111111110111111—21 |
| Hawn | 1111111111110110110011111—21 |
| Tee Kay | 1011111111100011011111111—20 |
| Lane | 1101011110111011011111011—19 |
| Brown | 1001101101011110001110111—16 |
| Grover | 1110010110001101011110111—16 |

At the close of the medal shoot the following teams shot for an oyster supper and the price of the targets, 10 targets per man, losing side to pay the bill: Keller, captain; McElroy, Grover, Lane and Schmelzer. Sexton, captain; Tee Kay, Hawn, Brown and Harper. Sexton's team won by breaking 40 out of a possible 50, as follows: Sexton 9, Tee Kay 10, Hawn 5, Brown 8, Harper 8. The defeated team broke 38: Keller 10, McElroy 6, Grover 7, Lane 9, Schmelzer 6.

The same teams then shot for cigars to be enjoyed after the supper, and the tables were turned, Keller's team scoring 19 out of 25, and Sexton's 17.

The annual meeting of the club was held at Dr. Lane's office at 8:30 o'clock last night, with a full attendance. The election of officers resulted as follows: President, Judge L. Hawn; Vice-President, Dr. J. A. Lane; Secretary, H. W. Koohler; Treasurer, J. W. Sexton; Captain, Geo. W. Goff; Executive Committee—Judge Hawn, G. W. Goff, H. W. Koohler, Walt Keller and S. H. McElroy. The report of the secretary and treasurer showed the club has had a prosperous year and is in good condition financially.

## New Utrecht Gun Club.

IT'S not at all an uncommon thing to read in the daily papers such headlines as "Winter Weds Summer" or "May Captures December," and the like, referring to marriages where the disparity between the ages of the contracting parties is very wide. It is seldom, however, that an editor gets a chance to use such a line as "Fall vs. Spring" when reporting a shoot.

The first contest for the American E. C. Powder cup, presented by Captain Money and his son, N. E. Money, to the New Utrecht Gun Club, which took place on Saturday afternoon last, Sept. 29, afforded just such a chance, T. W. Morfey, of Paterson, N. J., and Conny Fergueson, 3d, fighting a duel for the cup until 20 birds had been shot at. Morfey requires no introduction, his work at the traps being well known, particularly since his record in the Dexter Park handicap of the Interstate Manufacturers' and Dealers's Association last April.

Conny Fergueson, 3d, if he keeps up his present gait, will be in it with the best of them when he comes to man's estate, a period of his life which is still nearly a decade off. Conney is not yet twelve years old; he attains that age on Jan. 19 next. He is a well-built little fellow, has a pleasant smile, particularly after a good kill, any amount of nerve, and is the pride of the club. He shoots a 16-gauge, 4½lbs. Francotte; his work with this gun can be judged from his score of 18 out of 20, the first 15 being dropped without a miss.

For the cup contest no less than eighteen members put down their names, six other members, four of whom arrived on the scene late, shot along for birds only. The number of entries caused the supply of birds to fall short, the result being that after the fifth round the Messrs. Sykes requested all those who had no chance of making straight scores to withdraw, with the privilege of a re-entry, W. F. Sykes setting the example by requesting the scorer, Mr. Rice, of Chicago, to affix the letter w to his score; eleven others followed in his footsteps, the contest finally narrowing down to Morfey, C. M. Meyer, D. Bennett, Conny Furgueson, 3d, and C. A. Sykes, whose handicap allowed one miss to be scored as a no-bird. Mr. Sykes made his score 10 straight by killing all but one of the 11 birds he shot at; Messrs. Morfey, Meyer, Bennett and Furgueson killed their 10. This left five men in for the five moneys, the conditions being "17 entries or over, five moneys." Before shooting off for the cup, miss and out, it was agreed to divide the purse.

Then came the struggle for the cup. Messrs. Meyer and Bennett each missed fast left-quarterers on the first round and retired, C. A. Sykes joining them at the end of the second round by shooting behind a zig-zagging right-quartering incomer. This left only Morfey and his young antagonist in the race. Morfey's fourth bird in the ties was a right-quarterer which was hit with both barrels but managed to fly within a few yards of the boundary. As it looked a lively bird Morfey declared to gather the bird but the referee ruled him out under his interpretation of the rules governing the contest; the trapper, who had been retrieving the dead birds, and who, incidentally, had chased Sprattley's ninth bird over the boundary line, by a pice of wretched work, was sent after the bird. Whether an expert retriever could have got the bird is an open question, anyway this man didn't, the bird just fluttering high enough to perch on the top of the 2ft. high boundary fence. Morfey appealed from the ruling of the referee, Conny meanwhile getting a hoverer from No. 4 trap which he killed, his many friends applauding him loudly. The executive committee then went into a brief session to consider Morfey's appeal; it heard the referee, examined witnesses, and decided that Morfey ought to shoot at another bird. This bird, a right-quartering incomer, he got with his first barrel, using the second for safety. His sixth bird, a lightning driver, he feathered with his right but apparently missed with his left, Conny's friends cheering for their little champion, who only had to kill to win. A low-flying right-quarterer, a bird as black as a thunder cloud, left No. 3 trap like an ice wagon but suddenly changed its mind and lit out for home at a pace that would have made a duck hawk hump; Conny stung him up but that was all. Morfey killed his next four but Conny fell down on his twentieth, a really good left-quartering driver; this gave the cup to Morfey.

The quality of the birds can best be judged by a reference to the score; a brisk wind across the traps from left to right aided them considerably in their flight, giving the "scouters" outside the fence lots of shooting; they were as good birds as will be found anywhere at this season of the year; of course there were some duffers among them but they were few in number. Score:

American E. C. Powder cup contest, 10 live birds per man, entrance $3, New Utrecht Gun Club rules and handicap:

DUTCHESS.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Memphis Gun Club.

MEMPHIS, Tenn., Sept. 15.—The big shoot which was given by the Memphis Gun Club has created a good deal of enthusiasm and interest among the sporting men of this country; in fact, the Memphis Gun Club is overrun with applications for membership. By the opening of next season, I think we will have the best club in the South. The Memphis Gun Club is certainly very much indebted to your correspondent, Mr. Hough, for the handsome and entertaining articles on the Memphis tournament and on Memphis in general. That article had the effect of stirring up more interest among the business men here than anything that has happened for years. The article was fully appreciated by business men in every line, and has certainly made your paper the most popular one of its kind in this country. It (the article) was published in full in the daily papers here, and was very favorably commented on. I inclose the result of a little shooting match which took place at Billing's Park, the grounds of the Memphis Gun Club, on the 14th inst., on which occasion three very handsome prizes were offered. Whenever you contemplate sending out a representative of FOREST AND STREAM to Memphis, understand that while he is here he is the guest of the Memphis Gun Club. Scores:

M. F. COOK, Sec.

## Dropping for Place Must .Go.

MERIDEN, Miss., Sept. 15.—That trip of Hough's was extraordinarily interesting, and told in his unapproachable way, it is about the best piece of work done lately. I have attended several tournaments, and I must say that the dirtiest work done on lowest down race track does not compare with what I have seen at such places. I see Mr. Hough is taking a stand against it, and I wish some one would make it a business to hit straight out every week at the "falling down" at every tournament Another thing, tournament shooting will soon go unless the traveling salesmen of gun houses are handicapped out of existence. Notice the scores and see where the greater part of the money goes. Why, it goes into the hands of a few, who instead of leaving their business to enjoy a day or two of pleasant companionship are on pay during the hours they are rolling up big scores against the amateur. Notice, too, when their shooting is not quite up to the winning mark, how they put their guns away on the plea of not feeling well. GEO. W. STAPLE.

# Answers to Correspondents.

### No notice taken of anonymous communications.

D. O. H., Portland, Ore.—We know of no firm who manufactures paper portable houses.

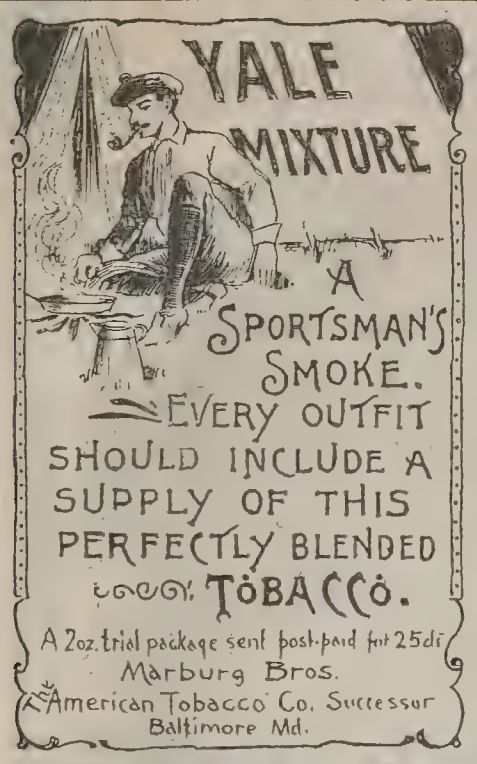
DR. A. T. S., Yokohama, Japan.—"Modern American Rifles" is the standard work on the subject. We can furnish it. Price $2.

A. J., New York.—Vigilant won but one race, the private match in the Solent. The race around the Isle of Wight was largely outside the Solent.

J. Q., Tavistock, Ont.—Will the fluid discharged by a common toad when irritated cause blood-poisoning? I have heard of a case attributed to the cause. Ans. No, it is quite harmless.

E. C. M., Chicago, Ill.—Kindly advise me if there is any book published upon the subject of frog culture or frog farming, and if so, what is it and where can it be obtained? Ans. None that we know of.

TUCSON, A. T.—A, B and C shoot at 25 birds, American Association rules, 3 moneys, 60, 30 and 10 percent. B kills 23 birds, A and C kill 21 each, who takes third money? Ans. B takes first and third, A and C dividing second money; that is, B gets 70 per cent. of the purse, while A and C take 15 per cent. of the purse respectively.



J. A. P., Helper, Utah.—E. C. smokeless powder is commonly loaded struck measure and not tapped. Tapping increases the average charge from one to three grains. For wadding, use one trap wad next to powder, one ⅜in. soft white felt and one black-edge. Write the American E. C. Powder Co. for directions for loading.

C. A. C., DeBeque, Col.—I think a great many of your readers would be pleased to see you publish or republish a few good articles on flytying. How does it strike you? Ans. Keene's "Fly-Fishing and Fly-Making for Trout" gives the information you desire with drawings and samples of the actual materials to be used. Price $1.50.

J. E. C., New York.—There is no common usage to cover this case, the fairest way would be to take the positions first, second and third, in each race; the first prize going to the yacht with the smallest number of points, and the second to the next. There is no definition of a professional which is generally recognized; but any one who is by occupation a fisherman, boatman or seaman, or who sails a boat for pay must be considered a professional.

NEW YORK.—A bets that it is against the law to shoot robins (meaning the ordinary robin red-breast) in Connecticut the year around. B bets there is an open season on them in that State. Who wins? Ans. In practice there is no open season, but the law is not clear. Section 2525 forbids the killing of a number of birds—of which the robin is one—between Feb. 1 and Sept. 1. Section 2536 absolutely prohibits the killing of robins by any one on lands not owned by himself. See *Game Laws in Brief*.

J. H. D.—1. Do deer, caribou and elk shed their antlers annually? Are the antlers often found after they have been dropped? 2. Is the quality as good as those taken from the animals? Ans. 1. Yes, they shed annually and the antlers are often found after they have been dropped, if the ground is favorable for it. In the thick underbrush of the Eastern States the fallen antlers are not often seen. On the plains of the West and on the bald hills of the Rocky Mountains, which form the winter feeding ground of the elk, we have seen hundreds, if not thousands of antlers dropped the winter before in a day's march. Similarly in the northern Rocky Mountains we have often found moose antlers dropped, and antlers of deer on the prairie. It is well known that such horns are much gnawed by various species of rodents and that weather more or less quickly destroys them. 2. The quality of the antlers that have laid out in the weather for a few months is not so good as those taken from the animal's head.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

W. Fred Quimby, Gen Agent U. S. and Canada.

The growing popularity and success of the EMPIRE TARGET are causing our competitors to renew their efforts to malign its qualities by calling it a "cheap imitation and inferior substitute," but it would seem by the enormous sales and the large list of leading jobbers and dealers handling the EMPIRE that their efforts were not "panning out" as they would wish. We are informed by the largest dealers that the Empire is giving better satisfaction than any other target they ever handled. The reason for this is that the Empire is a strictly first-class article and sold on its merits. It is manufactured under the management of experts, who have been in the business from its beginning, and made by the most expensive and perfect automatic machinery, from the very best composition that is possible to put in a target, and so shaped and constructed as to make the surest breaker and flyer, and we challenge our competitors to prove otherwise.

**Empire targets cost no more—perhaps less—than any other, and can be thrown from all principal traps.**

**NEW EDITION.**

Lancaster's Famous Book,

**THE ART OF SHOOTING.**

By CHARLES LANCASTER.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

**Mr. Grinnell's Indian Books.**

**BLACKFOOT AND PAWNEE.**

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

**BOOKS ON SHOOTING.**

**New Editions.**

**The Modern Shotgun.**
By W. W. GREENER.
PRICE, $1.00.

**The Gun and its Development.**
By W. W. GREENER.
PRICE, $2.50.

These volumes have been for some time out of print, and new editions revised by the author have just been received. There is scarcely any one whose utterances with regard to shotguns and rifles are entitled to as much weight as Mr. Greener's, for he has been making these arms for many years. To his great knowledge of them he adds a pleasant and clear style in writing, which adds to the value of his books. Every American who uses a gun ought to read these books. Sent postpaid on receipt of price.

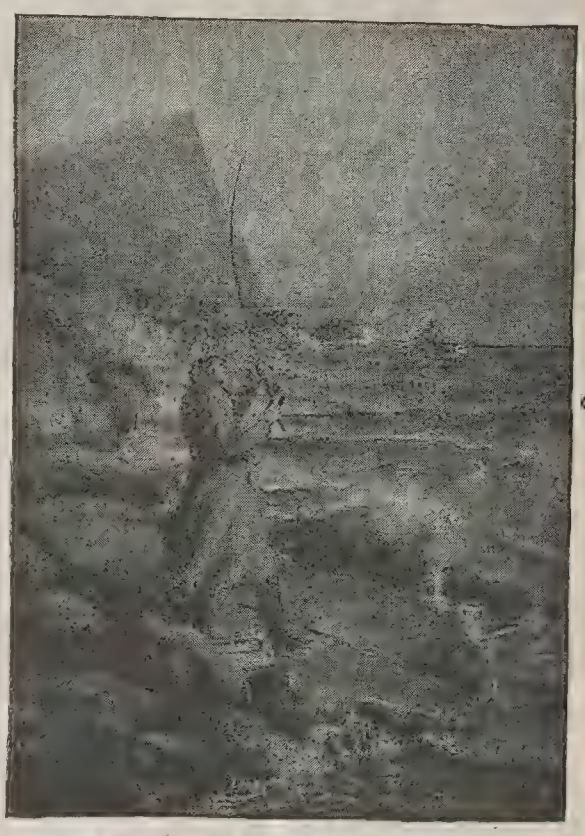
# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

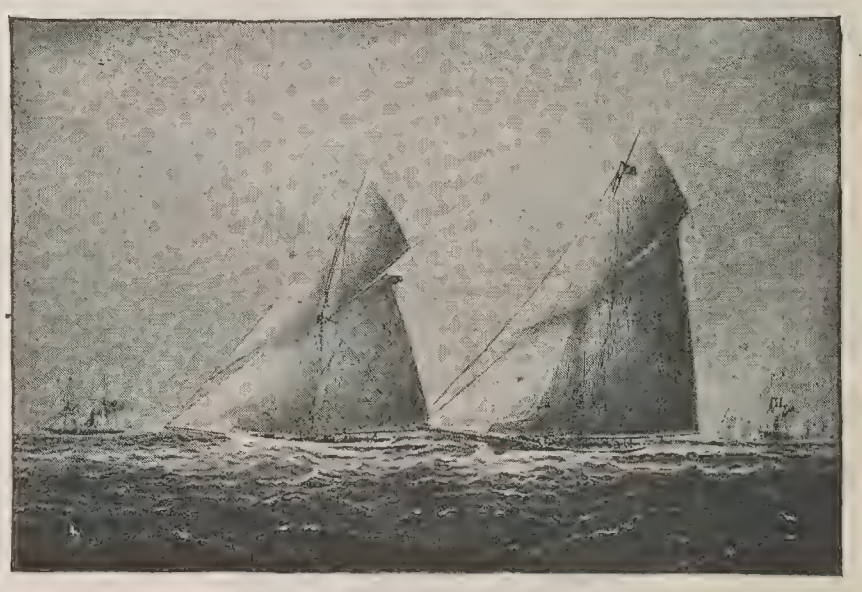
JACKSNIPE COMING IN.

### AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

## THE NATCHAUG SILK CO.

**will give nine big cash prizes for the following catches of fish taken during the season 1894, viz: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:**

| | |
|---|---|
| FIRST PRIZE— | $25 in Gold for the heaviest Muskallonge. |
| SECOND PRIZE— | $25 in Gold for the heaviest small mouth Bass. |
| THIRD PRIZE— | $25 in Gold for the heaviest large-mouth Bass. |
| FOURTH PRIZE— | $25 in Gold for the heaviest Lake Trout. |
| FIFTH PRIZE— | $25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine. |
| SIXTH PRIZE— | $25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person. |
| SEVENTH PRIZE— | $25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person. |
| EIGHTH PRIZE— | $25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water. |
| NINTH PRIZE— (SPECIAL) | $25 in Gold for the heaviest Brook Trout caught in the State of Maine. |

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

## CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P. O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**

Remit by express money order, postal money order, or postal note. Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *"STOP THE SALE OF GAME."*

THE enthusiastic reception accorded to the new platform plank announced by the FOREST AND STREAM is encouraging. Not only have a large number of our readers at once seen how much such a change would do toward conserving the limited game supply, but many dealers have acknowledged that the adoption of such a plank would injure their business very slightly or not at all. A representative of the farmers has called attention to the fact that the abolition of the sale of game would be likely to increase the price of some of the products of the farmers. Besides all this, there is a considerable class of men, engaged in the business of selling game, who would actually be glad to drop the traffic, on the ground that there is no profit in it. One of these has written to us from a large city, under a recent date, as follows:

I am engaged in the retail trade in poultry and game in one of the oldest established firms in ——, and have worked there about two years, and as I am an enthusiastic sportsman myself, I would like to say a few words in regard to your platform plank on "stop the sale of game."

Probably most sportsmen think that there is an enormous profit in retailing game to hotels and private customers, but if they could see the quantity of game—birds and animals—which goes to waste, they might not think it so profitable after all. During the open season thousands of partridges, prairie chickens, quail and ducks are shipped to us from all points, and, of course, when the season closes we have any quantity left over in our freezer, and this frozen game is next year worth practically nothing, and so the loss on it takes away most of the profit from what was sold the year before.

Then as to venison. There never was a cent made in retailing venison and never will be, but the rich people and the hotel men must have it, and of course, that demand must be supplied. In a lot of ten or twelve saddles there are certain to be two or more which are shot, and so utterly worthless, and these have to be thrown away.

Only the other day I was talking to a man who has handled game in this way for the past twenty years or more, and he agreed with me that on the whole there is very little profit in the business.

As I said before, however, the club men and rich gourmands must and will have it. I remember very well that a month or two ago a wealthy customer came into our store and asked for a pair of partridges, saying that he wanted "none of your shot birds; give me a pair of trapped ones."

It is not the poor fellows who sell a few birds now and then that must be reasoned with, but the men who can afford and are willing to pay for those luxuries. I wish the sale of game could be stopped, although it may seem strange for me to say it.

This testimony is very interesting, and it is by no means the only letter that we have received on the point. It comes back to the old question, so often insisted on, that influence ought to be brought on the consumers of game as well as on the middlemen, through whose hands it passes.

But there is another view of the matter which will occur to many of our readers and indeed has been often mentioned, and this is the killing of big bags by men who have the opportunity, and yet who would never think of selling their game. Probably almost every man who reads FOREST AND STREAM is acquainted with some such men, good fellows, good sportsmen, who on the whole have right ideas about preservation of game and about shooting, but who when the opportunity occurs to kill 100 or 150 birds in a day, find it impossible to stop shooting. If such men—men who are familiar with the conditions governing this whole subject; men who should exercise self-restraint and hold their hands because they know what this great destruction means—if such men will not live up to the principles which they profess and advocate, can we expect that those who make their living partly by the sale of game, or that those who know nothing about the importance of preserving game, but know only that they like to eat it, should give up the gratification of their appetites?

We can hardly expect from others acts of self-sacrifice which we are unwilling to perform, and until sportsmen mend their ways and cease to uselessly destroy fish and game, their precepts can not convert many.

### *WOMAN OUT OF DOORS.*

IT is not so many years ago since in the minds of the majority of the better class of the community there was something disgraceful about the recreation of outdoor sports. Then the man who went shooting or fishing was thought to be shiftless, worthless, and very likely given to drink. If, notwithstanding his pursuits, he was a reputable member of the community and was successful in business or professional life, he was yet regarded as an exception to the rule and as probably a little bit off his mental balance. Men who were timid about the good opinion of their fellows kept their excursions for birds or fish a secret, and when they started out carefully hid their rods and guns. In those days a woman seen abroad with gun or fishing rod would have had small chance of escaping arrest as a lunatic. Her reputation would have been gone. The ideal woman of those days was weak, languid and prone to vapors; she was expected to weep at the sight of a dead bird and to faint at the discharge of a gun.

We have got beyond those days now. The times have changed; the world moves, though perhaps it moves but slowly. Gradually field sports for men came to take their proper place as legitimate [and wholesome recreations. It was no longer disgraceful for a man to go shooting or fishing. Soon after this, began woman's interest in these sports; at first very mildly with croquet and archery, and then passing on to tennis and bicycling, until now it is no unusual thing to see a woman fishing a stream, following the dogs, or sailing a yacht, and twenty years hence, those of us who are left alive, will look back with hearty amusement at the comments that are made to-day on women in the field.

There are no good reasons why there should not be as many and as good sportswomen as there are sportsmen. No reasons why the wife or sister should not love and share in the free, bracing outdoor life, the splendid exercise which sends the warm blood bounding through the veins, the changing charm of fields and woods, the series of pictures offered by the working dogs. Physically she is strong enough to handle a rod or a gun, or the boat's tiller, and with training, to do these things long enough and well enough to bear her part in the field.

Yet as all men do not care to shoot or to fish, or to sail a boat, so there are women who care for none of these things, but who take pleasure in being out of doors and in sharing the society and the surroundings of the sportsman, even though they may not care for the prize that he strives for. Such a woman enjoys watching the working of the dogs and the shooting done by husband or brother, or loves to accompany him along the brook or on the lake. Yet without some special interest for herself, she may sometimes find it a little dull to walk alone and unemployed around a swamp, while her companion passes through it, himself and dogs hidden from view.

For such women there are still many outdoor occupations—enough to satisfy the most exacting. There are sketching, photography, and half a dozen branches of natural history, all of which may be followed with interest and profit. Of these natural history studies, one of the most attractive and easily pursued is botany. To many people this word calls up only a meaningless jumble of long Latin names, of orders, families, genera and species; terms which have to them no meaning and which sound very alarming. But if one can only start aright, it is surprising how little technical knowledge is needed to make the study of botany fascinating even to one who knows nothing of it.

Those unfortunates who are born and bred in cities, and whose only ideas of country life are gathered from a few weeks of summer spent on hotel piazzas by sea-shore or mountains, have no conception of the beauties lying about them waiting to be discovered, and even the girl who resides in the country usually fails to see most of the beauties of her surroundings. While it is true that many of the most beautiful and rarest flowers are hidden in wood or swamp, it is also true that the dusty roadsides between which she walks or drives each day are full of countless attractions if she will look for them. There grow, though perhaps hidden under a coating of dust, the delicate soft circles of the wild carrot, the tall purple clusters of the iron weed, and the delicate blossoms of the oxalis; these and countless other flowers line the dustiest and dullest country highway, and may be gathered and identified by the laziest and most superficial botanist.

There is a touch of genius about Mrs. Dana's book, "How to Know Wild Flowers," for, while from the scientific point of view its arrangements and instructions are highly artificial, this very artificiality enables a person altogether ignorant of botany to know the common plants which she finds in fields and forest provided she can read and understand the English language. To a woman having this interest, who takes her course over field and meadow, and by the swamp and through the wood, what a treasure house is opened. With her book in her hand, her specimen basket hung over her shoulder, and her eyes keenly on the watch for new flowers, every step will reveal some novel shape or color, and each tramp will give her new friends in the lovely world of flowers. Instead of sitting lonely on the hillside, listlessly watching the clouds and listening to the whistles and calls, and the crashing of the twigs in the swamp below her, she will be on a hunt of her own, and when she meets her companion at the end of the swamp, he will listen as interestedly to the story of the plants that she has found, as she to his account of how the old dog trailed and pointed the plump partridge which lies at her feet.

### *THE SPORTSMAN'S EXPOSITION.*

THE sportsman's exposition to be held in this city next May promises to be successful, but just how great this measure of success will be cannot be told until the plans of the directors shall have been decided on and announced. From the known character of these directors it may be assumed that their policy will be a broad one, but it is important that it should be decided on and made public with as little delay as possible. Whatever is determined, there will of course be a good exhibition of arms and implements, but much more than this is required if a full and unqualified success is to be reached, if all who are interested in American sport are to be proud of the exposition as a whole.

The question of success or non-success will depend largely on the character imparted to the exhibition. If it is a genuine sportsman's exposition it will be successful. If it is merely a series of displays of the goods sold by the exhibitors, it is not likely to attract much attention, and will fail of the good which it ought to do.

To make this exposition an entire success it must have an educational character, and must also excite the popular interest, that is the interest of the men, women and children who are now not especially interested in any form of sport. Any person who will take the trouble to walk through the large gun and fishing tackle stores of any of our important cities can there see all the implements used by sportsmen in the field, and such a person will not care to visit the proposed exposition and pay an entrance fee merely to see the same things that he can see in the stores. Such an exposition should have an historical character and show the evolution of various sportsmen's implements; a mechanical side with exhibitions of the manufacture of particular articles, and a comparative side, in which comparisons should be instituted between the implements of America and of European countries. Besides this, trophies of sport should be gathered from all lands, pictures should be collected and generally all the attractions possible should be brought together to interest the public at large.

No doubt the committee in charge of the matter have already put themselves in communication with the manufacturers and dealers in this country, but this is not enough. Amateur sportsmen in this country and in Europe should be interested in the matter, and European exhibitors be communicated with and personally interested. The co-operation of all such men is necessary to bring together collections such as will interest and educate the public.

The work of preparing for an exhibition such as should be held in New York is very considerable, and the time in which to accomplish this work is short. The undertaking must then be pushed and active measures taken to bring it to a successful issue. No time must be wasted if the work which faces the promoters is to be done.

# The Sportsman Tourist.

## LITTLE PLUME'S DREAM.

ONE spring the Blackfeet were camped on the Judith River, which in their language is named the Yellow Stream. Game was getting rather scarce in the vicinity of camp, so it was determined to move camp to Armell's Creek, another tributary of the Missouri, some thirty miles east. At that time I was living with Little Plume, a young warrior of thirty years or more, very brave and a great hunter. He was of a cheerful disposition, always laughing and joking; but the morning we were to move camp he seemed to be unusually quiet. He got up and had his customary plunge in the river, and ate his breakfast, speaking very little, and seemed to be in deep thought. After a time he got out his war sack, and selecting a bunch of choice eagle's tail feathers—very highly prized by the Blackfeet for decorative purposes—he went out and gave them to the sun; that is, he made a prayer to the sun for health and safety, and concluded by tying the bunch of feathers to the branch of a tree as an offering to the powerful god. Soon the lodges were taken down, everything was packed up and loaded on to the horses, and the march began. In those days a tribe of Indians on the march presented a stirring scene. Most of the riding horses were decked with fancy beadwork and bright saddle trappings; the pack horses carried queer-shaped sacks and pouches of rawhide, which were painted with quaint designs in bright colors. The horses which carried the property of the medicine men, sacred and mysterious bundles, were always white, and their manes and tails were painted with vermillion. The medicine pouches, made of white rawhide, were beautifully painted, and the long fringes of buckskin depending from them nearly swept the ground. The costumes of the people added not a little to the brightness of the scene. The older people often wore a buffalo robe or sombre-colored blanket, but the young and middle-aged men and women wore fancy-colored blankets of every conceivable hue; and as they trooped along laughing and chattering, their long hair flying in the breeze, they were an interesting sight. At the head of the column rode the chiefs and head men, followed by the women and children; behind them and on the flanks rode the great body of the warriors driving the loose horses before them, and of these there were many hundred.

As we rode along this bright spring morning, Little Plume informed us that he had had a very bad dream. He said that a little old white man came to him and cried out "Beware! You will be in great danger to-morrow."

"How?" asked Little Plume.

"I may not tell you'" replied the white man. "All I can say is, have courage, do your best and you may come out all right."

I had never argued with these people about their beliefs. In fact, to get at their inner life, to learn their inmost thoughts and ways, I pretended to be a true disciple of their religion. I made them think that I too, was a sun worshiper and a believer in dreams and signs. Often I would recount to the old men some dream I pretended to have had, and ask their opinion as to its portent. So when Little Plume recounted his dream to me, I said: "My friend, this is truly a fearful dream. How did the little old white man look?"

"He was very small and thin," he replied, "and his face was very smooth and white."

"Well," said I, "if I were you I would be very careful to-day. Stay close to camp, also don't ride any wild horse or fool with your gun. You can't tell what danger your dream has warned you of. There are more ways of being killed than by the enemy. Your horse might fall and crush you; your gun might go off accidentally; a rattlesnake might bite you. Oh, yes, you must be very careful."

"I am not, I never have been," replied Little Plume, "a coward, you know my record in war; it speaks for itself. But I hate these warning dreams. You are told that something is to happen to you, but do not know what it is; and that makes the heart uneasy. You can not eat or talk of anything. Always you are on the watch and fear you know not what."

About 2 o'clock we reached some pine buttes, and while the camp halted to rest a little, Three Suns, the head chief, Little Plume and I rode up to the top of one of the buttes to take a survey of the surrounding country. Only a few miles distant was the valley of Armell's Creek, very broad and level and bordered by high hills and bluffs. Here and there along the stream were small groves of cottonwood and poplar, and on the hills grew scattering pines. But what interested us most was the game. I got out my glass, a powerful telescope, and by its aid I could see countless herds of buffalo and antelope. Some few of these were between us and the creek, but the main body of them were on the plains west of it. For at least thirty miles, as far as the eye could reach, the prairie was fairly covered with buffalo.

"This is a rich country," I remarked, as I handed the glass to Little Plume. "We will soon be feasting on boss ribs."

"I'm glad of that," said Three Suns, "I'm tired of elk and deer meat," and he went on to speak of the buffalo, saying that they really were the life of the Indian, that they were the food, shelter and raiment of the people.

Little Plume, who in the meantime had been sweeping the country with the glass, here exclaimed that there seemed to be a commotion among the game far down the valley. Some buffalo and antelope had been frightened and were running toward us.

"Well," said Three Suns," that is nothing strange. You know Running Rabbit's camp (another Blackfoot chief) is between us and the big river (Missouri), and very likely they are camped somewhere about here."

"No," replied Little Plume, "I don't think it was they who frightened the game, for they would be on horseback and we would see them. I feel quite certain that some war party on foot is sneaking along up the creek and that they are what scared the game."

"You may be right," said Three Suns, "and it's best to look out. We will herd the horses in for a night or two and keep a strong guard on the watch. Now, then, we ought to be going. I think we shall camp pretty well up on the stream in order not to disturb the game until we are ready to make a big killing. Let us make to the left of that sharp butte over there (pointing to one southeast of us) and keep straight in that direction until we strike the creek."

So we mounted our horses and descended, and shortly the march was resumed. In an hour or two we reached the creek and our lodges were pitched on a level bit of prairie handy to wood and water. One of Little Plume's wives (he had five) caught a young antelope which had evidently been born that day and brought it up to us, saying, "See what a beautiful little pet I have found."

"I am just hungry for some young antelope boiled," said her brother, who was standing near by, and seizing it, he drew his knife and with one slash ripped it open and threw it upon the ground. The poor thing lay there gasping, and we could see its heart still beating but growing fainter and fainter. It was a brutal act, and I felt like giving the young scamp a good thrashing, but held my peace. The woman roundly berated him, and from the way Little Plume looked I thought he, too, was displeased.

After a hearty meal and a good smoke, Little Plume saddled up a fresh horse, and saying that he was going out on the hills to take a look at the country, rode away. I was tempted to go with him but the day had been a very warm one, and I hardly felt like exercising any more, so I stayed in the lodge and smoked and read (I had quite a bundle of books with me) until it was too dark to see the print. When it was quite dark and Little Plume did not appear, we began to grow quite uneasy about him and after a while the women began to cry and scream that he was killed. I tried to quiet them by saying that he might have found Running Rabbit's camp and concluded to stop there for the night. But it was of no use. So to get away from the doleful noise they made I went outside. Suddenly I thought I heard a call far out on the prairie, and listening intently I heard it again but could not make out what was said. A young man who was standing by heard it too and ran out in that direction. He soon returned, out of breath and so excited we couldn't understand what he said except "Little Plume—almost dead—take him horse." Immediately there was the greatest excitement in camp. Little Plume's wives and female relatives began to mourn, and cry; men came from all directions with drawn weapons, crying out for revenge, and the young man who had found Little Plume leading the way, we all went out. When we got up to him we were agreeably surprised to hear him say, though in a very weak voice: "I'm not going to die yet. Put me on a horse and I can ride to camp. I've killed one Sioux." At this there was a wild howl of joy and all began to shout out his name, and those in the camp hearing it, joined in, all crying out in their loudest voice "Little Plume wa! hai! Little Plume wa! hai!" Meaning, the victor. It is the proudest moment of a Blackfoot's life when he thus hears himself extolled by the people.

It did not take us long to get him to camp and in his lodge, and stripping off his leggings we found that he had been shot in both legs; through the calf of one and thigh of the other. No bones were broken, but the muscles were badly lacerated and there had been considerable loss of blood. I washed the wounds and dressed them with such simple remedies as I had, and after a light meal, our hero was fairly comfortable. Late that night after everything had quieted down, he told me the story of his adventures.

"You remember," he said, "that my dream warned me I would be in danger to-day. He spoke truly; I have had a very close call. All day I have felt uneasy, and the signs have been bad. When my brother-in-law ripped open the young antelope and we could see its heart beating, I felt sure that something was going to happen. Then when I rode away from camp I had gone only a very short distance when the ravens began to circle close to me, and that was still another bad sign. I ought not to have gone out, but I thought I would only go a little way, just to see how the game was, and lay out a place for the big hunt to-morrow. I went down the valley quite a little piece, and then started to ride to the top of the bluffs so that I could get a good look at the surrounding country. I was riding quartering up the ridge which is broken by deep coulées, when I saw four buffalo bulls coming toward me up the hill. No other game was close to me, so I drew my horse back out of sight, got off, and crawling to the edge of the coulée, watched for them to come within range. When they were so close I could see their eyes I fired at what I thought was the fattest one, and over he went. The rest ran off. All this time I felt very uneasy. I kept looking up at the top of the hill, then down below. My heart felt heavy, yet I could see nothing to be afraid of. I left my horse and went down and began to cut up the bull. The ravens came all around me, flying close to my head, and calling out, and some lit on the ground so close I could see their eyes. I took out the tongue and then skinned down one side and took out the entrails. Then I got so uneasy I couldn't stand it any longer, and, leaving the tongue and all, I went back to my horse, and had put my foot in the stirrup to get on and ride home, when the thought struck me that I was a foolish coward. I thought of all that fat meat lying there which my children would be so glad to have, and I went back and began to cut off and tie in shape to pack some of the best parts. As I was working away I got very uneasy again, and would often stop and look all around. And I thought I saw something appear for an instant on the edge of the hill above me, but concluded it must have been a raven just flying out of sight. I stooped over to tie some meat, and when I rose up again I saw five Indians where I thought I had seen the raven, and just as I saw them they fired at me. I ran for my horse, and just as I reached him he fell over dead. They had killed him so as to give me no chance to escape. My heart failed me when I saw this, but I ran to a coulée which partly concealed me, and fired three shots at the enemy who were rushing down the hill. That stopped them, and they went out of sight in a coulée. Soon I could see them crawling and sneaking above and below me, and saw they were trying to surround me, so I jumped up, and yelling as loud as I could I ran straight back toward camp. One of the enemy was right ahead of me, and he rose up and fired, but didn't hit me. I stopped and fired, and he threw up his hands, dropped his gun and fell over. I had more courage when I saw this, and felt strong. I ran on as fast as I could, and the enemy followed, shooting pretty often. Every little coulée I came to, I would crouch down and fire a shot at them, which would make them drop down. Then I would run on again. We kept up a running fight this way for quite a while, when a shot struck me in the calf of the leg. It didn't hurt much at first, but I could feel the blood running down into my moccasin. The next coulée I came to I fired twice at them, tore off a piece of my shirt and ran on. At the next coulée, after firing at them, I tied up the wound as well as I could, and ran on again. They didn't seem to want to catch up with me, but kept a good long rifle shot behind. I suppose they thought by keeping a long way off and shooting pretty often, they would get me after a while without much risk to themselves, but as I ran I kept dodging this way and that, and gave them a pretty difficult mark. I was getting pretty well toward camp and was running up a hill, when a shot struck me in the thigh, and over I went. I thought then my time had come, but I managed to roll into a little washout. Then I sat up, and fired twice at them. They had started to run toward me, but that stopped them, and they went 'way back and started to climb to the top of the hill. I knew if they should get up there that they would surely kill me, for they would be in easy range and could see me plainly from there. I prayed then. I didn't quite give up. I called on my dream white man for help. I had only three cartridges left, and thought I would save them for the last round. As I was looking up over the edge of the coulée I saw them stop climbing. Soon one of them made a sign to me and motioned me to go home, and that they would go to their home. I didn't answer at all. I just took aim and fired once at them. They turned and ran back the way they had come. I am not sure what made them do this, but think when they were getting near the top of the hill they either saw our camp or some of the people riding about, and thought they would be safer to get back toward the Missouri. As soon as I saw them going I fixed up both of my wounds as good as I could, and using my gun for a crutch hobbled toward camp. I thought I never would get here. Toward the last I had to crawl a little way at a time, and when you heard me call I was so weak I could have gone no further."

"Well, my friend," said I, "your dream gave you a true warning, didn't it?"

"Yes," he replied, "it did. What powerful medicine that little old white man is. I wonder what kind of a white man he really is!"

The next day a large party scoured the country in search of the war party (supposed to have been Sioux), with whom Little Plume had the battle, but could not find them. Where he shot one of them they found where he had fallen. The grass was covered with blood and all tramped down. Undoubtedly his comrades on their retreat had taken him away and buried him, or perhaps sunk the body in one of the deep holes of the creek.

## A RIDE AFTER COWBOYS.

THE climate of Texas is salubrious and wonderful, and its soil in some localities very productive. Among other products may be numbered its queer characters which are indigenous. They run the gamut of human nature to extremes—from the most kind and even-tempered to the most vicious.

Not the least interesting study of this varied population is the cowboy, or what was the cowboy of years ago, for the modern type bears little resemblance to the ancient. Now he is nothing but a laborer hired by the large ranchmen or pasture owners, to perform the hard and tedious duties of a ranch, with all of the sometime romance of the life wiped out of him.

A party of these cowboys retiring to their homes in west Texas, once, passed through the little town of Richmond on the Brazos River, which had to be crossed by a ferry at that time. They had been to Louisiana with a herd of beeves and were returning home flush with money and full of whisky. Their route before reaching the river and ferry lay through the rich bottom lands thickly settled with farms along the main road. In passing along they amused themselves shooting at objects that presented themselves, and were not very particular as to what the object was. If a dog in a yard should bark at them they marked him for their prey and the six-shooter sounded his requiem. Even the poor old ganders were treated to a like fate for hissing at them (or so the messenger said who came in ahead to inform on them). The railroad train passed Walker's Station just after this crowd had been amusing themselves. The indignant citizens put a man on the train and sent him to town to inform the authorities of what had transpired.

While the informant was making his complaint and the magistrate issuing the papers for their arrest, the offenders crossed the river and passed through the edge of the town without halting. The papers were soon ready and were handed to the sheriff, who went in pursuit; and overtaking them on the outskirts of the town informed them of his mission, which was to arrest and take them before a magistrate. One of the party asked the officer to produce his warrant, and when he did so wanted to look at it. The sheriff handed him the paper, when he very coolly tore it up and told the sheriff they had no idea of going back to contribute anything for the support of the county officers. They were four to one and the sheriff was powerless, so he rode back to summon a posse to assist him in arresting them.

Quite a crowd were assembled around the court house when the officer returned, ready to joke him on his discomfiture, but when he called for assistance all were willing to lend a hand and join in the fun of bringing them back. Everybody who could procure a horse was soon getting ready.

County Court was in session at the time, with the judge on the bench and a prisoner on trial; but the court adjourned on account of the excitement. Among others who were eager to go was the culprit being tried for some misdemeanor, a young man of twenty, who was one of the boys around town. Seeing so many getting ready he couldn't stand it, but appealing to the court, said, "Judge, please let me go." The Judge looked stern and replied, "Mr. Blank, you are a prisoner, sir." "Judge, if you'll only let me go I'll come right back and stand my trial." The Judge relaxed his discipline and let him go. After all, judges are human.

It took three-quarters of an hour to get horses and guns ready, and at that time we rode out of town eleven strong. The time consumed in preparation gave the fugi- gives a good start and advantage, and when we cleared the town and the trees surrounding it they were nowhere in sight. We knew the course they would take, however, and kept on at a long gallop in that direction. When

about three miles out we sighted them, and the chase began in earnest over the prairie. Their horses had been on a long journey, but they traveled well, and owing to the start which they had of us, held their own well. When we sighted them they were nearly three miles off; and then commenced a race which I have never seen equaled. It was a test of endurance in horseflesh in which blood counted. In the start there were eleven fairly good horses; but at the pace we went one after another began to drop out until at the end of ten miles there were only four of us. Eleven, twelve, thirteen miles were passed, and we were fast gaining on the fugitives. Ah, that wild ride! The wind that fanned our faces played with the long grasses, over which we were flying. Riding in our stirrups, we held the gallant little steeds steady. Their measured hoofbeat on the prairie was the only noise to be heard as we scurried along. Away we went, pursuers and pursued. Occasionally a flock of prairie chickens would rise and whir away, or a jack rabbit hop out of the way of our horses' feet, move off to a safe distance and turn on us with a look which plainly said, "Are they mad?"

Our companions, whom we had outridden, were fast fading out of sight as we measured off mile after mile of our course. The pursued rode like men who knew how to manage horses; but ride as they would their horses could not stand the strain put upon them. We were riding them down, and it was only a question of time when we would overtake them. On nearing a small creek fringed with timber we had gained on them until only about 300yds. separated us. They reached the creek and rode into it, but did not go up on the other side. We thought of course they were waiting for us, so we halted for a brief consultation as how to best approach them. It was no child's play riding on those fellows, who were even numbers with us and had the creek bank for a shelter. Our halt was only momentary; we went forward cautiously until we rode under the hill, when to our surprise they were not in sight anywhere. We went up on the opposite bank, but still could not see them, though the prairie was open for nearly two miles over to the Bernard timber, the nearest point of which was up the creek; and judging that they would make for the point, we rode in that direction, scanning it closely as we went; but still could not see them. Glancing back in the other direction down the creek, we saw them come out below us over 600yds. away, and ride hard for the Bernard timber. They had ridden in the bed of the creek, whose banks were high enough to screen them until they had gained on us sufficiently, and then had come up. We knew they would be lost to us once they entered the Bernard timber, but we rode after them, and had another exciting chase all to no purpose. They rode into the timber some distance ahead of us and we could only track them. After following their trail for a while we gave it up, for we never could have overtaken them.

If we could only have had the patience and forethought to have looked for their tracks at the creek, the affair would have had a different termination; perhaps resulted in our capturing them or *vice versa*.

When we called a halt on the Bernard and looked at the time, our watches marked one hour and ten minutes since we had left the court house at Richmond, and the distance was twenty miles.

Of the four horses of our party that made the race all were blooded stock, and though some of those that fell by the wayside were as good-looking, they did not have the blood to carry them through; and say what you will, "blood will tell."

S. D. CALDER.

GALVESTON, Texas.

## ON THE KUSKOKWIM.

FORT WRANGELL, Alaska. — Notwithstanding Alaska has so long been an outlying possession of the United States, but little real exploration has been made of the vast territory west and north of Mt. St. Elias, that embraces and includes the immense Yukon Valley, which rises within thirty miles of the sea coast of southeastern Alaska, and debouches in Bering Sea, after a course of several thousand miles. Many consider the Yukon the principal river in western Alaska, and in fact it is such, but there are other great rivers in that region, almost unknown to white men. The Kuskokwim is one of these other rivers. For several years scores of miners have entered the Yukon Valley by Lynn Canal and the portage across the mountains by the way of the Chilcat villages. It is only thirty miles from the waters of the Pacific by this portage to the small lakes which constitute the sources of the Yukon. Some of these miners whom I have met have visited Stuart and Pelly river valleys, and others again have reached the headwaters of the Kuskokwim, and descending that stream have reached Bering Sea at its southeast extremity. I have found few of these men who are not entirely trustworthy.

I have just met a gentleman of intelligence who went into the Yukon country more than two years ago, and eventually found his way into the valley of the Kuskokwim, and at last reached this place from Bering Sea. I have thought over the substance of what he said respecting his observations in the journey from the headwaters of the stream to its mouth. The Alaska Commercial Company has a temporary trading station about 700 miles up the river, in charge of a Finn and a half breed Aleut. From this trader he procured a badarka, or skin boat, and an outfit with which to descend the river. These boats are made of the skin of the sea lion, and are about 25ft. long, 28in. wide, and 14in. deep. There are three circular holes in the deck or cover, in which three persons can sit, while the craft is navigated with paddles. When the traveling outfit is complete, each one of the three persons aboard wears a waterproof parka or shirt put on over the head, and having a hood which incloses and covers the head. This parka is made of the dried entrails of the hair seal, neatly sewed together, and when the voyager is seated in the badarka, resting on his knees, the skirt is closely gathered about the circular hole in the cover of the craft, and in that way the rain is totally excluded. The badarka will carry besides the three men from a ton to a ton and a half of freight. My friend employed two Eskimos to aid in navigating the boat. He had with him an old tent, and in addition to some tinned vegetables, a few articles for traffic with the natives, abundance of ammunition for his rifle and double-barreled shotgun.

Both sides of the great river have numerous Eskimo villages at a distance of about fifty miles apart. Each village consists of no more than half a dozen huts, each capable of containing from forty to fifty persons, and made of dirt thrown up, partly under ground, and roofed with hair seal skins. The huts have no chimneys, and the smoke escapes through a hole in the roof. Throughout the entire length of the river there are no natives except Eskimos. The Tinneh tribes of the British possessions, a savage people, seldom enter the valley of the Kuskokwim, except to trade, by which silver fox, bear skins, wolf pelts and beaver skins in large numbers reach the coast through the factors of the Alaska Commercial Company.

My friend embarked with his two native companions only a short distance west of the source of the Kuskokwim, about nine hundred miles from its mouth in Bering Sea. In their entire progress they encountered neither falls nor wild rapids. For the first 350 miles both banks were lined with a dense forest of small pines, firs, hemlocks and cedars, none of the trees being more than a foot in diameter; a fact closely observed at all the camping places while passing this scrub timber region. The valley is broad on either side, and back of it rise a range of hills covered with forests of a like kind, and still further back ranges of high mountains clad with this kind of timber until it meets the snow.

After the first day's voyage the river widened to a mile in breadth and the water was deep, clear as crystal and swift. It was the latter part of June and the red salmon were moving up stream to the breeding grounds in immense schools, miles in length. In scores of places these salmon were packed so closely in their struggle to get forward that the bardarka was with difficulty pushed through them. During the whole course of the voyage for the first 500 miles these countless schools of red salmon were encountered, and a thousand tons of fish might have been taken without perceptibly diminishing the number. Not only did they encounter billions of red salmon, but untold numbers of king salmon, actual princes among their species, were on the same errand of reproduction in the tributaries of the Koskokwim. No attempt was made to capture either the king or the red salmon with the hook. The two natives frequently speared a king salmon for food, and none were taken in that way that would weigh less than 40lbs.

Though the party made short journeys, often laying by until noon, and camping, and carefully investigating for traces of wild animals, they observed signs and saw nothing but the small mule deer of Alaska, gray—almost white—in winter, and red in midsummer. They saw not the least signs of either the brown or the black bear of Alaska, and the natives who were in company, informed my friend that bears were seldom seen in the Kuskokwim Valley. A few beaver are found in some of the tributaries of that river, but they were never abundant.

The clothing of native Eskimo, men, women and children, was made of tanned deer skin, and of the tanned skins and the entrails of the hair seal and the sea lion, ornamented where the material unites in seams with the down of wild geese, ducks and swans, which are abundant every where.

The principal food of the natives is smoked or dried salmon and salmon roe, which are dried on ricks in the open air. Salmon are stored in the ground in large quantities at each village. A trench is dug in the tundra or spongy soil, and on the bottom of this grass is laid. On the grass large quantities of fresh salmon are placed, and the pile is then covered over with further quantities of grass and tundra or moss. As can easily be imagined, the odor of this food when taken out for use would not make it very tempting to a civilized taste and appetite.

These Eskimo of the Kuskokwim Valley are an unwarlike, good-natured, happy-go-lucky people, and thoroughly honest. Frequent chances were given them at the villages where the voyagers stopped for petty pilfering, but not the most trifling article was missed on the entire trip. The Greco-Russian priests have neither churches nor missions among these natives, but their priests, near the mouth of the river, visit the villages up the river in the spring of the year, and marry and baptize the children and the young people in a sort of "combine" for the sake of economy and time. All the knowledge of religion they acquire is how to make the sign of the cross, which they do on the most trivial occasions.

After passing through this slightly timbered region for about 350 miles, they reached a section which stretched to the mouth of the river, about 600 miles away, which was a continuous savannah. Broad bottom lands covered with high grass extended to the foot hills, equally destitute even of shrubs, having nothing but tall grass, and behind these again high mountain ranges, with grass and moss only to the snow line. At intervals of forty or fifty miles on either side of the river were small clumps of scrub birch and alder, and that was all.

The surface of the broad savannahs was here and there relieved by small lakes of fresh water, even after the voyagers reached a point to which the tide reached from Bering Sea. Millions of wild ducks and geese haunted these lakes, and nested in the tall grass, and the natives at that season of the year gather immense quantities of eggs for food. At the various camping places, in an hour or so after the tent was pitched, twenty or thirty fat young geese were shot and brought into camp. No other signs of game on land, from the time they left the timber belt to the mouth of the river, were observed, except when they ascended one of the lower tributaries of the Kuskokwim, and then made a portage to the headwaters of another tributary, to escape the necessity of rounding Cape Newenham by badarka, in a high tide and a stiff breeze. In passing over the portage they saw evident bear traces, about a day's journey up from the mouth of the tributary.

The width of the Kuskokwim at its mouth is about thirty miles, and after narrowing to about three miles, it retains that width for the first 300 miles from the sea. It has many islands, covered only with tall grass. Here geese, ducks and wild swans in great numbers find a resort. Ice never forms on the river for 500 miles from Bering Sea, and in winter the ground freezes to a depth no greater than in the Middle States. The rainfall during summer is considerably less than at Sitka and further east and south along the coast, and the mercury during the entire six weeks spent in descending the river ranged at about 60°.

My friend, who was always an enthusiastic hunter and had spent many years in the mountains of Montana, Oregon and British Columbia, does not consider the valley of the Kuskokwim by any means the sportsman's paradise, except in respect to the wildfowl and the salmon. All the small tributaries and lakes are alive with small mountain trout, requiring no skill or tact whatever to capture them by the thousands. Commercial greed or enterprise, just as you choose to call it, will seek this valley as a field for fish-canning eventually, but the long distance from civilization, the difficulties of access and the absence of the real elements of sport, will in my judgment cause this region to be ignored by the sportsman who seeks simply a delightful vacation.

J. H. K.

## MY FRENCHMEN.

WHILE standing one afternoon at the door of Cobb & Co.'s stage office, on the Diamond Fields, South Africa, watching the unloading of the passengers from the freshly arrived stage, my attention was attracted by the actions of a party of youthful diggers who had formed a knot around one of the new arrivals and seemed highly amused at his gesticulations and actions. One of the group happened to break away and pass by me, when I asked him the cause of the merriment. He replied "Oh, Dad!* Step out there and see the capers of a Frenchman, who can't speak a word of English."

Walking out to the outer edge of the assemblage, I saw that they had surrounded a young Frenchman who seemed to be very much annoyed that no one understood him. Pressing through the throng I spoke to him in broken French and proffered my assistance, when he sprang forward, and it was with some difficulty that I prevented him from embracing me. He then said, "I have arrived here with sufficient funds to pay my way, but find there is not a hotel, or any place where I can lodge in the whole camp, what am I to do? I can't remain out here in the road all night." Instantly forming the opinion that he was a gentleman, I said "If you will accept such rough accommodations as I can offer you, there is a corner in my tent to which you are very welcome." Again I had to use some force to prevent a second attempt at a hug, and finally managed to pick up one of his valises, while he shouldered the other and followed me to my quarters, where he seemed delighted with his first experience of camp life.

For some days he knocked about the claims and paid particular attention to the modes of mining, leading me to believe that he wished to get a thorough insight into the business before embarking in it. About a week elapsed when one night as we sat smoking our pipes he said, "You have been so kind in not questioning me about my business or intentions, I think it nothing but right that you should be told who I am and what I intend doing. I did not come here to dig diamonds, but to buy them; as my father is one of the largest diamond cutters in Paris. In a short time I expect the foreman of the shop to join me, but don't see how we are to purchase stock, as he knows no more English than myself. To prove that I am telling the truth I will show you that I am prepared financially to carry on my business in a proper manner." Whereupon he unbuttoned his vest, passed his hands beneath his shirt and drew out a belt, from which he unfolded letters of credit for £50,000, besides several thousands in bank bills. To say that the revelations made me uneasy would be a mild way of expressing my sensations. The idea that something might happen to my guest and his money sadly interfered with my rest, and I did not feel easy until I persuaded him the next morning to accompany him to the bank.

When we passed into the building he seemed to think that a joke was being played on him, as he very naturally associated the business with a fire-proof structure, thief-proof vaults, etc. Instead of which he found only a corrugated iron affair, with a dirt floor, and the manager's office separated from the teller's counter by a simple canvas screen, while the only visible solid appurtenances were a couple of heavy iron safes. Taking him behind the screen I introduced him, and it was comical to note the amazed look of the manager when my companion coolly produced his belt and carelessly displayed its contents. I explained the gentleman's wishes, which, after a strict examination of the letters and bills, were promptly attended to, when we were treated with marked courtesy and respectfully bowed out of the shanty. Feeling much relieved I parted from my friend and hastened to my claim; but had been at work but a short time when he joined me and pressed the immediate necessity of commencing business as soon as he could arrange suitable quarters. He seemed to be afraid that some of his craft would arrive from Europe and interfere with h s picking up a particular class of stock which he was sure that he could secure at about his own price. At that time very little was known about the true value of rough stones, and a greater proportion of those which were sold on the fields were bought by parties sp culating on their own account, or representing those in Cape Town who were interested in the weekly auction sales held at that place. My friend had attended the sales, and judging from what he had seen, was perfectly satisfied that there was not a competent judge of rough stones in the whole of South Africa.

In a few days I managed to secure a spot on one of the main thoroughfares of the camp, suitable for the location of a tent, and contracted for its construction with a runaway sailor who had been smitten with the diamond fever and had left his ship in the lurch in Cape Town. In the mean time the expected foreman arrived, and the pair took possession of the tent, but were afraid to display the usual sign of "Diamant Kooper," as neither of them could speak English or Boer. About a week elapsed, when one morning, just as I reached my claim and was starting to work, I was accosted by a young man, soliciting a job. His peculiar accent caught my ear, and I immediately asked him if he wasn't a Canadian. His answer convinced me that I had found an interpreter for the new firm, as he spoke the *patois*. Dropping pick and shovel, I started with him for the Frenchman's tent, where he was instantly engaged to translate, and the sign hung out for business. I heard nothing of the parties for some days, when one of my neighboring diggers asked if I had heard of two crazy Frenchmen who had turned up in the camp, buying nothing but "chips," which the boys were unloading on them at a lively rate. To the uninformed I would say that a large majority of our finds were not whole diamonds, but pieces, which were called "chips" or "splints," for which there was scarcely any sale, as at that time no one was capable of telling what the loss would be in cutting, particularly if there were many flaws or cracks in the chip. Being sure that my two acquaintances were

* My soubriquet, from having been longer in South Africa than any other American on the Fields.

the parties to whom the reference was made, I held my tongue, and inwardly resolved to try and make an effort to effect the sale of a number of "chips," which had been eyesores to me for some time.

That afternoon, on my way from my claim to my tent, I purposely went out of my way, in order to pass the tent of the Frenchmen. Just as I got opposite the door, I was seized and drawn in behind a canvas screen which divided the sleeping apartment from the front or office portion, where both partners drew from their pockets several small canvas bags, from which they poured on the table a heap of large diamond "chips," which they assured me would weigh over 8lbs. avoirdupois, and had been purchased at merely nominal figures. The ex-foreman took up one of the largest pieces, and examining it closely for a few seconds, laid it on the table, just in front of him, opened his pocket knife, held the blade at slight angle to one of the sides of the "chip," said "Look," and with a slight blow of a small hammer split off a portion of the stone. This was my first insight into the cleavage of a diamond, and to explain the reason of his action he told me that he would reduce the entire lot in size, in order to save postage, only exercising due care to split off such extra portions of the "chip," as would be necessary to reduce it to the form of a brilliant. All diamonds were sent in parcels by mail, which was transported overland some 500 miles to Cape Town, in small two-horse carts, driven by half-bred "Totties." It was a fortunate thing for the digging and buying fraternities that none of the "stand and deliver" brotherhood had reached that portion of the world. Of course all the small pieces were carefully preserved until some opportunity offered to send them personally down to the Cape, whence they were taken by steamers to Europe. After taking my first lesson in preparatory diamond cutting, I sold my lot of "chips" at prices which would have appalled some of the sharp ones, who had imagined they were doing "a big thing" in letting the Frenchman name the prices and take their "splints." FRANK J. THOMPSON.

## Camp-Fire Flickerings.

"That reminds me."

### MY CHANCE ACQUAINTANCE.—VIII.

A FEW resorters had gathered in my venerable friend's workshop, which was a combination curiosity, workshop, lounging and storehouse. It had rained. It did rain. The prospect was good for considerable more rain. It was not one of those hasty "get up and get" showers, but a steady, constant, consistent, continual patter-patter. Everything exposed was wet, sodden, soggy, soaked through and through. The few fish we had caught in the morning had every appearance of having been thoroughly soaked; their eyes were dull and milky; and when the fish were hooked they came in more like sticks than respectable bass, as though every particle of fight had been soaked out of them.

There were puddles in the highway, pools in the yard, and duck ponds to the right and to the left scattered all over the fields. The eave troughs and conductors were as full as a successful candidate for alderman on election night. The fowls had gathered under a small "lean-to," heads down and tails the reverse of their natural and proper position; and as the poor bedraggled chicks shifted their weight from one foot to the other they looked the perfect picture of loneliness and disgust. No, there was no music in the patter of the rain on the roof, for the shingles were soaked as soft as mush. We were a dull, dismal, gloomy set, our smoke was out, small talk exhausted, cards were in the boat, reduced to pulp, stories had been swapped and elaborated threadbare, divested of every particle of interest. The clouds were heavy, sullen and black as charcoal. There was not life enough in the company even to pull straws, pitch coppers or tie puzzle knots, while the stillness was as thick, dull and solemn as a magazine war article or one of their essays on the effects of the moon's rays on cellar drains.

Suddenly the old man opened the door, when presto! change! It was equal to the turning on of a double barrel search light or the firing of a spouting oil well. The halo penetrated every nook and corner of the building. The horses whinnied in the adjacent stable, the old rooster shook himself, braced up and moved with an early morning vigor, while there came from the company a violent fusilade of "Hello, old man," "Come in out of the wet," "Howdy do?" "Where you been?" "What you been doing?" "Come into the ark," etc., etc.

The old gentleman shook the water from his palm leaf, hung up his rubber coat, rapped smartly his briarwood pipe on the work bench, pushed a straw through the stem, filled the bowl, started a smudge equal to a coal pit, turned a pail bottom-side up, placed a couple of meal bags thereon, and as he sat down, gravely remarked, "It's a wet rain."

This sage remark having been adopted without a dissenting voice, the old man continued, "I've got a sliver in one of my hands and I want one of you fellers to get it out," at the same time producing an implement which appeared to have been a cross between a marlin spike and a cheese knife. The "sliver" having been removed and thrown out on the wood pile for future use, the old gent carefully wiped the blade of his tool, bestowing on it an affectionate glance or two then and proceeded.

"Ain't it funny how some things 'll stick to ye wus'n the itch or a bad dollar? Now I've had that are knife nigh on to forty year. The blade was made for me by a tramp blacksmith, and there never were a better piece of stuff put into a blade. The handle I made myself from the horn of a deer I shot out in the swamp yonder. I've lost it several times, but it has turned up again as often.

"Drapped it into the lake onc't through a hole in a raft of logs, but I cut it out of a big pickerel I caught through the ice the next winter. Another time I came across an old bear with a cub. I shot the old one and tried to save the young one alive, but the little cuss clawed and scratched me so I got mad and stuck the knife into him 'fore I thought. It must have hurt him bad, for he gave a powerful wrench, got away from me and run into the brush with the knife a-stickin' in him. I put a ball into him, though, the next spring, and he wasn't very fat, but the knife was there just where I'd left it.

"The next time I lost it I'd been about three mile up the river looking for a likely rollway. I tied my boat up to an old windfall while I ate my lunch. Used my knife to cut some meat. Stuck it into an old log. Forgot it and started for home. When I were about half way down I wanted the knife to cut some baccy with. It was gone. Well, as I knowed jist where I'd left it, and as the water was smooth, I thought I'd go back and get it. Now, I hadn't gone more'n half a mile, when I'll be blamed if I didn't see that ar knife stuck straight up in a piece of bark sailing along as grand as could be and a-coming down the river to meet me.

"Yes, I do set a great store by that knife, but it's cow time, boys, and I must be a-going."

The old fellow trudged off after his cows, but he left behind a broad, deep halo of cheerfulness, which the dismal weather could not deaden; the torrents of rain might dampen but could not subdue it. One of the party executed a war dance in the original language, then sang "Johnny Get Your Gun" in three foreign ones. A. W.

## Natural History.

### DUCK HAWKS ON THE PALISADES.

AN interesting discovery was made by some egg collectors of the suburban village of Englewood, N. J., a short time ago. They found a pair of duck hawks nesting on the Palisades and secured the eggs.

A few years ago no breeding places of the duck hawk were known in the Eastern States except on Mt. Tom and Mt. Holyoke, in Massachusetts; but this discovery proves that we have them right here on the North River, within two or three miles of New York city. The duck hawk, besides being a rare bird hereabouts, is one of the most interesting mombers of the hawk family. It is one of the true falcons, and under the name peregrine falcon was much used in the hawking of the Middle Ages. It is a very active bird and always on the go—a true hunter.

We boys who were interested in birds and their habits had always known that there were hawks on the Palisades, but had supposed them to be fish hawks. However, a fish hawk's egg is a good egg, and one morning in March ten of us started for the Palisades on an egg-seeking expedition. It was a glorious day. The sun shone out strong, the air was clear and cool, and our walk through the woods was a pleasant one. We soon reached the cliffs and looked out upon the grand view to be had from any part of the Palisades, but more especially from Clinton Point. Involuntarily we first look downward. Far, far below is the great river, flowing silently and ever onward to the sea. Some fishing smacks, sailing to and fro, seem absurdly small, and a man walking along the rocky shore below us is almost a speck. What a plunge it would be from here to the river! We remember with wonder the tradition of the man who fell over with a horse and buggy some years ago, and upon reaching the bottom, picked himself up safe and sound and led the horse home in the same condition. Looking to the right, and down the river, we see in the distance the Brooklyn Bridge and the spires of St. Patrick's Cathedral, and a little to the left the Harlem River and Spuyten Duyvil. A train is just pulling out around the bend, and at first seems barely to crawl along; but its speed increases, and the pigmy cars seem to go about as fast as the toy trains one sees in the shop windows. Two puffs of white smoke ascend from the engine, and almost a minute later two faint whistles come to our ears across the river. Further away, beyond the train and the Harlem River, is Long Island Sound, blue and dotted with white sails.

As we gaz d on the wide prospect, a speck appeared in the distance, high up in the air. As it drew nearer it was seen to be a bird, and in a minute we knew it to be a hawk. Suddenly, with a quick swoop and uttering its peculiar, plaintive cry, it darted downward and disappeared in a recess in the cliffs. We all hastened to the spot, and saw there one of the pretty sights that only a lover and frequenter of the woods ever sees. Some fifty or sixty feet below a good-sized rock, with some dry grass on it, jutted out from the face of the wall, and in a little hollow in this grass lay three beautifully tinted, brownish-colored eggs. We uttered cries of delight, and at the noise the hawk, which had been sitting nearby, took fright and soared out over the river, uttering again that plaintive wail.

The next thing was to get the eggs. Two persons remained above, while the others climbed down a cleft, and came up again under the nest. To reach it we soon found out was no easy matter. In fact it was almost an impossibility—bare, smooth walls to climb, with few footholds and only a stunted tree or two near the top. But one fellow said he would try it, so we gave him a "boost," and up he started. He got about half way up without difficulty, for he was a good climber, but from there he could go no further. Straight up for over fifteen feet, to the foot of a small cedar tree, a smooth wall extended. We flung up a rope we had brought with us, and he threw it over a branch of the tree. The hardest part of the climb was now to come, and he knew it, for from the tree up it was comparatively easy. He grasped the ends of the rope in both hands and began to pull himself up. He was getting along famously, when a sudden cry from the climber, and we were horrified to find that he was hanging in mid air by one end of the rope. The other end had slipped out of his hand and his weight had pulled it rapidly up and almost over the limb, but it had caught in a small notch. Just this notch stood between him and death, and there he was—his face white with terror—hanging to the end of the rope for dear life. A moment of breathless expectancy and then he began to ascend. Slowly he crept up, placing one hand over the other. He was almost at the top, but seemed to weaken and be on the point of losing his hold. We placed ourselves under him, to catch him as he fell, but he had good, strong arms, and here they stood him in good stead. One mighty effort and he grasped the branch of the tree, hoisted himself up, and was safe. We breathed a sigh of relief and shouted to him to rest.

The great strain over, he had but little strength left, and it was many minutes before he started upward again. But he had "sand," and eventually got the eggs and brought them down in safety. We all felt glad when he was again on *terra firma*, and after another rest pursued our way home. So much for the getting of the eggs, and a very exciting trip it was, too.

We afterward showed the eggs to a veteran student of birds, and he surmised that they were duck hawk's eggs. We were much surprised and mightily pleased at having captured such prizes, and when we submitted them to the authority on the subject at the Museum of Natural History in New York, and found they were real duck hawk's eggs our satisfaction was great.

That rope still hangs on the face of the Palisades as a memento of our companion's thrilling adventure, and I suppose the duck hawks sailing round there occasionally peck at it in angry resentment at having been robbed, through its help, of their eggs. H. H. C.

### A White Sparrow.

PARTIAL albinism among English sparrows is of quite frequent occurrence, as one may often observe in a flock of these noisy little pests, one with a number of white feathers on wings or tail. But a perfect albino is rarer. It was my good fortune to observe one of these birds last summer in the vicinity of Bridgetown, Pa., but unfortunately I was unable to secure it for my collection, for twice when the bird was seen there was no gun to be had, and on three different days when a special hunt was organized, the white sparrow apparently had an engagement in the next county, for it was not to be found.

When first seen it was feeding by the roadside with a flock of a dozen or more of its ordinarily attired brethren, and seemed to realize that it was more conspicuous than they, for it flew off upon our approach, in advance of the others. It is not known that it was mated, but it seemed to be on friendly terms with the rest of the flock, and as far as could be seen was treated by them as if it were an ordinary sparrow. Albinos do breed and thus albinism becomes established and hereditary as in the case of white mice, white rabbits, etc. All animals and birds are liable to the deficiency or entire lack of pigment which produces albinism, and birds that are normally black, such as crows and grackles, are just as likely to be affected as other species. A crow with almost entirely white wings was frequently seen near Woodbourne, Pa., last summer. The cause or condition of albinism has not as yet been determined, so we must be content to simply call it a freak of nature. Hunters who are superstitious believe that albino animals and birds have charmed lives and cannot be shot. H. L. GRAHAM.

GERMANTOWN, Pa.

## Game Bag and Gun.

### GAME DESTRUCTION WEST.

DEADWOOD, S. D., Oct. 2.—*Editor Forest and Stream:* I am by vocation a commercial traveler and by nature a lover of field sports, hunting and fishing. My business requires occasional trips to the western part of South Dakota and northern Wyoming.

A few days ago, in conversation with some fellows of my own vocation on the train in Wyoming, I was told that a party of "Englishmen and dudes from Boston," as he styled them, while on a hunting trip a few weeks ago in the western Big Horn Mountains, had come across a herd of sixty elk in one of the small narrow valleys of that country, surrounded them and before quitting had killed the entire band, old and young, large and small, male and female, and had left the carcasses—with the exception of a few of the larger heads for trophies—to feed the wolves and fatten the ravens.

Such work as this is revolting to the senses of the true sportsman, and one's soul is filled with indignation at the relation of such wholesale murder, and it is that which calls forth this communication. We read in your valueable paper nearly every week reports from Boston hunters, but I question very much whether the hunters of that fair city will indorse such "sport" as this by any of their citizens. It is doubtful in my mind whether the parties to this affair ever read such progressive journals as our own FOREST AND STREAM, and if they do they will certainly not report the result at this trip.

I tried to learn the name of the person who gave this information, but the brother traveler who told me did not know his name, but he told the story in the rooms of the Sheridan County Commercial Company, of Sheridan, Wyo., and said that Mr. J. D. Adams, a member of the company, could give me his name.

We cannot hope to have any elk and other large game long left in this country. The advent of railroads in these heretofore wild regions brings people nearer the home of the few that are left, and it is only a matter of a very short time when this noble game animal will be extinct.

On this same trip, in conversation with a locomotive engineer—who himself is fond of the gun and rod—I learned something of the great slaughter of grouse in the sandhills of northwestern Nebraska for commercial purposes. He declares that he is positive there is not an engine on the entire Burlington system—and they have some large ones—strong enough to move, in one train, the number of grouse that were shipped over that road last year, and besides this, stacks of them that were left to rot on the prairie. The slaughter is now going on again, and we pray for the time to speedily come when our platform, "Prohibit the sale of game at all seasons," will be a law and enforced in the State of Nebraska.

The past season in Nebraska has been so very dry that the young chickens have perished for the want of moisture, except possibly in the northeastern part—even old ones are found dead over the prairie, either from the effects of the severe drouth or from some other cause. There is considerable discussion on this question. Some claim that it is from the effect of the dry weather and others that it is a disease among them. Ranchmen and settlers tell me that they find many nests with from ten to twenty eggs that apparently have never been set on, and that no old chickens have been seen for months in the vicinity.

I am reminded of an interesting discussion going on some time ago regarding the efficacy of small caliber rifles for deer shooting. A friend of mine in this city tells me he loaned a party, who was going out for a two weeks' hunting and fishing trip, his little .32cal. Winchester, just to take along to shoot grouse and other small game, but that it returned with seven deer to its credit. He does not say how many he crippled and lost, as he paid no attention to those that run off after shooting. This killing was said to have been done in Wyoming, as the State of South Dakota prohibits the killing of deer until 1896. Snow is already falling in the mountains and foot hills, and the wholesale slaughter will soon begin, as there are hundreds of hunting parties now out. E. E.

# CHICAGO AND THE WEST.

## The Present and Past in the Wilder West.

*[From a Staff Correspondent.]*

### BILLINGS, MONTANA.

THE lively little city of Billings, Montana, situated well up on the Yellowstone River, at the base of the east slope of the Rockies, is one of those communities well covered by the comprehensive but not inaccurate title of "red hot sporting town." It is claimed by the sportsmen of Billings that more different kinds of sport with rod and gun can be had out of Billings, and in a higher degree of excellence, than is possible at any town in the West. Taking Billings as a center, one can outfit for elk, deer or bear about as advantageously as at any mountain town one could name. One can get some sharp-tailed grouse shooting at times, and in season he can have excellent goose and duck shooting. If he is a lover of the greyhound he can have the best of opportunities for coursing coyotes or gray wolves in the neighboring ranches. Above all he can easily reach some of the best trout fishing ever enjoyed by mortal man. The Stillwater, the Clark's Fork, Boulder Creek, the Fishtail, the Little Rocky, Bennett Creek and other mountain streams easily accessible from this point, by rail, wagon and pack animals, afford such trout fishing as cannot be understood, appreciated or believed by one who has not actually seen it. Naturally there are many lovers of the fly-rod in this mountain city, and even those making up the membership of the vigorous trap-shooting club take readily to the angle. The town presents an exceptionally strong body of active and practical sportsmen. It might well boast also of its social organization, the Billings Club, at whose elegant rooms the sportsmanship of the town is apt to be found in congregation of an evening.

Mr. Huntington, the gentleman who handles the electricity and business of the Northern Pacific station of Billings, has already written a most pleasant account of the attractions which Billings possesses for the sportsmen, and I will not attempt to add to his specifications further than to say that any visitor would be missing a good feature if he failed to get a run after Mr. Huntington's foxhounds.

Col. Babcock, of the A. L. Babcock Hardware Co.; Mr. John D. Losekamp; the main general outfitter; Mr. Phil. M. Gallaher, civil engineer; Mr. Jabe Vaughan, who feeds hungry people, are all gentlemen whom it is a pleasure to meet, and any one of them will give a stranger the straightest kind of information as to the sporting resources of the country, which is something of which the visiting stranger cannot always be sure in a Western town.

### A Corner on Elk Teeth.

I am satisfied that I am presenting a unique piece of news, when I say that Billings has one distinction which no other town on earth can claim. It is the greatest elk tooth market of the world. It may not be generally understood, but is none the less a fact, that there is a corner on elk teeth. Mr. John D. Losekamp, of Billings, is the man who holds this corner. He practically holds the elk tooth stock of the entire country; and to his already enormous supply he is constantly adding, the Indians and hunters bringing teeth to him from all over the country. Not every one knows that the elk teeth, or rather the tusk, of which two only are found in the mouth of the adult elk, has a practical commercial value. The teeth are used as jewelry, mostly as pendents on watch guards or as insignia of the secret society known as the Elks. The value of a tooth ranges from 50 cents to $2.50, according to its size, color and marking. Mr. Losekamp has now over 86,000 elk teeth deposited in safety vaults. He buys them mainly of the Indians. Many of the old Indian dresses were highly ornamented with elk teeth, some of them being fairly covered with the teeth. Mr. Losekamp has lived on the frontier all his mature life, and understands Indian trading perfectly, yet he has sometimes paid over $100 for a single garment thus ornamented, caring of course for nothing but the teeth. The Indians drill the teeth to fasten them on their dresses, and this does not injure the value of the tooth, but they have a much worse habit of sometimes staining the teeth a bright red. This dye cannot be extracted, and depreciates the value of the elk tooth for a white customer. The Indians do not dye the teeth so much now since they have learned they can sell them for more in their natural state. Mr. Losekamp gave me a very interesting description of the long bargainings he has sometimes had with Indian chiefs, who were reluctant to sell the much-prized family possession of dresses covered with elk teeth. I fancy that few dwellers east of the Rockies have known much before this of the elk tooth as an article of commerce, and believe Mr. Losekamp's venture to be one altogether new in its way, though not without a prospect of handsome profit.

### Couldn't Carry Any More Trout.

Mr. Losekamp is as ardent a fisherman as one would often meet, and each summer takes a long trip up his favorite stream, the Stillwater. Under date of Sept. 7, he writes me as follows:

"I am just back from my outing trip of twenty-two days in the upper Stillwater country about twenty miles above where you were with us. It would be difficult for me to give you a description of the entire trip, but I wish to give you a list of trout I caught from 8:30 to 11:30, on the upper Stillwater River, a country which is seldom gone into. Did not want to fish longer, as I had all I could conveniently carry. We caught some lower down the creek measuring 20 and 20½in. which weighed 4lbs. The catch was (Thursday, Aug. 16): 5 at 14in. long, 6 at 14½in., 6 at 15½in, 6 at 16in, 5 at 16½in.; 28 in number, which I should place at 64lbs. weight. A good day's fish in that country would certainly run close to 100 fish of the above size. I wish you could have been with me and seen sport which money could not buy in the East.

"Quivey was in a few days ago and spent a couple of days with me. Old Bill Hamilton is sojourning in the mountains, and Liver-Eating Johnson is in Red Lodge, basking in the cool air."

Speaking of this same trip, a writer in Mr. Ramsey's paper, the Stillwater *Bulletin*, says:

One of the most agreeable trips for a summer outing is up the Stillwater Valley. Although so recently open to civilization it is thickly dotted with cabins, overrun with irrigation ditches and presents some as beautiful and fertile ranches as are found in this part of the State. There are no gnats or mosquitoes which, with the cold mountain streams and plenty of fish, make it desirable for camping. Our little party spent ten days on the upper lakes of the Stillwater. As far as Nye City the road is good, but from there to the lakes the trail is very difficult; mountains, swamps and swift mountain streams bar your approach to the lakes. Eight miles above Nye is Fish Lake—by right a broad eddy in the river—a mile long and from ten to twenty rods wide. Here we camped and were joined the second evening of our arrival by John Losekamp, Ed. Vaughan and others who added their jovial stories and experiences to the chat around the camp-fire. The next day at noon one might have seen Mr. Losekamp coming into camp with twenty-seven speckled beauties weighing at least 50lbs. His score was tied by Chas. Hathaway of our party the next morning. The salmon trout of the lake are of uniform size, averaging 2lbs. at least, with a few from 3 to 3½lbs. Large game is not abundant on account of the heavy fire last fall, which destroyed the shelter and feed. The settlers are very hospitable and kind, and many pleasant reminiscences will attend our journey.

### Along the Stillwater.

I very well remember the fishing trip up the Stillwater to which Mr. Losekamp refers in his letter, mentioning myself as one of the party. That was last April, when the mountains were full of snow and the water in all the streams was so cold as to make you shiver at the thought of drinking it. We made up our party at Billings, Mr. Losekamp, Col. Babcock, Mr. Vaughn, Mr. Meigs and myself going thence west by rail to the little town of Stillwater, whose name is now changed to Columbus. This pleasant village nestles next to the mighty Yellowstone, nearly opposite the mouth of the beautiful Stillwater stream, the latter one of the most beautiful streams one ever set eyes upon. At Stillwater we were joined by Mr. June Noyes, the main local trout enthusiast, and as quiet and kind a companion as ever wet a fly. We took a team here and went some distance up the Stillwater, in our second day going as high up as Absoraka. This little post office, which is now kept open for the convenience of the Stillwater settlers, is located just above the junction of the Rosebud. All the valley, as the *Bulletin* says, clear up to the extreme forks of the Rosebud, is now taken up and under the ditch, but the farming is of so feeble a sort that the wildness of the country is not much disturbed.

### Indian Graveyards.

The trace of the Indian is still strong along the Stillwater; witness the several Indian burying grounds which are to be found around Absoraka. There are two of these not half a mile from the house where we stopped, one very large one in the clefts of the rocks which line that stream. Another, and one more accessible, is in the timber of the bottoms just above the house. This really was only one large burial tree, but it held a number of bodies. The cowboys, who do not share the old-timer's idea as to the sanctity of an Indian graveyard, have torn this burial tree pretty much to pieces. The lodge poles, which made the platform, are all scattered about, and the bones, clothing, etc., are spread widely around over and under the deep surface covering of forest leaves. We found here many fragments of bones, and numbers of the ornaments with which these poor people had adorned their dead—copper beads, bits of copper wire, many-colored glass and porcelain beads, etc., etc. There was one little hand, with the wrist bones still attached, bearing still about it the copper bracelet which in life was no doubt the wearer's pride. Under the leaves, some distance away from the burial tree, we found two skulls, quite perfect except that the lower jaw was gone, the coyotes no doubt having accounted for the latter. Off to our left a mile or so, opposite the great burial cliff across the Rosebud and distant from it about two miles or more, my companion pointed out to me yet another burial ground, this one also situated high up on the face of a rocky bluff. These were all Crow ("Absoraka") graves. The Crows seem to have left their dead either in trees or in caves, as seemed best at the time. The method of sepulture was the same in either case. The body was wrapped up tightly in blankets or cloths, and put far back into the cave or crevice of the rocks, no pains being taken to cover it with the rocks, though the intention seems to have been to protect it from wild animals. From the tomb across the Rosebud, there had rolled down to the foot of the cliff the head of a little baby, and I presume the coyotes had managed to get in there. One could not look on these evidences of a former life and death without a certain feeling of sadness, in spite of the recollection that the Crows were not altogether admirable persons in their habits of business or pleasure. But I am inclined to believe that their two different systems of disposition of their dead can nowhere be better seen in so close proximity to each other than here up the valley of the Stillwater and Rosebud streams.

### Plenty of Trout.

As to our success at fishing, even at that inauspicious season, I could ask nothing better, though my friends were continually complaining and apoligizing about it, and declaring that they never had so poor luck in their lives. The trout were not taking the fly to any great extent, and we found that the minnow and the helgramite or "devil scratcher" made the best bait. We caught a number of trout weighing a pound, a pound and a half or two pounds. While I did not have the luck of my friends Losekamp, Noyes or Vaughn, I at least was able to hold Col. Babcock level, and moreover had the satisfaction of getting the largest trout of the trip, a magnificent fellow which we thought would weigh 5lbs. and certainly over 4lbs. I remember few trips in all my life so thoroughly enjoyable as this up the lovely Stillwater Valley. My friends urged me to join them for their summer trip, still higher up the stream, and though I could not go, I am glad to learn that this expedition has been so fortunate, as Mr. Losekamp tells. I can certainly heartily indorse all that the most enthusiastic Billings man can say in regard to the excellence of the sport near Billings. Of course, neither the Stillwater nor the other streams above mentioned, are actually near Billings, in the Eastern sense of the word near, but in Montana 50 or 60 miles is nothing, and Billings is the town you want to head for if you figure on sport in that part of the State.

### Old Times and Actual Old-Timers.

Mr. Losekamp speaks of Mr. Quivey, Uncle Bill Hamilton and Liver Eating Johnson. These are all old-timers of the most interesting sort, and from them or of them all we are certainly going to hear a great deal more in FOREST AND STREAM. I met Uncle Bill Hamilton and Liver-Eating Johnson, both at Billings, and Ike Allen at Columbus, and no passing show, no panorama, no epic of the most skillful pen could for an American equal the experience of talking to these men of the days gone by. As best I can, that is to say, all too poorly and inaccurately, I shall later on try to tell some of the things they told to me.

"Old Bill Hamilton," as he is known from one end of the Yellowstone to the other, is one of the few genuine, reliable old-timers the West has left. He has lived a life of adventure since his boyhood, and his old age now finds him settled down in the little town at the mouth of the Stillwater, in a little cabin over which flutters a ragged flag in remembrance of the days when he scouted for the Generals of the Army in the West. Old Uncle Bill Hamilton is one of the most lovable men I ever met. My last remembrance of the Stillwater is that of his tall, thin figure as he stood fishing at its mouth. Uncle Bill had caught some trout, too, and with Western liberality he wanted me to take with me the largest ones he had. I can conceive that the writing descriptive of even one's most pleasant trips can sometimes be a labor, but when I come to write of Uncle Bill Hamilton, every word will be a pleasure, for a more simple and more honest man never lived, neither one less seeking of notoriety, though the record of his life, if it could ever really be obtained, would surpass, we may well believe, any volume of American adventure that has ever yet been penned.

### Cyclone in Arkansas.

ON Oct. 2, a cyclone visited Little Rock, Ark., with even more disastrous effects in sportingdom than that mentioned last week at Horicon Shooting Club, in Wisconsin, Several lives were lost in Little Rock, and many persons were injured. The Richelieu, conducted by the well known sportsman, Mr. Jos. Irwin, was considerably damaged. The Dickinson Arms Co., the largest sporting goods firm in the State, suffered loss to the extent of $2,500. Joe Irwin and John Dickinson are not the sort of people we would willingly have meet with such misfortunes.

### A Lawyer's Trip.

Mr. A. S. Trude, probably the best known criminal lawyer of Chicago, and a good FOREST AND STREAM man, is back from a long and successful trip in Wyoming and Idaho. Mr. Trude is a good lawyer, and no doubt he knows that elk are under a close season of six years in Montana, and are protected in Idaho till Sept. 1, 1897, and can not be legally hunted at all in Wyoming by a non-resident. I take it, therefore, that the newspaper reports which credited him with bringing back a lot of elk meat and eight elk heads are merely pieces of imaginative writing. How about it, Mr. Trude? You really wouldn't want to class yourself with Dr. Thomas, now would you?

A copy of the *Game Laws in Brief* costs 25 cents. A copy of FOREST AND STREAM costs 10 cents. They are worth it.

### A Railroad Man's Trip.

Mr. W. F. White, general traffic manager of the Santa Fé R. R., and the party who accompanied him in the special car trip to New Mexico and other parts of the Spanish Southwest, have returned, after a most enjoyable and successful experience in the mountains. Mr. White is one of the most deservedly popular railroad men in the business. This trip to the Southwest is a fixture with him for each year, and he is going again next fall.

### Busy Day.

State Warden Blow and Deputy Lenk arrested James Ollandher one day last week on Wolf Lake, one of the Calumet waters south of Chicago, for shooting ducks before daylight. Ollandher tried to escape, and pulled his gun on the officers, but the latter called his bluff and ran him in. His case was continued until to-morrow, $200 bail.

John Delaware, 32 West Ohio street, likes robins for autumn diet, and he shot six Sunday near Hyde Lake, at a cost of $5 a bird.

Louis Embers, 228 Clybourn place, shot two robins on the Desplaines River the same day. For the songsters he paid $10 a bird.

George McMurdy was arrested for shooting ducks and using a headlight on Wolf Lake. The court fined McMurdy $10 apiece for three ducks.

Warden Blow is enforcing the game laws vigorously, having secured 146 convictions this season.

### Kit Carson's Kinsman.

The dispatches have the following:

CLAYTON, N. M., Sept. 30.—Thomas O. Boggs, better known as "Uncle Tom," one of the oldest American residents of New Mexico, is dead. Mr. Boggs came to New Mexico in 1845 with his father, who was one of the organizers of the ill-fated Donner party, the first to travel overland to California. "Uncle Tom" acted as guide for General Fremont. He was sent by General Kearney in 1848, with dispatches of General Scott in Old Mexico, to Fort Leavenworth, and met with many thrilling experiences while engaged in this duty. Mr. Boggs was a brother-in-law and companion many years of Kit Carson.

### Called Back.

Mr. C. F. Johnson, late of Chicago, and a prominent angler there, located last year at Portland, Ore., and had great times in the Northwest with the salmon, trout, deer, elk and bear. Two weeks ago he arrived in Chicago. "I couldn't ask for more sport than that Coast country affords," said he, "but I couldn't stay away from this dirty, busy old Chicago. It called me back and here I am."

### Egad! Sir.

In its leading article for the current issue a Chicago exsporting newspaper speaks of some "Cadwell" ducks. If the editor had known anything about shooting he probably wouldn't have said that. Do you suppose he could have meant gadwall?

### Forgot

A new publication volunteers the information that there are "about 25,000 elk and 150 buffalo in the Yellowstone Park." The readers of FOREST AND STREAM learned that some time ago from seeing the news in FOREST AND STREAM. That was where the editor of the new publication saw it, but he forgot to say so. I can recommend FOREST AND STREAM to editors or readers who are looking for news for their respective purposes. E. HOUGH.

909 SECURITY BUILDING, Chicago.

**Prairie Chickens.**

RECENT reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway, 207 Clark street, Chicago.—*Adv.*

## FROM DAN TO BEERSHEBA.

### The Tribulations of a Trio.

I SUPPOSE it is allowable to send to a sporting paper an article which only incidentally treats of sport, but tells of an outing, wherefore this true account of the manifold trials of Shadrach, Meshack and Abednego, in their efforts to compass the journey from Refugio to Victoria, in southwest Texas.

These three worthies are all lawyers, the last a six foot three specimen of humanity, whose acquaintances, when he first came to Texas, immediately dubbed him "Scantlin';" the first, a gray-haired lawyer of three score years, and seasoned to such trips by thirty years' experience in Texas; the second, a round-faced, round-bodied smiling gentleman, inclined like Mark Tapley to come out strong under difficulties, but unlike Mark, not inclined to seek the trouble that he might have the chance of coming out of it.

Court being over, the problem of a return home began to interest this interesting trio. There had been incessant rain for several weeks, and the natural roads through this part of Texas—you know Texans in these parts believe in letting them severely alone, and never doing any work on them—were in such condition that the question was, not which was the best road, but which presented the least difficulties to be overcome.

Roads were all discussed. They had come to the large and flourishing city of Refugio somewhat after the fashion of the travelers in olden times, who, desiring to go from Victoria to Brownsville on the Rio Grande, had to travel overland to Indianola, thence by ship to New Orleans, and thence by ship to Brownsville. They went by rail from Victoria to Guero, thence to Kennedy, thence to Beeville, and thence to Refugio by hack, some 150 miles, to compass the distance of forty-five from Victoria direct, and found the roads that way so bad that they believed anything was better than a return in the same direction. To appreciate the foregoing consult a map of Texas.

So it was made known that the trio wished transportation, and about 10 A. M. there appeared one of the enterprising citizens, a certain Señor Baalim, whose long residence in Texas and large experience in the management of the Texas pony, were vouchers of his ability to take us to our destination some time. Our jehu proposed, for the consideration of four dollars per capita, to transport us to the city of Victoria, via Sharp's Lake, Terrell's Ferry and Stafford's Crossing. His outfit consisted of an ambulance, a pair of small ponies, and a jug of mustang wine, with an amount of energy and linguistic proficiency not then fully realized by his would-be passengers.

Abednego eyed the team askance. Just a doubt was creeping up his spinal column, as to the ability of those two 14½ hands high ponies to take the party, bag and baggage, and gun, to Victoria. Then, too, there was a wicked look in the eye of the brown pony, and he shook his shaggy mane over his eyes and looked devilish. He was evidently a horse with a character. Abednego had ridden such a beast during the unpleasantness between the U. S. and the C. S., and knew the look. He had doubts of that beast. He intimated some of them, as to speed, endurance and temper, to Baalim, but was assured in a eulogy such as no living animal had ever before that received, that that pony was *par excellence* the pony of the universe for style, endurance, steadiness, bottom, push, energy and mildness. Evidently Abednego was wide of the mark. There was not another such animal on the green earth. So down sank that doubt into his boots again, and he felt sheepish that he had presumed to doubt an animal, like Cæsar's wife, "above suspicion."

"I tell you father's a driver, he is!" said a tall specimen of young man with red hair and his hands in his pockets, eyeing the ponies critically, "and he'll take you through all right, you'll see. And as to Brownie there, why, he is just the beatin'est pony in all Refugio county."

Doubts set at rest, and lunch, gun and baggage loaded, they started, and for at least 200yds. from the start, with the whip of Baalim flying around them, Bill and Brownie "lit out," and the last they saw of that red-haired young man was a smile about a foot wide, with which he exulted in the fulfillment of his prophecy.

If our joys would only last! Ah, there comes the rub! If Romeo kissing his Juliet good night over the front gate could just perpetuate the sweetness of that kiss for one hour, but 'tis

> "Like the snowfall in the river,
> A moment felt, then melts forever."

The lope slowed up into a jog trot, the trot gently degenerated into a walk (and not a fast walk either) as the first mud hole was encountered and Jehu's notes of encouragement were heard, a sound impossible to spell, made by the drawing in of the breath through puckered lips. But as the optimist, Meshack, remarked, they were only going to the San Antonio River, anyway, only about twenty miles, and he reckoned they had plenty of time for that. Abednego began to study Brownie again. He thought that that animal had an opinion of his own, and that it was decidedly against going very far from the master's crib. Sometimes one ear and then the other turned backward, as if to inquire how much further before a change of course, but no change came. The road lay wet and muddy ahead, and steadily the master urged his steeds away from town.

A few miles further on the road passed a wide shallow pond, and the trio saw a flock of Wilson snipe wheeling and circling near it, and as they approached the snipe settled down, and Abednego, who was the only booted passenger, wanted a shot, so with much willingness Bill and Brownie called a halt to rest, and the hunter strode off toward the pond. A long shot at them on the water, and another as they rose secured half a dozen birds, and the journey was resumed.

"These snipe," said Abednego, "you will see differ from the jacksnipe only in being of a somewhat lighter color under the wings and on the breast, than the jacksnipe, and in going in flocks. But there is one way you can always tell one from the other, though they are so much alike. This middle toe of the jacksnipe reaches the knee, when bent up thus, and the toe of the Wilson snipe does not. But when they are cooked you can't tell the difference. Both are equally toothsome."

The party lunched at the Melon, a small stream crossed by the road. Baalim contributed some very delightful turtle steak and the jug of wine to the lunch, and with proverbial Texas hospitality insisted that all should partake of the latter, as the creek water was muddy. Meshack drank, and was charmed, and straightway began a long dissertation on the nature and manufacture of mustang wine which was his special delight, and there was nothing like it, he said. Shadrach drank slowly, and like a man who wants to get all the enjoyment possible out of it, and then fixed his eyes steadfastly on vacancy, about two miles away, as if pondering a perplexing legal question. Abednego drank, and made a wry face b hind his hand, and was vividly reminded of his boyhood, and those unripe persimmons, that he had torn his pants in climbing to gather and eat.

While the team was resting, Meshack took the gun and in a short time added three or four more birds to the bag, and Abednego with that doubt creeping once more up his spinal column, made a rapid mental calculation. To the Melon, six miles, two and a quarter hours, fifteen yet to travel, three miles an hour, 6 o'clock P. M.

Upon the road from Melon to Sharps Lake, more than once Brownie showed symptoms of baulking, and as walking was faster traveling than riding, to lighten the load, Meshack and Abednego walked several miles, bagging several ducks on the ponds by the way. Sharps Lake is a shallow pond, about half a mile across and about knee deep, one of a chain of lakes, lying nearly northwest and southeast for six or eight miles across Refugio county, and filled with aquatic birds and fowl of every kind. In this region they were hardly ever out of sight of companies of wild geese stalking across the prairie, or clouds of wild ducks of every variety on the water or rising from it. A line of white brant half a mile long stood motionless on the edge of the lake about a quarter of a mile north of the road, and Meshack wondered how many could be killed with a small cannon loaded with buckshot within range and so posted as to command a raking shot.

It was with fear and trembling that Sharps Lake was entered with our slow team, as no one could tell when Brownie would take it into his head to stop, and the water was too deep for comfortable wading. But as luck would have it the beast did not stop in the water, though he did shortly after they got on firmer land, and the load was again lightened by the dismounting of passengers, and the team again started by the exertions of the driver who under the pressure of necessity added some choice oaths to his vocabulary, stamped on the floor of the vehicle, used his whip, threatened all sorts of punishment to his steeds, and in the language of the statutes, used "loud and vociferous language." They added several ducks and 10 or 12 Wilson snipe to their bag here, Meshak shooting and Abednego retrieving. The San Antonio River was reached about half an hour before sundown, and they had still before them about four miles of river bottom to travel before reaching their stopping place, and over the very worst part of the road. The river had been overflowed for the whole distance, and the waters receding had left the whole river bottom, which is heavily timbered, soft and muddy with bad washes in the road and much debris accumulated in places.

With infinite difficulty the team were induced to pull the empty vehicle up the eastern bank of the river, from the ferry boat, and Meshak and Abednego now became convinced that if they expected to get through at all they would have to walk the whole distance.

"We are of the earth, earthy," remarked Shadrach, with a sigh, as he also rolled up his trousers, preparatory to joining the pedestrians. Meshak with his usual optimism thought that we would not find it so bad, any way, and at least Abednego wouldn't find any water he could not wade, and Baalim cursed his team energetically and encouragingly and they crawled along in the rear of the footmen. In the depth of the forest twilight came along swiftly and gloom began to lower down upon the travelers. After about a mile had been walked, the road became so bad that Shadrach got back in the back to keep company with the driver, but the other two walked on. The method of the driver was, to begin to urge his team by shouting and stamping a little before a bad place was reached, and to keep it up *crescendo*, until it was passed. He rose to the necessities of the occasion, as his road grew worse. Meshak and Abednego pushed on, circumnavigating those pools of water they could not jump across, and occasionally differing as to the better track to take to avoid the water ahead, they gradually drifted some way apart, and as the gloom of the late evening increased, they separated entirely. Occasionally the sound of the driver's voice abusing his team could be heard as they dragged along far behind, but at last, some dire misfortune seemed to have overtaken them or the team had broken entirely down, for the driver had lifted up his voice on high, and as Meshak and Abednego each paused at the unwonted energy and deliberation of the address, they heard through the vistas of the forest Baalim thus address his team, "You scoundrels! and so you won't go any further; ha! you sore-backed devils! You Brownie, you lazy hound! so you are cutting up your hundred-dollar shines, are you! I just believe I'll get down and cut your throat from ear to ear. Why don't you go along, you scoundrels, you lop-eared bandy-legged villains! Go 'long I say! I'll kill you no-count billy goats, go 'long!"

With a sigh for the fate of their partner in distress, and a certainty on Abednego's part that help had to come from their stopping place for the night, they pushed on, and down the long corridors of the forest pursued them the music of the cries of our Baalim, whose energy and perseverance had long before this time fully earned him the pay he was to receive for the whole trip. Abednego found doubtful footing upon the muddy islands lying through the sloughs that he had to traverse, and more than once would have been wet to the knees but for his boots, but at last reached Boniface's comfortable home, and after having explained to him the situation he promised to send a team back for the stalled hack. There was some delay in getting the team to send back, and about the time that Boniface had found his men, behold slowly looming up in the darkness, down toward the timber, Bill and Brownie hove in sight, and as they halted in the light of Boniface's hospitable door, such a look of mingled woe, dejection and resentment rarely developed on the face of beast as appeared on Brownie's shaggy countenance.

A good supper and refreshing night's rest, followed by a substantial breakfast, cheered and invigorated the trio, and Abednego thought that even the ragged edges of Brownie's perversity would have been smoothed down by rest and hay, oats and corn. In the morning they saw the team once more attached to the vehicle, with high hopes that their troubles were now over. The road to Victoria was still heavy and wet, and the morning was foggy with threat of rain during the day, but until they reached the Guadaloupe bottom they did not expect to encounter any road quite so bad as the San Antonio River bottom.

Baalim mounted his seat, the passengers took their places, and the heads of the team were turned in the direction of Victoria, and with a cheerful "G'lang," the driver started. But about three rods from the starting place there was a gentle up grade. Brownie wanted to go to Refugio and not to Victoria, and here he incontinently called a halt and began to cut up one of his hundred-dollar shines, as his owner called them. He backed, both his body and his ears. He completely frustrated the efforts of the willing Bill, his co-laborer, to climb that hill, and at this early hour the anger of Baalim was kindled and he smote the beast with whip and with choice words of denunciation. But it was all to no avail; Brownie would not pull the load up that hill, and passengers dismounted as well as driver, and then by dint of whipping and pushing the vehicle on the refractory beast, forced him up the hill to level ground. Here passengers embarked and the journey was again resumed as the mist began to thicken and drip down the cover of the hack, and the hog wallows ahead, full of water, showed up white between the black, waxy, muddy lumps.

To vary the monotony of the journey, Meshak began to speak of the South Pacific extension, of the railroad from Victoria and Goliad and Beeville, and to enlarge upon the benefits of railroads in general and this one in particular to the section of country through which it passed, and Baalim listened for a while in silence; but as the team staggered through a mud hole more than usually tenacious, he began to give us his views. "Can't see that the durn railroads are any good," he said. "The country was a heap better off before we had them. Then there was plenty of work for teamsters, and the people had more money and were better contented, and hundreds of wagons would go to Indianola and load, and hauling was a good business, and there was a market for the corn that the people made and for the meat and chickens, and everything was better and peop'e were better off. Now there's all sorts of people come into the country, and the dang tramps and thieves; and in my opinion we would have been a ding sight better off in Texas if there had never been a railroad built. Go long! git out of here!" to the team.

"There is certainly one thing they are good for," said Abednego. "One can travel on them in comfort, at any rate."

"People go too fast in these days, anyway," said Baalim, "and always in a hurry, and horses is a drug in the market, and all because of the railroads."

"When I came to Texas," said Abednego, "there was a stage line from Indianola to Victoria, then the only means of getting from one place to the other. The charge was ten cents per mile, and not long miles either, and only fifty pounds of baggage allowed to each passenger. I waited three days before I could secure a seat in the coach, everything having been engaged ahead, and the stage proprietors would not take any passenger who did not stop at a particular hotel. I had stopped at the opposition house in Indianola, and before I could engage my seat had to go to the other house and put up there. When we were about ten miles from Indianola the coach stalled in the mud. All the men passengers had to get out, and the driver kindly suggested that while he held the team we should go about two hundred yards off and get two or three fence rails to pry the coach out of the mud if we wanted to get on. This was done, and the coach was dislodged from the mud by the united efforts of six or eight men; then it started again, and the unloaded passengers, scraping two or three pounds of the black, sticky mud from their shoes, concluded to walk a while to rest the team. Five hundred yards or less from the scene of the first stall, the coach stuck again in the mud, and as the rails formerly used were now the nearest, the driver again came to the rescue, and suggested that we should go and bring them to pry the coach out once more. As that seemed the only thing that could be done, it was done, and again the coach was *en route* but as the driver climbed into his high perch and cracked his whip at the leaders, he said that there were several bad mud holes a short distance ahead, and to save time we had better bring the rails along, as we would surely need them; and so it came about that we paid ten cents a mile for the privilege of walking and packing a fence rail."

Abednego quieted his conscience for getting off this old chestnut on the driver as a part of his own experience, by the thought that desperate cases required desperate remedies, and further, by the thought that it was allowable to "point a moral" if not to "adorn a tale."

"But how about being starved to death in a snow-up, or pitched into a fifty-foot river, or mashed into smithereens, by another engine, or blown into kingdom come by a boiler explosion?" retorted Baalim with withering scorn.

Here the team came to a standstill in the midst of a mud hole of larger dimensions than usual. He attempted to urge them out by shouting and stamping, but in vain, and then he said that he reckoned we would have to lighten the load before that danged Brownie would pull.

As Abednego was the booted passenger, he prepared to dismount; but the mud and water being deep, he stepped over the dashboard, and cooned it out to the harness of Bill, from which point it was possible by a spring to clear the worst part of the mud. Throwing the leg that had been between the horses over to the outside, he sprang to the ground, but unfortunately the seat of his pants had hitched on the catch fixed on the top of the pack saddle for the reception of the reins, and a fearful sound of tearing cloth saluted his ears.

Now, the suit he wore was a new one, for which he had paid $55 to a Galveston tailor, and he was proud of its neatness and fit, and with great indignation as he reached dry ground he threw back the tail of his coat to investigate the amount of the damage. Alas! there was a letter A, 2ft. in length, torn in the solid cloth, and the white of his underwear maliciously shining at him from his rear. He glanced back; Shadrach was doubled up, with his hands over his stomach, his face aflame, with a million wrinkles in it, and his whole frame convulsed with laughter; Meshak was thrown back, his mouth a yard wide, haw-hawing as though his life was at stake. The driver's weatherbeaten countenance was screwed around until circular wrinkles having the mouth for a center

crossed the whole face. Loud and long he heard peal after peal of laughter from the hackload, and even the team, startled into good nature, seemed to share in the general merriment, and moved right along out of that mud hole in fine style. Abednego was filled with rage. He cast one withering look back and then strode on in sullen silence for three miles before he stopped, taking the rain as it fell with stoic indifference, and only halting when a gate barred the way that must be opened to permit the passage of the team. For a moment he thought of passing on and leaving the driver to dismount in the mud to open it, but at last concluded to open it and ride again.

"Now really, now you know, Abed," said Meshak, as he mounted the wagon, "why really—ha, ha—we ought not to have laughed—ha, ha—at you—ha, ha—and it was too bad to have—ha, ha—your new breeches torn—ha, ha, ha—but you—you— looked so—so—ha, ha, ha—very comical—ha, ha, ha, ha—that—that—in—ha, ha—deed—ha, ha—we couldn't help it, we couldn't—ha, ha, ha, ha, he, he, he, ha, ha, ha!"

And Shadrach echoed every explosion with his voice, but by and bye Meshak was sufficiently recovered to loan Abednego two pins with which to partially conceal the rent, and on they went, their team slowly overcoming the difficulties of the road.

The road was heavy and the team very slow, and more than once on the long stretch from the San Antonio River to the Coletto all the passengers had to dismount to enable the horses to go at all. After a long walk of three or four miles by all of the passengers, as they reached a part of the road slightly better they again got in the hack, with wearied bodies and patience worn nearly threadbare.

When Coletto Creek was reached, and the team was watered, they met several acquaintances going in the opposite direction, with whom they had some talk, stopping the team near the bank of the stream for that purpose, but when the conversation was finished and it was sought to move on, Brownie refused to move in the direction desired or in any direction save back toward home. He wanted to follow the horsemen, and thereupon he and Baalim got up a controversy that threatened to be prolonged, and the trio got out of the hack upon the sandy margin of the stream with their lunch in hand, and seeking the shade of a vine-covered tree on the bank, began to eat their dinners.

After a long and animated discussion with Brownie, and much persuasion from the whip, and several eloquent and vehement threats to cut his throat from ear to ear, Baalim at last got the team started by going down the creek to recross and suddenly pulling the left rein instead of the right and thus forcing them up the east bank of the stream; and drove up to our temporary camp, hot and furious, but declaring that Brownie had never, no never in his life cut up such hundred-dollar shines as he was doing on this trip. Abednego, with a sad smile thought of the red-haired young man's description of Brownie "he's the beatin'est pony in Texas," and mentally exclaimed "Amen."

About 4 o'clock in the afternoon they reached the hill overlooking the valley of the Guadaloupe River stretching out four miles between them and Victoria, and as that had been recently heavily overflowed it was apparent that the team could take us no further, and the hack was unloaded at a neighbor's house near; the driver paid, and the trio began to cast about for some means to reach their destination. The newly built railroad running west from Victoria had been completed to the hill upon which they found themselves, but no trains was running (for this story is of a time when it was walk or nothing); and nothing remained for them to do but to foot it to town along the railroad grade. Abednego captured three heavy cornstalks, near by, that had been used in the construction of a pigsty, or some other inclosure by the workmen on the railroad, and abandoned when they moved further out, and with the help of these as walking canes, the weary three footed the remaining four miles, and walked the trestling, and bridges, while two stout colored men who had been given a dollar to do so, followed with their baggage.

The advent of the cornstalk three with their soiled and torn clothes, and weary limbs, was greeted with smiles of compassion and exclamations of surprise by those they met as they traversed the town, and there was but one consolatory thought upon which they all three dwelt with satisfaction as they neared their journey's end, and that was that they never would have such a trip to make again, as ere another court the railway would be completed.

"Papa, give me that cornstalk," said Abednego's little son as he entered his domicile and sank into his easy chair, "I want to make a horse out of it."

"Right my boy," he said as he handed it to him, "and the next time I start out from Refugio on such a trip I will ask them to hitch in a billy goat in place of Brownie, or will myself get astride a cornstalk, and ride home, as an easier way to get there than to walk, and push the hack." TEXAS.

### Carrier Pigeons Shot.

VINEYARD HAVEN, Mass., Sept. 29.—*Editor Forest and Stream;* Inclosed you will find a metal tag taken from the leg of a carrier pigeon, which was shot at Squibnocket, Aug. 24, 1894. He was shot from the roof of a building just at dark. I inclose same to you, as it may interest some reader of the FOREST AND STREAM; I obtained it from the farmer near the Gunning Point Fishing Club House. The brass band reads T A J 93 39. The bird would not have been shot had it been recognized as a pigeon. R. W. C.

BALTIMORE, Sept 30.—*Editor Forest and Stream:* One day last week a carrier or homing pigeon was picked up on the railroad bridge of the P. W. & B. R. R. across Gunpowder River. It has a band around the leg with C 4241 on it, and had probably been struck by a train, as it was wounded. It is now all right and is at the bridge tender's house. If he should release it do you think it would find its way home? EDWARD A. ROBINSON.

[Probably.]

**Chickens, Ducks and Geese**

are going to be very plentiful along the line of the Northern Pacific this season. Make your arrangements to go and get some of them. Send Charles S. Fee, General Passenger Agent, St. Paul, Minn., 4 cents in stamps for "Natural Game Preserves of the Northwest."—*Adv*

## A WHITE BLACKBIRD.

IT was the 19th of August, the day before the opening of the rail season in Connecticut, and we were driving over to the river to engage the shovers for the morrow, and have the usual chat with Charlie, as to the number of birds, state of the corn grass, etc. The day had been warm but the autumn coolness began to be felt in the afternoon air, and the livery stable horse pricked up his flapping ears and lifted his big clumsy feet a trifle more briskly than usual, as he trotted along the leaf-strewn woody road. As we rounded the last turn and came in sight of the river, "There's Charlie now, halloo Charlie," shouted the Doctor.

At the sound a figure bending over a boat drawn up on the bank straightened up, and Charlie turned toward us, shielding his eyes with one hand. The look of question and surprise died out of his face as he saw who it was, and with a smile of hearty welcome he came up the bank saying, as he came "How-dy-do—how-dy-do—I was calculatin you'd be along to-day, Doctor, and I've just been gitting the Madam's seat fixed in the boat."

Then the horse was tied under the shed, and as we seated ourselves on the grass the Doctor said, "Well, how about the birds—anybody been up prospecting yet?" "Wall—yes"—answered Charlie, meditatively drawing a long yellow straw through his teeth. "I guess there's a few birds in, I was up to the cove, last night, and shoved about a bit and got up eight or ten birds, but the' warn't no kind of a tide—couldn't get nowhere. But there's a fine lot o' grass, and I guess meby I can find fifteen or twenty birds if there's anybody can shoot 'em. They's goin' to be three boats up beside, you, though, and you want to get here sharp on time, so's to git in fust."

Well, the arrangements were made, and after a few more words, we drove away, promising to be on hand promptly at 6:30 A. M. the next morning. We kept our

THE WHITE BLACKBIRD.

promise, and were repaid for our early rising by the beauty of the drive in the fresh morning air. As soon as we arrived, Charlie was impatient to be off, and before long we were on our way up the river, the Doctor and Clark in one boat, and Charlie and I in another. Then the reason for Charlie's impatience was divulged.

"How are ye shootin' this year?" demanded Charlie, as soon as we were fairly off.

"Oh, Charlie, I don't know—not very well I am afraid. You see I have not had a gun in my hand for six months, and I probably couldn't hit a barn door to-day."

"Humph!" growled Charlie, "that's bad, 'cause there's a bird on this river I want you to get; we're going after him now, first thing."

"Good gracious, Charlie, you frighten me! What kind of a bird is it?"

"Wall, it's a kind of a bird I never see before, nor you either, I'll be bound; it's a white blackbird."

"A white blackbird!" I echoed.

"Yes, m'am. That's just what it is, a white blackbird. He's been around here for two weeks now, an' most everybody on the river's been a-shootin' at him; but they aint got him yet, and I want you should get him. I'd ruther you got him than twenty rail. Poor fellow! I feel kind o' sorry for him, anyway. You see, he's in a flock of about fifty, and they treat that bird real mean. They know he's some different from them, and they peck him, and fight him, and won't let him come only just on the very edge of the flock. I seen him as much as twenty times, and he's just as white as paper. And I just said now, the Madam's going to hev that bird or my name aint Charlie."

"Well, I'll do my best, Charlie," answered "the Madam," gratefully. "But I shall be so anxious to get him that I am sure to miss."

"No you won't, now. I'll look out for that. We'll just shove up quiet like, and when we get just where we want, I'll get 'em up; but I want to show him to ye first, so's you'll be sure to know him. Now, we're gettin' near where they was last night. Now, you just sit here and let me get back there with that shovin' pole, and I'll p'int him out."

So we quietly changed places, and the boat glided over the water like a wraith, propelled by Charlie's strong arm and long pole. Suddenly he whispered excitedly: "There, there he is just ahead of ye—settin' in that big bunch of grass to the right. There—see 'im—see 'im."

"No," I cried, in as suppressed a voice as my excitement would allow, "where—where?" and I bent and ducked and twisted about, making the boat rock perilously as I did so. As the words left my lips, with a whirr like an escaping rocket, the whole flock rose out of the clump of grass ahead, and made for one some distance beyond, and as they did so I had a good look at the poor pariah, who meekly followed in their wake. He did look very white in the midst of that assemblage of black-clad brothers, and my longing to "get him," became greater than before.

Charlie rowed swiftly up the creek in the wake of the flock, and in a few moments we were close to them again, and could hear their calls and chatter, as they flew back and forth in the tall corn grass. It took Charlie a few moments to locate the poor outsider, but he was finally discovered on the very edge of the flock, sitting all by himself on a drooping corn grass stalk, and looking far from happy. Finally our preparations were all made, the gun was loaded and cocked, my eye was on the bird, and I was ready to take him the moment the flock got up.

Then Charlie, with an Indian warwhoop, threw a block of wood into the midst of the birds. They rose with a rush and wheeled off, and as the gleam of the white wings caught my eye, up came my gun, the report echoed from shore to shore, and then, lying on the smooth surface of the water ahead of me, I saw the white blackbird. No longer a pariah, but destined to proudly adorn the collection with which the walls of our country home are enriched. THE DOCTOR'S WIFE.

## THE GAME SUPPLY.

THE preservation of game is a subject of deep concern to every sportsman who shoots over dogs, or who trusts solely to the gun for his sport. From observation made during my recent trip in the Northwest I am convinced that, year after year, the game supply has steadily diminished.

The chickens were quite abundant this year, owing chiefly to a most favorable breeding season, but they were not so evenly and uniformly distributed over the whole chicken country as they were years ago. Their breeding and feeding grounds are now confined to comparatively narrow tracts, following such courses as are favorable to their protection and comfort in respect to growths of cover, and in affording a food supply also. Some localities may have abundance while other localities may have none, but the abundance is only for a short time.

From personal observation and what I could learn from local sportsmen the multitude of shooters is in too great a ratio to the number of chickens. The whole chicken country is searched repeatedly. Every town contains shooters enough to thoroughly sweep the whole adjacent country for miles around. Shooters from one town often meet shooters from some other town going in an opposite direction, all intent on killing chickens.

While there is a game law against the exportation of game from North Dakota, it is violated with the greatest regularity and with entire impunity. Shooters take empty trunks into the State, which, filled with chickens, are checked as baggage on the return trip.

One gentleman filled a large sack with ducks, which he took with him from North Dakota to his home in eastern Minnesota. The railroad official, as a matter of perfunctory duty, asked him what the bag contained, for there is a semblance of an effort on the part of transportation companies to observe the game laws as it pertains to themselves. The agent received for reply that the bag contained eggs. This seemed satisfactory, since no further questions were asked and the bag of ducks was accepted for transportation.

Ducks are few in numbers as compared to previous years. A few favored sections, where food is abundant and where they are least disturbed, may have large numbers; but the small sloughs, lakes, creeks and marshes, which a few years ago literally swarmed with them, they now avoid. There is sufficient food and shelter for them in the big sloughs or lakes, which are also ample enough for their needs throughout the entire season.

A few years ago all the little and big sloughs in the northern country were none too much for the needs of the ducks, so vast were their numbers. But the slaughter of those which breed in the settled sections of country and which are killed before the fall migration begins, and the continued slaughter which begins near Lake Winnipeg on the north, through all the vast region on their south bound flight to the Gulf of Mexico, is producing the inevitable result. During the winter months on the Gulf coast the market-shooters diligently pursue their vocation. They send thousands upon thousands of ducks to the game dealers in the great cities. On the northward flight in the spring time, the ducks must run the gauntlet of the previous fall. The destruction is so great that in a few years they will have shared the fate of the wild pigeon.

To give some idea of the destruction, I will mention the results of one duck hunt, made by a party of four, Mr. Pike and two sons, of Chicago, and Mr. H. W. Cowan, of Windsor, N. D., the latter gentleman living not far from the scene of slaughter. I have the information from Mr. A. S. Weld, who owns the sloughs, or part of them, where the "hunt" took place.

Their score was 1,300 ducks in eleven days, and 100 chickens, 2 wild geese and 2 sandhill cranes. This would make an illegal number of birds killed daily, as the law permits not more than 25 birds to be killed by one person in one day; it furthermore prohibits a person having more than 25 birds in possession at one time.

As these birds could not be legally shipped out of the State nor shipped for profit within the State, the question arises, what was done with that immense number of birds?

Mr. Weld further informed me that Mr. Pike brought with him 5,000 cartridges from Chicago, and took back but a few hundred. This was the destruction done by one party. Others were quite as diligently at work in the same neighborhood.

By the way, Mr. Weld further said that when one of the Pike party killed the legal number in one day, the ducks killed afterward were called snipe.

North Dakota is a rich field for missionary work by the National Game, Bird and Fish Association, of whose doings at this active season of game slaughter nothing is heard. B. WATERS.

### Maine Shooting.

SIXTEEN MILES FROM EUSTIS, Me., Oct. 2.—*Editor Forest and Stream:* With Dr. F. M. Wiser and Mr. Chas. H. Meigs, of New Haven, I have just closed (Sept. 29) the most successful trout fishing season I ever had, and we opened the shooting season yesterday in pretty fair style, Dr. Wiser bagging a very large black bear, Mr. Meigs a bear and a deer, and one deer to my gun. Large game and partridges are very plentiful. Any of your readers wanting the best of deer shooting with moose, caribou and bear on the side, can get it by addressing Emery & Douglas, Eustis, Me. I guarantee a good time and plenty of game. Both Emery and Douglass are born guides and pleasant gentlemen. GEO. W. LA RUE.

## A FARMER'S VIEW.

IRVING, Barry Co., Mich., Sept. 30.—*Editor Forest and Stream:* On editorial page of FOREST AND STREAM of Sept. 22, in "Portraits in Ink," called "A Pot-Hunter," you struck a chord that will vibrate responsive in the hearts of many a farmer reader. God bless you for a farmer's trump.

From 17 to 30 I lived on a farm, then was cashier and bookkeeper for five years, and the last two have been on the farm again. My clerical work was in Grand Rapids, Mich., and in New York. So I feel as though I could look at both the city and country side of shooting and fishing. From experience, I feel for my city brother and know how a day off or perhaps a week or two in the country, are looked forward to for many months, and we farmers are glad to divide our sport with our overburdened business friend, but as I know from experience our city brother sometimes thinks that the mossback farmer leaves his work every once in a while and kills game and fish at any time, in season and out, and does not wish "a city feller" to step on his land.

I will admit that there are lots of mean, selfish law-breaking farmers. Such men enter into all classes of mankind. But the largest destruction of game and fish out of and in season comes from the mean element of village, town and city. Not that mankind is worse in those places than elsewhere, except on account of the greater population gathered together in a small compass.

I really think that the average farmer is not only a game protector, but is ready to share his land with a sportsman if treated like a gentleman and asked permission to shoot or fish. You who shoot for the sport there is in it, who can buy game when you crave a meal of it, who also have meat on your table once a day at least, or at the worst three times a week, should think of this I know that the average farmer goes without meat eight months out of the year; and when he has it, the hog is the animal drawn upon. Why is this? Because it takes all he can convert into money to pay his season's expenses with perhaps the interest on a mortgage. There are of course a few forehanded farmers with whom perhaps you, my city brother, are acquainted, who when you visit them show you great buildings full of grain, while fine cattle, sheep, hogs, fowls, greet your eye, and you sit down to a table with beef, mutton or roast pork before you, while there are several hired men there also. But there is also the far more numerous class, the farmer with fewer acres, who cannot afford to hire, except a few days in harvest; who does his own work and feeds, clothes and educates four or six children, while his wife and he deny themselves everything except hard work.

No doubt such an one has a gun and is a fond lover of shooting, but he must improve every fine day, for rainy weather, days spent in going to town to exchange farm produce for family necessaries, sickness and so on, tell at the end of the year. Now this man knows that the game sent away by market-gunners, carried by sportsmen to towns and cities, has almost cut off entirely his few days' shooting when he could give his family of little ones a treat of a fresh game dinner. Very likely almost every man and boy from the nearest town has levied a tax on him and in some cases have left nothing for the family who own the land. All this would be well enough if the privileges were used with moderation, for the people of these United State should all enjoy these comforts. The average farmer I am sure is willing that those confined in cities should enjoy this opportunity of a few days at the game, and for one I wish, if it were possible, that every family could eat a few game dinners yearly.

I also know that a fair proportion of gentlemen shooters fully understand all this, and ever treat the owner of the soil well, always asking the privilege of shooting. The return to that farm of such men is looked forward to by all its human occupants as a special pleasure; the head of the family shows all his little game pockets of squirrel, quail and rabbits, while in the house the best is being made ready. At parting, the town party insists that the farmer shall accept a share of game; the hand shakes are hearty and full of friendship, and the inmates of that home return to the night chores with a feeling of joy and comfort not to be experienced again for many a day to come. To such sportsmen I can take off my hat and bow to the very ground, God bless them. They are always welcome; I had far rather have them come than to keep the game to myself. In this case it is far better to give than to receive.

I have seven neighbors living near by, and for some time have watched them from the game killing standpoint. One has camped at a lake for a week's fishing but shot no game; one fished one day, no game killed; the third has shot one woodduck but caught no fish; the other four, myself included, have neither shot nor fished. All keep guns, love the sport and borrow my FOREST AND STREAM.

Now about pot-hunting; we are all poor shots on the wing, but good on the run, for fox, rabbits, etc. My family has not had fresh meat over one month out of twelve, and I will try to obtain a taste for them soon. So when the law is off on birds I will take a day off, and not having a bird dog will most certainly, if I should find a partridge sitting on a limb, shoot him on sight, and quick sight too, or if I have good luck enough to get sight of quail under similar circumstances I shall do the same. Rabbits I always shoot before a dog; no ferrets for me. In fishing, when I get one on the hook out he comes; no fooling with a rod and line too weak to hold him without the greatest care, and letting out 100ft. or more of line. I like the sport, but it is a fish breakfast I am after, and if fortunate enough for a meal or two I am satisfied. Three days out of a year, perhaps, for fishing, as many for squirrels and rabbits, will more than be an average for each of my seven farmer neighbors.

The law is off on quail Oct. 1. We are very busy with the last of the fall seeding and corn-husking. We know of no bird dog. Who will tramp over our farms without asking with bird dog and gun? Where will the birds go that we have seen while plowing in the spring, who used to sit and look at us, sometimes only a few yards off, and call "Bob White;" and again in haying and harvesting the little round fuzzy fellows that would scuttle away to cover; and last in corn cutting when we looked, no doubt for the last time, at the familiar coveys? Where I say, will the birds go? Here is the answer experience has taught: Two-thirds will be put into the game pockets of the market-gunner. And Grand Rapids, Hastings and other towns will turn out its army of shooters for a share of the rest.

Do the majority of shooters realize the favor granted them and take only enough to satisfy their own wants? Do they ever think that the farmers could organize and each post every foot of land he owns, only doing what those rich in this world's goods have already done, what clubs are doing yearly. Only yesterday a brother farmer replied to a question from me as to a good place for squirrels:

"Well, yes, I don't mind telling you, as one of us. But when a load of the town chaps comes along in a wagon inquiring for game, I tell them there is no game about here. Why, last fall four fellows drove up and asked to put their horses in the barn. I did put them up and gave the horses hay, and them fellows all the milk they could drink, free of charge. Well, darn their hides! They broke some wires from a post, and the cows got into my corn. They left a gate open and the hogs got into the woods, and from there into a neighbor's corn, and I had to give him fifteen bushels of corn before he was satisfied. No, no more hunters from town for me."

I told him that I knew lots of men in New York, Detroit, Grand Rapids, etc., that were far above that class, gentlemen shooters, who put no one out. "Mebby so," was all the answer I got.

Well, I have wandered all over, lost myself from what I started to write, which was to thank you for your picture of a "Pot-Hunter." One mossback who read it brought down his fist on his leg with a thump and said, "That's right, he's got it square." To the true sportsman we farmers will give a hearty handshake of welcome. All we have is free to them. J. C. Y.

## MAINE GAME.

ONE of the first Boston parties to come out of the Maine woods since the open season on big game began is the Puffer party. The Puffers, in the soda fountain and apparatus business, under the name of A. D. Puffer & Sons, are great hunters, and they have taken a good deal of big game. They go to Maine nearly every season. In the party that has just returned were the senior Puffer and one of the sons; Mr. Coller, salesman for the Puffers; Mr. H. L. Buss, of the Boston Chamber of Commerce, and his brother, Mr. C. B. Buss. The party found big game plenty. They got several deer, and saw caribou, which they were not able to get. They went to Telos Lake, one of the Chamberlaine Chain, and not far from that lake. They had fair duck shooting, for so early in the season. This sort of sport is reported to be great in that part of the country later in the fall. The black ducks stop for some weeks on their migrating south. They found some partridge shooting, but very few in flocks.

The gunners are very plenty in the Maine woods. Senator W. P. Frye, of Maine, is out from his camp at the head of Mooselucmaguntic Lake. A friend of the Senator says that he, with his party, would have been glad to have stayed in camp even a month longer but for the tremendous shooting going on in that vicinity. Men of a good deal of daring are afraid to go into the woods this fall in many parts of the Maine big-game country. Careless shooting is too common.

An Oldtown, Me., dispatch to the daily papers tells of a railway train on the Bangor & Aroostook Railroad that is killing deer this fall. On Monday evening, Oct. 1, the train left Oldtown as usual. But when some twenty miles out it came to a halt from a rather curious cause. The passengers proceeded to investigate and found that the train had run over a deer that had evidently attempted to cross the track ahead of the steam horse. The report says that the passengers were several of them anxious to purchase the specimen, but the train hands preferred to take care of the booty themselves. The deer was taken to Houlton and dressed and was found to weigh nearly 200lbs. If we are to believe the newspaper reports, the engineer of the same train says that his engine struck another deer on the same night, and that a couple of weeks ago two deer were killed by the same train. The story is worth investigating and the testimony of the engineer would be interesting reading. It is possible that the headlight of a moving locomotive may have a strange fascination for a deer in the night time.

Mr. Wm. H. Goggin may be considered a lucky sportsman. Only twice has he been into Maine to hunt deer, and each time he has taken his deer. With three of his friends, he is just out of the woods. The party included Mr. Wm. P. Tenney, Mr. S. Matherson, Jr. and Mr. Wm. Gray. They visited Pleasant Lake, one of the Schoodic chain, and they think they have found an ideal spot. They went to Kingman by rail, and thence to the lake by teams. Duck shooting was good; the finest of black ducks. They were there before the trout law came on, and had good trout fishing. That at Trout Lake, a pretty little lake up in the mountains, was particularly fine. Mr. Tenney landed a triplet catch—three at one cast. They shot partridges on the way up and had a genuine woods dinner. Partridges they found to be scarce as a rule, however. The first morning they tried for deer Mr. Goggin shot a buck with four-pronged antlers, of which he is justly proud. Mr. Matherson was also fortunate enough to get his deer, though the first shot spoiled his antlers. Mr. Coggin and Mr. Matherson, who hunted together, came out first, leaving Mr. Tenney and Mr. Gray, determined to secure a deer. This they accomplished in a day or two, and they are back in Boston, greatly pleased with the spot they have found. SPECIAL.

### Roading a Diamond Back.

WHILE out quail shooting with my brother one day last spring the dog struck a trail on a piece of low, damp ground, thickly covered with a rank growth of ferns and gallberry bushes. After following the trail a short distance the dog would stop every few steps as though afraid of flushing, then creep on again. I was standing off to one side, expecting every second to see the bird get up, when my brother caught the dog by the collar and pulled him back, calling to me at the same time. As soon as I got on the spot I saw the cause of this rather sudden move. There, right ahead of the dog, was a large rattlesnake wriggling slowly along. One charge of No. 8 shot in the head settled his snakeship, and as we concluded we didn't want any more hunting that afternoon, I carried him home and took the skin and rattles off. The snake was a diamond back and measured 5ft. 8in., having eleven rattles and button. G. I.

FAIRBANK, Fla., Oct. 3.

## ADIRONDACK DEER HOUNDING.

*Editor Forest and Stream:*

Your correspondent R. P. F. has the right convictions in regard to the present status of the game law relating to our Adirondack deer, and when he says, "I consider hounding a sport in name only; a surer means of deer extermination does not exist," he hits the nail squarely on the head. The salter, the cruster, the jacker and the trapper are protection in comparison.

At the time of this writing, there are at least 150 dogs and more men and boys within a radius of three miles. I can hear more than fifty gunshots every day, and they kill from four to ten deer each day. For the past two years the principal stock raising in the town bordering the wilderness here, and whose inhabitants are principally Germans and foreigners has been deer dogs. Almost every family has from one to five dogs, and during the open season for hounding they all go to the woods to hunt for meat. Last fall they took out over 300 deer; one man with his parties took out once thirty deer. This fall he has taken out two wagon loads already and has time for two more.

I have done a good deal of work and paid out hundreds of dollars for deer protection. But when last fall I saw eight deer all together drawn upon the shore of a little lake here, beside six more reported killed in an adjoining lake I declared off. No more work, no more money for deer protection as long as the law sanctions thirty days each year of this water butchery.

Of what advantage is it to deer protection to deprive the backwoodsman of his meat obtained at his salt lick; the business man who is obliged to take his vacation before the open season, or even the trapper among the lily pads of his deer, when every deer thus saved is saved only to be butchered in the water by meat-hunters in the hounding season. All game laws for the protection of our Adirondack deer will be a farce and of no avail so long as the State licenses a method of hunting that literally converts every lake and pond in the Adirondacks into a deer trap into which the deer are driven, and when there confined butchered with all the savage and bloody instincts of our race. Tell me what better is this than setting the trap among the lily pads? I am glad to say that I know of very many of my brother sportsmen who would not abuse or take advantage of this easy method to slaughter deer. But then there is the game hog, and those who gauge sport only by the number killed, and so long as a method of hunting is legalized which requires no labor, no skill or experience, when the novice is as likely to be successful as the keenest sportsman, it induces every one and all classes to take a hand in hounding. There would be much less trouble in enforcing the game law if hounding were prohibited. Then if the law was violated it would be reported.

Most people here in the woods feel pretty much as I do about it. No use, they say, to save deer for the water butchers in the fall. Stop hounding absolutely. Make a heavy penalty for having dogs on grounds where deer are found, and the law would be more readily and surely enforced, and the increase and perpetuation of Adirondack deer would be insured for all time. But if hounding be continued the time is short when all the public or State lands will be void of this noble game. MUSSET.

## A NEGLECTED QUAIL COUNTRY.

ON June 12, 1894, the writer was called to Grand Tower, Ill., and spent nearly a week there, investigating among other things, its possibilities in the shooting line, and the place promises such sport with the quail next fall that I am moved to tell the readers of our paper about it.

Grand Tower is on the east bank of the Mississippi River, 120 miles below St. Louis, and can be reached either by boat or rail. It is one of the straggling old river towns that are frequent along the lower portions of the big river; it stands on the brink of the stream. Above and below for many miles, and for some distance back of the town extend the river "bottoms," used for the production of wheat and corn, and it is here that the quail abound. During a drive of five miles through the bottoms I saw twelve pair of quail and heard a great many more. Trips in various directions showed them plenty everywhere, and Bob White could be heard almost any minute throughout the day. The season has been very dry, and a big crop of quail is the result. There will be abundance to satisfy any reasonable man, and this article is not written for the benefit of the game hog nor the market shooter, and it may be well to say that the market shooter would not be tolerated by the citizens. A gentleman, shooting only for the sport, using a little tact and distributing a few birds where they will do the most good, will have no difficulty in finding a great deal more good ground than ten men could use in a whole season.

The ground is almost as level as a floor, dry under foot, most of it being sandy enough not to be very muddy even when wet. There are occasionally shallow bayous and patches of low ground that overflow at times, and here the weeds grow pretty tall. The corn gets too tall for good shooting in the early part of the season, but the dry weather will probably cut it short this year. There is a good deal of woods, but no brush, as the cattle keep it eaten down. In fact, there is but little cover that is not fairly good for both man and dog. Good shooting will be found within half a mile of the village, and extending indefinitely, both up and down the river. The easy way to do it is to have a man take you down the river in a skiff as far as you wish, and then shoot back to town. Then, done for the day, one doesn't have a long tramp to get back to the hotel. If shooting up the river, begin at town and have the boatman come up and bring you down. The current is so strong that a skiff can make ten miles an hour down stream, but only two going up.

The Muddy, a sluggish, crooked stream with banks 15ft. high, winds through the bottom and empties into the river five miles below town. There are times when good mallard shooting can be had along it, and there are other small streams and bayous where ducks can be had, but if ducks are to be the principal game wanted, Grand Tower is not the best place to go for them. Very little quail shooting is ever done here by the natives, ducks and squirrels being their favorite game. There are two bird dogs in the town, and their owners do a little, very little, quail killing. Across the river the land is hilly, mostly covered with woods, but I saw and heard many quail over there, too. Some wild turkeys are to be found, but not in sufficient numbers to make them an object.

The Tremont House is kept by Mrs. Baronowsky, a rosy-cheeked German widow, one of the biggest-hearted people in the world, who keeps a house that is beyond criticism. The rooms are small, but the beds are strictly clean and comfortable. All the food is nicely cooked and served, and is abundant and of best quality. The only objection to the house is that the saloon is used for the office, and there is no place for the guests to sit except in the saloon or in their rather small rooms, but no doubt the landlady would allow gentlemen the use of her parlor. Her rates are $1.50 a day for transients, with liberal reduction to parties stopping several days. There is another hotel at the lower end of the village that is more in the nature of a private boarding house. It is right on the river bank and its front porch affords a grand view of the river (which is a mile wide) and the wooded bluffs and hills on the opposite side. I stopped there for supper and lodging three years ago, and was well cared for. I had a big room on the river front. Since then it has changed hands, so no information can be given as to how it is kept now. The best time to be there will be from the first of November to the middle of December. With the exception of possible rains the weather will be good. Henry Rhodes, a young man living in the village, is acquainted with everybody and all the country round about. He is fond of shooting but does not shoot quail much; he is reliable, and if not otherwise employed will be very glad to serve shooters in any way for reasonable wages.

O. H. HAMPTON.

## TEXAS AND THE SOUTHWEST.

### Ducks on the Coast.

ANTICIPATING that many readers of FOREST AND STREAM have made up their minds to visit the Texas coast this winter as a direct result of Mr. Hough's masterly word painting of the Southwest and its game and fish, and feeling sure that Corpus Christi through San Antonio will be the visitors' goal, perhaps it may be well to introduce to the world of sportsmen the chief master of dots and dashes at the civilized southern end of the Aransas Pass Railway. Max Luther is his name. He is in no wise related to the reformer of that name; but then he is considerable of a reformer himself, having come down from a 10-gauge to a little 16, which is handled to perfection in his hands. Mr. Luther is the leading duck shooting spirit of Corpus Christi, and any Northern sportsman who desires a good hunt will find Mr. Luther willing, nay, desirous, to give him all the information in his possession. It saves a world of trouble to have somebody tell you where to go and how to get there, particularly when one knows he can depend on the information. Don't take any stock in big killings, however, as the weakness of the hunters of the coast lies in that direction.

### A Small-Bore.

While on a hunt with Max last winter, we found excellent shooting at bluebills over a little pond situated on a small ranch, presided over by the usual lean, lanky, chills-and-fever-complexioned denizen of the salt coast. The modest ranchero charged 25 cents for the privilege of shooting therein. He stood at the gate with hand outstretched for two bits a head, which he received. The house was close by and the little fresh-water pond not 100yds. away. The party feverishly scattered over the field of bunch grass, tearing their gum boots on the thorny stuff that prevails all over that country. The writer took things easy, however, seeing that the shooting would last but a short time, owing to the limited supply of shells, and as we were shooting 20-gauges (much to the amusement of the native, who generally turns up his nose at anything but a 10-gauge and 5drs. of black powder), I knew there was no chance of renewing our supply of ammunition.

The ranchero spoken of above picked up the little 20-gauge, wrapped me all round with a look of commiseration, sat the gun down, and "reckoned as how I'd find the feathers on them ducks purty tough. Don't think you kin put enough powder in them little shells nohow."

I slipped down to where I thought I could get the best shooting, took off a sweater that I had slipped into, for the morning air was very stiff, and from behind a bunch of grass began to pick off the bluebills quite regularly. At any rate, I was very well pleased with my shooting, being satisfied that I made at least 75 per cent. singles and doubles. When I had fired 100 shells I returned to the house to secure the rest of my ammunition. He of the broad brim came forward, took hold of the gun and yelled: "Look hyar, Mary; cum an' see de little gun that there man's bin doin' that good shootin' with. Why, gol durn it; it would jest about make a good ramrod for my old Betsy." The old lady came out, so did half-a-dozen admiring "kids." The 20-gauge was pawed all over, and as I resumed my stand and the first double fell, cleanly killed, the whole business applauded.

### A Curious Fatality.

While it is a popular belief in the North that southwest Texas is infested with snakes, the visitor to this section will be astonished at the scarcity of the reptiles. They are plentiful only in rare localities and fatal bites are not frequently heard of. But the strangest case of snake bite I have ever heard of comes from Castroville, a village forty miles from San Antonio. Mr. Geyer, a well to do farmer who lived two miles from Castroville, was mowing hay three weeks ago, and while the machine was running the sliding blades in the mower refused to move, something having evidently found its way in the gearing and clogged it up. He stepped off the seat and on examination was astonished to find that what had clogged up the machinery was a large rattlesnake. The reptile was cut in three pieces and the piece next to the head was fastened in the gearing. Mr. Geyer took out the tail piece first, secured the rattles, then the middle piece, and as he pulled out the remaining piece the head struck him on the hand, and in two hours he was a corpse. Mr. Geyer was well liked and his untimely demise is regretted by the entire community.

### Canvasbacks on the Moody Rice Farm.

I have received a letter from one of the market-hunters hired last winter by Col. Moody, a wealthy banker of Galveston. He states that he killed over 5,000 canvasbacks during the season and says the shooting is steady all winter. This year he is not employed because another bunch of expert duck killers has been hired. Calculating that he shot two shells to each duck bagged, which is a very conservative estimate, and 1¼oz. of shot for each shell, it will be seen that the ether in that neighborhood was perforated by 781lbs. of shot by that one gun. Multiply that by 10—the actual number of market-hunters that are hired to kill ducks on that lake by the rice-raising syndicate, and you have a total of 7,810lbs. of shot that was fired over the rice canvasback duck farm. Is it any wonder that some of the pellets find their way into the fowls' gizzards?

TEXAS FIELD.

## ONE REVERIE.

THE nights are getting cool now and the open fireplace where the chestnut wood cracks and sputters is a good place to sit before and dream of the good times past. As the darkness settles around the room, hiding its familiar and civilized objects from view, and the fire flame sheds its warmth and flickering light back upon one's self, one can sit and look dreamily into the blaze and see visions of other fires, other times and other surroundings come and go in beautiful dissolving views. And sometimes to look back on the past, where one sees only the best parts of an outing and where memory and the soft shading fire light smooth out the roughness of the roughing it one can enjoy a repetition of many a pleasant day spent with nature in her own wild home.

The little briar with its fragrant load has made me drowsy. There is no singing mouse to come forth and charm me with its weird music, but as the light from the burning logs grows brighter a pretty picture presents itself for admiration.

A chain of three lakes, lying snugly among the Maine mountains: a little cabin with it attendant "hovel" almost at the foot of the tall pines of a grand old forest; an old batteau drawn up on the lake shore; a group of us around a huge camp-fire over which is sizzling and sputtering the remains of a big porcupine which I brought into camp that afternoon, to the horror of the three Maine natives, and which to their greater consternation had been dressed and was served up piping hot for supper. On the rough table it was carved with a big bowie in a great state as the Christmas porker of old, and found sweet and much like the genuine article itself. But no Maine men could be induced to touch it. But the next day after, when miles away from the nearest house, the axle of the camp buckboard broke and while the rest of the party went on afoot leaving two to keep a lookout on things, M. is said to have admitted that "he could go a small piece of thet ere porkipine now!"

TODE.

### Preparing Skins for Rugs.

IN the FOREST AND STREAM of Sept. 29 you gave directions to a correspondent regarding the tanning of muskrat skins. I have prepared a number of skins for rugs and such purposes. In fact I prefer to do my own work in preserving trophies of my hunting trips, such as tanning and mounting heads, and now have a number of specimens of my own killing and preserving such as moose, caribou and deer heads, also rugs of bear, caribou, deer and fox skins.

A few years since I was fortunate enough to shoot four bears with fine jet black pelts, and I proposed to cure them myself. I was told by a fur dealer that I could not do it successfully, as a bear skin on account of the grease and oil, both in the skin and hair, was very hard to properly dress. Now I have had my bear skins for three years on the floors of my house as rugs, they stay there the year around. During the warm weather they are taken up about once a week and shaken out of doors and they are bright, soft and glossy, and no moths or insects have touched them; I also have a fine red fox skin which I killed last November, and which has hung all summer in the hall of my house and no signs of insects about it. A friend was looking at it and said, "I don't see how you keep it, I had a fox-skin mat made and paid well for it, and took great care of it, but moths and worms have got at it and it is spoiled."

I prepared the bear skins as follows: I gave the skins a good scraping on flesh side, removing all fat and particles of flesh, then gave a good washing in luke-warm water, using plenty of washing-powder, such as is ordinarily used for laundry purposes, and then washed them in clear warm water and put them in a pickle of 2lbs. salt, 1lb. powdered alum, one teacupful of borax, all dissolved in a gallon of soft water. Let the skin remain in solution about a week (if a large skin), turning it over and moving it about a little each day. Take out and wash in clean water and hang up until it commences to dry (until hair is nearly dry). Give flesh side a scraping and work and pull skin until it shows slight signs of drying. Then put in a large tub containing about two bushels of dry, fine mahogany sawdust and work and knead the skin in the sawdust, taking it up and shaking out the sawdust now and then. The sawdust will work all through the fur down to the roots, and is very drying and absorbs any grease left in hair and skin. When the skin is worked dry it will be very soft, and by shaking in the air and hanging on a line and whipping with a switch all the sawdust can be removed. On the fox skin mentioned I tried an experiment—gave the skin a coating, on flesh side, when damp, of arsenical soap, such as taxidermists use, diluted with water, then let it dry in and gave a good washing, intending to leave a slight trace of the arsenic, then prepared same as the bear skin.

Small skins are much easier to dress than large ones, and they can be worked dry in the sawdust quite easily. When mahogany sawdust can not be had, fine dry sawdust of any hard wood would no doubt do as well. Of course there is some hard work in preparing the skins, but I find there is plenty of hard work in procuring the skins to work on, if you kill the animals yourself.

C. M. STARK.

DUNBARTON, N. H., Oct. 1.

### Lawbreaking on Staten Island.

PRINCE'S BAY, S. I., Oct. 3.—*Editor Forest and Stream:* This is the time of year when the local game constable ought to come into play here on this end of Staten Island. The game laws are being violated every day, Sundays not excepted. Of course the boys can shoot squirrels now, and there are just enough around here to make this an excuse for going out with a gun, and if a robin or a high-holder comes in the way, down it comes. Of the latter quite a number have been shot. In walking through the woods the other day I saw where two had been picked and their heads cut off. No owl or hawk would pick a bird so clean and then cut its head off; and besides that owls never leave any shells of 12-bore on the same spot.

Shore birds have been shot all through the month of August in the vicinity of Great Kills. There are a few quail left on this end of the island and probably they will all be shot before the legal time.

We can't blame the game constable as he is not supposed to know anything about what is going on. Most people here think that a man to be a good game protector must be a man that has a gun and shoots well, but I incline to the belief that some other people understand these affairs as well as those that like to shoot a little once in a while early in the morning.

R. L. H.

### Good Words.

I AM in favor of your "Plank," but please tell me how it will affect such cases as Mr. Hough reports on page 246 about Mr. Rice's butchery, copied from the Fremont (Wyo.) *Clipper*, or that of the Boston merchant slaughtering five deer and sinking them, mentioned by "Special" on page 247, or that most despicable case of A. H. Sheer on page 248, bragging about the killing of five does, which is the meanest and most wanton way of exterminating our big game; and numerous other similar cases of game and fish butchery of self-styled gentlemen sportsmen that we read about in our paper.

Why not add to your "Plank" that nobody should shoot more game nor catch more fish than can be used. A market-shooter is a heavenly saint side of such a H O G-entleman sportsman.

A READER FOR TWENTY YEARS.

### A Query.

IS A man a pot-hunter because he uses no dog, but still hunts his partridge or squirrel?

Given: a country where there are no deer, no large game. A man who loves to use the rifle, but has no opportunity to hunt game commonly supposed to be adapted especially for that arm. Plenty of grouse and squirrels.

If this man, with a miniature rifle (.22) stalks his bird with the same care (and he will probably find it fully as hard) as he would a deer, finally locates it, draws bead and lets fly the tiny ball, and has the satisfaction of securing his bird, is that man a "pot-hunter," or as much of a sportsman as the fellow who lets his dogs do all the hunting while he calmly shoots the bird as it rises?

That's the question.

Let us hear a few answers.

TODE.

### Big Bucks.

NUMBER FOUR, Lewis County, N. Y., Sept. 30.—*Editor Forest and Stream:* Two large and old bucks were killed on Sept. 27 and 28 by Mr. E. Ormonde Power and his brother, J. Antonio Power, both of New York city, on Beaver Lake, and weighed respectively 225 and 200lbs.

X.

### Madison County Game.

GEORGETOWN, N. Y., Oct. 6.—Gray squirrels are plenty this fall, a bag of seven being made yesterday by two of our local sportsmen. Partridges more plenty than they have been in a number of years, but have scattered with the falling leaves.

# Sea and River Fishing.

## EASTERN ANGLERS.

MR. HENRY C. LITCHFIELD'S trout story must not be lost. He is very well known to thousands in the sporting line, or with the fishing line. He is always to be found with Messrs. Dame, Stoddard & Kendall. A gentleman brings the story, and so Mr. Litchfield must not be expected to vouch for the truth of it. But the gentleman did present the affidavit of the gentleman who gave it to him, regularly made out and sworn to. The gentleman went out on a fishing trip to a lake quite a long distance from any tackle store, but still he did not take pains to very thoroughly fill his kit. He cast for trout with a couple of flies on his leader. He had very little success for some time but finally got a vigorous strike and hooked his fish. Almost immediately there was another strike and another trout was hooked. Then the rare sport of handling a pair of lively trout began, but suddenly the leader broke off just above the flies with the two trout attached. The angler was greatly disgusted but took out his book for other flies and a leader. What was his surprise and disappointment to find that he had no more flies and was minus another leader. Silently bewailing his ill luck and his misfortune, he ordered his guide to pull him ashore, which was not far from the scene of his loss. He went ashore and sat down on a log, lit his pipe, and prepared to rather gloomily think matters over. Soon his attention was attracted to a little commotion in the water, not far from where he had lost his trout. The commotion drew nearer and nearer the shore. He saw that it was his team of trout, still yoked together, and as sure as fate they were coming rapidly for the shore, like a pair of steers, with the yoke between them. He seized his rod and wading out a little ways he carefully thrust it under the water as the two trout came on. At the right moment he raised it, caught the leader over it, and drew the trout in, saving both of them, with the leader and both flies. The balance of his day's fishing was done with the saved leader carefully mended, and the used flies. This story can be believed or not, as the reader chooses. There is the affidavit, and above is the story.

Mr, D. W. Smith, head of the weekday Boston *Herald* night desk, is back from his vacation in New Hampshire, he is coming to be a fisherman. He spent considerable time in black bass fishing, and much enjoyed the sport. Mr. W. C. Grout, of the *Herald* day desk, is back from his vacation at Lake Maranocook, in Maine. He is much pleased with the black bass and pickerel fishing he got there.

SPECIAL.

## ANGLING NOTES.

### Angler and Pot-Fisher.

THE terms angling sportsman and pot-fisherman are strangely misapplied at times. I have considerable respect for some men who are called pot-fishermen, and very little for some other men who call themselves angling sportsmen and who affect to despise those whom they call pot-fishers.

A pot-fisherman may fish out of season, and with the crudest tackle, or with engines of destruction that are made illegal by statute; and he may not be particular about the species or the number of fish that fall to him, but as a rule he fishes for that useful utensil which is prefixed to his name, or, in other words, to fill an empty stomach, or to sell the fish that he pots. He may not be made of clay as fine as that which goes into the composition of the sportsman, and a bullhead or an eel taken on a set line may be to him as sweet of flesh as a trout taken on a fly, but for all of that he does not catch fish to leave on the bank or to boast about, for it is straight business with him, either to satisfy his hunger by the easiest and most direct means, or to make a profit, so he does not waste the meanest of fishes which he takes in his mean way. His education or advantages may be such that he knows no other course to pursue in the capture of fish, and he may take them to the last one with no thought of a future supply for his pot or his profit, but they are utilized in the market stall or on the pot-fisher's own table.

But what can be said of a man who claims to be an angling sportsman, a man with the advantages of education, a man of means who never knew the pangs of hunger or of want in any form, who with fine tackle and plenty of it, will catch and kill in an artistic manner 128 ouananiche in one day, and bring them to his hotel to spoil, that he may "make a record." I do not know what kind of a record he calls it, but I call it a disgraceful record.

And what of another man in the Maine woods, in a camp where there are a dozen men fishing, each furnishing his quota only of trout for the table (for there is no way of getting any trout out of the woods), who goes out with the warning that none of his trout can be used, and kills in one day over 200 handsome trout and brings them to the camp to rot.

I regret to say that these instances that I have quoted of inexcusable fish slaughter are not rare among those who are called sportsmen, for I have found similar cases, or heard of them, over and over in the various fishing camps and resorts that I have visited, although it is not always that the fish are intentionally wasted after the record which is sought is accomplished. For instance, I was fishing in Lake Champlain for black bass and a gentleman in the same hotel saved his bass for a number of days in the ice-house until he had enough to fill a barrel, and then he shipped them to New York, a distance of over 300 miles by freight train. The fish were none too fresh when they started on their journey, and were utterly spoiled when they reached their destination. The man's intentions were good, but he did not show a high order of intelligence when he shipped fresh fish as freight and expected them to remain fresh.

Some hotel and camp keepers encourage this record-making business as an advertisement, and others discourage it by every means in their power. In speaking of records I refer to records of the number of fish taken and not to the size of individual fish, which is perfectly and absolutely meritorious for any man to compass in a record if it is done legitimately.

Pot-fishermen are denounced and damned by sportsmen because of their illegal methods of fishing and their general destructiveness which depopulates our waters of fish faster than they can be stocked by nature or by artificial propagation, but are they alone to blame for such a condition of things? Is not the educated sportsman who slaughters fish within the law, and then wastes them to make a record, far more to blame for the destruction, so far as his individual record is concerned, than the other fellow? I think he is, and it is for this reason that I have precious little respect for the fish pirate who masquerades under the name of angling sportsman, and he must be cast out from among angling sportsmen by the sportsmen themselves before the ignorant pot-hunter is brought to the bar, if for no other reason than his bad example.

It is not so long ago that FOREST AND STREAM put in the pillory a man prominent in angling circles for practices similar to those I have described, and from that hour that man has been dead to those same angling circles, but the lesson seems to have been forgotten. This is not a pleasant subject, but it is one the anglers themselves must face, and by their own action kill the cause of it.

### Another View of the Subject.

While on the matter of the destruction of fish by sportsmen, I must say a word about a method which is employed to this end, but in a way entirely different from that already mentioned, which I hope is not widespread and may be considered as a matter of angling ethics.

A lake in the interior of New York containing lake trout was fished in season and out, netted and speared, until the trout were few and far between, and then the strong hand of the law brought the netters, spearers and illegal fishermen to jail, or they were fined and driven out of business. Then the work of restocking the lake with lake trout and black bass was begun and carried on by the State and a fish and game protective association, until the trout were as abundant as ever and the lake afforded the very best of fishing for this species of fish. The catches became greater each year and the average size of the fish increased with the fresh blood and the planted food, until now there is no better lake trout fishing in the State than in this lake. Fishermen from far and near have been attracted to it, and as it is planted every year with 500,000 lake trout fry from one of the State hatcheries, and is closely watched by a special State game protector, there is no good reason why the fishing should not continue good if sportsmen themselves do not over-fish it.

It may seem strange that I should even suggest such a thing as sportsmen depopulating a lake in a legal manner after the poachers and illegal fishermen have been brought to book and driven away, but some men with their steam yachts fish unceasingly the season through and turn the fish over to their guides to sell. I am reliably informed that one man has caught from his steam launch this year nearly one ton of lake trout, and his guide has sold the most of the catch. The people about the lake are indignant that this and other wealthy pseudo-sportsmen or market-anglers should do such a wholesale business; but what are they to do about it?

The only thing that can be done is to pass a law limiting the number of fish to be taken. New Hampshire now has such a law in relation to brook trout, and no one can take more than 10lbs. at one time under a penalty of $50, and I verily believe that other States will be driven to enact a similar law for all the species of so-called game fishes.

Private clubs with preserved waters and hatchery establishments to keep up the supply of fish in them by artificial means, limit the number of fish to be taken by the members, and if this is so in a club of real sportsmen, where sound principles regarding supply and demand prevail, why not have the same safeguards thrown around the fish in wild waters where the supply is maintained by the State? There is nothing unreasonable about such a proposition, and if the law should regulate the number of pounds of fish that a man might take at one time or in one day, it would tend to preserve the fish and save some men from a mortifying spectacle when they examine their own features in their shaving mirror after furnishing fish to a market stall through their guides.

This practice has bred another wrong, one that must work great injury to the reputation of the lake. Guides who are not employed by wealthy owners of steamboats have attempted to emulate the guides on the steam launches in wealth getting, and some of them at least have, after being paid for their services and boat, demanded as their right all the fish caught by their employers in order to market them. In conclusion I may say that I do not expect any testimonial of esteem, or even a bouquet, from the yacht owners and guides that I here referred to.

### Growth of Landlocked Salmon.

Since it became known that the United States Fish Commission would this year begin to stock Lake George, N. Y., with landlocked salmon, I have been asked repeatedly how soon the planted fish would be large enough to catch or how fast they would grow As this depends upon the food, I could only say that as there was an abundance of suitable food for salmon in the lake, they would probably grow as rapidly as the same species in other similar waters. I have to-day secured a letter from Col. Wentworth, Fish Commissioner of New Hampshire, in which he mentions facts more satisfactory than any guesswork on this subject. This is an extract from the letter:

"We have taken from Pleasant Pond and Sunapee Lake about 80 brook trout and 15 landlocked salmon for the hatchery. The salmon at Pleasant Pond have done remarkably well, the largest, so far, by actual measurement was 30in. long and weighed 12lbs."

The first plant of landlocked salmon fry was made in Pleasant Pond in 1889, and to the best of my recollection consisted of 10,000, therefore this 12lbs. salmon was a little over four years old. Last fall quite a number of salmon were seen in the streams tributary to the pond where the fry were planted and where they had gone to spawn, and a score or more of these were estimated to weigh over 6lbs. each.

This pond, which is in the town of New London, N. H., has been closed to all fishing for a term of years, and the season for fishing opens on May 1 next year. The pond contains not only landlocked salmon of large size, and plenty of them, but it has brook trout, and has been planted with the Sunapee saibling. The brook trout that have been seen on the spawning beds in the streams by the hatchery men are record breakers for size, and the anglers who are fortunate enough to be at Pleasant Pond next May when the fishing opens should have such fishing as rarely falls to the lot of man in these modern days, and all within a day's journey of New York city.

A. N. CHENEY.

## SPANISH MACKEREL FROM THE DOCK.

ST. PETERSBURG, Fla., March 2.—Fifty men and women took the steamer Margaret yesterday for a day's mackerel fishing from the Quarantine Dock, situated on Mullet Key. It was a jolly party that steamed down to the mouth of the bay, each with pole and line and a grain sack to hold and bring back the day's catch. All had lunch baskets and all were talking about the prospective fun.

The steamer made the Quarantine Dock and we tumbled over each other in our eagerness to capture the most beautiful of all salt-water fish. The exciting sport was inaugurated by one of our party taking a three-pound mackerel. His float had no sooner reached the water than a fish took it down out of sight. He struck, and the line started off sideways, swishing through the water and tangling up other lines on its way. He was soon landed, and the fun became general.

The dock was short, and the good fishing place still shorter; so that our party, numbering over fifty, stood about two feet apart, each person intently watching his own float. A fish was in the air every few seconds for minutes together; then they would haul off, and we would catch nothing for say five minutes, when they would return.

Quarantine, where we were fishing, is on the south end of Mullet Key, which is about two miles from the mouth of Tampa Bay. Whenever you find a dock in the bay, there you will find countless millions of minnows, seeking the docks for shelter.

The mackerel soon find the minnows and feed upon them until they have cleaned them all out, when they migrate to other feeding grounds. Great schools of hungry mackerel swim in from the gulf through the mouth of the bay and soon find their way to the quarantine dock. The fishing is better at quarantine than at docks more remote from the gulf.

When the school struck the dock, we could tell that they were coming by the agitation of the water. Then some one landed a mackerel and said "here they come," and for fifteen minutes every one was busy baiting, casting, reeling in and landing the famous beauties. Then away they would go and we waited with bated breath for their return. Now and then the lines would get into a complex tangle, and then it required the patience of a heathen god to untangle and straighten things out; for the more haste attempted in trying to untangle a foul fish line, the worse the tangle becomes.

Near us were a good Methodist and a good Presbyterian, fishing side by side in harmony. Soon the Methodist hooks a big mackerel that goes zip around the Presbyterian line, and they soon have their lines in a bad tangle and the mackerel takes French leave. Now comes a wordy scrap between these good men, in which they use great adjectives, and just as they are about to come to blows an awkward fisherman across the dock strikes a 4lbs. sea trout (weakfish), and, having no reel, he gives a tremendous jerk and lands the trout on top of the said tangled fish lines. Then the two churchmen make up their own quarrel and pitch into the awkward fisherman, who quietly takes his fish from the hook, cuts off his line and leaves the other two to untangle at their leisure.

"Here they come!" Not a word is now spoken. The only sounds are the swish of the lines as they are cast out, the strike, the click of the reel, and the flapping of the fish on the dock. Every eye is strained on the cork float. A lady near us said, "Why don't I catch a fish?" I said, "Madam you are fishing too deep; adjust your float about 4ft. from the minnow." She made the change in the line, and then dropped the line over and let the tide carry it under the dock, and after waiting a few minutes said, "I shall never catch a fish." Down went the cork, and she tugged away at a 4lbs. mackerel, the largest canght that day. Zip! went the fish off sideways, everybody reeling in to get out of the way. She calls to her husband for help. He said, "Land your own fish." After a hard fight she lands the 4lbs. beauty and holds a matinee for a few moments, in which she very gracefully receives our congratulations.

We fished until noon, when the stewards spread dinner, at which a few sat down, but the majority ate with one hand, and held the pole with the other. The wind came out strong from the southeast, and drove a heavy sea under the dock; this only made the fishing better, but it made the casting extremely hard, as we had to cast against the wind.

The steamer, after dropping us off, steamed across the bay into the Manatee River—her regular run—and was to call for us at 4 o'clock P. M. We made the most of our time. We had two boys catching minnows for us, and right lively did we make them work.

"There comes the steamer!" We reluctantly reel up our lines, and drag our heavy bags of fish on board the boat, tired out but happy, for Mr. Leaycraft and your correspondent had caught 110 Spanish mackerel and 20 sea trout (weakfish), which more than paid our expenses for the whole day.

Strange as it may seem, there were many in the party who caught but two or three fish each during this exciting four hours' fun; they struck too soon or too late, or fished too deep or too shoal. As our time was too precious to fritter it away instructing amateurs, they were badly left, and went home unhappy and disconsolate. Fifteen hundred Spanish mackerel, sixty sea trout and thirty bluefish were caught from the quarantine dock that day, and twelve or fifteen persons captured the great bulk of this fine catch.

Next to the tarpon, the Spanish mackerel are the most beautiful fish that swim in the Gulf of Mexico. They have a shapely head and a mouth that is armed with sharp white teeth that come together like a steel trap, and when they bite the minnow is cut clean through, as if done with a sharp knife. They are beautiful in outline, tapering gracefully from their heads to their broad fluked tails. They have a large and long dorsal fin, and long lateral fins near the gills; these, together with the broad flukes that form the tail, make them rapid and powerful swimmers.

We have often seen them on a poise, watching our minnow. Suddenly they start for the bait like a streak of lightning. Down goes the cork. We strike, and then comes the tug of war. How he fights! We reel in until we can lift him over the rail, and hold him up in the sunlight. How beautiful! The back a dark blue, blending down the sides to a beautiful amber, and the belly a pure white. See the rainbow colors reflected from his sides, that are covered with myriads of small transparent scales. Slowly he changes color, the dark blue is gone and the back becpmes a light green. We drop him on the dock and every scale falls off.

### Nets in Lake Ontario.

*Editor Forest and Stream:*

The article in FOREST AND STREAM of Sept. 29 relating to the part of the State and more particularly to the section over which I exercise my official duties, quite naturally makes me feel indignant. One would infer from reading, that illegal fishing was being carried on directly under my nose, as the saying is. This is not the case, as I will endeavor to show.

Trap nets are being used here. One was put in about Aug. 1, and two have come into service since. The article referred to does not make the direct statement that these nets are being set within the mile, but leaves it in such a manner that the general public might suppose such to be the case. As a matter of fact these nets are out a mile (the required distance) or over, and do not have any leads running to the shore, or even toward it. On the contrary the leads run in the opposite direction, and consequently these men and nets come easily within the letter of the law. The Munchausen story of 1,700 bass being taken by a single net during one week, is, to people living in this section, ridiculous. If the three nets have taken 1,700 bass, in addition to the other fish, from the time nets were first put in up to present date, it would come nearer the facts, and I doubt if that number have been taken.

To secure better protection of fish the facts must be stuck to and we all know these are bad enough. The law should read three or five miles from shore, bars of meshes in gill nets 2in. at least, instead of 1⅛ as most of them are at present. I make this suggestion merely to show that in my opinion they should be as I state. In all my reports and at the State Association for the Protection of Fish, held at Syracuse, during the last two years, I have advocated this change, and I am positive that the waters of Lake Ontario will soon be depleted, if action in the matter is not taken at once. Perch are getting scarce, and the good catches made by the anglers will soon be a thing of the past.

At the conclusion of your article, you say that it would be well for local anglers' associations to investigate. I may state that the largest and most prominent anglers club in this part of the State, the Niagara County Anglers' Club of Lockport, was notified of these nets within a week after they had been set.

CHAS. RIPSON,
Fish and Game Protector.

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

### Rockport and Corpus Christi Way.

CHICAGO, Ill., Oct. 3.—I am in receipt of the following correspondence from a well known gentleman of Rockport. Texas, at which point I passed so pleasant a time last winter, and which I hope to see again this winter before the snow flies in the North—it never flies at all at Rockport. I can indorse all the encomiums of that pleasant corner of the world, and only suggest that Dave Herzfield measure his big tarpon over again. If it measures 9ft. 7in., it should weigh a whole lot more than 200lbs. I don't think Dave knows a swordfish from a tarpon, and I think he has measured the bill, beak, nose or foregoing protuberance of his fish just an inch or so too freely, though maybe I am wrong. As to the tarpon, they are there in plenty at Aransas Pass, and big ones, too. By the way, I wonder if Dave Herzfield remembers the time he and Dick Merrill broke open the oyster house at midnight in search of fresh oysters. This I saw them do, but forget whether or not I ever informed on them. My letter reads:

"Sept. 18.—Capt. A. J. Peeler and party have just returned from a short fishing trip at Aransas Pass, and report one of the finest catches of the season. In one day they caught 62lbs. of trout, redfish, etc., and three fine tarpon weighing 65lbs., 95lbs. and 142lbs. respectively. The Captain had the honor of catching the largest tarpon, having struggled with the great king for one and one-half hours. He has had many happy experiences in angling for tarpon, but this last passes them all. Capt. Peeler will return to Austin shortly.

"Mr. Dave Herzfield and his friends, Messrs. H. B. Kokernut, B. M. Peck, J. W. Tinsley, Chas. Berzinger and Claude Kent, have just returned from a day's fishing trip at Aransas Pass. Mr. Herzfield has the distinguished honor of wearing the blue ribbon in having caught one of the largest tarpons this season. The silver monster measured 9ft. 7in. in length and weighed over 200lbs. Mr. H. will have the tarpon mounted and placed on exhibition at his place of business. In landing the great fish Mr. H. compares it to a Texas bucking broncho. The largest catch of any one day while on their trip was 110lbs. of trout, redfish, Spanish mackerel, etc. The party also went "floundering" one night and speared 75lbs. of flounders. The distinguished friends of Mr. H. propose to return to the coast again at no distant day and try their hands at duck shooting.

"Ducks and geese have begun their southward flight and the professional hunter and game shipper are making extensive preparations for the coming season. On account of the peculiar lay of land, with its many water inlets, especially the fine feeding grounds, Corpus, Aransas and Corpono Bays make the finest hunting grounds in America. Already this favored section of the country has been visited by prominent sporting men from all parts of the United States, and the indications are now that our coast will be visited in numbers by the best sportsmen of the country. All lovers of sport who try a trip to south west Texas coast will be more than satisfied.

"Dr. J. A. Hunter of Dallas, Texas, formerly of the Pearl River Fishing and Hunting Club of New Orleans, has been with us for the past ten days—the Dr. caught four tarpon in one day and says he has fished and hunted from Maine to Texas, but without doubt Aransas Pass is the finest place for fishing that he ever saw. Said he, 'I saw tarpon by the hundreds, and redfish and Spanish mackerel without number.'

"Dr. Hunter, Mayor Connor, E. M. Rheardon (cashier of City Nat. Bank) of Dallas and others propose to organize a club of 200 members and erect a fine club house at Aransas Pass." E. HOUGH.

909 SECURITY BUILDING Chicago.

### Chautauqua Lake Muscallonge.

BUFFALO, N. Y., Oct. 1.—*Editor Forest and Stream:* One of the largest muscallonge caught in this vicinity in several years was pulled out of Chautauqua Lake the other day by L. A. Wilkinson, an ardent angler who lives at No. 377 Prospect avenue, this city. Mr. Wilkinson and A. S. Williams, of Jamestown, sailed up the lake at 5 o'clock Friday afternoon, Sept. 28. They were dragging a line at a considerable depth when suddenly they felt a pull as if it had caught on a rock. Mr. Williams stopped the boat and took hold of the line. He is a strong man but he couldn't make it lax in one pull. He finally succeeded, and to his surprise saw the head of the big fish following the line. It was but the work of two minutes before the fish was brought within reach of Mr. Wilkinson's gaff, and the two men floundered it in the boat. It was 53in. long, 21in. in girth, and weighed 35lbs. Mr. Wilkinson, not excepting the members of the Sprudels or any of the local fishing clubs, has taken the largest fish while on a simple angling tour, of any man who has gone out in near-by waters this season. When the Sprudels went on their last excursion it was with difficulty that a few minnows were caught. Ald. Coe, the city's "fish-ologist," is surprised, but he believes it because he knows it is so.

### Fishing Tackle in his Grave.

THE New York *Herald* of Oct. 1 printed what purports to be extracts from the will of Moses H. Katzenberger, a wealthy resident of Memphis, lately deceased. One of these extracts is as follows:

"Should there be a boy born to either of my sisters-in-law, Cora and Lizzie, and I hope there will be, then such male issue is to take, share and share alike, all my fishing rods and tackle, except a line and a few hooks to be buried with me, in order that if there is any fishing in the other world I will be provided with tackle to enjoy the sport, which has afforded me such delight in the present mode of existence."

### A Correction of a Correction.

DENVER, Col., Sept. 29.—*Editor Forest and Stream:* I must ask your further courtesy to correct the statement over my signature as it reads in FOREST AND STREAM, Sept. 29. The same is evidently a typogragphical error, as the context shows. My copy reads: "About noon on Sunday I got the 8¾lbs. fish." Yours reads: "Two 8¾lbs. fish." I will admit that I am not an expert penman, but if this is not corrected, I will get a reputation for being an expert fish prevaricator. H. M. BOSTWICK.

### Surf Fishing on the Jersey Coast.

ASBURY PARK, Oct. 8.—The past week has been one of glory to anglers on our coast. We have had a vivid reminder of the pleasures we enjoyed several years ago. The violent wind storm of two weeks ago destroyed the pound nets, and the heavy run of weakfish due at this period of the year has escaped destruction and been permitted to enter the undertow, where they feed ravenously on the mullet and spearing.

The grounds taken by the opponents of pound fishing, that that system interferes with and hampers all other methods of fishing, is clearly tenable and becoming more convincing as time produces these mute yet unimpeachable testimonials.

Nearly every day fine catches of weakfish are made from the piers and the beach direct. This method of fishing requires great skill, and nothing but patient practice can make perfect the casting necessary. Last evening, in company with Judge Wm. B. Guild and his son Theodore, I took eleven, ranging in weight from 3 to 4½lbs.; their catch was three and seven, respectively, of equal size. Taken with surf-rod and reel these game fellows furnish exciting sport and can safely be classed as among the best of sea-fishing.

Bluefish are notably and unaccountably scarce. None have been taken during the week, and but few at sea. I was pleased with "Big Reel's" comments in your last issue. He is entirely correct in his views and assertions. The average man using ordinary tackle will find casting 200 to 250ft. a physical impossibility. "Why can't people who write and tell fish stories keep 'em straight?"

LEONARD HULIT.

### A Freak Weakfish.

DAVID F. MARTS, second assistant keeper of Ship John Lighthouse, Delaware Bay, reports that he took at the lighthouse, early in September, a 4lbs. weakfish which had two perfectly-formed mouths, one under the other, and each mouth was connected with its separate stomach and intestines. It is to be regretted that this curiosity was not preserved, but this was not practicable it seems, for none of the keepers were allowed to go to the mainland for some days after the capture. F. S. J. C.

## Fishculture and Fish Protection.

### Pollution of Pennsylvania Streams.

FREQUENT complaint has been made lately of the pollution of Pennsylvania streams by refuse from tanneries and other manufacturing establishments, which is believed to have destroyed great quantities of fish, and a number of letters on this subject have been printed in FOREST AND STREAM. Inquiry of the Pennsylvania Commissioners of Fisheries as to what could be done to remedy the present unfortunate state of things has elicited from Prof. Henry C. Ford the following letter. The case is evidently one which calls for a strong expression of public opinion, and residents of the districts affected should endeavor to impress upon their representatives in the Legislature the importance of the subject:

PHILADELPHIA, Sept. 20.—*Editor Forest and Stream:* A long absence from the city has delayed my answer to your favor of July 25 in reference to the pollution of the Youghiogheny River. I am in receipt of many communications of similar import from other parts of the State, and regret to say that we have no law in Pennsylvania that will prevent such pollution of our streams. This has not been the fault of the Commissioners of Fisheries, for at the last two sessions of our Legislature we introduced an act to prevent the discharge of refuse of tanneries, wood acids, etc., into the waters of the commonwealth. It was defeated each time by the efforts of members of the Legislature from the very districts affected by such nuisances. It is the intention of the Commission to introduce a similar Act at the next session of the Legislature. If your correspondent and all others affected by the pollution of our streams will use their influence to induce their representatives to vote for such a bill, the Fish Commissioners will see to its enforcement if it becomes a law. HENRY C. FORD,

President Pennsylvania Commissioners of Fisheries.

## The Kennel.

### FIXTURES.

DOG SHOWS.

Oct. 30 to Nov. 2.—Terrier Show, by New England Kennel Club, at Country Club, Brookline, Mass. D. E. Loveland, Sec'y, 128 Tremont street, Boston.

FIELD TRIALS.

Oct. 23.—New England Field Trial Club, Members' Sweepstake. A. R. Sharp, Sec'y, Taunton, Mass.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B Wells. Sec'y.

Nov. 16.—Eastern Field Trials Club, at Newton, N. C. All-Aged, Eastern Subscription and Selling Stakes. Entries close Oct. 1. W. A. Coster, Saratoga Springs, N. Y., Sec'y.

Dec. 17.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

### A Tale of a Dog.

IN an obscure corner in a drawer of my desk I found, today, a little list of words and phrases made out by me nearly four years ago, and then slid into and mixed with other scraps of paper until it was "lost in the shuffle." It was a pleasure to find it again and a cause for regret to be reminded that my small friend, of whose daily doings it is a memorandum, finds difficulty now in obeying almost the least of the commands it contains. So great a change a little time makes in short lives. The infirmities of age have stolen upon her. She has grown fat, rheumatic and deaf; but the beauty and roguery of her brown eyes are as yet undimmed and the activity of her mind is undiminished.

It is now many years since, returning from my office one January evening, I was invited to look behind the kitchen stove and there discovered a little retriever puppy, black as the midnight except for a frill of white down her throat, curled up on a coat thenceforth to be missing from my wardrobe. It was not the last garment to be similarly sacrificed before she was made to understand that the family washing did not weekly festoon the back yard for her especial benefit. What her antecedents, both of ownership and kindred, were, we never knew. She made her appearance in the express office of the Denver & Rio Grande R. R. here one day, consigned from far-away Michigan to a railroad clerk. But the consignee had moved away, it seemed. There was no one to receive her, and owing to an ungallant and short-sighted prejudice against her sex, no hospitable door opened to her. Then it was the Providence that watches over all of us interfered and guided her puppy footsteps to my old coat behind the stove and thenceforward in paths of pleasantness and peace.

Owing to the prejudice and preference of the lady who had become her preserver and owner, her life was diverted from its natural course in the fields and woods to the less adventurous one of a household pet. In all her life she has been hunting only once, but on that occasion she nobly proved her sporting blood by retrieving three ducks that had fallen seventy or eighty yards away, wading and swimming for them, one by one, in the marshy lake, although at that time she had never before seen a duck. She had already learned to fetch and carry, however, and this feat was probably only an instance of her remarkable intelligence rather than any manifestation of hereditary instinct. It is of this intelligence, so unusual, that I believe an authentic account of some of its manifestations would interest your readers, that I mean to write.

She was never in any sense a "trick" dog. Beyond a few amusing little things, she was never taught anything except what it was necessary or convenient or otherwise desirable in the household economy for her to know or do. Much of what she knows she learned, as people do, from hearing conversation or having it addressed to her without any definite intention to teach her. Usually in teaching her to do any of the simple things within her comprehension, it was only necessary to perform the thing desired a few times—two or three—for her. I recollect that when she was taught to shut a door I stood her on her hindlegs with her forepaws against it, pushing it slowly shut once only, and repeating several times the command "Shut the door!" She grasped the idea of moving the door as quickly as a child. But to teach her to go behind it and push it shut instead of in front of it and push it further open required another lesson. As long as she had full possession of her faculties she continued to be an exception to the rule, "It is hard to teach an old dog new tricks." I never noticed that it was harder for her to learn at seven or eight years old than at one or two. Usually, of course, if a command could be as it were illustrated for her by a gesture she grasped the idea quicker, just as a man would; and as she was always a lazy dog, it seemed also to stimulate her movements. However, a gesture is not at all necessary. It is a common thing to call to her from the house as she stands at the back gate whining to be let in, behind a tight board fence, where she cannot see me nor I her, to "go around to the front gate" (which she can open herself).

The list or vocabulary referred to, and which is here given, was made in an idle hour when she was in the daily habit of doing the things indicated therein as the occasion for them happened to arise. It occurred to me that some time some ill-informed person, incredulous of canine accomplishments, might question the tales told of her, and that, if I could pull on him a memorandum made on the spot, to the accuracy of which I was willing to make affidavit, it might, for this as well as for many other reasons, be a valuable and interesting record. I remember that I carefully struck out at the time any word which there was a reasonable doubt in my mind of her understanding. My present impressions confirm the correctness of the list. Since it is hard to recall off-hand, in category, all that one knows or might on occasion remember about any subject, the list could doubtless be extended. Also, I make small mention of the numerous combinations of these words and ideas to which, in the shape of commands or questions, she was accustomed to respond, and in which form, for the most part, she gave token of her comprehension of the meaning of the separate words. For convenience the words are roughly classified under the various parts of speech. This list was made in the winter of 1890, and is as follows:

*Verbs.*—Come, go, hurry, run, shut, open, want, lie, sit, roll, wag, get, bring, take, ask, fetch, scratch, ride, look, find, climb, keep still, jump, walk, find, sweep, cannot, drink, eat, comb, bite, cry, hold still, see, shake, catch, bark, tease, stop, hurt.

*Nouns.*—Yard, prairie, walk, barn, house, gate, grass, window, door, floor, kitchen, stairs, cellar, upstairs, downstairs, table, corner, chair, room, bed, water, milk, drink, meat, bones, bread, crackers, back, medicine, pill, cake, fly, rat, mouse, paper, stick, comb, broom, paw, belly, tail, side, hand, head, ear, leg, mouth, hat, shoe, glove, horse, buggy, fence, shame, crumbs, cat, kitten, chickens, hens, snow, dirt, dog, puppy, baby, "Tatty," "Teddy," "Bob," "Rab."

*Prepositions and Prepositional Phrases.*—In, out, around, on, under, up, down, away, over, behind, through, by, on top, other side of.

*Unclassified.*—Further, outdoors, front, back, other, today, to-morrow, she, her, him, he, all, your, sick, where, wet, dry, fast, here.

I submit that the foregoing vocabulary would be a very creditable one to a child three or four years of age. When it is further taken into account that a dog is in the position of a dumb child, unable to form a single sound of the language he hears, to ask a question or express a wish; that he is seldom noticed or spoken to as compared to a child, and that it is from this association and asking questions that children learn most; that his senses are all widely different in degree and, as far as taste and smell at least are concerned, different in nature from ours; that his bodily structure and habits are wholly different from ours; and last, that so far as aptness and predisposition to learn what we know goes, heredity can do nothing for him; I submit again, in view of all these things, that the acquisition of a vocabulary so extensive in meaning and so far from the natural field of canine thought as this, implies intellectual ability of a very high order, and very little, if at all, inferior to the lower degrees of human intelligence.

Perhaps a few instances may not be uninteresting and may help to remove the doubts which, I am well aware, will be entertained by many who, for whatever reason, are not intimately familiar with the nature and capacities of the canine race. This dog has always been extravagantly fond of riding. Several years ago I happened to drive through the alley back of the yard where she lived and, seeing her there and being alone, determined to take her with me, but did not wish to do so without the knowledge of her mistress who might, else, think she had run away or been stolen. She had been taught when teasing for anything, to go, upon command, and "ask her" or "him," as the case might be, if she might have it, whereupon she would go to the person designated, attract his attention and stand waiting and teasing him to direct the person who had sent her to "give Bug" (her name) the article of food or other thing she wanted. The meaning of this performance she thoroughly understood. Accordingly, when I stopped at the alley gate, she scampered toward it in great delight at the prospect of a ride. I told her in a clear and emphatic tone, two or three times repeated, to "go ask her," whereupon she rushed to the rear door and set up a scratching and whining which soon brought her mistress. At her appearance the usual "asking" was gone through with and the request granted in the customary way. She rushed back to me, a distance of 50 or 60ft., I leaned from the buggy, unfastened the gate latch, told her to open the gate, which she did, and I lifted her into the buggy, without having stirred from my seat. The whole proceeding was exactly the same as if she had been a dumb child, incapable of articulate speech and able to express itself only in signs, looks and inarticulate cries. It was also the first time her teaching had been applied in this particular way, though often repeated afterward.

She never cared much for the companionship of dogs, nor, indeed, very much for that of any one else except her mistress. However, she was always delighted to play with a little dog, a terrier or a puppy. They seemed, to judge from

her behavior, to remind her of her own puppies, and the careful fun and roguishness of her play with them was very amusing, not to say affecting. The little chickens were always suffered to come and eat with her or even to peck at the bone under her paws without remonstrance, so far as I ever saw. Sometimes three or four at once could be seen sharing in a timorous way in her *al fresco* meals. But like presumption on the part of the hen was sure to be met with discouraging growls and other hostile demonstrations. A gnawable bone seemed to be held in even higher esteem by her than is the wont of dogs. Once, when two or three hens were observed pecking in a hopeless way at a few shining relics of this kind in the back yard, I repeated to her several times, "The chickens are getting your bones," and then sent her to the window to see. She went fairly beside herself with fury, rushed to the door, and, upon its being opened, charged the offending fowls with the utmost ferocity. To this day the repetition of the above sentence produces a similar effect.

It was for several years a great pleasure to her to go down the street to visit her mistress's mother, partly because a black and tan, Teddy, lived there, and partly because of sundry cookies and ginger cakes she was sure to get. Her mistress always accompanied her. It was her custom to say, "To-morrow—to-morrow we'll go down to see Teddy." No further attention was paid to this promise by the dog that day. But the next morning her mistress was literally "dogged" from cellar to garret and from room to room. As the usual time for the promised visit approached in the afternoon, the dog's excitement and impatience increased, till the continual nosings and audible yawns, the stretchings and shakings, the whinings and eloquent looks were changed into joyous friskiness by the production of bonnet and shawl. It is to be noted that this shows the power to grasp the abstract idea of time. To-morrow was a perfectly plain conception to her. She was able not only to understand the words and that they constituted a promise, but also to connect them with her pleasurable recollections, and, which is much more wonderful, could connect them with a definite time—the next day; then to retain this impression till the time came to realize it, and last, to recognize unaided the approach and arrival of this time. Is it not idle to say, in the face of this, that the canine mind is not the same in kind as the human intellect and different only in degree?

One of her pleasures is to have her back and body gently scratched. She was long since presented with a little curry-comb which, unfortunately, she cannot use herself. This comb is kept in the barn, usually within her reach. When I wish to comb her I say, "If you want your back scratched, go to the barn and get the comb." After one or two repetitions of this she goes there and disappears. If she does not find the comb in the usual places she reappears in the barn door and looks at me seated on the house steps. At command she returns and makes further search and so on till the comb is found or I am satisfied she cannot find it. She will, if compelled, take the comb back, but as she is never tired of being scratched, it is hard to induce her to do so. There is, of course, no remarkable intelligence shown in this. It occurs to me, because we together performed this religious rite only last Sunday, and because it illustrates the fact that quite long sentences and complex ideas are intelligible to her as well as the short orders usually given. I have now to relate two things which seem to me almost if not quite as remarkable as her comprehension of time.

Her constant companion is a collie of blue blood, but of limited intelligence as compared to her. Nobody understands this better than he does. He is always alert to take his cue from her. When one is talking to them it is pathetic to see the puzzled look with which he watches her—his interpreter, as it were. When they are outdoors together a pricking of her ears and a little bark invariably sends him flying over the fence to see what her keener senses, as he regards them, have warned her of. There was a time when it never failed, but I have seen several cases where he seemed to be "dead on to her game." I am sorry to say that I have seen her many times betray the confidence he reposes in her, plainly with the intention of possessing herself of his bone. It has happened many times when there was absolutely no question but that she did it with calculation, there being no cause whatever for giving an alarm, and she immediately grabbing his bone as soon as his tail was fairly turned. The expression of satisfaction on her face when successful in this ruse is indescribable, and she wriggles all over with delight. Now, this is pure stratagem, of the same kind if not of as high a degree, as wins battles and less justifiable civil advantages. It is applied reason.

From her lazy habits and advancing age she has of late years been much troubled with torpidity of the liver and kindred ailments. Whenever I notice the usual symptons—a filmy, watery look in the eyes, tendency to shiver and loss of appetite—I give her a couple of Sargeant's pills. I am entirely satisfied that she understands the subject or at least their effect so far as making her feel better is concerned. Her usual way of obtaining what she wants is to stand or sit in front of the person whose attention she wishes to attract. Upon naming over the things she is most likely to want she indicates the right one by her behavior. On one occasion none of the ordinary wants seemed to fit the case. Let me remark here that it has often happened that she has wanted to "say" something which the utmost ingenuity has been unable to suggest, and these wishes have perforce gone unuttered and unsatisfied. (It is a sad thought somehow, that even for a dog there is no creature in the wide world who can understand his longings. We humans know how that is, ourselves.) At length her owner, noticing her appearance, exclaimed "I wonder if she wants a pill." Instantly she showed that was what she did want, led the way to the door where her medicines are kept, waited impatiently till it was given her and then went contentedly back to her bed. The same thing has happened since, and whenever it is necessary to give her this medicine she shows not only willingness but eagerness to take it.

Now, there can be no agreeable taste to the gelatine capsule and she never has occasion to go to the door of the room where her medicine is except for this purpose. No cause can be assigned for her actions except that she understands the effect of taking it and anticipates it. It being obviously impossible to obtain a statement from the dog one must make up his mind about all such things from her actions and all the circumstances. Personally, I am entirely convinced that she understands the case, as, I am sure, any one observing her would be. This is an evidence of power to reason from cause to effect more remarkable, to my mind, than anything else she does. The cause is so far removed in time and apparent relation from the effect that it seems almost incredible that a dog should connect them.

Space is lacking to extend this little chronicle. The usual performances of intelligent animals—fetching and carrying, returning for articles left or dropped, flapping her tail on the floor when listening to conversation not directed to her but concerning her, etc., are common with her also. While it is, perhaps, true that very few animals possess such marked intelligence it is also true that much of its development is due to her treatment. Practically, she was always treated like a child. There was always some one to give heed to her mute appeals and provide at once for her. Her sensitive feelings were always considered. She has seldom been punished, rarely scolded, and when either was done there was good reason for it and she knew what it was. It is not an exaggeration to say that her friends recognize in her a dignity above that usually attaching to dogs, and would as soon think of doing a cruel or mean thing to a child as to her. Suppose she had been taken at the age of one year and put through a systematic course of daily instruction for a period of years, as is done with children, can any one say what marvelous results would have been attained? Sufficient, perhaps, to change our views as to the nature of the lower animals and their position in the scale of life.

If the reader be incredulous and inclined to say that he has never seen a case of such developed intelligence, let me ask if he knows of a case where a dog has been treated in this way—made the constant companion of human beings indoors and out for its whole lifetime, its wishes, wants and feelings attended to with conscientious care, disciplined, taught and encouraged to think, not petted and pampered to death but treated kindly and firmly with sympathetic intelligence? There are many degrees between pampering and abuse, but in all of them the dog is treated as a lower animal, small attempt made to educate him except as a servant of man, little attention paid to his finer feelings, usually dismissed with a pat or a kick as the humor serves, lodged in a kennel and fed on scraps. If all these conditions were reversed the average intelligence of the dog would be rated much higher than it is now, and in exceptional cases of extreme docility, sensitiveness and capacity, the record here given might be far surpassed.

In conclusion let me say that this little account of a smart dog has been written with the failings of the man with "the smartest dog y' ever seen—knows everything y' say to 'im" kept well in mind. There is always a tendency to unconsciously exaggerate the capacities of our pets. There is also a disposition when telling a story to tell a good one. An effort has been made to avoid both these pitfalls, to tell the literal truth devoid of embellishment, with the ambition, also, to give a certain scientific value to the narrative and, maybe, to help a little in bettering the condition of the noblest friend of man.

E. K. WHITEHEAD.

DENVER, Col., Sept. 28.

## DANBURY DOG SHOW.

**Oct. 2 to 5; Entries, 158; Dogs Benched, 154.**

THERE are certain annual canine gatherings which mark the seasons and from which minor events are calculated. New York show, in the dogman's mind, is associated with the break up of winter; Boston show marks a period in which overcoats are a burden and the thoughts of youth lightly turn to the color of his new spring suit, and the dogman stores away his dog crates, and if not "chained to business" goes fishing and the dogs run loose for the summer. Early fall and bracing weather are always associated with the Danbury fixture, invariably held the first week in October. Strange it is that this little show, one of the most conservative in its utter disregard of accepted forms of dog show management, one of the most awkward places to get at and worse still to get away from, should command the attention of a certain class of exhibitors year after year. After the excitement of judging—and there is precious little of this, as few of the classes have more than two or three entries—there is literally nothing to do unless it be to have another peep at the same old fat woman, impossible sea lions, wild men from Borneo and other weird objects which seem to form the principal animate exhibits at this real old country fair. It cannot be the trotting, for this is of the 2:40 order only, nor can it be the amount of prize money that can be gathered in, and the dogmen are not to be fooled by the thimble riggers; it's just Danbury, and there you are. Even the management does not change; we always know that we shall get a hearty shake of the hand and a welcome from Mr. Sears and another welcome shake from Mr. Reed, and these two men, kind and affable to every one, constitute the alpha and the omega of the Danbury committee, management or whatever you like to term it. You know if you are an old habitué that you will be always welcome to the directors' room, where coffee and sandwiches and cigars are pressed upon you; it's just a home-made dog show, without any frills or high collars, and perhaps that is why the "boys" will always patronize it.

This year there was a brightness and intimation of better management in the newly painted stalls which, as the reader should know, are of the double-decker order, running along the sides of a long narrow building, "little dogs aloft and the big dogs lying down below," and instead of the old style of chalking up the numbers at the back of the stall to provide amusement for the dogs in rubbing them out, the stalls were designated with plainly painted numbers, which are intended to serve for all time. Then there were brass tags to put on the dogs' collars, too, and the unfortunate reporter had not to run around the whole fair to try and find the owners of the tagless dogs. For all this we were thankful. These numbers, however, are merely for the guidance of the exhibitors, they are meaningless to the dear public who, for the modest sum of ten cents, is permitted to ramble through the building and expected to take an interest in the dogs just because they are dogs, for having no catalogues to guide them, their canine education is limited, and the proud gaze of the exhibitor who has won first prize is lost upon an unappreciative public. Every show, whatever its pretensions, should provide catalogues. The prize rosettes, a new feature this year, were very pretty, blue and red rosettes with a large button in the center, on which, in gold lettering, was "Danbury Fair, 1894." Although there were no regular catalogues, the management, bearing in mind the difficulties under which the reporters labored in former years, provided a few typewritten copies of the entries, which was a move in the right direction and duly appreciated.

This year instead of pitching the judging ring in the tent among the apple and pumpkin exhibits, a good large ring was fenced in at one end of the adjoining agricultural implement shed where judging could be carried on regardless of weather conditions, and this marked another acceptable innovation. A number of attendants were also on hand to take the dogs in, and compared to former years the ring was very well served under the stewardship of Mr. Reed.

Mr. Mortimer, who took all classes, got to work about 11:30 A. M. on Wednesday, and had concluded his not very difficult task by 3:30 P. M., though he and others lost a day through supposing the show commenced on the 2d, as the dates claimed. Many of the principal winners have been commented upon at late shows, so our task is not a very difficult one. Among the principal kennels represented were the Seacroft Kennels from Boston, Hell Gate Kennels of St. Bernards and the Hermitage Kennels from New York. Frank F. Dole's team that never missed a Danbury show, Palace Kennels of Great Danes, from New York, Lansdowne Kennels from Philadelphia and Ben Lewis's all round team of fifty dogs that comprised one-third of the whole exhibit.

Among the exhibitors and visitors we noticed H. M. Nelson, C. F. R. Drake just returned from their European trip, Frank F. Dole, N. Fenton, Fred. Schmidt, A. Heller, F. Schultz, H. Thiman, Dr. Hair, Dr. Thurber, W. S. Turner, Dr. Knox the "vet," and the veteran sportsman Mr. Knight Sperry, whose beaming countenance was reflected from a robustness that showed he had entirely recovered from his severe illness during last winter.

The typewritten catalogue was not as accurate as it might have been, and although many of the dogs were wrongly named we have corrected those we know of, and if we make mistakes in the others we claim the indulgence of their owners, for we are "doing the best we can."

Before describing the winners, it is a duty to call attention to the fact that though entries closed on Sept. 17, some dogs were accepted after that date, notably the beagle Robino; the show was under A. K. C. rules and if exception was made in one case there is no reason why Dr. Hair's entries should not have been accepted, as they were only a day or so late, owing to a delay in receiving a premium list. His dogs were present, but did not compete.

MASTIFFS.—Only one in the challenge class, Ethel, looking fairly well, considering the distances she has traveled the last few weeks. Open dogs (1) brought out once more the Danbury dog Kaiser William; he is a plain sort, faulty in front and his head is not of the fashionable type. Dr. Hair had an entry that would surely have won had it been shown, as it is a very fair mastiff.

ST. BERNARDS.—Competition was not at all keen, as outside of the principal winners the rest were poor. In challenge rough dogs Otos, looking in good coat and handsome as ever, was unopposed. The open dog class brought out four, and that Roland, Jr., was the best in the lot was easily seen, scoring over Vindex II. in size, character, skull and markings and depth of body, but losing to the other in hocks. Vindex has a white body, but has a very fair, deep head. Milton, a dark brindle, took vhc.; his head markings are almost black, is short in body, but of good depth, and is faulty behind, good bone. Rollo, hc., is a light, weedy specimen. In bitches (2) first went to Kingstonian Beauty, who had all she could do to beat Spec Lomond, losing considerably in head and something in body and front, but excels in quality and bone; shown rather thin.

Prelate was the only entry in smooth dogs, he has improved on his puppy form, but his head scarcely shows enough quality and he has a white body, still he is a fair upstanding dog. In bitches (2), the well known Bellegarde, well shown, had no difficulty in beating Hermitage Abbess, who though fairly good in type and shape of head is light in body and leggy. The puppies (4) were very poor, the winner, Minnie C., being bad behind but possessing the best head. Seacroft Dayton, though better on its pins and in body, is very weak in muzzle. Othard was as good as any of them, with by far the best front. Hellgate Kennels took the special for best in the show, and as usual all their dogs were well shown.

Deerhound classes were drawn blank.

GREYHOUNDS.—In challenge class Bestwood Daisy, as neat and pretty as ever, scored without opposition. When we see these same old dogs year after year, the words of the old song "The Brook" involuntarily come to mind—"Men may come and men may go, but I go on for ever." Open dogs (2) gave the judge a little more trouble, though the decision that placed Spring of the Valley over Jack of Clubs was correct, he beats in quarters and second thighs, hocks, depth and strength of loin, placement of shoulders and condition, losing a trifle in head, cleanness of shoulders and shortness of loin. Wild Lily, the Providence winner, was unopposed in the bitch class.

RUSSIAN WOLFHOUNDS.—All the competitors, or, rather, entries, came from the Seacroft Kennels. Vinga, looking well, took the challenge prize, while Sorvanets was also alone in open dogs. In bitches, barring her faulty, very straight hocks, Zmeika had a walk over her opponent, Lady Dietz, who is weedily built in comparison.

GREAT DANES.—The quality was very poor. In open dogs a red fawn, Schultz's Neuvo, won over a lumbering, bad-legged dog, Schultz's Nero. The winner is better type; neither good in head, though Neuvo is cleaner, and also in neck and shoulders; Nero gets it in bone and rib, but is not the style we want; the winner is better in this respect. Two poorer ones came out in bitches; the winner, Diana, has a very fair head, though lippy, and is much better in front. Irene, second, is a white-headed one with the china eyes, correct, but not at all prepossessing in appearance and faulty in forelegs. She was afterward placed first over a better-formed one in Schultz's Juno. To love such an animal must be an acquired taste.

NEWFOUNDLANDS.—There were no entries, and although the fat old curly dog that has proved such a bone of contention in past years is still alive and was on exhibition, his owner did not expose him to criticism this time.

Bloodhound men had no cause for complaint here as four classes were provided but there were no entries.

POINTERS.—No challenge class entries but in open dogs, any weight, three good ones came forward and the well known heavy weight Molton Banner scored once more; but for his head which is rather plain and coarse he is well made all round, the other two, Lad of Rush, second, and Lapford Major, vhc., were nearer a size, the latter losing in head being a little dished-faced; both are well ribbed but faulty in feet; Lad gets it in cleanness of shoulders, neck, carriage of stern and depth of rib. In bitches (3) competition finally lay between Lass of Kippen and Lapford Nancy, placed in that order with Emblem vhc., though the latter seemed hardly treated, scoring considerably over Nancy in head, especially in depth and squareness of muzzle, bone and front and depth of rib but is throaty and short necked; Nancy's forelegs are very light, not straight and open toed.

ENGLISH SETTERS.—In Spectre's absence Victress Llewellin took the rosette, looking well though out of coat. Open dogs by the entries promised to be a very good class, but the absence of Cactus, the Providence winner, Critic and Harry L., gave the judge a somewhat easy task. Wordsley Dude, very well shown, scored all over Young Howard in every particular but front, as he throws his elbows out and is heavy in shoulders; Young Howard is a nicely made dog however, without that heaviness that one would expect from his breeding. Bitches (5), Woodland Grace absent, proved a nice win for the Providence winner Maid Marian, second going to her kennel mate Flower of Sulphur, who loses a little in head, both well shown; Flirt vhc., loses considerably in head to the winners, and is a little straight behind, had the best front of the lot and good bone; Nellie Bly, hc., was shown fat, has a short thick neck, fair head. A poor puppy in Daisy Gale was given a second, she is wide in front and very faulty in head, long and snipy.

IRISH SETTERS.—These classes promised well in the catalogue, but the Seminole entries did not show up, and in open dogs only one appeared, Hector, and he was given a second more because he was an Irish setter and was the only one to come to time. The entries in the bitch class did not fill their engagements.

GORDON SETTERS.—These classes proved more interesting, though the winners are all old faces. Leo B. and Princess Louise was the order in the challenge class, the latter looking a little tucked up and out of coat. Open dogs (2), Jack of Spades being absent left the well-known Homer S. a bloodless victory. He looked exceedingly well, and "Ben" had him fit for a New York show. In bitches (2) both were from Dr. Dixon's kennel, and the prizes went to Santa Marie and Maid of Waverley. The winner seemed in whelp, has the best head, but loses in front to the other.

SPANIELS.—Irish water spaniels had one, Kitty of Cork, an old rounder. There was only one entry in field spaniels, but that a good one, in fact the best, Staley Baron. There was one cocker entry, Cousin Dick, but he did not put in an appearance. The wire-haired cocker class proved blank, too, and the reason for such a classification is not apparent.

FOXHOUNDS.—The challenge class brought out one entry, champion Femur, Ranger being absent. In open dogs two well-known hounds came forward, Parson and Deacon, and their Providence positions were rightly reversed, as the former has the better front, though pasterns should be stronger, and is better in body and head. Two poor ones came out in bitches. Chippie, the winner, is a light, weedy one, and Tibia II., a five-months-old pup, is of course undeveloped yet, but shows lots of bone; she got a blue ribbon after all in the puppy class.

BEAGLES.—In challenge class, Paderewski being absent, the blue rosette went by default to Belle of West Chester. How is she in challenge class? In open dogs (2) the new dog, Robino, in very poor shape and should not have been

shown, took the prize over Clarion of Glenrose without any difficulty; both were at the Rhode Island show. Gypsey A. had a walkover in the bitch class; she looked lusty as usual.

FOX-TERRIERS.—These proved the banner classes as far as the number of entries went. Grouse II. came out for the challenge class and looked in good shape. Open dogs (8) was a good class, having several well known representatives. Seacroft King eventually won over Lansdowne Poverino, scoring in head, though light in body and a bit long cast. Poverino was shown light; he has lots of terrier character. Lansdowne Triton, reserve, is rather coarse in skull, good bone, but a bit wide in front and down behind; is well ribbed. Hillside Royal, vhc., was at the Rhode Island show, and Punch, also vhc., is light in muzzle for his skull and short-faced; shown a trifle thin, but otherwise a smart little terrier. Wordsley Trapper, hc., we spoke of two weeks since. In bitches (4) first rightly went to Lansdowne Trim, rather light in bone and leggy, nice head, ears a little large, and should be stronger in pasterns; otherwise good in front. Seacroft Empress is better in eye and ears, but loses in body. Refusal, vhc., a cobby sort, is faulty in hocks and is short-faced and thick in head, good bone and front. Lansdowne Divinity, hc., stands a little wide in front. In puppies (7) Seacroft Duke, a rather leggy sort, won over Wawasset Baron; both are fairly good in front though Baron's toes should be closer, but I liked the latter's head best, and he is nearer to the ground besides being cleaner in shoulders and neck. The others were not up to much; big and coarse in head, most of them.

WIRE-HAIRS.—This time Mister Great Snap disposed of his old opponent, Brittle Beaut; Snap was looking much improved over his Toronto form; Beaut's head is better and he was better shown. In bitches a rather weak-faced one in Mistress Betsy won, alone.

COLLIES.—Here again the absence of the Seminole entries played havoc with the classes. The Squire, Metchley Surprise, Gold Dust, Curzon, Ormskirk Gypsey Maid, Cora Belle of Nesseldown, two in each class, refused their engagements and the solitary representative was Daisy, who, though short of coat, shows intense quality, has a sweet head well shaped, but would not throw her ears; she also took the puppy prize.

BULLDOGS.—Just a few to show there is such a breed. Romance had no competitor in the challenge class in Addiscombe Gypsey's absence. The Yale mascot, Handsome Dan, came out once more and proved a mascot all to himself, for he was unopposed. In bitches Derby May, whose charms were commented upon in our Rhode Island show report, also walked over for her ribbon.

BULL-TERRIERS.—There were the same old faces that have faced the judge so often they could show themselves. Attraction beat Starlight for the challenge prize, the younger bitch is cleaner in the head and cheek, but none can down the old matron in front; she was shown too fleshy. In open dogs it seemed a near go between Topsparkle and Admiral Mello, the latter has the best front, though too wide, and is rather long cast, body and eye are in the winner's favor. American Gully, vhc., is a patched son of Gully the Great, a fine big dog, but rather round in head and cheeky, but of good length, good body, but a bit wide and heavy in shoulders. Billy Plummer was absent. In the bitch class the well known Edgewood Topsy had no difficulty in scoring over the neat looking Lansdowne Thelma, whose faulty quarters, feet and rather dished muzzle are against her; she loses in rib, to.

SKYE TERRIERS (4) were all absent.

BLACK AND TAN TERRIERS.—Broomfield Sultan, one of the most consistent campaigners and in himself a refutation of the popular idea that a black and tan must be kept in a bandbox to show up fit, scored unopposed, another challenge prize. A smart little bitch in Othella won alone in bitches; she is a little light yet throughout, but nicely marked, and has quite a good head.

Toy terrier and Yorkshire terrier classes did not fill.

PUGS.—Seminole Kennels had Attraction here and their only representative; he looked better than at Providence. Just a fair bitch in Topsy won in bitches.

DACHSHUNDS.—An old acquaintance, Jessie Victoria, filled the challenge role, but was shown a little above herself. In the dog class two came forward, Feldman and Erdmann, a red and a black and tan; both are out at elbow, and it is a close thing between them, but Feldmann scores in quality, shape of head and stern; neither seemed loose enough in skin. In bitches (2) one appeared, Erline, a black and tan, a nice little sort, well shown.

IRISH TERRIERS.—The challenge class brought out Brickbat, Jr., and Galtus, and barring his size, the former won all over, so much better in front and head. In open dogs but one came forward, Ned, a big, coarse headed dog with fair coat and front. In bitches Hilltop Surprise, in good coat, and, though scarcely racily enough built, easily won from Gessela II., better front and body and coat.

SCOTTISH TERRIERS.—Open dogs had one entry, Duncan, is too fine in muzzle, has bat ears, and is a little long cast, nice coat. Merry Call and Burton Bitters was the order in bitches. The latter loses only in head, too short and weak. She afterward took the puppy prize.

The only toy spaniel, Young Royal, was absent.

POODLES.—The well-known Paris filled the challenge class, and in the open class Leo and Ithel, repeatedly before the public lately, were the only entries. French poodle classes did not fill.

ITALIAN GREYHOUNDS.—Spring, the old campaigner whose hardiness would shock those Italian greyhound fanciers, who pack their pets in cotton wool when the frost comes, was the only representative and won.

Drayman, the basset, was also shown and won unopposed. To show the absurd classification at this show, this breed had four classes provided, nearly as many classes as we have ever seen dogs at a show.

MISCELLANEOUS.—This was divided by sex, but no numbers were given them, probably late entries. Frank, a rough terrier that is too small for an Airedale and too big for a Welsh terrier, but with characteristics leaning to the latter, was given first in dogs. In bitches the Bedlington Blue Belle beat the Airedale Vixen, whose weak face was her worst point.

B. F. Lewis took the handler's prize with 50 dogs, and W. S. Turner the second prize with about half that number.

H. W. LACY.

LIST OF AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, B. F. Lewis's Ethel.—OPEN—*Dogs:* 1st, G. E. Sears's Kaiser William.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, Fred Schmdit's Otos.—OPEN—*Dogs:* 1st, Fred Schmidt's Roland, Jr.; 2d, F. Mager's Vindex II. Very high com., McCall & Cattaneo's Milton. H gh com., Anton Heller's Rollo. *Bitches:* 1st, Fred Schmidt's Kingstonian Beauty; 2d, McCall & Cattaneo's Spec Lomond.—SMOOTH—*Dogs:* 1st, M. Bushheimer's Prelate. *Bitches:* 1st, Fred Schmidt's Bellegarde; 2d, Hermitage Kennels' Hermitage Abbess. *Puppies:* 1st, McCall & Cattaneo's Minnie C.; 2d, Seacroft Kennels' Seacroft Danger.

GREAT DANES.—*Dogs:* 1st and 2d, Palace Kennels' Schultz's Neavo and Schultz's Nero. *Bitches:* 1st and 2d, Palace Kennels' Schultz's Diana and Schultz's Irene. *Puppies:* 1st and 2d, Palace Kennels' Schultz's Irene and Schultz's Juno.

RUSSIAN WOLFHOUNDS.—CHALLENGE—1st, Seacroft Kennels' Vinga.—OPEN—*Dogs:* 1st, Seacroft Kennels' Sorvanets. *Bitches:* 1st and 2d, Seacroft Kennels' Zmeika and Lady Dietz.

GREYHOUNDS.—CHALLENGE—1st, Toon & Thomas's Bestwood Daisy.—OPEN—*Dogs:* 1st, F. A. Feitz's Spring of the Valley; 2d, J. H. Winslow's Jack of Clubs. *Bitches:* 1st, Toon & Thomas's Wild Lily.

POINTERS.—*Dogs:* 1st, Glenrock Kennels' Molton Banner; 2d, J. L. Adams's Lad of Rush. Very high com., M. L. Rockwell's Lapford Major. *Bitches:* 1st, George W. Lovell's Lass of Kippen; 2d, N. L. Rockwell's Lapford Nancy. Very high com., C. H. Clark, Jr.'s, Emblem.

ENGLISH SETTERS.—CHALLENGE—1st, J. Lewis's Victress Llewellin.—OPEN—*Dogs:* 1st, H. Northwood's Wordsley Dude; 2d, F. F. Dole's Young Howard. *Bitches:* 1st and 2d, J. Brett's Maid Marion and Flower of Sulphur. Very high com., Hampton Kennels' Flirt. High com., E. W. Cornwell's Nellie Bly. *Puppies:* 1st, withheld; 2d, Martha S. Hill's Daisy Gale.

IRISH SETTERS.—*Dogs:* 1st, withheld; 2d, J. Mullaney's Rector.

GORDON SETTERS.—CHALLENGE—1st and 2d, Dr. S. G. Dixon's Leo B. and Princess Louise.—OPEN—*Dogs:* 1st, W. O. Lindsay's Homer S *Bitches:* 1st and 2d, Dr. S. G. Dixon's Santa Marie and Maid of Waverley.

IRISH WATER SPANIELS.—CHALLENG—1st, B. F. Lewis's Kitty of Cork.

FIELD SPANIELS.—*Dogs:* 1st, Toon & Thomas's Staley Baron.

FOXHOUNDS.—CHALLENGE—1st, Dr. H. T. Thurber's champion Femur.—OPEN—*Dogs:* 1st and 2d, Dr. H. T. Thurber's Parson and Deacon. *Bitches:* 1st, F. Eastwood's Chippie; 2d, Dr. H. T. Thurber's Tibia II. *Puppies:* 1st, Dr. H. T. Thurber's Tibia II.

BEAGLES.—CHALLENGE—1st, H. Fitzsimmons's Belle of West Chester.—OPEN—*Dogs:* 1st, J. Lewis's Robino; 2d, F. W. Chapman's Clarion of Glenrose. *Bitches:* 1st, F. W. Chapman's Gypsey A.

FOX-TERRIERS—SMOOTH, CHALLENGE—1st, Seacroft Kennels' Grouse II.—OPEN—*Dogs:* 1st, Seacroft Kennels' Seacroft King; 2d and reserve, Dr. G. B. H. Darby's Lansdowne Poverino and Lansdowne Triton. Very high com., J. F. Belt's Hillside Royal and DeWitt Cochrane's, Tenyeo Punch. High com., Harry Northwood's Wordsley Trapper. *Bitches:* 1st and high com., Dr. G. B. H. Darby's Lansdowne Trim; 2d, Seacroft Kennels' Seacroft Empress. Very high com., Frank F. Dole's Refusal. *Puppies:* 1st, Seacroft Kennels' Seacroft Duke; 2d, J. F. Belt's Wawasett Baron. Com., M. A. Kenney's Bessy.—WIRE-HAIRS—OPEN—*Dogs:* 1st, G. W. H. Ritchie's Mister Great Snap; 2d, Rochelle Kennels' Brittle Beaut. *Bitches:* 1st, G. W. H. Ritchie's Mistress Betsy.

COLLIES.—OPEN—*Bitches:* 1st, George E. Sears's Daisy. *Puppies:* 1st, George E. Sears's Daisy.

BULLDOGS.—CHALLENGE—1st, Toon & Thomas's Romance—OPEN—*Dogs:* 1st, A. B. Graves's Handsome Dan. *Bitches:* 1st, Renshaw-Mason-Jones's Derby May.

BULL-TERRIERS.—CHALLENGE—1st and 2d, Frank F. Dole's Attraction and champion Starlight.—OPEN—*Dogs:* 1st, J. A. Manice's Topsparkle; 2d, Wm. Feversham's Admiral Mello. Very high com., G. E. Bailey's American Gully. *Bitches:* 1st, Frank F. Dole's Edgewood Topsy; 2d, Dr. G. B. H. Darby's Lansdowne Thelma.

DACHSHUNDS.—CHALLENGE—1st, Dr. C. Motchenbacher's Jessie Victoria.—OPEN—*Dogs:* 1st and 2d, Dr. Motchenbacher's Feldmann and Erdmann. *Bitches:* 1st, J. Brown's Erline.

IRISH TERRIERS.—CHALLENGE—1st, Toon & Thomas Brickbat, Jr.; 2d, H. C. Connor's Galtees.—OPEN—1st, Dr. Kirk's Ned. *Bitches:* 1st, G. G. Hamell's Hill Top Surprise; 2d, B. F. Lewis's Gessela III.

SCOTTISH TERRIERS.—OPEN—*Dogs:* 1st, Toon & Thomas's Duncan. *Bitches:* 1st, Toon & Thomas's Merry Call; 2d, Seacroft Kennels' Burton Bitters. *Puppies:* 1st, Seacroft Kennels' Burton Bitters.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, Rochelle Kennels' Broomfield Sultan—OPEN—*Bitches:* 1st, J. C. Mahler's Othella.

PUGS.—CHALLENGE—1st, Seminole Kennels' Attraction.—OPEN—*Bitches:* 1st, Miss C. Morone't Topsy.

POODLES.—CHALLENGE—1st, Dr. S. G. Dixon's Paris.—CORDED—OPEN—1st, Dr. S. G. Dixon's Leo; 2d, J. B. Ellison's Ithel.

ITALIAN GREYHOUNDS.—*Dogs:* J. Lewis's Spring.

BASSET HOUNDS.—*Dogs:* 1st, Seacroft Kennels' Drayman.

MISCELLANEOUS.—*Dogs:* 1st, B. F. Lewis's Frank. *Bitches:* 1st and 2d, Mr. Hopkinson's Blue Belle (Bedlington) and Vixen (Airedale).

SPECIALS.

Best St. Bernard in the show, Fred Schmidt's Otos. Handler with the largest number of dogs in charge, 1st, B. F. Lewis (50); 2d, W. Turner.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

### The Endurance of Pointers.

IT is commonly believed that pointers can not endure cold weather, or at least that they suffer greatly from it and that often it injures their health. But Mr. Thos. Johnson assures me that his pointers withstand the rigors of the Manitoba winters quite as well as his setters do. They will lie down in the snow and rest without any apparent discomfort. A warm room is not to their liking after they get habituated to a life in the kennel. They have neat, comfortable buildings in which they can seek shelter when so minded, but they seem to enjoy more a life in the open air and snow.

Mr. Johnson, to illustrate this point, mentioned a peculiar instance in respect to a pointer dog which was stolen and which was taken to the resorts of the market fishermen on one of the great lakes north of Winnipeg. The fishing is an established industry. The fish are caught through the ice and are drawn to the shore on sledges which are pulled by dogs. Into that laborious life the pointer was forced. His daily task was a twelve-mile trip to the shore, drawing thereto a heavy sledge-load of fish, and then a return trip to the fishing camp. Fortunately, when visiting the fishermen, a friend of the owner recognized the dog among the many employed. The owner had little trouble in gaining possession after learning of his dog's whereabouts. Afterward, the more comfortable quarters of home had no attraction for the pointer. He had become so habituated to outdoor life and so inured to the coldness of winter that he slept in the snow from choice and showed no signs of discomfort from it. He had acquired the hardiness of the Esquimaux dog, which suffers most where there is warmth.

In reference to Esquimaux dogs, those visitors who saw the team of dogs, mounted specimens, in the Manitoba Exhibit at the Columbian Exposition, will feel keen regret, as will all lovers of the dog, on learning that the team, owned by the Hudson Bay Company, was killed and mounted for the sole purpose of an exhibit at the World's Fair.

It was taken out of actual service in the far North and driven to Winnipeg to be killed and mounted, truly a sad ending to a useful life, an ill requital for gratuitous labor done through its working years. The importance and purposes of the Manitoba exhibit were not such as require the slaughter of those dogs. There was nothing to justify such a cruel act. The purpose could quite as well have been subserved by drawings or models. Had a private individual killed four or five dogs for the sole purpose of making an exhibit, there might then have been heard the voice of censure.

### Sledges in Winnipeg.

In Winnipeg all kinds of dogs are used for sledging purposes, by the boys. The messenger boys in particular, are experts in managing their dogs as draft animals. Standing on their sledges they are drawn at much faster speed by their dogs than they could go unassisted. When trained those dogs are guided with ease and they will stand or lie down in front of house or office till their master returns from within. In summer the messenger boys use bicycles, so that between the wheels and the dogs the service is quicker and better than it is on this side of the line. The matter of pedigree or looks of the dogs are valueless in sledging

---

Mr. J. B. Stoddard informs me that the breeding of Tick Boy was erroneously given by me as Duke of Kent ex Bloom, in the report of the Manitoba trials. It should have been King of Kent ex Bloom. The dog is a very superior performer, and therefore it is his due to give his pedigree correct. Under date of Sept. 28 Mr. Stoddard wrote that the weather in Manitoba was cold and birds wild, and that he would soon return to the States.

B. WATERS.

---

We understand that, according to Mr. Joachim's opinion, the Rhode Island show winner in beagles, Ringleader, that Mr. Mortimer brought over with Robino, is by far the best of the two. In this case Mr. Mortimer has the best yet. If Robino is not taken in hand at once by his new owner, the question as to which is the best will be easily solved.

## DOG CHAT.

### The A. K. C. and Its Members.

If kennel clubs or other associations affiliate with the A. K. C., it is supposed that they do so with a full understanding of the pains and penalties which they are liable to incur if they do not adhere to the rules of that body. When a club takes this step it assumes responsibilities that lay it open to criticism if these responsibilities are shirked. The time is past when one may blink the issue and with a shrug of the shoulders say, "Oh, well, they don't know any better; we won't be hard on them." The rules, whether good or bad, are plain and must be adhered to, or the occasion for their existence is wiped out. The Danbury Fair show people, if they have not studied these rules, should be compelled to do so. One of them, a very important one, says that every dog must be the *bona fide* property of the person making such entry at the time of closing of entries, and that every dog must be either listed or registered. A perusal of the catalogue of this show will point out some derelicts in both these requirements. This indiscriminate entering of dogs in the names of persons who do not own the dogs should be looked into by the A. K. C., which body, however, seems to overlook this part of its duty. We do not want finicky quibbling and absurd disqualification of owners for a slip of the pen, but some degree of accuracy should be maintained in giving the right owner's name. In Rule II. it says, "Exhibitors must abide by any errors made in entering their dogs." Another A. K. C. rule says that a challenge class entry must specify on the entry blank a sufficient number of first prize winnings to entitle it to compete in such class until such time as it has won in a challenge class, after which one challenge win shall be sufficient. This was not done at Danbury in any one case. The receiving of entries after published date of closing we have alluded to elsewhere. Another rule refers to puppies, which must not be entered either for exhibition or competition under six months of age. This rule was violated in several instances, and one puppy was shown for competition under the prescribed age. We simply draw attention to these lapses with a view of urging the A. K. C. to keep its protégés in proper order, whoever they may be.

---

FOREST AND STREAM, in common with other journals, received Dr. Thurber's letter on "Ideal Foxhounds," but as the letter has already appeared in print, and certain portions of it are rather personal, we publish merely the meat of it and the part which does most credit to the sense and patriotism of our worthy friend. This is as follows: "There always was and always will be more or less discord after a judge has given his decision; yet a man seldom shows a dog under a judge whom he does not consider competent. The mere fact that Commodore was never before beaten does not, according to A. K. C. rules, exempt him from defeat, especially when off of Southern soil, and beyond the jurisdiction of the judge from Old Kentucky, for there are still as good dogs of all breeds in old New England as the world ever knew. It is not my intention to attempt to expatiate upon the merits of my own stock or to depreciate others. If anybody desires to know why Mr. Fellows considers Elite the superior of Commodore, I presume Mr. Fellows has good and sufficient reasons of his own to give. In conclusion I will say to all admirers of the Southern type of foxhound, who may feel chagrined at the turn events have taken, that perhaps the following old, yet truthful saying, may comfort them, 'The pitcher that goes too often to the well shall be broken in the end.'—DR. H. T. THURBER."

---

In these days of progression and vast increase in what may be termed expert cynology, the columns devoted to kennel departments are apt to be filled continually with the news of the day in canine circles and other matter pertaining to the "fancy." The inner life of the dog is too often lost sight of and those who could, like Mr. Whitehead, afford us many pleasant moments in reading accounts of the doings, and, shall we write, sayings of these canine companions, no doubt think that such stories would not be appreciated. This is a mistake. We know that the dog's intellectual qualities are allowed to lie dormant by many breeders in the race for field and bench show honors, still the fact remains that there is a side of the dog's character that is too little considered by the ordinary dog owner. We trust that the charming "Tale of a Smart Dog" will be followed by many others of a similar character, not only to afford interesting reading matter, but also to induce others to look deeper into the companionable qualities of the animal which is known as man's best friend. Doubtless it has been the experience of many dog owners to have met with dogs who displayed intelligence equal to Bug's, but few have had the discernment or patience to educate their natural intelligence in a like manner. The lack of the sense of speech on the part of the dog should not be a deterring influence in this direction but rather the contrary, for in a language of its own the dog, to an attentive master, is well able to convey his thoughts by the tone of his bark. An intelligent dog and a dumb human being are not so far apart as some people imagine, and numerous instances could be related that would bear out Mr. Whitehead's contentions that dogs are endowed with reason. There are fools among dogs as among men, but the smart dogs only require intelligent education to bring out results that are simply astonishing merely because we look upon all dumb animals as inferior.

---

Last week we published a portrait of the noted Skye terrier Old Burgundy, and this week it is our painful duty to chronicle his death. Mrs. E. M. Williams, his owner, was simply wrapped up in the dog, and lovers of a good dog, whatever be its breed, will sympathize with this lady and her husband in their loss. Apart from his intrinsic value, which, as one of the very best of his breed, was naturally considerable, the fancy has lost a dog that would have proved a very interesting figure at our shows and would have won the highest honors. Two weeks since yesterday he was as lively as ever, and on Saturday was taken suddenly ill, which made Mrs. Williams fear that he had been poisoned. A vet. was sent for who pronounced the trouble as a slight attack of peritonitis, but stated that the dog was in no danger. Toward Sunday he grew weaker, gasping for breath, and in the afternoon he died. The vet. now finds that a clot of blood on his heart was the cause of death. Mrs. Williams has fortunately several puppies by Old Burgundy, and some promise to be very like the old dog, but naturally none can take his place in the affections of his fair owner.

---

The owner of the Chestnut Hill Kennels sends us two charming pictures of his collie Christopher "at home." They show the old dog in beautiful coat shaking hands with a curly-headed two-year-old youngster. The scene reminds us of the well-known picture, "Can't You Talk?" and it shall grace the columns of FOREST AND STREAM before long. Mr. Jarrett has had several tempting offers for the white collie Silver King, that won at Pittsburgh. He is well bred, for he is by Golddust out of a bitch by The Squire, and was bought with three others when two months old.

---

Mr. Loveland tells us that the N. E. K. C. will not inaugurate their whippet racing in any half-hearted manner. They propose to offer at least $100 in prizes, and no entry fee will be charged. Entries will close Oct. 25. Circulars will shortly be issued giving fuller information as to prizes, etc.

Mr. John Armstrong, who is preparing Mr. T. G. Davey's dogs for the International Field Trials to be held next month, writes his brother that quail are not at all plentiful, he having found but four bevies in two weeks' work, so his dogs are getting a theoretical training.

At the next election of officers of the National Beagle Club which takes place at the annual meeting, Oct. 29, a slight change will be made in the constitution to meet the proposed division of the secretary-treasurer's office. In future there will be a secretary and a treasurer, Mr. George Laick being nominated for the former and Mr. G.W. Rogers for the desk work. An adjourned meeting of the club will take place at the A. K. C. rooms, 44 Broadway, New York, on Thursday, Oct. 11, at 3:30 P. M.

There are several new offers in our business columns this week. G. W. Patterson offers young St. Bernards; J. Hope, English and Irish setters; Exchange Kennels, bull-terriers, Yorkshires, etc.; W. J. Percival, pointer dog; H. L. Kreuder, well bred beagles; Joe Lewis, some choice English setters; T. H. Garlick, dead game Scottish terriers; Chas. D. Roberts; ch. Duke of Dexter pointer pups; Standard Kennels, beagles; D. L. McCarthy, Airedale terriers; A. G. F. wants a foxhound for rabbits. Our readers, interested in dogs, may find in our list of books on dogs the very best and latest works on almost every breed, their training and care.

An American fox-terrier breeder has offered Sir Humphrey De Trafford, the Manchester Baronet and sportsman, $1,500 for his crack terrier Roper's Nutcrack, but the offer was refused.

The Swiss Mountain Kennels, in renewing their stud advertisement, report good results. They have several good St. Bernard dogs for sale, as owing to the excessive express charges now prevalent this kennel will not show so extensively as in the past, though they will not give up the breed by any means.

Members of the English Spaniel Club have broken out in revolt and a new club is in process of formation.

Poor old Princess Florence. We never expected to read this criticism, penned by the Rev. A. Carter, when he judged St. Bernards at Darlington show: "Princess Florence, *third*, has sadly deteriorated and was execrably shown. She appeared in the ring roach-backed, with her tail tucked right under her belly, and quite sheepish in expression, and was allowed to simply slouch round the ring. That she is, at her best, a grand bitch, is beyond denying. Though houndy in head, she has great depth, enormous bone, and is a wonder for size."

From the *British Fancier* we learn that Mr. Jas. Agnew, owner of the Old Hall Kennels in Scotland, has sent to this country the collie bitch Old Hall Una, winner of several firsts. This makes the sixth collie Mr. Agnew has sent to American kennels since November last, and the interesting news is given that it is just eighteen years since he shipped his first collie to America. It is not stated who the American buyer is. Our American fanciers somehow delight in keeping their own secrets.

The *Daily Nor'wester*, of Winnipeg, Man. reprints Mr. Waters' article in "Points and Flushes" of Sept. 29, which treats of the amendment in their rules which allows a dog the privilege of winning twice in their All Age stake before becoming ineligible in the club's future All Age stakes. Mr. Waters advances a very strong argument against this innovation, and as this is a very important subject we should like to have the opinions of field trial men generally on this point.

At a meeting of the New England Kennel Club held at the club rooms, Oct. 4, the election of officers for the ensuing year resulted as follows: President, Edward Brooks; Vice-President, James L. Little; Secretary-Treasurer, David E. Loveland; Board of Governors, the above-named officers and John E. Thayer, Samuel Hammond, Jr., George A. Fletcher, Andrew B. Cobb, C. Stedman Hanks and Oscar W. Donner; Bench Show Committee, Edward Brooks, Samuel Hammond, Jr., and David E. Loveland; Delegate to the A. K. C., Edward Brooks.

The Hempstead Farm Kennels have sold the prize-winning pointer Hempstead Beau to Mr. Clarke of Philadelphia, Pa., for $250. Mr. Clarke owned the pointer Gamester, but we regret to say that on arriving at Pittsburgh the Sunday before the show the dog was taken sick and died the next day. It seems that last July 4 he was very much frightened by a packet of firecrackers that exploded under his belly; since then he has been very nervous, and the vet at Pittsburgh gave it as his opinion that his death was due to nervous prostration and fright brought on by traveling.

As a natural consequence when certain men become too active in a specialty club there are bound to be ructions. Several English specialty clubs do not keep pace with the ambitions of some of the members, and two or three new clubs are reported in the process of formation. Mr. Krehl seems to have straddled a situation in the Schipperke Club, of which he was president, and has resigned. A good deal of public correspondence of a warm order has ensued, emphasizing the fact that no one counected with a kennel journal should take prominent positions in such clubs or other canine associations, for however good their intentions may be, there will always be found certain men who will attribute other motives to their zeal and create ill-will.

A nice question at law was involved last week in a civil case in Chief Justice Murphy's Court at Williamsburgh. The owner of a black and tan terrier called Snip, related how he loved his dog in life and when it fell sick he got a vet's prescription of one drop of Croton oil, in two drops of fish oil, to be given in five doses. The prescription was put up by a druggist who according to the dog's owner put two drops of Croton oil and two ounces of fish oil in the bottle. Snip gave up the ghost when this dose was forced upon him and so it happens that the owner sues the druggist for $50, as the value of the dog and the damage to his feelings. We have not yet heard the result.

### Danbury Show.

*Editor Forest and Stream:*

I have just read your paragraph about the Danbury show. I intended to have written to you last Saturday and called your attention to their loose ways. At my request my son entered Harry L. at Danbury. He took considerable pains to get him ready and was going on Monday so as to show the dog. Saturday the inclosed tag came, and upon looking it over I made up my mind that Harry would stay at home. I think that if I had tied that tag on the dog he would have chewed it off in a short time and then he would not have been taken in. Another thing; there was no ticket for the boy to enter on to show the dog, and no identification ticket but the coupon, and according to this coupon he could not be sent home until Saturday night, and thus be obliged to lie over Sunday somewhere on the road.

ANDREW J. LEWIS.

CENTRAL FALLS, R. I.

### To Pointer Breeders.

*Editor Forest and Stream:*

The Pointer Club of America, in offering their new stakes, are alive to the importance of introducing to the members and the breeder generally some means by which interest in the pointer and our club may be advanced and encouraged.

The Board of Governors has decided that competitions of this character ought to work advantageously in accomplishing the desired end. They urge every member and all pointer breeders who can possibly arrange to compete for these prizes to do so.

Events of a similar character, offered by other specialty clubs, have always been a decided success and a source of large income to the breeder and exhibitor. We anticipate a stake of $250 or $300, and are sure that it will be a sum worth competing for.

The entries cannot fail to bring together the best of this kind, and a win in these competitions must prove of incalculable value to both the dog and the breeder.

The Pointer Club has been liberal with its funds in the past, and it intends to expend the future income of the club in even larger special prizes than heretofore, but to arrange the competitions so that there will be no walkovers for old-timers, but to encourage the breeding of new stock and the perpetuation of the best types, and the survival of the fittest.

Pointer men, don't play the laggard or keep in a manger, but make a liberal stroke in the right direction. Show your knowledge by showing your stock; make your plans this year for next year's work, and send in all the entries you can muster as soon as possible. In thus doing your part toward the work before us you advance your own interests more surely by the enlargement of the field we represent.

We believe the pointer has never had the success which he deserves, because of the lack of confidence in the possibilities to be attained. By steadily pushing him to the front with the expenditure of some thought, time and money, he is sure to get there.

F. S. WEBSTER,
Secretary Pointer Club of America.

NEW YORK CITY.

### United States Field Trials Club's Derby A.

*Editor Forest and Stream:*

The following-named dogs are dropped from Derby A on account of non-payment of second forfeit:

ENGLISH SETTERS.

YALE—H. K. Devereux's dog.
TORY DOTLETT—F. R. Hitchcock's bitch.
WILL—Minnesota Kennels' dog.

POINTERS.

DAN—N. L. Chaffin's dog.
BLYTHE'S LAD—C. G. Stoddard's dog.
DOURAY—C. G. Stoddard's dog.
WAMDUSKA—C. G. Stoddard's bitch.
DAMSEL—John T. Mayfield's bitch.

P. T. MADISON, Sec.-Treas.

## Hunting and Coursing.

### FIXTURES.

FIELD TRIALS.

Oct. 23.—New England Beagle Club at Oxford Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.
Oct. 29.—National Beagle Club Geo Laick, Tarrytown, N.Y., Sec'y.
Nov. 5.—Brunswick Fur Club. Bradford S Turpin, Dorchester, Mass, Sec'y.
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

COURSING

Oct. 16.—Kenmore Club's annual meeting at Goodland, Kan. C. F. Weber, secretary. E H. Mulcaster, judge. R. Taylor, slipper.
Oct. 23.—Western Kansas Coursing Club's meeting at Leoti, Kan. W. O. Allphin, secretary. E. H. Mulcaster, judge. R Taylor, slipper.
Oct 30.—Cheyenne Coursing Club, at Great Bend, Kan. Ira D. Brougher, S c'y.
Oct. 30.—Altcar Coursing Club's autumn meeting at Holyoke, Col. S. W. Vidler, secretary. Basil Hayman, judge. R. Taylor, slipper.
Nov. 14.—California State meeting at Merced, Cal. J. R Dickson, S cretary.

### New England Beagle Club's Field Trials.

*Editor Forest and Stream:*

Inclosed please find list of nominations for the New England Beagle Club's second annual trials to be held at Oxford, Mass, commencing Tuesday morning, Oct. 23:

CLASS A, ALL-AGED STAKE, DOGS AND BITCHES, 13 TO 15IN.

MARGUERITE—Glenrose Beagle Kennels' white, black and tan bitch (Fitzhugh Lee—Dido).

BUCKSHOT—George F. Reed's black, white and tan ticked dog (Dave—Daisy).

LEWIS—Howard Almy's tan and white ticked dog (Bannerman—Parthenia).

PIPER—A. D. Fisk's white, black and tan dog (Fitzhugh Lee—Lady Novice).

ROYAL ROVER—G. A. Buckstaff's black, white and tan ticked dog (Rover—Singer G.).

JEAN VAL JEAN—H. S. Joslin's black, white and tan dog (Chubb—Mystic II.).

LOUIE FITZ-LEE—H. A. P. Smith's black, white and tan dog (Fitzhugh Lee—Maid).

MOLLIE L.—Mark Lewis, Jr.'s white, black and tan bitch (Don—Mollie).

QUABOAG BELLE—Awashonk Beagle Kennels' black, white and tan bitch (Larry—Louie).

ZENO—Awashonk Beagle Kennels' black, white and tan dog (Deacon Tidd—Daisy).

VICK R.—Forest Beagle Kennels' black, white and tan bitch (Fitzhugh Lee—Nell).

FOREST HUNTER—Forest Beagle Kennels' black, white and tan dog (Forest Boy—Lady Lee).

DORSEY MOLLIE—Pottinger Dorsey's black, white and tan ticked bitch (Jack—Beauty).

BLANCHE—Miss E C. Kreuder's black, white and tan bitch (Frank Forest—Ina).

CLASS B, ALL-AGE, DOGS AND BITCHES, 13IN. AND UNDER.

GYPSEY FOREST—Forest Beagle Kennels' black, white and tan bitch (Frank Forest—Sue).

VIOLA—Forest Beagle Kennels' white and tan bitch (Valentine—Jeannette).

OLAF OF DENMARK—Henry Hansen's white, black and tan dog (Bannerman—Parthenia).

CLASS C, DERBY, DOGS AND BITCHES, 13 TO 15IN., WHELPED ON OR AFTER JAN. 1, 1893.

UMSLOPAGOUS OF GLENROSE—Glenrose Beagle Kennels' black, white and tan dog (Fitzhugh Lee—Parthenia).

NELL R.—George F. Reed's tan and white ticked bitch (Ned—Haida).

BLOSSOM—A. D. Fisk's white, black and tan bitch (Fitzhugh Lee—Lady Novice).

PEALER—H. A. P. Smith's black, white and tan dog (Ned—Snap).

SLIP—H. A. P. Smith's black, white and tan bitch (Ned—Snap).

DIAMOND—Awashonk Beagle Kennels' black, white and tan dog (F. Forest, Jr.—Diamond Kruger).

BINGO—Awashonk Beagle Kennels' black, white and tan dog (Deacon Tidd—Daisy).

ZENO—Awashonk Beagle Kennels' black, white and tan dog (Deacon Tidd—Daisy).

CLASS D, DERBY, DOGS AND BITCHES, 13IN. AND UNDER, WHELPED ON OR AFTER JAN. 1, 1893.

PRIDE OF GLENROSE—Glenrose Beagle Kennels' black, white and tan bitch (Fifer—Gypsey A.).

BEATRICE OF GLENROSE—Glenrose Beagle Kennels' black, white and tan bitch (Fifer—Gypsey A.)

LAICK'S ROY—George Laick's black, white and tan dog (Rover—Minnie L).

CLASS G, ALL-AGED, BASSET HOUNDS AND DACHSHUNDS.

PRINCETTA—Windrush Kennels' liver and white dachshund bitch (Jay—Princess).

• • • •

### Show Beagles as Practical Field Dogs.

*Editor Forest and Stream:*

I did not think of again writing on this matter, but the letter of your correspondent in a late issue sets me going again. He concludes his letter with the hope that he will hear more from his friends. Setting aside that hope, some other parts of his letter would probably have brought me out.

He challenges his friends who do not believe he knows what a good dog is, to look up his record and see about his handling as many beagles and other dogs as any one in the State; and then he goes on and tells us that the beagles (?) he has owned and handled are the "short, bow-legged, long-bodied beagles." Shade of Sirius! What kind of a beagle is that? Had the gentleman owned a French or German name it might have been excusable, but for one with a good Anglo-Saxon name to refer to a beagle as "bow-legged" and "long-bodied," it takes the fish biscuit. I read the letter aloud to my neighbor last evening, and as he went, lantern in hand, to close the kennel gate between us and the pack, none of which measure 28in. from tip of nose to root of tail, I thought I heard him quote Shakespeare's "Oberon"—"Ho, ho ho!" and say, "Bow-legged, long-bodied" beagle. Once in a while unfortunately such a dog creeps into field trials; but if our friend had followed the result of last year's awards he would have found such a dog, although winning a first, was duly disqualified as not being a typical beagle. That there are poor beagles and useless beagles no one at all acquainted with the breed will deny; that some are gun-shy is well known, the latter, as "Agamak" says, being among the best of workers, yet it does not follow that such a fault is transmitted to the progeny, neither does it follow that all the puppies from those that are not gun-shy will be like their parents in that respect. I have in mind now the product of two bitches, one gun-shy and one not; the former never raised a gun-shy puppy (and her puppies have been used in the field); the latter produced both, and that from the same dog, yet the gun-shy dog was a thorough workman. As a breeder remarked to me the other day, "Everything depends on getting your puppies into good hands." If one has a reputation to make it is better to dispose of the young stock to a practical field man for a less amount than to the uninitiated for a higher price, for the practical man will certainly give the pup the necessary chance. Such a one wrote me only a few days ago, asking at the same time after the welfare of a pup of his breeding; this same man at one time owned Fitzhugh Lee, showing that practical men do use show beagles.

Your correspondent tells us that he has a beagle and that he thinks it will make a good hound; if he has now a "sure enough" beagle I hope it will turn out well and if he handles it gently and gives it a good chance there is a strong probability that he will have a highly satisfactory hound. If he thinks it as good as someone's else there are three or four annual field trials for beagles provided for the purpose of proving quality, where I believe all hounds get a fair chance to be seen and heard.

And now I come to the last but one paragraph where your correspondent thinks it a bitter pill to swallow when one goes out *only to hear* the hounds. I feel like the gentleman that wrote "what's the use;" perhaps your correspondent will tell me why a true huntsman tries to match the tones of his hounds, if it isn't to hear their music? Why does the bard of Avon say "match'd on mouth like bells"? I always supposed that it was the music of their voices that the foxhound, the harrier and the beagle had been cultivated for, as much as for their scent and rabbit hunting. In my estimation not less than four dogs are necessary for a satisfactory run; they need to be selected something like this: a treble, a high tenor, a second tenor and a deep tone or baritone; then if they pack with equal nose and speed, why the music and echoes are worth losing a few hours' sleep to listen to. Perhaps to properly appreciate such music one has to be educated thereto. Fortunately, as a boy, I had opportunities of hearing such packs of foxhounds as the Earl of Coventry's, the Berkeley and the Ledbury, on days that their meets were in the neighborhood. Every veer of the wind was studied, every sound listened to—but perhaps I had better not diverge from the beagle subject; knowing I could never own enough foxhounds to make a pack, I thought I might some time own some of his diminutive relatives, and I think I have laid a foundation. I know it is a long way round, Mr. Editor, to breed a satisfactory hunting and musical pack, but then there is the pleasure of it and the satisfaction of knowing each individual's peculiarity and breeding thoroughly, and the stimulus of overcoming the many obstacles to be met with.

I used to like taking a gun to shoot rabbits where they were thick, but it is nearly a year since I had a shotgun in hand, and, with one exception, nearly ten years since I shot a rabbit. I know my friends and acquaintances often laugh at me about getting nothing, but I laugh back. Last time I got cold, and had to stay indoors two or three days, then they say, what do you go in the woods nights for? I answer, to hear the dogs run. Well, they say, you can't see what the dogs hunt, but I reply that it is to *hear* the dogs' voices, that musical discord that the bard of Avon writes of.

That brings me to those "beagle meets." I am a little selfish in making the suggestion, I want to hear the combined music of a number of hounds such as we have here; some of the stock will furnish the treble, we may get the short tenor and counter tenor from the Forest stock; probably for long notes of a very mellow cadence we can find some of old Ringwood's near descendants, while perhaps the Lee and old Tone blood will furnish us with deeper tones. The more I think over this subject the better I think of it. I am pleased to see that "Colombia" favors the idea even if he thinks the meets should be three times a week; probably I agree with him and it is not unlikely that I shall go more than once a week, but if the once-a-week works well, it will be little trouble to broach the subject of more frequent meets.

Acting on your suggestion, I have no objection to act as "whipper in;" in fact, I shall be glad to hear from any local or other beagle men on the subject. A postal addressed "Comedy," Malden, Mass., will reach me all right and be duly answered. I may say that, so far as two or three of us are concerned, the meets are an established fact, and I have received considerable encouragement from others. I hope those who wish to associate for the purpose of running their hounds will be of *the kind that care for the sport* more than the rabbits.

Had it not been for the drought I should probably be writing this letter from camp, as my neighbor and self had so arranged, taking the hounds and staying over Labor Day, but think it would be almost useless to expect much of a run this dry weather.

Hoping to hear further from fellow beagle men both through your columns and the mail. COMEDY.

MALDEN, Mass., Sept. 1.

• • • •

### Brunswick Fur Club.

*Editor Forest and Stream:*

At the sixth annual field trials of the Brunswick Fur Club, to be held at North Acton, Mass., on Nov. 6, the following special prizes will be awarded: Mr. N. Q. Pope offers a silver medal for the hound doing the best trailing, Dr. A. C. Heffenger a silver medal for the hound showing the greatest endurance, Mr. A. B. F. Kinney a silver medal for the hound doing the best hunting, and Mr. R. D. Perry a silver medal for the hound showing the greatest speed. The hound making the highest general average in all classes will receive a silver medal from the club and will hold the *American Field* cup for one year. BRADFORD S. TURPIN, Sec'y.

DORCHESTER, Mass., Oct. 5.

• • • •

### The Dixie Red Fox Club.

*Editor Forest and Stream:*

We have organized in Alabama the Dixie Red Fox Club, with members in Mississippi, Tennessee and Alabama. We desire it to be generally known to all sportsmen.

JOHN H. WALLACE, JR.

## HUNTING AND COURSING NOTES.

Mr J. F. Stoddard, of Georgetown, N. Y., is putting the well known beagle Tricotrin, that he purchased from the Hornell-Harmony Kennels, to his proper game, and proves that this show beagle, at any rate, is a practical sort. He writes: "Rabbits also came bobbing into view under pressure from the merry beagles, all of which are under the standard and full pedigreed. No cross-bred or mongrel dogs these, but the cussed fools will run rabbits—their only fault. The day before yesterday they took after a great big red fox, and don't you think, I had to shoot that fox before I could get the dogs to go home with me. Then before I reached home Tricotrin jumped another fox, and—

"Villagers in the stilly night,
While slumber did surround them,
Upon the hill they heard his voice
While the fox ran all around them."

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

# Canoeing.

### Lake Huron and the Au Sable River.

ON Aug. 10, 1893, our party, consisting of four members of the Wyoming Canoe Club of Wyoming, Ont., went rattling along the splendid highway that leads from that place to the beautiful shores of Lake Huron.

The drive to the lake, a distance of about twelve miles, in the early morning, was a pleasant one, and we abandoned ourselves to the fullest enjoyment of it. Everywhere splendid fields of ripening grain were waving in the gently breeze, orchards and vineyards laden with fruit dotted the country, while many pretty vistas of rural landscape presented themselves along our line of route, but we were not prepared for the grand surprise that awaited us as we drove down the winding roadway that leads through a grove of grand old beeches thickly interspersed with pines and cedars, to the beach below. The broad sandy beach, the high tree clad banks, the winding roadway and the deep gorges cut by the waters of Hillsboro Creek, presented a picture of rare beauty.

On reaching the beach we unloaded the canoes, and stowing the duffle into them buttoned down the covers and shoved off for a spin, and to try their trim.

While awaiting the arrival of the rest of our party we were visited by some gentlemen living in the vicinity who came down to inspect our canoes. After they had made a critical examination of them they expressed much surprise that so light a canoe should have carried us safely through the cruises of several seasons in the worst of waters and without injury to them.

The names of these canoes, all of canvas, were Yukon, Gallinipper, Zanzibar and Ojeek. The Treasurer, Captain, Secretary and "Old Bluebeech," commodore, skippers respectively.

On the arrival of the balance of our party, we hastened to take advantage of a light but fair wind, and as everything had been snugly stowed away in the canoes, and the blue-peter was floating aloft, all hands tumbled aboard in quick time, and waving a final good-bye were off.

Up to this time the Secretary, privately, had grave doubt of his ability to sit so light a canoe, but when once afloat these doubts were soon dispelled. The experience gained many years ago on the south shores of Lake Superior had given him the "key" to the "sit," and he now found himself at home in the Zanzibar.

As the sails filled out in the freshening breeze, we went spinning along and were soon carried beyond hearing of the gratuitous advice lavished on us by the friends whom we had left on the beach astern. Along this stretch of shore the shallow water is literally paved with boulders, and our attention was mainly taken up in dodging them and parrying a choice selection of mildly abusive remarks fired at random, at the head of the unfortunate, who failed to accomplish the feat gracefully.

For a distance of a mile or two from shore our paddles would frequently touch bottom, in fact all this stretch from Hillsboro Creek to Kettle Point is very shallow and dangerous in rough weather, and is given a wide berth by all but small craft. For a few miles the coast shows principally high clay banks denuded of timber and uninteresting but as we progressed they became more densely timbered, presenting a more lively and inviting appearance. As the day had grown intensely hot, and the hour was approaching noon, we ran in, and under their graceful shade lunched and rested a while. Returning to the beach we indulged in a refreshing bath and then were off again.

A run of a couple of miles brought us abreast of Cedar Point, a lovely spot, where many tents and cottages could be seen nestling in shady nooks beneath the cedars; but, owing to the great heat, only the more youthful members were on the beach, who at sight of our fleet, swarmed out and came to meet us in tremendous haste. They were burning with curiosity to know who we were. As they ranged alongside of us they opened their "sally-ports" and overwhelmed us with innumerable questions. They soon learned all that was worth knowing about our canoes, then they desired to know where we had come from, where we were going to, and what we were doing it for. They inquired into our present social standing, our past history and hazy geneology, and desired to know what our future prospects and aspirations were. They were quite sociable, and were not overawed by the dignified bearing of the Commodore, but seemed to inspect his antiquated old slouch hat and tattered trousers with a critical eye.

As the breeze began to freshen we trimmed in our sails and bade our little friends good-bye, now changing our course and steering directly across Johnston's Bay for Kettle Point, and as we drifted lazily along before a dying breeze the heat of the sun nearly roasted us. The Secretary hoisted his umbrella, which broke the intensity of the glare, but for the rest of us, who were not thus provided, we had simply to take it. The Commodore got it on the roof of his nose, which had taken on a brilliant moss rose tinge and burned and smarted terribly. The Treasurer's nose was a sight to behold, but the enthusiasm of that gentleman was not diminished in the least by so trivial a thing as a sun scorched nose; but with the Captain it was different, he never ceased to smile, and seemingly did not feel the heat. Our greatest sympathies were for the Secretary, whose slender form and weakly constitution made him less able to bear the intense heat than the rest of us.

By this time we were abreast of Gustin's charming resort, Lake Valley Grove, and observed an unusual commotion among the campers, which shortly developed into a rush for the boats, into which the ladies were hustled, and they headed out for us. As they approached the fleet the Commodore was observed to shuffle, placing the Captain in a position between himself and the approaching visitors. It has been suggested that this might have been done in order to place his highly illuminated nose in a less conspicuous position; but as he has not made any confession, it is probable that the facts of this dark mystery may never be known. Our visitors greeted us pleasantly, chatted a while, and then tendered us a most pressing invitation to land and tarry for a time with them. The Captain thanked them for their very kind invitation, expressing his deep regrets that circumstances over which we had no control compelled us to decline. A roguish voice in one of the boats remarked that "probably it was just as well, as there is nothing at the resort but girls, and they were all cannibals." The Captain parried good-naturedly, and we proceeded on our journey.

The scenic beauty of this stretch of shore as viewed from a distance is very fine. The whole extent of coast line of Kettle Point and Johnson's Bay present an almost continuous wall of living green. Directly across the bay from Lake Valley Grove, Jeff's famous resort, partly hidden in a grove of gigantic butternut trees, looked decidedly restful. Away to the south, at the mouth of Shanawanda Creek, the Indian fishery buildings and their fishing fleet are just visible. With the aid of the glass we could see their chapel, their school and other buildings on the heights beyond. But the scenery was fast loosing its charms for us. We were too tired, too hot, too dignified and too notoriously lazy to paddle, and the seats that for five hours we had held down with unvarying steadfastness were becoming as adamant to our sensibilities; but at last, after a tedious drift, we rounded the point, and feeling a splendid breeze were soon at our camping ground, a lovely parklike place, shaded with fine broad topped white birches, under which we pitched our tents, ate our supper, forgot our miseries, and were superlatively happy.

The evening was spent in rambling on the fine beach and in exploring the timber. The surface of the country is thrown up into a succession of low hog backs and densely timbered with pines, cedars and hemlocks, as well as almost every variety of deciduous trees. A few woodcock, partridge and hares were seen, but as the blood-thirsty mosquitoes were there in numbers and were having a picnic at our expense we cut our further explorations short, and fled to the shelter of the tents, where we were soon wrapt in the arms of oblivion, etc.

Aug. 11.—We were late in turning out this morning, breakfasted leisurely and loafed through the forenoon sumptuously. We were visited by some gentlemen who were encamped at the point, and during the conversation they informed us of a supposed coal find at that place. We were skeptical, and subsequent events abundantly justified our doubts.

Shortly after dinner, a fine breeze springing up, we decided to make the run to the Au Sable River. The tents were taken down hurriedly and tumbled into the canoes indiscriminately. The Secretary got off first, and went away like a telegram, getting a big start. The Captain came next, closely followed by the Commodore, but the Treasurer was delayed by a hitch in his rig, but at last was seen to hoist sail and shoot away from the shore. By this time there was a wide gap between the different canoes. Zanzibar's white sail was but a mere speck in the distance, while Yukon was a good half mile astern In this order we had progressed a mile or so, when on glancing back to see how the Treasurer was faring, we were somewhat startled to find that we could not see his sail. At last, however, after a long scrutiny, we descried Yukon rising on the crest of a wave, and then the Treasurer was seen to be using his paddle, from which we concluded something had gone wrong.

Our attention was next directed to the Secretary, who was seen to be heading toward shore, and a moment later went plowing through the breakers and up on the beach. On seeing this the Captain and Commodore held on and landed with him to await the arrival of the Treasurer. The Secretary, who is somewhat short-sighted, explained that, having lost sight of the fleet, he concluded to go ashore and await its arrival. On the Treasurer coming up he informed us of the delay, stating that a sudden squall had caught him napping and had demolished his rig. The mast was broken in two, the step torn up, and the deck plate broken. Repairs were impossible at this place, and as there was no other alternative, we quickly decided that all should paddle the remaining distance to the river.

The wind had grown decidedly fresh and the sea lumpy, making our passage through the breakers an exciting experience, but when once clear of them we made good time, and in half an hour rounded Stony Point, and with a straight course ahead of us, were silently paddling along, when we were awakened from our half-dreamy condition by the low rumbling of thunder. A hasty glance away astern revealed a startling state of affairs. Great masses of ominous black clouds were piling up in the west, and there seemed a fair prospect that we would get a ducking before we should reach a suitable camping place. The Secretary, not relishing the prospect of getting wet, suggested that the Captain and Commodore should hoist sail, push ahead and get the tents up before the storm should overtake us. In their haste to get up sail the Commodore, at least, narrowly escaped a capsize. Once under way, they went tearing along at a tremendous pace with the canoes squirming and yawing under the pressure of sail. The seas fairly boiled around them, and sometimes over the top of them, but the aprons were tight and their own hides and spirits impervious to water.

From this time forward they had to attend strictly to business, the wind had increased to half a gale, the seas at times going clear over them, and the strain on rig and steering paddle was tremendous. The Commodore had drawn a few rods ahead of the Captain when on looking ahead he was startled at seeing not twenty feet away a most villainous-looking reef of rough, angular stones lying directly in his course. He shouted to warn the Captain of the danger but his voice was drowned in the roar of the sea. The next instant he was lifted on the crest of a huge wave and swept clear over the dangerous place. On turning to see how the Captain had fared the Commodore was amazed to see the Captain sailing along calmly and serenely unconscious of the existence of any danger. A few minutes later a great wave swept over the stern of the Captain's canoe, and climbing up her skipper irrigated his back and filled his gaping pistol pocket to the level full. The Commonore did not miss the spectacle or fail to laugh, but it was cut off in its tender infancy, for the next moment a companion wave to the one that had visited the Captain broke square over his shoulders and even went high enough to kiss the curl out of his hoary locks. This was a joyous moment for the Captain, who took sweet revenge and fairly roared in an ecstacy of delight. They were both thoroughly soaked and perfectly indifferent of what should come next, whether it was a thunder shower, a cyclone or a tidal wave. In the momentary lull that followed the Commodore shouted to the Captain, "Can you hold out to the river?" The reply came back with tremendous emphasis, "You bet."

The remaining distance to the mouth of the river was a glorious race before a gale of wind and was accomplished without accident beyond a few bumps in crossing a bar into the channel. Entering the river the canoeists continued on up for a couple of miles and landed at their old camp ground of 1892. The tents were run up in a hurry and the duffle safely stowed away in them.

The experience of the Secretary and Treasurer was even more exciting than that of the advance party, they being so seriously handicapped by the mishap to the Treasurer's rig. At one time the Secretary in reaching forward to secure some loose articles from being washed overboard, lost his balance and narrowly escaped going overboard, but by making a prodigious effort recovered, and went reeling into the cockpit in company with about a barrel of the subtle fluid. He came up smiling, however, but expressed it as his opinion that a 50-pound canoe in an angry sea was not the most favorable place in which to indulge in acrobatic exercises. After this free exhibition the Secretary grew reflective, and shortly solved the problem of how to get there without paddling; this he accomplished by bracing an open umbrella against the mast, and it proved a brilliant success.

The Treasurer's avoirdupois is considerable, and that placed in the sternsheets of so light a canoe crowded it down pretty low, and in consequence the seas had full sweep over him pretty often, but he worked his paddle with such unwavering zeal that they reached the river and the shelter of an overhanging bank before the storm reached them.

After the fury of the gale had abated somewhat they pushed on up stream, and on rounding a bend in the river came in sight of the tents, beside which stood the two anxious watchers, who at sight of their belated comrades kicked their hats into the air and raised their voices in a wild, welcoming war-whoop that fairly awoke the solitude and went echoing and re-echoing away among the hills. The Captain, who had been making preparations to go in search of the missing ones, now bounded into his boat and went down to meet them, and on seeing the Secretary looking tired, he hooked on and towed him up to camp.

Shortly after they reached camp the clouds began to break up, the sun came out We had supper, and then putting the camp in order, we settled down to the rest and enjoyment we proposed to take for the next two days.

During the night we were awakened by the shrieking of the wind through the branches of the scrub oak, under which our tents were pitched. As we lay listening the storm increased in fury, the rain descended in torrents, the lightning flashed, the thunder boomed and for a long while the roar of the elements was something terrible, but it passed away at last and we slept.

Aug. 12.—We awoke late to find the sun shining brightly in a cloudless sky; we scrambled out, and after a hasty breakfast had been partaken of, we put our rods together and thrashed a half mile of the river, up and down, but never a bass responded.

We then seated ourselves on the bank and commenced casting over a dark pool, allowing the baited hooks to sink to the bottom. The Treasurer was the first to get a nibble, and reeling in landed a small turtle. In a few minutes several more were landed, which were carefully unhooked and allowed to return to their native element. Becoming disgusted the Treasurer and Commodore returned to camp, The Captain reeled up and went for a long paddle down to the mouth of the river, where, meeting with some old friends among the campers, he spent a pleasant morning. The Secretary continued to fish, and in an hour or two surprised the camp with a fine string of bream. These we cooked and ate, finding them a much better fish than we supposed.

After dinner the entire party crossed the river and walking a short distance ascended one of these great sand dunes, so common along this stretch of shore. This one, over 200ft. in height, gave us an extended view over a large amount of country. For a long time we stood gazing on the splendid scene around us; almost every way we look extend mile after mile of hill and valley, vine and tree-clad, with its masses of many-colored foliage flaming gorgeous in its autumnal garb. Away to the southward the great basin of the now drained Lake Burwell extends for many miles, with its rank growth of almost tropical vegetation waving gently on the breeze. Glimpses of Lake George and Lake Smith lend beauty to the scene, while the river in its many windings, partly hidden by tree, bush and vine, is a marvel of sylvan beauty.

But as the shades of evening had begun to lengthen we turned away regretfully and descending from our perch sauntered leisurely back to camp. After supper had been disposed of we set to work and, after a fashion, repaired the damage to the Treasurer's boat.

BLUE BEACH.

[TO BE CONCLUDED.]

### Mr. Howard and Yankee.

THE letter from "Dragon" which we reprinted from the *Field* two weeks since, has brought out the following reply from Mr. Howard in the last issue to hand of that paper. Sir: The letter of "Dragon, R. C. C.," in your last issue would call for no reply from me were it not for the fact that it is made to appear that I have misrepresented Dragon. It is flatly denied in the letter that Dragon is an open-well canoe. I do not know what Dragon is now, but she was an open-well canoe when I saw her at Bourne End. Dragon's well, as I remember it, was about 4ft. or 5ft. long, and was without a self-draining floor. If that is not an open-well, I do not know what is. In America any well that is not self-draining is classed as open no matter what the length.

Dragon seems to be annoyed that I singled her out as my preference for a match race with Yankee. There were just two reasons why I mentioned Dragon: (1) That I consider Dragon to be the fastest English racing canoe that I have seen; (2) that her owner was the only member of the Royal Canoe Club who had shown any inclination of racing his canoe against mine on water open enough for a triangular course. I did not know that Dragon was still undergoing alterations, as I understood that she had been put into racing trim. I did not intend my reference to Dragon as a new challenge. I have made no challenge since July 4. I have believed all along that Dragon intended to meet Yankee on a triangular course if professional engagements did not prevent. As for Dragon's avowed disinclination to take up my challenge, I have nothing whatever to say.

Taking into consideration the fact that Yankee sailed only five races at Bourne End, that in one of these races Dragon capsized and withdrew while Yankee continued the race, and that Dragon and Yankee did not meet elsewhere, I am unable to see how Dragon has beaten Yankee six times, as asserted.

Dragon's opinion that I have everything to gain and nothing to lose if a match race is brought off, coincides with my own view of the matter.

I am glad to see that Mr. G. F. Eyre, hon. secretary of Oxford University Sailing Club, has the right idea as to the type of boat to recommend to a novice. A boat that may be capsized with impunity is certainly the best for a novice, and the more easily a boat capsizes the more willing would I be that a novice should learn to sail in it. No man is competent to handle a canoe or small boat until he has had experience at capsizing. At home I have invariably encouraged novices at canoe sailing to capsize early and often. It increases their skill, and takes away their fear of the water. Of course a man who cannot swim should never have control of a canoe or small boat. No man unable to swim is admitted to membership in the New York C. C.

WM. WILLARD HOWARD, New York C. C.

10 COURTENAY STREET, Salcombe, S. Devon, Sept. 18.

That the racing of Mr. Howard and his canoe Yankee in England has done little for the reputation of American models and builders is fully shown by the reports and comments we have published through the season; but the practical result is best illustrated in a letter which we have lately seen, from a British canoeist to one of the leading American canoe builders.

This canoeist last spring proposed to order an American canoe, but postponed it to the fall on account of the lateness of the season. He now writes: "Giving an order to you must, to a certain extent, be an experiment; I do not doubt the excellence of your workmanship, but judging from the performances of Mr. Howard's canoe Yankee here this summer, it is questionable in the highest degree whether the American boats of this type are equal, in speed at any rate, to our own. I know you did not build the Yankee, and possibly you could have constructed a faster boat; but it is impossible for us to look at it in that light, as we think that Mr. Howard would not have come across here, all the way from America, unless he was confident that the Yankee was a thoroughly representative boat in her own country."

In justice to American designers and builders, we must state that Yankee was designed and built by a new man, whose work has never been tested here; and moreover, the model is a distinct departure from the American type in the important point of power, being intended by Mr. Howard to carry but 112ft. of sail in place of 160, to come within the R. C. C. limit. At the same time, no effort was made to select from the wide range of dimensions allowed by the new R. C. C. rules, on the other hand the canoe had the same serious fault as Mr. Howard's previous boats, a straight keel for the full length of 16ft

Differing greatly from the fastest American models, and never tried with them, Yankee cannot be considered in any way a representative of the modern American racing canoe.

We have no doubt whatever that the superior speed of American models which was conceded in 1886-88, existed in a still greater degree up to this season; and that Mr. Butler in Wasp or Bee, or Mr. Oxholm in Glenwood, would have been victorious over the best British representatives in 16×30 canoes, all using the Butler sliding seat. As matters now are, however, we see little prospect of a proof of this or even of a continuance of satisfactory international racing on either side. The recent change of the R. C. C. rules is certain to produce not only a very different canoe from the present racing craft, but many different canoes to suit different localities in England, Ireland and Scotland, such as the upper and lower Thames, the Solent or Hendon Lake. This of itself will place the American designer at a disadvantage, owing to his ignorance of the special local conditions, and it will be a very difficult matter in the future to defeat British canoeists in their own waters.

## FIXTURES.

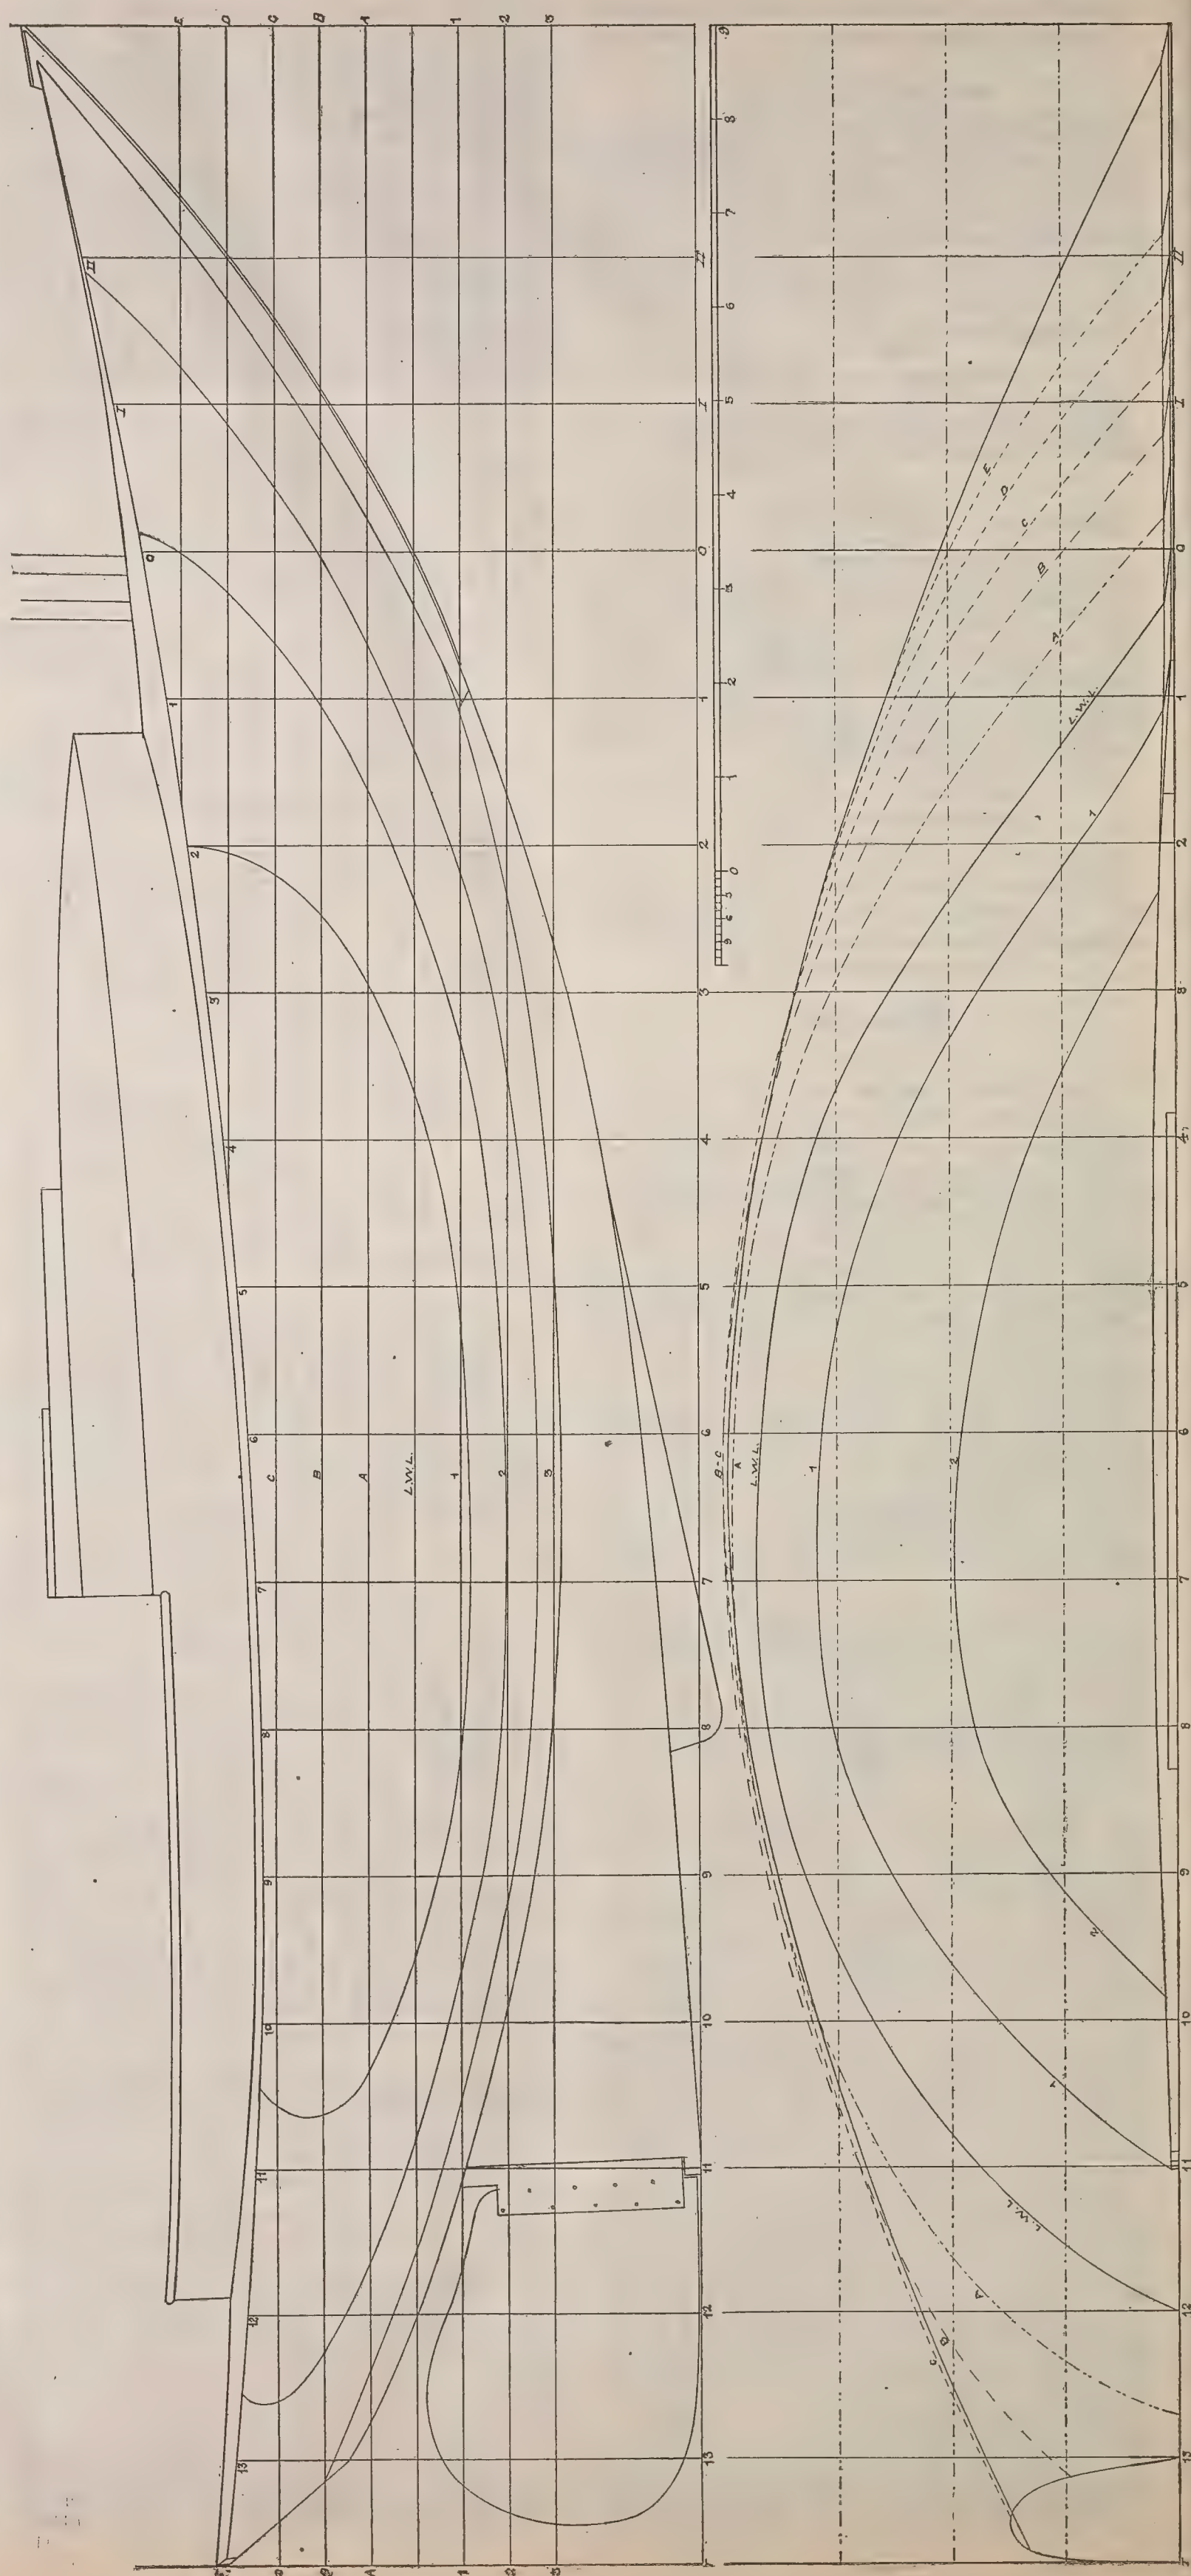
OCTOBER.

13. San Francisco Cor., Final Sail. 20. Cor. Phila., Club, Del. River.

TWO CURIOUS terminations to yacht races have lately been reported about New York. In one case a buoy was carried away by a heavy storm, and a coasting schooner at anchor was designated as a mark, in place of the lost buoy. As the competing yachts reached the new mark, they found that she had weighed anchor and was just under way up the river. The other case was still more unusual. A dispute between the official timer and a reporter led to a personal encounter in which the official time sheets were lost overboard, making it impossible to decide the winner.

ON Oct. 6 Mr. George Gould and family arrived at New York in the steamer New York, Mr. Gould being thoroughly and effectively interviewed before he had left the pier. His statements fail to confirm the many reports of unfair treatment to himself and Vigilant, and he expresses himself as well satisfied with the reception accorded him by English, Scotch and Irish yachtsmen. We understand, on reliable authority, that Mr. Gould's intention is to fit out Vigilant next spring and challenge for the Cape May cup, but the yacht will not visit the Mediterranean.

THE three months, October, November and December, may properly be considered the designing season, as orders placed at a later date for any yachts of large size are more than likely to be delayed in the



completion until half the season is gone. At the same time there is nothing to indicate the immediate commencement of new yachts, the mythical Bennett 87-footer has failed to materialize beyond the point of current rumor, and there is no further news of either a challenge or a challenger. If Lord Dunraven really proposes to challenge, now is the time for at least the opening of negotiations with the New York Y. C., if not the final agreement, and the actual commencement of designing on both sides.

## The Cape Cat Hit or Miss.

THE "Caper," or Cape Cod catboat, has been from its earliest days essentially a square-ended boat, with plumb stem and short, broad counter. Of late, however, in common with all other types, it has been compelled to follow the fashion in the matter of overhangs, and since last season the sight of a "Caper" with long ends and great over all length is anything but a rarity. The yacht here illustrated is, as her name indicates, an experiment designed and built last year by Herbert F. Crosby of Osterville, Mass., for F. M. Randall of the Pavonia Y. C. Not only has the counter been lengthened and narrowed, but the fore overhang has been carried out to an excessive degree. The yacht, which is now owned by Vice-Com. A. C. Longyear and Mr. D. W. Mitchell of the Newark Bay Boat Club, has raced but little, being used for cruising, but was the winner in her class in the Labor Day regatta of the New York Y. R. A. last year. The ballast plan originally included an iron keel, but after a trial it was removed and replaced by wood and the weight stowed inside, the change being considered an advantage. The dimensions are as follows:

| | |
|---|---|
| Length, l.w.l | 18ft. 9½in. |
| Overhang, bow | 5ft. 7in. |
| Overhang, stern | 2ft. 8½in. |
| Length over all | 27ft. 1in. |
| Beam, extreme | 9ft. 9in. |
| Beam, l.w.l. | 9ft. |
| Draft | 3ft. ½in. |
| Draft with board | 7ft. |
| Freeboard, lowest | 1ft. 7½in. |
| Sheer, bow | 2ft. 5in. |
| Sheer, stern | 7in. |

The yacht is cat-rigged, the mast stepped just at the end of the l.w.l. She has a very roomy cabin with about 5ft. headroom and a good cockpit, which is high enough to be self-draining. The rudder construction is peculiar and by no means to be commended; the rudder stock is of cast iron, 2in. in diameter in the rudder trunk, with a square head, while below are cast two flanges, between which the blade, of 1½in. oak, is held and bolted. The yacht is fitted with both wheel and tiller.

## An Amateur's Effort.

*From the San Francisco Chronicle.*

IN the course of the next fortnight the Corinthian Y. C.'s fleet will initiate a new and curious member. It will be the little cutter Feu Follet, which has the distinction of being the product of one man's handiwork and patience.

Nearly four years ago Henry Gorter, a member of the Corinthians who is employed as a machinist by the city at the Corporation Yard, conceived the idea of building a yacht for himself and family. Being of an inventive turn of mind, and also particularly fond of boat designing, he proposed to build a yacht upon lines entirely of his own conception. His declaration that he would construct the craft himself, during such hours as he could spare when not at his place of employment, caused his friends to indulge in considerable pooh-poohing. They said it would be a life task. The fact that Gorter's home is on that dizzy height at the junction of Chestnut and Kearney streets, a point that has been appropriately dubbed the "jumping-off place," also caused the skeptics to snicker. But Gorter would not be discouraged and labored patiently upon his craft. He met with all sorts of obstacles, such as all amateur builders are bound to encounter, but the principal one came from his neighbors. His habit of rising at 4 o'clock every morning, and hammering, chopping and sawing until 7 o'clock, and on Sundays continuing the racket all day, caused a howl from those who did not relish having their early morning slumbers and Sabbath quiet disturbed. But the work went on, and to-day, instead of talking of tar and feathers, the neighbors are proud of their disturber. During the past month or so strings of yachtsmen and boatbuilders could be observed toiling up the steep hill every evening, their mission being to gaze and wonder at Gorter's odd-looking craft, for its species is quite rare here, and the Feu Follet's trial trip is being awaited with considerable interest.

The little boat is what her builder styles a beamy cutter, being a decided departure from the narrow English cutter lines. She possesses many of the characteristics of the American centerboard racer, and still is kept far enough from that type to be a genuine cutter. Her length over all is 29ft., and the waterline length is 21½ft. The deck beam measurement is 7ft. 10in., but still her greatest beam is to be found a foot or so below the deck line, giving her a vase-like appearance. The displacement is 5 tons. The keel is of lead and weighs 3 tons. It was cast by Gorter himself and he was over a month getting it in the shape he desired. The boat will draw 5ft. of water at the heel. The deck if of white cedar, as are also the topsides, while below the waterline the covering used is of Oregon pine. All the timbers are double-bend, steamed Indiana gray oak.

The Feu Follet will carry 800 sq ft. of canvas, which is an enormous spread for a boat of her dimensions. The boom is 26ft. in length, the gaff 18ft. and the hoist 19ft. The staysail is 16ft. at the foot. The jib is quite a small affair, as Mr. Gorter does not fancy large ones for cutters. The cockpit and cabin also give evidence of the builder's ingenuity and handiwork. Everything is fitted up for comfort, and the amount of room available is surprising.

When asked what he expects of his boat as regards her probable speed, Gorter smiles and says he hopes for the best. It is easy to imagine, however, that he expects some speedy work from her.

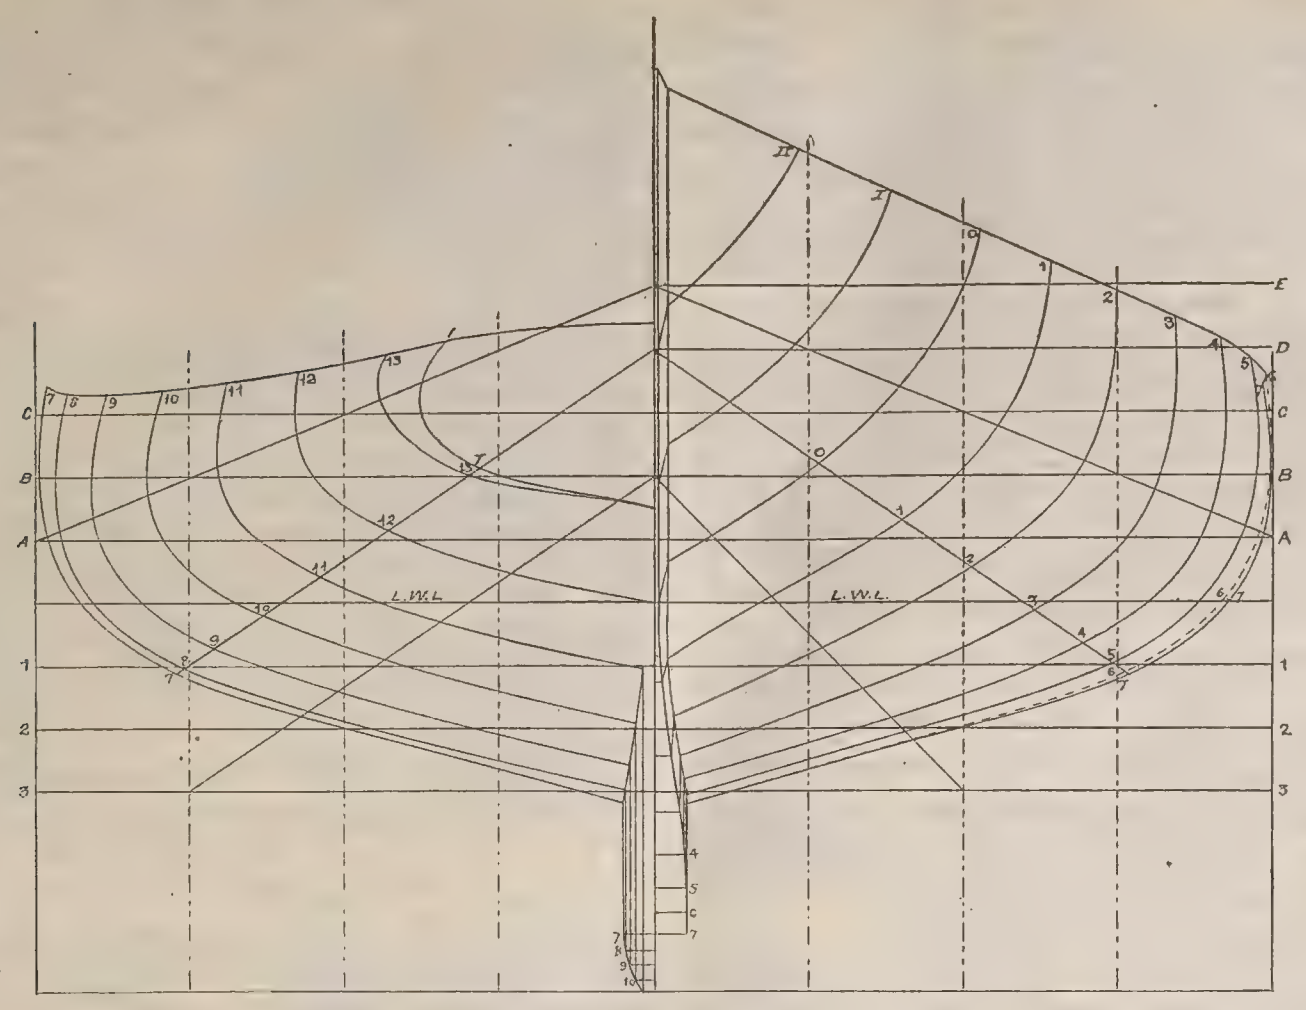
"I built her on lines that I felt ought to bring about good results," he said "but at the same time I did not intend her for racing exclusively. She will be pretty fast at all events. She will be absolutely safe, too, in any kind of sea or any kind of weather. It will be impossible to capsize her. The mast can snap off and her sails blow away, but the boat will always be found right side up. Regarding her design I will relate a singular coincidence: When I finished the plans and started to work on the boat it was with the belief that nothing like her was afloat. I had studied the plans of every great yacht known, and drew my own conclusions from them. But the season after I had begun my work the celebrated Gloriana came out, and when I got hold of a drawing of her lines I discovered immediately that she was almost a counterpart of my little boat. The Gloriana's designers had followed out the same theory that I had worked on and adopted—that was of avoiding all hollow lines above and drawing fine upon the angles. Straight lines predominate."

[From the pictures in the *Chronicle*, the yacht is of very good model, though not like Gloriana, she resembles more the Itchen boats, such as Madcap, and the Burgess 30-footers of 1889-90, with comparatively deep forefoot and short clipper stem. She is apparently a symmetrical craft, and very creditable to her designer and builder.]

## International Competition.

*From the Mail and Express.*

WE have had two or three interviews with returned pilgrims who went over with Vigilant, and there is one thing they all agree upon. They have no cause of complaint regarding the way they were treated in the races.



At one time while we were in the thick of the series the cablegrams contained much reference to jockeying, and complaints were put into the mouths of Capt. Haff and others connected with Vigilant. A word of caution was given in this column not to put too much faith in these statements, as they bore a decided imprint of being manufactured for the American market.

I do not know how it is that those who send news regarding international events from England cannot confine themselves to the absolute truth, unless it is that they think we can only accept defeat if accompanied by abuse of the other side.

This is the one unpleasant feature of international contests, and when American papers get abroad giving the facts as they were not with conclusions and criticisms based thereon, it only makes matters worse. Fortunately remembrances of these things do not last long, and we all come up smiling for the next engagement.

With regard to the sailing of Britannia, Capt. Haff strikes the keynote of all up and up competitions when he said in reply to questions as to fair treatment: "They were not giving anything away. We were treated with great courtesy, but they are shrewd fellows, and while we had nothing to complain of, we received no concessions that I know of."

One important point of the entire series of races except one is that these were not match races, such as we have been accustomed to for the America's Cup, but regularly advertised annual regattas. Mr. Lorillard, when he sent over his horses to run in England, did not ask that the Derby Stakes should be started at the Bushes, and Mr. Sanford, because Brown Prince had bad shoulders and could not run down hill, made no request that the judges' stand should be taken up to Tattenham Corner. Neither did Mr. Broeck, in the old days, request

BODY PLAN CAPE COD CATBOAT HIT OR MISS.

that, because his horses had been always started by drum tap, that style should be adopted when his horse ran for the Goodwood Cup.

In all regular fixtures of sport which are open to all there must be unchangeable conditions. If you don't like them, stay out; but if you go in and are beaten, don't kick on account of conditions which you accepted, should be the motto for all contestants, no matter at what game.

---

In matches, of course, there is every opportunity for seeking to enforce one's wishes as to conditions, and there is an old English maxim regarding this which is well to bear in mind, and that is, "A match well made is half won."

The Vigilant and Britannia had one match race for which conditions were mutually arranged, and the Vigilant was fortunate to be the winner.

The more of these international events we have the better able we will be to accept success or defeat gracefully, but at present foreigners accuse us of being altogether too much aroused by the necessity of being successful, approaching too often a beforehand assurance, which is hard to back down from should defeat ensue. MONITOR.

## YACHT NEWS NOTES.

On Sept. 29 a private match was sailed off the Indian Harbor Y. C. between Banshee and Crocodile, the times being:

| | Start. | Finish. | Elapsed. |
|---|---|---|---|
| Banshee, Henry Doscher | 2 27 33 | 5 01 07 | 2 40 34 |
| Crocodile, William Osborne | 2 26 42 | 5 21 11 | 2 54 29 |

Banshee, sailed by Mr. Franklin Beames, won easily.

Viva, steam yacht, John B. Herreshoff, lost her rudder on the night of Sept. 29 when off Eaton's Neck, in a storm. She ran into Huntington Bay under a jib and later shipped a new rudder at Carll's yard, Northport.

Mr. Arthur Binney has designed a cabin knockabout for a Philadelphia yachtsman, to be 38ft. over all, 25ft. l.w.l., 9ft. beam, 5ft. draft, with about 800ft. sail area. She will have a good cabin, with w. c. and galley, with a berth for one hand.

Mr. C. Fowler, of East Haddam, Conn., has ordered of C. L. Seabury & Co. a steam yacht 120ft. over all, 97ft. l.w.l., 16ft. beam, 9ft. depth and 6ft. 6in. draft. She will have a triple expansion engine and boilers, and is guaranteed to make 16 mile per hour for three consecutive hours.

Eleanor, steam yacht, has made 14½ miles on her trial trip.

One of the successful Solent 1-raters, Frou Frou, with a record of fourteen first prizes to fifteen starts, has been sold to Mr. G. Kirk, who will send her to America.

Vigilant and Lasca are now lying near to each other in Fay's yard, Northam, Southampton.

Among the new clubs formed this fall is the Green Lake Yacht Club of Green Lake, Wis. The club starts out with a membership of thirty-five, and with bright prospects for the season of 1895.

At the annual meeting of the Sodus Bay Y. C. held at Sodus Point, N. Y., on Sept. 21, the following officers were elected: Com., A. C. Bartle; Vice-Com., C. P. H. Vary; Fleet Capt., D. McNett; Sec.-Treas., F. J. B. LeFebvre, Sodus Point, N. Y.; Treas., A. G. Warren; Surgeon, Dr. F. L. Willson; Executive Committee, C. H. Perkins, J. M. Pitkin, Jr., T. E. Elliott, W. C. Burgess, F. C. Wickham; Regatta Committee, W. H. Cook, C. P. H. Vary, C. H. Hills, A. G. Warren, M. Morley.

### Zettler Rifle Club.

CYPRESS HILLS PARK, Oct. 7.—The Zettler Rifle Club held its bi-monthly shoot in this park this morning. The weather was fine and the light clear. The most of the regulars were on hand at an early hour prepared to contest every possible point in order to get the top score. From New Jersey came Dorrler, Hansen and Plaisted. From the Harlem district were Holges and Walther. The Williamsburgh contingent was well represented by Krause, Günther and Ross, the latter adding further honors to his reputation as an expert by making the good score of 1,114 points in 50 shoots.

The man target brought out the usual competition. Ross was high on this target, making a full score of 60 points. Scores:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| F C Ross | 23 | 24 | 24 | 24 | 24 | 21 | 23 | 23 | 23 | 23—232 |
| | 24 | 22 | 22 | 23 | 20 | 21 | 18 | 24 | 25 | 25—224 |
| | 18 | 21 | 23 | 23 | 25 | 23 | 21 | 23 | 22 | 22—221 |

| B Zettler | 19 | 19 | 18 | 15 | 23 | 23 | 19 | 21 | 21 | 23—201 |

Bullseye, 4in. center, 3 shots, possible 3: C. G. Zettler 2, H. Holges 2, B. Zettler 1, F. C. Ross 1, L. P. Hansen 1.

Man target, 3 shots, possible 60: F. C. Ross 60, H. Holges 57, C. G. Zettler 56, L. Flach 55, M. B. Engel 55.

### New Jersey Guardsmen.

The team match between companies A, B and C of the 2d Regt. N. J. S. N. G. for the Old Battalion Trophy was shot off on the Salls Haldon range, Paterson N. J., on Oct. 6. Company C won the honors and the trophy. Following the trophy match was a team match between Companies A and C, three men a side, for the lunch and refreshments. The Company C. team again demonstrated their shooting qualities by putting up the winning scores, 89 to 83. Scores:

Company C. Corp. Kniffs 18, Sergt. Nolan 22, Capt. Parker 16, Privt. Vorrace 20, Privt. Weston 17, Lieut. Van Walraven 19, Privt. Ranson 20, Lieut. Van Walraven 18, Privt. McCarthy 22, Sergt. Dietrich 21. Total 193.

Company A. Sergt. Brooks 19, Sergt. Hall 17, Mus Welcher 19, Lieut. Fairhurst 20, Privt. Retbeck 20, Privt. C. Gallagher 17, Privt. J. Gallagher 19, Privt. Foster 23, Privt. Blake 17, Corp. Newby 20. Total, 191.

Company B. Sergt. Shannon 14, Privt. Chandler 17, Mus. Daley 22, Lieut. Reynolds 17, Sergt. Robinson 17, Privt. Hunziker 18, Privt. Barmaur 20, Privt. Woods 19, Privt. Kniblo 19, Privt. Ladwig 22. Total 185.

### Cincinnati Rifle Association.

CINCINNATI, Oct. 7.—The regular shoot of the Cincinnati Rifle Association was held to-day on its range. Conditions were 200yds. at standard American target:

| | | | | |
|---|---|---|---|---|
| Gindele | 87 87 83 83 | Lee | 73 76 71 70 | |
| Weinheimer | 81 72 69 68 | Schmidlin | 47 39 48 50 | |
| Stegner | 64 57 57 62 | Topf | 60 65 57 53 | |
| Wellinger | 69 67 60 64 | Locker | 38 49 53 53 | |
| Hake | 59 59 63 49 | Drube | 69 62 50 51 | |
| Simon | 78 70 68 74 | | | |

### Greenville Rifle Club.

GREENVILLE, N. J., Oct. 6.—The weekly gallery shoot of the Greenville Rifle Club was held at the club headquarters last night. There was quite a large gathering of members in the club rooms, but the rifle competition was participated in by only twelve. The scores are appended: Collins 235, C. Boag 234, Purkess 239, Scheeline 236, J. Boag 240, Agneau 236, Chavant 235, Cherlock 232, Chase 230, Hill 220, Renker 221, Graef 215.

### Schlicht Rifle Club.

WEST NEW YORK, Oct. 2.—The Schlicht Rifle Club held its weekly gallery shoot Oct. 1. Medal winners: Geo. Schlicht champion medal 242, Jacob Diehl first class medal 239, Geo. Richert second class medal 229, Chas. Meyer third class medal 239. Scores: Jacob Diehl 239, Geo. Schlicht 242, H. Aufder Heide 212, Jacob Schlicht 227, Wm. Schlicht 214, Geo. Reichert 229, Fred. Lambrix 223, Chas. Meyer 239, Geo. Dorr 224, Aug. Tribout 200, Aug. Meyer 234, Capt. J. Dedrick 227.

### Hansen Defeats Watts.

NEWARK, N. J., Oct. 6.—The return match between L. P. Hansen, of Jersey City, and F. C. Watts, of this city, was shot off in the Schuetzen Park this afternoon. The previous match was shot on Sept. 22, 50 shots per man, and resulted in a victory for Hansen, with a margin of 11 points. The match to-day was a repetition of the first. The total score of both contestants in the first match was below the average of their usual work, and it was expected by the friends of each that in the second match they would make a better showing. The weather conditions were favorable, wind light and the atmosphere clear. The shooting of Mr. Watts was somewhat disappointing to his Newark friends, his total for the 50 shots being only 968 points. Hansen seemed to be in good form from the start and opened up a gap of 26 points on the first string. Hansen's total for the 50 shots was 1,063, beating Watts 95 points. Among the visitors who were present to witness the match were Wm. Hayes, J. T. B. Collins, A. Williamson, Geo. Varick, S Kastendick and Wm. Hughes. A fine lunch was served at the hotel following the match, the "Old Obadiah" paying the freight. Scores, 50 shots:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| L P Hansen | 18 | 22 | 22 | 24 | 23 | 19 | 24 | 18 | 17 | 18—205 |
| | 20 | 23 | 15 | 21 | 23 | 22 | 22 | 23 | 24 | 24—217 |
| | 20 | 24 | 23 | 21 | 21 | 23 | 24 | 25 | 20 | 20—221 |
| | 17 | 24 | 16 | 25 | 19 | 20 | 21 | 19 | 24 | 21—206 |
| | 23 | 24 | 23 | 18 | 19 | 22 | 22 | 22 | 21 | 20—214—1063 |
| F C Watts | 23 | 16 | 18 | 20 | 20 | 22 | 10 | 21 | 17 | 13—179 |
| | 17 | 24 | 22 | 21 | 24 | 22 | 15 | 19 | 22 | 20—205 |
| | 21 | 25 | 20 | 21 | 21 | 24 | 24 | 16 | 16 | 16 - 204 |
| | 18 | 20 | 18 | 21 | 21 | 21 | 21 | 22 | 22 | 12—194 |
| | 19 | 18 | 24 | 15 | 20 | 22 | 20 | 16 | 22 | 10—186— 968 |

### The New York Independent Corps.

THE New York Independent Corps, Capt. William V. Weber, held its practice shoot in the Glendale Schuetzen Park, L. I., on Tuesday of last week. The shooting house was well filled with the members of the corps. The competition on the targets was lively. On the man target B. Walther was first with 58, Wm. Hayes 57, Gus. Zimmerman 56, I. Martin 56, Geb. Krauss 55, J. Bittschur 53, G. Greiner 50, Ernest Fisher 48, J. G. Bauer 32, Aug. Schumacher 30.

On the ring target August Begeron was high, followed by Gus. Zimmerman, Wm. Hayes, I. Martin, B. Walther, Geb. Krauss, G. Greiner, Aug. Frank, J. Bittschur, J. G. Bauer, Aug. Schumacher and J. G. Halbe.

The next shoot will be the last of the season, and will be held Oct. 30. The prospect are that it will be a very interesting meeting for some of the members whose efforts to capture the season medals have resulted in very close or tie scores. Messrs. Zimmerman and Walther are said to be a tie for the man target medal. When Oct. 30 rolls around and it finds these two marksmen in the shooting house and in their usual form, there will probably be a first-class contest over that man target medal, and he who wins it will very likely have put up the full limit of the target (60 points).

### Columbia Pistol and Rifle Club.

THE Columbia Pistol and Rifle Club is noted for the number of excellent marksmen it has on its roll of membership. The members never tire of practice and regularly engage in contests with rifle and pistol. The Roos medal is one of the club's trophies, and now this bids fair to fall into the possession of one of the youngest shots, A. H. Pape. Sept. 23, in shooting with the rifle at a standard American target at Shell Mound Park Mr. Pape made the highest score yet, namely, 92 out of a possible 100 at 200yds. This places him ahead in the all-around shoot.

Mr. Pape broke the crack record with a target rifle and F. O. Young with a Springfield rifle on American target. Young succeeded in shooting nitro powder sutcessfully in his pistol.

For the Blanding pistol medal, all-comers, Dr. Rodgers made 93, F. O. Young 91, A. H. Pape 90, F. Gehret 89, P. Bohr 80, Lieut. F. M. Davis 82, F. Poulter 80.

For the Roos target rifle medal, all comers, A. H. Pape 91, P. Bohr 80, F. O. Young 80, John Peters 77, A. H. Kennedy 75, L. Barrere 74.

Glindeman Springfield rifle medal, all comers: F. O. Young 84.

Winners of cash prizes in all-comers' matches for three months ending yesterday: Pistol—Smith Carr 96, C. M. Davis 94, Dr. Rodgers 93, F. O. Young 93, A. H. Pape 93.

Rifle—A. H. Pape 92, F. O. Young 91, Dr. Rodgers 88, A. McBean 87, D. W. McLaughlin 87.

Musket—F. O. Young 84, F. Gehret 82, A. H. Pape 81, F. Poulter 80, Dr. Rodgers 73.

Siebe all-around medal up to date: A. H. Pape, pistol 97; rifle 92; musket, 81, total 270; F. O. Young, pistol, 94; rifle, 91; musket, 84, total 269; Col. Kellogg, pistol, 90; rifle 86; musket, 82, total 258; Dr. Rodgers, pistol 95; rifle, 88; musket, 73, total 256; F. Gehret, pistol, 90; rifle, 84; musket, 82; total 256. ROEEL.

### Excelsior Rifle Club.

JERSEY CITY, Oct. 3.—The Excelsior Rifle Club held its weekly gallery shoot at headquarters last night, six members participating. The scores are appended: W. J. Hennessey 241, L. P. Hansen 240, Wm. Hughes 239, D. Kastendick 236, Jas. Hughes 228, J. Binns 221.

## RIFLE NOTES.

The National Schuetzen Bund is sending out the first edition of its constitution and programme for the great festival which is to be held in July, 1895. This issue is in the German language and is intended for the German societies. We understand that an English edition will be issued soon and distributed among the English-speaking societies. We published the programme of prizes of this great festival several months since.

The Zettler Rifle Club will wind up its outdoor season shoot on Oct. 21. There has been some hard work on the part of the regulars to reach high position on the prize list. Fred. Ross boosted himself on to the top rung early in the season, and at the present time he is beyond the reach of any of his competitors. Holges, Flach, Schmidt, Busse, Hansen, Engel *et al.* have all got a grip on the next rung and each is hoping that the other fellow will lose his hold and drop off at the next shoot. Quite a number are having a tug of war for the privilege of a hold on the bottom. It's a clear case of hustle, and when the dust of this shoot is cleared away it is expected that the gallery ranges of the club will be another lively center of interest during the fall and winter. The shooting committee is dangling a most enticing bait before the vision of the members in the form of the appended programme. It might be to the interest of the rifle if some of the committees of other clubs would study this. Programme: Two hundred dollars donated by the club for members only. Entrance fee 20 cents for each target, 10 shots on 25-ring target. Each member will be allowed to shoot 5 targets on each Tuesday at 20 cents a target, after that club rates. Any .22cal. rifle, short cartridge. No practice shots allowed. Champion trophy—The member making the best score on his first target on each practice day will be entitled to wear this trophy until the next practice day. This trophy shall become the property of such member winning it the most number of times during the season. In case of ties, the scores to count for each. Special prize given by the club to the member making highest individual score during the season. In case of ties this prize to fall back to the club. Special prize No. 1—A fine gold locket will be presented by the Zettler Bros. to the member making the best 50 targets during the season. Special prize No. 2—A fine gold medal valued at $25 to the member making the following scores during the season: most 247, most 245, most 240, most 235. Ties to be shot off by 50-shot score. The season shoot opens on Tuesday, Oct. 23, 1894, and will be continued every Tuesday, from 9 A. M. to 12 P. M., and closes on the last Tuesday in April, 1895. Ring target prizes—Seventeen prizes, ranging from $30 to $2. Should a member be absent at a shoot, he has the right to shoot 10 targets at the following shoot not consecutive. Should he be absent at two consecutive shoots, he will be allowed only to shoot 5 targets.

While we are on the subject of the Zettlers we would suggest to our brother riflemen who have never visited this famous club at its headquarters that an hour or more spent in the home of the experts would not be thrown away, especially so if the visit is timed on a Tuesday night between November and April. On such nights they are generally "At home."

We understand that the Leonard Smokeless Powder Co. is about to put its powders upon the market, when it will make an earnest effort for the patronage of the American rifle and shotgun shooters. The fact that it is the product of American brains and capital will probably create no prejudice against its use. Among the shotgun shooters nitro has become a fixture. Our riflemen are only waiting to become convinced, when they too will fall into line. Here is a score of ten shots, off-hand, that we saw made with nitro and afterward examined the shots in the targets; eight of the ten shots were in the 8in. bull; the two sevens were nippers and came from imperfect holding. The score, while not brilliant from an expert point of view, shows what the possibilities are with the nitro now in the market. M. Herrington of the New York Rifle Club has been using nitro in his .38-55 Ballard all the past season and he claims that his scores average as good or better than previous scores made with the old reliable black powder. Dr. Barber of the same club, who is now spending a month in the woods of Maine, before starting on his trip loaded up his shells with nitro and the Winchester copper bullet. A report of the Doctor's experience with this cartridge while in the woods will be a matter of interest to us all.

An ex-military officer (retired) during an interesting chat on the rifle and its use, gave us a hard nut to crack in the form of a query as to why the United States Ordnance Board after developing the Kraig-Jorgensen rifle should handicap its efficiency by such crude sights as have been fitted to this arm? We confess our inability to reach the kernel in this query. Some wag expressed the opinion that this sight was the only one that would stand the necessary sand and rust test, and it must be adopted as a part of the "up to date" military arm.

One of our Connecticut correspondents who is interested in the coming champion match, writes as follows: "I see there is a 100-shot match brewing. One of your contemporaries states it is for New York and New Jersey men. Does this mean that Connecticut is to be left out in the cold? Or will you take us in if we come down?" In answer to this query, we would say that this match is open to all riflemen from Maine to Alaska.

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

## FIXTURES.

Oct. 10.—Little Rock, Ark.—Little Rock Shooting Association's fall tournament; targets. Paul Litzke, Sec'y.

Oct. 10-11.—Interstate Manufacturers' and Dealers' Association's tournament, under auspices of the Palmetto Gun Club, at Charleston, S. C.

Oct. 11.—Lewiston, Me.—New England Shooting Association championship tournament, under auspices of Androscoggin Gun Club.

Oct. 12-13.—Lancaster, Pa.—Lancaster Gun Club's fall tournament; targets first day, live birds and targets second day. H. O. Leachy, Sec'y.

Oct. 13.—Ashbourne, Pa.—Ashbourne Gun Club; targets. E. Bilting, Jr., Sec'y.

Oct. 16-18.—Des Moines, Ia.—Highland Gun Club's fourth annual tournament; live birds and targets; $300 in seven guaranteed purses.

Oct. 18-19.—Elizabeth, N. J.—Elizabeth Gun Club's annual tournament. Live birds second day; lunch and loaded shells on the grounds.

Oct. 20-22.—Blooming Grove Park Association's fall tournament; live birds, targets, rifle shooting and fly-casting.

Oct. 22-24.—Emerald Gun Club tournament, at Dexter Park. Targets and live birds. Dr. G. V. Hudson, Sec'y, 9 Madison street, New York.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica

Oct. 25.—Richmond, Me.—New England Shooting Association championship tournament, under auspices of Richmond Gun Club.

Oct. 30-31.—Marion, N. J.—Tournament at Marion, N. J., complimentary benefit to Mr. C. H. Townsend; promoters, M. F. Lindsley, W. F. Quimby, Al. Heritage and T. H. Keller; targets.

Nov. 6.—Rye, N. Y.—Rye Gun Club's all-day shoot, commencing at 9 A. M.; live birds and targets. E. J. Pope, Sec'y.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

Jan. 17-19.—Hamilton, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

April 3-5.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York.

May 14-16.—Dayton, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

June 19-21.—Cleveland, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The Elizabeth (N. J.) Gun Club's two days' tournament, Oct. 18 and 19, promises to be a big shoot. The first day will be for targets, the second day live birds. Nobody will be barred, everybody welcome. The price of targets (2 cents) will be deducted from the purses; twelve entries or less, three moneys; over twelve entries, four moneys; ties divided. Shooting commences at 10 A. M. each day. Lunch and loaded shells on the grounds. The Elizabeth Gun Club was organized ten years ago, and has been shooting quietly ever since, without making much noise in the shooting world. It has lately taken a new departure, having enlarged its club house, erected a fence on the 50yds. boundary for live bird shooting, and built a brick pit securely screened for the rapid-firing system. The shooting grounds are only ten minutes' walk from the main depot. A stage will be at the depot on the arrival of trains, to convey shooters to the grounds. The club guarantees fair treatment and a good time to all shooters.

Robert E. Chetwood, Pres.

As claimed in the fixtures for 1895, we beg to announce our fifth annual tournament on Jan. 17, 18 and 19, 1895. We have this year added to our regular programme of $1000 in gold, two events: One an international team race between Americans and Canadians; rules governing this race will appear in our official programme later. The other is a stake race, $15 entrance; to be paid as follows; $5 on Nov. 1, $5 on Dec. 1, and $5 on Jan. 1. On Jan. 1, the nominee must name his competitor Any nominee missing one payment will forfeit his claims. This race of course will vary in magnitude according to the number of entries made; but we feel confident, from our former tournaments, that we shall have at least 100 entries, making a purse of $1500, and this will be divided into 5 moneys; 30, 25, 20, 15 and 10 It will be a 15 live bird event. As this is the first that has been introduced here, we trust that the shooting fraternity will help to make it a success. All communications addressed to J. W. Bowman, Sec.-Treas. Hamilton Gun Club, will receive prompt attention.

For the Highland Gun Club's tournament, to be held at Des Moines, Ia., on Oct. 16-18, a capital programme for both live bird and target events has been prepared. On Oct. 15, the day preceding the tournament, two special matches have been arranged. At 1 P. M. John Georgeson and H. J. Wilson will shoot for the State championship and a purse of $100 The conditions are 25 live birds, 15 targets and 5 pairs of targets. On the conclusion of the above match, Dr. Carver and C. W. Budd will shoot a race at 100 live birds per man for a purse of $400.

The Lancaster Gun Club will hold a tournament at live birds and targets on Friday and Saturday, Oct. 12 and 13. The programme and details of the shoot are given elsewhere. This tournament ought to be a successful one; anyway it's sure to be an enjoyable one, as the Lancaster boys know how to entertain their friends.

There will be no more shooting for the Riverton challenge plate until the latter part of this month. Mr. R. A. Welch, the holder, is now in Colorado on a hunting trip but expects to be back by the last week of October, when he will shoot a race with Mr. Thos. L. Dando, of Philadelphia, who is the next challenger on the list.

Columbia, Pa., Oct. 2.—At the regular meeting of the Rod and Gun Club, held last evening, the following officers were elected to serve for the ensuing year: President, Fred'k Bucher; Secretary, Jere. Koch; Treasurer, Edwin Stair; Quarter Master, Jacob Rothschild; Master of Transportation, Charles Baker.

The Boston Shooting Association at the Wellington range on Oct. 3, had a good day at targets, no less than 3578 targets being thrown in the 24 events. In these 24 events just 29 straight scores were tallied divided as follows: Jones 5, White and Herbert 4 each; Dickey and Wheeler 3 each; Climax, Snow and Leroy 2 each; Stanton, Sanborn and Rhuel 1 each.

Mr. W. R. Hobart is back again in this city after a successful western trip. Mr. Hobart will, for the balance of the year, attend to business in the vicinity of New York and will, incidentally, boom the fifteenth annual tournament of the South Side Gun Club, of Newark, N. J., set for New Year's Day.

The two days' tournament at targets, on Oct. 30 and 31, at Marion, N. J., promises to be well attended. Nothing of a local nature will conflict with the above dates, and the object, a complimentary benefit to Mr. C. H. Townsend, the late trap editor of Forest and Stream, is one that meets with the approval of the shooters around New York.

The last of the '94 series of tournaments promoted by the Interstate Manufacturers' and Dealers' Association is being held this week in Charleston, S. C. The Association's review of the work done during the past season will shortly be issued, and should contain some interesting reading matter.

Capt. Brewer is booked to shoot Mr. Cummings, a Lancaster, Pa., amateur, a race at 50 live birds per man, during the tournament on Friday and Saturday, Oct 12 and 13. He will also shoot a race at targets with a prominent local shot during the two days.

Capt. Mascroft of Worcester, Mass., is holding his Parker gun very straight just now. While at the score at Newburg he requested perfect silence—"Gentlemen, I'm a little nervous"—but he killed the birds all the same.

The Emerald Gun Club's three days' tournament at targets and live birds at Dexter Park, L. I., on Oct. 22, 23 and 24, is engrossing the attention of the New York and New Jersey shooters. Massachusetts and Pennsylvania will have representatives there also.

The South Side Gun Club, of Newark, claim New Year's Day Jan. 1, 1895, as the date for their fifteenth annual New Year's Day tournament; all day shoot at targets; W. R. Hobart secretary.

Was this a typographical error? Clipping from a Western paper: "J. A. R Elliott and Dr. W. F. Carver have signed an agreement to shoot another series of three matches at live birds for the *windshot* championship of the world."

Eddie Hill and B. C. Kuser, both of Trenton, N. J., will shoot a match on Thursday next, Oct. 11, at Yardville, N. J. The conditions are 100 live birds per man, 30yds. rise, 50yds. boundary, American Association rules to govern, $100 a side.

Capt. A. W. Money, F. Van Dyke and "U. M. C." Thomas left New York on Monday night at 9, en route for the Charleston tournament.

They're after Dr. Carver's scalp and purse in Chicago. Read what Forest and Stream's Western correspondent has to say about it.

The West Newburgh Gun Club's tournament last week was a most enjoyable one and the attendance quite satisfactory.

Carver and Elliott shoot a series of three matches on Oct. 11, 12 and 13, Thursday, Friday and Saturday of this week. Edward Banks.

### Stroudsburg Gun Club.

Stroudsburg, Pa., Oct. 8.—Inclosed you will find the scores made at the Stroudsburg Gun Club tournament on Oct. 4 and 5 The following shooters were present: James L. Smith, Geo. W. Smith, Charles Rittenhouse, Thos. Young, L. G. Salmon, L. C Ayers, of Hackettstown, N. J.; E D Miller, Springfield, N. J.; M. F. Lindsley, West Hoboken, N. J.; Harry Thurman, Philadelphia, Pa.; Wm. Stroth, West Pittston, Pa.; Mr. Hyde, Ridgeville, N. J.; Yard Brise, Trenton, N. J.; John W. Hoffman, German Valley, N. J.; Geo. W. McMurtrie, Belvidere, N. J.; James A. Graves, A. H. Transue, A. J. Smith, Delaware Water Gap, Pa. Others on the score are members of the Stroudsburg Gun Club. The shooting on Friday was good considering the high wind blowing directly in the faces of the shooters. Mr. Hoffman made a run of 90 straight and finished his score with 99 out of 100 at unknown angles on Thursday afternoon. Scores:

*First Day.*

No. 1, 10 targets, 50 cents entrance, known angles: M. E. Miller 7, C. M. Brownell 8, H. W. Kistler 7, Wm. Stroh 8, Harry Thurman 3, J. L. Purington 7.

No. 2, 10 targets $1 entrance: Brownell 4, Thurman 8, Stroh 10, Miller 5, Kistler 6, Purington 9.

No. 3, 10 targets, $1 entrance: Brownell 8, Coolbaugh 5, Miller 7, Thurman 8, Kistler 5, Stroh 3.

No 4, 15 targets, $1 50 entrance, known angles:

| | | | |
|---|---|---|---|
| J W Hoffman | 110111011011111—12 | M E Miller | 010111110101011—10 |
| J L Smith | 011001110010110— 8 | Brownell | 111100110000110— 8 |
| W Stroh | 111101001100011— 9 | Thurman | 101101111110111—12 |

No. 5, 15 targets, $1.50 entrance, unknown angles: Brownell 14, Hoffman 15, Smith 7, Thurman 9 Stroh 13, Purington 9.

No. 6, 20 targets, $2 entrance, unknown angles:

| | | | |
|---|---|---|---|
| Hoffman | 11101111101111001111—16 | Thurman | 11111111101100000011—13 |

No. 16, 10 targets. known angles, $1 entrance: Hoffman 10, Brownell 8, J. L. Smith 8, Transue 4, M. E. Miller 6, Purington 8. M. E. M.

### Shooting at Allentown.

Allentown, Pa., Oct. 3.—The regular monthly shoot of the John F. Weiler Gun Club took place yesterday afternoon at the club's grounds, Manhattan Park. The medal shoot resulted as follows, 25 targets per man:

| | |
|---|---|
| Ulmer | 11111011011011111100111111—20 |
| Sanger | 11110111110110111011111011 20 |
| Gillette | 10111110111111101110111011—20 |
| Brey | 11111111111011111111111010—22 |
| Miller | 11110111111001111101'0110—19 |
| Benning | 11111101111111111111111011—22 |
| Mazurie | 11111111111110111101111101—21 |
| Zellner | 01111101111111011110111011—20 |
| Hohe | 01101111111011101111101110—19 |
| Boyer | 10011111111011110111110101—19 |
| Killingler | 01111011110111110110110l—18 |
| Grimm | 10110111110110101010111110—17 |
| R Moore | 10011110111111101111110111—20 |
| S Weiler | 11011101111101101110111011—19 |
| Acker | 01111011110111111101111101—20 |

In the medal shoot Brey and Benning tied; Mr. Brey refusing to shoot off the tie the captain awarded the gold medal to Benning. Mazurie got the silver trophy.

The live bird match resulted as follows:

| | | | |
|---|---|---|---|
| J Weiler | 10101—3 | Klingler | 21212—5 |
| Ulmer | 12022—4 | Mazurie | 21211—5 |
| Benning | 11212—5 | A Weiler | x0222—4 |
| Benner | 11220—4 | | |

Another live bird match ended with the appended score:

| | | | |
|---|---|---|---|
| J Weiler | 11221—5 | S Weiler | 02221—4 |
| Benner | 2-10:—4 | Klingler | 00220—2 |
| Ulmer | 10100—2 | | |

Chas. F. Emerson.

## WESTERN TRAPS.

Chicago, Ill., Oct. 4.—Mr. J. M. Robinson, all the way out in Mendocino county, Cal., writes me as below:

"I see by a recent issue of my Forest and Stream where Mr. Bartlett had been entertaining the multitude at a tournament with fancy shooting, also where Mr. Brewer had been entertaining in a similar manner some time previously.

"Will you be so kind as to let me know what kind of fancy shooting these men do? What do their tricks consist of?

"When one is attending those tournaments what is the best, neatest, most convenient and most popular case to carry one's gun in? Your opinion, please. And, do the first-class shooters provide themselves with ammunition before attending these shoots, or obtain it on the grounds?

"I am practicing on some fancy shooting myself and expect to give something new, but do not know what others are doing of late.

"I see by the announcements for 1895 that the present shooting craze is likely to continue for some time to come. Supposing that I should go that way and get right in the midst of your hottest tournaments, do you think the boys would do anything to me?"

The fancy shooting of Brewer, Bartlett, etc., consists chiefly in rapid work with the repeating shotgun. Capt. Brewer uses the Winchester repeater, while Capt. Bartlett shoots a Burgess repeating shotgun. In this rapid work three, four and five targets are thrown into the air at once by an attendant; very frequently all five targets are pulverized before they reach the ground Capt. Brewer also shoots at targets thrown in the air while prone on his back, and breaks them, too. With the shotgun upside down or held sideways it's the same thing. Capt. Bartlett's specialties are, among others, two that require great quickness. In one he places a loaded shell in the magazine, an empty one in the chamber; he then ejects the shell with a kind of forward throw and blows it out of sight with the other shell which he has pumped into the chamber. In another he hands his loaded gun to an attendant, throws a block of wood into the air, turns a "flipper," takes his gun and pumps three or four loads into the block of wood before it reaches the ground.

The leather-mutton leg case, with division for stock and for barrels, and provided with shoulder-trap for carrying, is at present the most popular gun case. Shooters such as attend the tournament circuit usually have their own regular loads sent from home or factory to the grounds ahead of them. At nearly all big shoots good nitro ammunition can, however, be had on the grounds or in the town. Shooters are superstious about their loads; if they change ammunition and miss, they lay it to the load.

As to what the boys would do to a new man who appeared among them, I can not say. It would all depend on the man. If they didn't get his wealth, he would be a dandy. I would not counsel Mr. Robinson to come East to attend tournaments expecting to make any money now. Even the best shots don't make money. A novice would almost certainly lose heavily.

"Evil Spirit," et al.

The Chicago shooters will have an opportunity to see Dr. Carver in a series of live bird matches here. He has been challenged to shoot 100-bird races with Eddie Bingham, Abe Kleinman, George Kleinman, J. Smith of Evanston, J. A. Ruble and R. S. Mott. The money is said to be waiting to bind each match. It would seem that there are many Chicago people willing and eager to tread on the "Evil Spirit's" generous coat tail. I hope some or all of the matches will be shot and that we shall see some good races out of the lot.

Budd and Carver would draw well here.

In Chicago.

Dr. Lenow of Little Rock, Ark., is in the city this week and has allowed his Purdey gun to get acquainted with some of the J. Watson brand of birds.

Mr. C. E. Bisson informs me that his 12 years old son, the well known boy rifle shooter, tried his hand last week for the first time with the shotgun at live birds. He shot a 16-gauge with 2½drs. nitro and 5/8oz. shot, and scored eight out of ten. E. Hough.

909 Security Building, Chicago.

### Trap at San Antonio.

The closing shoot of the season for the San Antonio Gun Club took place at the Lakeview grounds, on Sept. 30. The attendance was good and the shooting fair. As has been predicted by the Forest and Stream shooting crack for Texas, Mr. I. N. Rothwell was an easy winner for the first class trophy for 1894; Mr. W. S. Smith, a very worthy young shooter, is proud of the capture of the second prize. The prizes are two guns, a Lefever and an L. C. Smith. Mr. Rothwell was awarded the Lefever, the Smith going to its namesake.

At the prize shoot, Mr. Rothwell jocularly stated that in order to make his victory complete, the committee in charge ought to put up a gun case as first prize so that he could have an opportunity of placing the trophy gun in new clothes. The suggestion was acted upon, and now the Lefever 12-gauge is safely esconsed in a nice case. Mr. Rothwell, after winning first in the prize shoot, then distinguished himself by closing the season with a grand winning in the trophy shoot (which he did not need) by the handsome score of 27 out of 20 singles and 5 pairs, thus having 7 winnings to his credit for the season, his closest competitor having but four.

Score, prize shoot at 30 singles: Veith 20, McVicker 20, W. T. Smith 21, Barr 17, Rothwell 25, Thiele 21, France 17, Eppstein 14, Wagenfuehr 23, Shields 16, Learn 19. Paris 14, Grossmann 24, Vollbrecht 16, Epp 24, Cann 17, Rahmsdorf 12, Prescott 14, Sengg 20, G. C. Smith, Jr. 17, Scudder 20, Pancoast 19.

Rothwell alone with 25 was first; Grossmann and Epp tied for second, a silk umbrella, and they concluded to divide the use of the article for an indefinite period; Wagenfuehr came in for third, and is now the happy possessor of a camping outfit; Thiele beat Smith out of a hunting coat in the tie shoot for fourth; Veith, McVicker and Sengg tied for and divided fifth, a cleaning outfit; Learn and Pancoast divided sixth; D. P. Barr shot out France. Cann and G. C. Smith for seventh; the eighth prize was divided by Shields and Vollbrecht; Eppstein, Paris and Prescott divided a bottle of rye for ninth, and Rahmsdorf took tenth as his share.

No. 2, for trophy, 20 singles and 5 pairs: Shields 18, Rothwell 27, W. S. Smith 19. Grossmann 16, Cann 11, Pancoast 24, Thiele 16, Sengg 14, G. C. Smith 11. France 13, Wagenfuehr 15, Barr 16, Vollbrecht 14, Paris 10, Learn 24, Epp 17. Texas Field.

### Rye Gun Club.

The first regular shoot of the club was held on the club grounds on Thursday afternoon, Oct. 4 The programme was successfully carried out with twelve members who attended. The club medal was won by J. A Budd, who will wear it until the next regular monthly shoot. The match of 10 birds between Capt. Doyle and P. Hodgins did not occur as expected, as Capt. Doyle was unable to attend. The club will hold an all-day shoot commencing at 9 A. M., Tuesday, Nov. 6 (Election day), and all shooters are cordially invited to attend.

No. 1, 3 birds: L E. Gamm 3, 12-Gauge 2, F. Field 2, J. Budd 3, S. Gedney 3, E. J. Pope 2, H. Billington 2.

No. 2, 3 birds: W. C. Lyon 3, L. C. Gamm 1, J. A. Budd 2, S. Gedney 2, F. Field 2, 12-Gauge 2, E. J. Pope 2

No. 3, 10 targets: H. Billington 1, L. E. Gamm 6, W. C. Lyon 4, J. Billington 4, S. Gedney 7, F. Field 5, 12-Gauge 2, E. J. Pope 10, J. A. Budd 8.

No. 4, 5 targets: L. E. Gamm 5, H. Billington 2, J. A. Budd 1, S. Gedney 2, T. Field 4, J. Billington, Jr., 2, W. C. Lyon 2, H. Lyon 1, E. J. Pope 4.

No. 5 birds: Lyon 2, 12-Gauge 2, Hodgins 2, Field 5, Budd 2, Pope 3.

No. 6, shoot for club medal at 10 targets; Budd and Lyon tie with 8 each; shoot off miss and out. Budd won:

| | | | |
|---|---|---|---|
| J A Budd | 1111111001—8 | J Billington, Jr. | 1111000011—6 |
| E J Pope | 1101010111—7 | H Billington | 1111011001—7 |
| L E Gamm | 1110101110—7 | P Hodgins | 0100000011—3 |
| S Gedney | 01111 0100—6 | F Field | 1011101011—7 |
| W C Lyon | 1111111001—8 | 12-Gauge | 0010100000—2 |

### Lancaster Gun Club.

The Lancaster Gun Club will hold a two days' tournament on Friday and Saturday, October 12 and 13, 1894. The first day at targets and the second day at live birds and targets. The club has made arrangements with Capt. J. L. Brewer, champion wing shot of the world, and other expert shots, to give an exhibition shoot each day. On Friday a member of the local club will shoot a match against Mr. Brewer at 100 targets. On Saturday a local expert will shoot against Mr. Brewer at live birds. American Shooting Association rules to govern. Dead birds belong to the club.

Programme, Friday morning; No. 1, 10 singles, $1.00; No. 2, 15 singles, $1 50; No. 3, 10 singles, $1.00; No. 4, 25 singles, $2 50; No. 5, 15 singles, $1.50. Saturday, live bird and target events to suit shooters.

H. O. Leachy, Sec.

*The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

## West Newburgh Gun and Rifle Club.

THE West Newburgh Gun and Rifle Club's annual fall tournament was held at the club's grounds at Gidney's Hotel, about three miles from Newburgh proper, on Oct. 3, 4 and 5, Wednesday, Thursday and Friday of last week. The tournament was a success, as all similar gatherings organized by this association have invariably proved to be.

The attendance of shooters from outside was flattering to the home club, while the members of that organization came up to the scratch in good shape and shot along with the visitors throughout the three days' programme. Among the visitors were: First and foremost, "Uncle Dan" Lefever, of the Lefever Arms Co., who shot as if his years were as nothing to him; Covill, representing the new Baker Gun; Capt. J. T. Mascroft, of Worcester, Mass., accompanied by his friend, Mr. Kennerson of that city; Capt. Lenone, always ready to make and shoot a match at live birds; F. Van Dyke, of New York, showing the boys what he can do with his Winchester repeater; E. D. Fulford, shooting well to the front, but experiencing some strokes of ill-luck at live birds; "Milt" Lindsley, of the American Wood Co., accompanied by his charming wife "Wanda," graceful and effective with her gun, and several others whose scores, together with those put together by the locals, made the pace quite hot enough for anybody.

Targets were used exclusively on the two first days, kingbirds being thrown in every event on the first day, and keystones on the second. Two sets of traps were used and, consequently, a large number of targets were thrown. The grounds which are located on the summit of a slight rise just in the rear of the hotel, affords a sky background, the mountains on the other side of the Hudson adding to the beauty of the scene, and not detracting in the least from a faultless background.

The officers of the club are: John J. E. Harrison, President; David Brown, Vice-President; W. C. Gibb, Secretary; J. A. Wood, Treasurer; and Geo. Taggart, Captain. The above named gentlemen, together with Messrs. H. C. Higginson, W. P. Rayland and A. Kissam formed the executive committee.

Mr. Taggart, the captain of the club, vice president Brown and secretary Gibb were indefatigable in their efforts to keep things moving, while Mr. Rayland, better known as "Rags," helped, with other members of the club, to round off any square corners that might have prevented the absolutely smooth running of the tournament.

Scores in the target events were as follows:

*First Day.*

No. 1, 15 targets, $1:

*Third Day.*

The third day was devoted to live birds. The traps were placed in front of the target pit, the edge of the hill being practically the boundary. In the conditions of the tournament nothing was said about the boundary limit but it might have read "Monaco boundary" and not been very far out of it. On the left side the rope which marked the boundary was just 29yds from No. 1 trap; on the lower, or right-hand side, it was something over 30yds. The wind, however, blew strongly across the traps from left to right, the result being that more "dead out of bounds" were scored to the right than to the left.

The birds were good, taking them as a whole; many were of the "corker" type, birds which tried the skill of the most expert shots present. No matter what kind of birds they were it made no difference to Mr. J. D. Taylor, a member of the West Newburg Club; he shot in fine form throughout the day, making a clean score in the programme events without a slobbering kill among them. "Wanda" was using loads that were too light for many of the fast drivers she drew, the birds getting away, although in many cases hit hard.

The following are the scores in the programme events:

In addition to the above an extra event at 7 birds and a private match were shot off. The 7 bird event, entrance $5, resulted as follows: E D. Fulford, Mascroft and Taggart 7; J. D. Taylor, Kenerson, Lefever, Van Dyke, Arnold and Dickson 6; H. C. H., Blue Rock and Kissam 5; Lenone, J. A. Wood, Stansbrough and Marantette 4; Wanda 3; Lindsley and Mitchell 2; W. Patton 1.

The match was as follows: Mascroft and Lenone, 10 live birds, $10 a side:

Lenone.....●'12022●10—6 Mascroft .....112202202●—7

EDWARD BANKS.

## Dayton vs. Brunswick.

DAYTON, N. J., and New Brunswick, N. J., are old rivals at the traps. Hitherto the Dayton men have carried off the honors. On Saturday last, Oct. 6, fifteen shooters, members of the Dayton Gun Club, arrived in New Brunswick shortly after mid-day, the programme being a team race, fifteen men a side, between the two clubs. New Brunswick couldn't get fifteen men together, thirteen being all that showed up. The result was that two of her men had to shoot a second score, the rule being that the lowest scores in the preceding squads should fill the vacant places. Mr. Oakley having left the ground early, Messrs. Van Nuis and Stevens were chosen; both men improved materially upon their previous scores.

The conditions of the race were 30 singles per man, 450 to the team, each man to shoot at 10 from known traps and angles, 10 at unknown angles, and 10 under expert rules, use of both barrels, second barrel break counting as ½. At everything known New Brunswick led by one target, scoring 103 to 102; at unknown angles New Brunswick gained another target, scoring 100 to Dayton's 99. Dayton, however, got a big bulge on the New Brunswickers in the last series of 10 targets at expert rules, scoring 98½ to their opponent's 86, winning the match by 10½ targets, with a total of 299½ to 289.

The way the race was shot was as follows: New Brunswick's and Dayton's first squads shot out their strings of 30 targets, New Brunswick getting a slight lead. This she increased to 7 targets by the time the second squads had shot their strings. Dayton's last three men had a big task to perform in picking up 7 targets out of 90, but they succeeded; they gained 3 at everything known and 5 at unknown angles, thus being one in the lead before they shot at expert rules. During this last series they scored 23 to their opponents' 12½, gaining 9½, and winning the match for Dayton by 10½ targets. Scores in the team race:

Conditions, 30 singles per man, 450 to the team, 10 at known traps and angles, 10 at unknown angles, 10 under expert rules, use of both barrels, second barrel break counting ½:

| | 299½ | | 289 |

Both before and after the team race a few sweeps for a nominal entrance fee were shot off, the following being the results:

No. 1, 10 targets: Carroll 7, C. H. Allen 6, Phillips 8, Van Derveer 5, Wadhams 8, G. A. Rule 8, Stevens 10, Barclay 6, Anderson 1, McDonald 6, Groendyke 5, Fisher 8, McDowell 10, Emmons 7, Farr 4, Edwards 8, Van Dyke 8, Phillips 9.

No. 2, 10 targets: Wadhams 7, Oakley 8, C. H. Allen 10, Pettit 9, Stevens 5, Barclay 9, Phillips 6, Van Dyke 8, Edwards 5, McDowell 7, Carroll 8, Fisher 7.

No. 3, 10 targets: Gunner 5, Mundy 7, McDowell 5, Allen 9, Wheeler 7, Van Dyke 9, Fisher 9, Bowen 8, V. S. Voorhees 8, Bailey 9, Edwards 8, Walker 8, Stevens 7, Raynolds 4, Van Derveer 0, J. S. Voorhees 5, Pettit 7, Van Nuis 9.

---

The Maplewood Gun Club has challenged the Boiling Springs Gun Club for the cup presented by Shooting and Fishing Publishing Company, now held by the Boiling Springs Club since their defeat of the Climax boys on Sept. 15. Although the cup belongs rightfully to the Boiling Springs men for the balance of this year, yet they are willing to accept the challenge of the Maplewoods provided the name of E. D. Miller, of Springfield, N. J., is expunged from their team; the Boiling Springs claiming that since Miller shot for the Climax Club in the contest above mentioned, he is hardly entitled to shoot with the Maplewoods.

## Shooting at Little Rock.

Little Rock, Ark., Sept. 28.—During the past month the following shoots have taken place here:

LENOW VS. DULEY.

Tuesday, Sept. 4, the pigeon match between Dr. J. H. Lenow and W. R. Duley took place. Duley lost his first bird, a hard left-quarterer, from No. 5 trap, dead out of bounds, while the doctor killed his first bird with one barrel and took the lead at the start, which he steadily increased, and when the race was finished he was 5 birds ahead of his opponent, though Duley had the misfortune to lose 4 birds dead out of bounds, while the doctor had but 1. The day was an extremely hot, sultry one, and the birds were a fair lot considering the weather, a little slow in starting, but quite fast when once on the wing. The doctor shot a 7¾lbs. Purdy ejector gun, 3¼drs. of E. C. powder, 1¼oz. of No. 7 chilled shot, in U. M. C. Co.'s Trap shells. Duley shot a 7½lbs. Smith ejector gun, 3¼drs. of hard grain Schultze powder, 1¼oz. No. 7 chilled shot, in U. M. C. Co.'s Smokeless shells. Conditions, 25 pigeons per man for price of the birds, American shooting rules to govern; King's automatic traps were used:

Duley.....•21211200•12102121•111•00—16
Lenow.....1111221101011102•212211112—21

LENOW VS. DICKINSON.

Dr. J. H. Lenow is very fond of pigeon shooting, and is never so well satisfied as when he has a match on with some one. He is ready to shoot any of the local shooters a pigeon match for the price of the birds, but is averse to shooting for money, and has met and defeated all of the local shooters who are in his class and who shoot pigeons for glory only. After endeavoring in vain to get on a match with some one in his class he went out of it, as the saying goes, and bantered John Dickinson for a match. The latter informed him that he would shoot him a race on the following conditions: Lenow to shoot 28yds. rise and Dickinson at 32, each to use 12-gauge guns. After considering the proposition for some time the Doctor finally accepted it and the match took place Tuesday, Sept. 18.

The day was an ideal one for the sport, with a good stiff breeze to help the birds, which were of the finest quality. When they had shot 10 birds apiece the race was a tie, but after this Dickinson struck his gait and lost only 2 birds of the remaining 15, one of them dead out of bounds, this bird he knocked down apparently stone dead with his first barrel, and the dog was sent to retrieve it; when he had got almost to it, it rose and flew over the dead line, and there fell dead, the shooter in the meantime having left the score. Dickinson was also handicapped by his gun, which on the discharge of the first barrel would jar safe, this caused him to lose a bird or two in the early part of the match, as on several occasions he was unable to use his second barrel. The Doctor did not shoot up to his usual form, and after the tenth round was not in it. Instead of improving he fell steadily off and was beaten by 7 birds Lenow shot the same gun and load as in his match with Duley. Dickinson shot an 8lbs. hammerless gun, 3½ drs. of hard grain Schultze powder, 1¼oz. of No. 6 chilled shot, in U. M. C. Co.'s Smokeless shells.

Conditions: 25 live pigeons per man for the price of the birds, American Shooting Association rules to govern, Lenow to shoot at 28yds. rise and Dickinson at 32yds.:

PULASKI COUNTY MEDAL.

The following scores were made in the last two contests for the Pulaski county medal. The attendance at the last two medal contests has been rather slim, only six shooters competing for the trophy each time Tuesday, Sept. 11, the weather was cool and cloudy, with a good stiff breeze blowing from the northwest. Dr. F. L. French won the medal on 41 out of 50. He was the only man of the local crackerjacks to put in an appearance, and had only the awkward squad to contend with. As the scores show, he was a long way ahead of his nearest opponent when the race was over. Conditions, 50 singles, unknown angles:

Francis.....11111110101110011101111111111111101110111111101011111—41
Duley.....00011110111011101011101001101100101111111111100011—32
Schaer.....11100000110001100111011100001100101100011000000 1—22
Baise.....10001101100021111111011010111010011101100010110101 1—30
Carleton.....00001100100000010000000000011011000010000000011—11
Drake.....01101011110010091110000000011111010000111110101 10—25

The contest, Tuesday, Sept. 25, was a close and interesting one, being hotly contested from start to finish. It was won by R. F. Baise with 42 out of 50; his victory was a pleasant surprise to all the boys. Forty-two out of 50 under the existing conditions was really a good score; the traps were set to throw a low bird and as hard as possible, while the strong north wind that was blowing right across the traps made their flight very erratic; the angles were very acute. The weather was perfectly clear and quite cool. This had a tendency to create a desire to be afield with gun and dog rather than smashing saucers, while not a few remarked that if such weather prevails next week they would be sure to be "among them" (the quail), as the season opens October 1

Condition of medal shoot, 50 singles, unknown angle:

French.....11101011011111111111111111111111111111111010001110—38

Paul R. Litzke.

## Live Birds at Morristown.

A dull sky, threatening rain every minute, put an effectual damper upon the attendance at Frank Class's Park Hotel at Morristown, N. J., on Wednesday afternoon, Oct. 3. Class had some 250 to 300 birds in his coop; enough for an afternoon's amusement. Only five shooters, however, took part in the sweeps, two of the five hailing from Trenton—Charlie Zwirlein and Eddie Hill. Class, Timmons and John Leonard formed the home contingent. Before the sweeps commenced Zwirlein and Hill shot at 10 birds each for practice, Zwirlein killing his 10, Hill's ninth dropping dead out of bounds. Class next tried his hand and knocked over 5 in succession, using but one shell to each bird. The pigeons were not of the kind usually termed hard, but there were some corkers among them. After looking over the birds in the crates, Hill bet Zwirlein that he could kill any five birds picked from those on the ground; the consideration was—"liquid refreshments for the crowd." Class picked the birds carefully, but Hill nailed each one with his first barrel. Among them were two drivers, two right-quarterers and one left-quartering incomer. During the afternoon's shoot Hill shot at 50 birds, killing 47 and losing one dead out of bounds. "Scotty," of course, did the trapping, while Class's Sancho, who made a name for himself at Dexter Park last April, retrieved the birds. Scores in the sweeps were as follows:

*Trap score type—Copyright, 1894, by Forest and Stream Publishing Co.*

## "Trap-Shooter's Ready Reckoner."

There has just come from the Forest and Stream press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Harrisburg Shooting Association.

The following scores were made at the annual fall tournament of the Harrisburg Shooting Association on Sept. 27 and 28, bad weather preventing a better attendance:

*First Day.*

No. 1, 10 targets, $1 entrance: J. H. Worden 10, Corcoran 7, Longnecker 7, Brewster 7, Burnham 5, Hobart 4, Krueger 8, Brewer 10.

No. 2, 15 targets, $1.50 entrance: Worden 12, Brewer 13, Krueger 15, Burnham 5, Corcoran 10, Hobart 9, Brewster 12.

No. 3, 15 targets, $1.50 entrance: Krueger 11, Brewer 11, Corcoran 12, J. H. Worden 12, Burnham 11, Brewster 12, Hobart 11, Longnecker 12.

No. 4, 20 targets, $2 entrance:

Extra No. 4, miss and out, $4 entry, 11 entries: Brewster, Wellington, Denny and Worden killed three birds and divided:

## Lynchburg Scores.

Lynchburg, Va., Oct. 2.—To-day the Gun Club held a shoot at the Fair grounds under the auspices of the Fair Association, it being the annual exhibit of the Agricultural and Mechanical Association. On account of bad weather and the hurry and bustle of building new exhibition grounds the club had but a few days to arrange for the occasion. The fixings were all put in place, however, in good time, and the programme arranged for the occasion was carried out. The shoot, with one or two slight mishaps, passed off in good shape. The day was bright and not too warm, the company excellent, and being determined to enjoy the day, had everything their own way. The visitors, who were made most welcome, were Messrs. Fonda, Daniels, Gilmer and Jordan, of Greenboro; Col. Anthony, of Charlotte, N. C.; Tell Mitchell and E. Taylor, of Lynch's Station; Chambers, of Pamplins, and Ficklin, of Cumberland, Va. After shooting the Fair programme all hands went to the club grounds at Riverment and finished the day.

The programme included nine 15-target races, $1.50 entrance, and three 20-target races, $2; everything was shot at known traps, unknown angles. Scores:

## Brewer to Carver and Elliott.

New York, Oct. 4.—*Editor Forest and Stream:* I notice in the New York *Sun* of Oct. 1, that Dr. Carver and J. A. R. Elliott are to shoot again for the "World's Championship," on Oct. 11, 12 and 13, at Kansas City. As Mr. Elliott has just won from the Doctor, what they claimed was the "Championship of the World," may I be allowed to ask if the proposed shoot is for the championship of Mars or some future world? If it is, why not make it an open event and let us all enter, champions, ex-champions and would-be champions, so as to determine who is to go to this strange world duly credited as the champion pigeon shot of this world of ours. I always thought that I was the champion wing shot of this sphere, but it seems that I was mistaken and that all the champions of the world, and of the world to come, are to be settled by contests between these two indiviuals.

I wish to call attention to the fact that I have a forfeit of $150 deposited in the hands of the *American Field*, and am anxiously awaiting the naming of the dates and places when I can have my little say as to the championship which I have ever been ready to defend since 1888. Now I once more ask the Doctor to name dates and places, giving me two weeks notice, and thus show the sportsmen of this and other countries that he really means to shoot me a match.

J. L. Brewer, Champion wing shot of (this) world.

## Boston Shooting Association.

Wellington, Mass., Oct. 3.—The following scores were made in the tournament of the Boston Shooting Association held here:

No. 1, 10 targets: Herbert and Dickey first, Jones and White second, Wheeler third.

No. 2, 10 targets: Jones first, Wheeler, Herbert, Rule and Dickey second, White third.

No. 3, 5 pairs: Rule first, Dickey and White second, Herbert and Wheeler third.

No. 4, 10 targets: White and Rule first, Jones second, Herbert and Dickey third.

No. 5, 15 targets: White first, Herbert second, Rule and Dickey third.

No. 6, 5 pairs: Herbert, Wheeler and Climax first, Dickey second, Jones third.

No. 7, 20 targets; White first, Herbert second, Jones, Wheeler and Rule third, Leroy and Dickey fourth.

No. 8, 10 targets: Herbert first, Jones and Dickey second, Rule third.

No. 9, 5 pairs: Jones, Wheeler and Rule first, White, Sanborn and Herbert second, Dickey third, Leroy fourth.

No. 10, 10 targets: Climax and Sanborn first, Jones, White, Herbert and Allison second, Wheeler, Snow, Stanton, Leroy and Curtis, third, Rule and Farrar fourth.

No. 11, 10 targets: Herbert, Wheeler and Snow first, White, Leroy, Olimax and Dickey second, Jones, Rule and Stanton third, Allison and Sanborn fourth.

No. 12, 10 targets: Sanborn, Jones and Burbridge first, Leroy, Herbert and Allison second, Wheeler and Climax third, Lyman, Rule and Stanton fourth.

No. 13, 5 pairs: Jones first, Wheeler second, Pickles third.

No. 14, 10 targets: Wheeler and Dickey first, Rule second, Jones, Climax, Allison and Stanton third, Herbert fourth.

No. 15, 10 targets: Jones, White, Leroy, Rule and Climax first, Herbert and Stanton second, Wheeler and Snow third, Allison, Farrar and Dickey fourth.

No. 16, 10 pairs: Wheeler first, Leroy second, Herbert third.

No. 17, 10 targets: White, Herbert, Climax and Snow first, Jones and Stanton second, Leroy, Wheeler, Rule and Allison third, Dickey fourth.

No. 18, 25 targets: White, Wheeler and Rule first, Jones second, Dickey and Stanton third.

No. 19, 10 targets: Herbert first, Stanton and Farrar second, Leroy and Walls third, Snow, Allison and White fourth.

No. 20, 10 targets: White, Wheeler and Dickey first, Jones, Rule, Allison and Snow second, Herbert third, Leroy fourth.

No. 21, 10 targets; White first, Allison and Wheeler second.

No. 22, 15 targets: Leroy first, White and Dickey second, Jones third.

No. 23, 10 targets: Wheeler first, Jones and Stanton second, Gore and Dickey third, Herbert fourth.

## Green Ridge Gun Club.

Scranton, Pa., Oct. 1.—The live bird shoot held at the Baseball Park on Sept. 28 under the auspices of the Green Ridge Gun Club, was a great success. The event of the day was a great success. The event of the day was a 25 live bird race, $10 entrance, birds extra. No less than 38 entries were obtained, the number preventing all ties being shot off before darkness put an end to the day's sport. The event was open to residents of northeastern Pennsylvania only. The following are the scores: F. M. Spencer 21, H. D. Swartz 21, A. C. Monies 18, W. H. Davenport 22, Clem. Marsh, Jr., 19, J. C. Highfield 21, Fred. Mason 16, L. Young 21, Will. Frey 21, C. J. Maddox 20, J. D. Mason 20, Phil. Williams 14, James Twiss 18, F. H. Clemons 18, E. A. Highfield 19, C. C. Stackhouse 10, J. A. Van Bergen 18, T. J. Ely 22, Rob. Wallace 19, John Coyne 17, Sim. Davis 22, Dr. J. W. Houser 21, David J. Davis 19, W. G. Fassold 21, Thomas Carter 13, Williams Evans 20, L. Bunnell 6, H. W. Kistler 12, C. M. Brownell 10, Will. Annaman 18, W. H. Watley 19, R. J. Grimes 15, Thomas Lewis 19, Sol. Jones 21, John Hughes 19, Wm. Thomas 8, Chas. Gardner 15, Rob. Clayton 17.

Davenport, Ely and Davis tied for first prize with 22; in the shoot-off in series of 5 birds Davis killed 10 straight and won. Eight shooters tied for the second prize, Dr. J. W. Houser winning by killing 10 straight, Spencer and Highfield scoring 9 each.

## Hebbard Beats Brewer.

Capt. J. L. Brewer, having just gotten a new L. C. Smith gun, was showing it to Mr. Charles C. Hebbard, of the W. Fred Quimby Company, the other day. The gun is a 7¾-pound live-bird gun, very straight in the stock. Mr. Hebbard, in throwing the gun to his shoulder, said that he could beat the man who shot it at targets. A match was made, and the result given below shows that Mr. Hebbard's judgment was correct in this instance. The shoot took place on the grounds of the Boiling Springs Gun Club at Rutherford, N. J., on Saturday afternoon, Oct. 6. Score:

Match at 100 targets, known traps, unknown angles:

Brewer.....10011111011111010101111—19
11101011111101111111111111—22

# Answers to Correspondents.

**No notice taken of anonymous communications.**

J. R. P., Philadelphia, Pa.—Various receipts for waterproofing have been published in the Forest and Stream of Jan. 16, 1890; Jan. 19, 1882; and July 27, 1882.

W. D., Paterson, N. J.—Please decide the following: Ten men entered in a sweepstake for three moneys; one man won first; two tied for second place and as I decided at request that they divide second money between them or decide it by the best target, or as a last resort shoot it off and the winner take all and the loser nothing, and the next highest man on score to take third money. Ans. In rifle matches or sweepstakes the highest scores takes the money. All ties divide.

Louis, Saratoga, N. Y.—The "bug" which you send us is what is called the walking stick, an insect belonging to the order *Orthoptera*, nearly related to the grasshoppers and crickets. It closely simulates in its appearance a twig or a stick, and so is called the walking stick. Another name for it is *Mantis*, and there is an European species known as the praying mantis, from the attitude which it assumes when disturbed. Any work on insects, or any good natural history, will give you further details about this insect.

Z. T. E., Jr., White Castle, La.—Inclosed please find sample of, as I suppose, wild rice seed. Some time ago I wrote Forest and Stream in regard to purchasing and planting wild rice. In answer I received names of parties from whom I could get the seed, with instructions for planting. Last December I purchased 22lbs. of the seed and planted some in Lake Natchez, twelve miles from this place. On visiting the lake ten days ago I found a strange plant bearing the accompanying seed. The plant was not where seed was sown but about a quarter of a mile east of where rice was sown. There are not less than 300 bunches of this plant growing with an average of about five heads of seed to the bunch. Never having seen wild rice growing I am in doubt whether this is wild rice or not, but from what I can remember of the seed sown I think it must be the rice. To settle all doubts I send sample of seed gathered from the plants. Ans. The seed is clearly wild rice, and if none grew in the lake before it seems certain that your sowing must be responsible for the plants you found. Could the seed have been carried by a current from the point where yo sowed it to where it is now growing?

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

A manual of scientific and practical knowledge, designed for the instruction and information of all votaries of the gun. "The author has had in view only one object—so to familiarize the sportsman with the habits of the game he pursues, and the methods of hunting it, that his success in the fields and marshes may be practically assured."—*Introduction.*

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

## NEW EDITION.

## Lancaster's Famous Book,

# THE ART OF SHOOTING.

**By CHARLES LANCASTER.**

**AUTHOR'S PREFACE.**

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

LONDON, FOURTH EDITION, 1892. PRICE $3.00.

**318 Broadway, New York.**

## Mr. Grinnell's Indian Books.

# BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

## BLACKFOOT LODGE TALES;

# BOOKS ON SHOOTING.

## New Editions.

## The Modern Shotgun.

**By W. W. GREENER.**

PRICE, $1.00.

## The Gun and its Development.

**By W. W. GREENER.**

PRICE, $2.50.

These volumes have been for some time out of print, and new editions revised by the author have just been received. There is scarcely any one whose utterances with regard to shotguns and rifles are entitled to as much weight as Mr. Greener's, for he has been making these arms for many years. To his great knowledge of them he adds a pleasant and clear style in writing, which adds to the value of his books. Every American who uses a gun ought to read these books. Sent postpaid on receipt of price.

**FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.**

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, $2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2 50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

### The Breech-Loader and How to Use It.

288 pages. Price, $1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

**THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.**

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 20, 1894.

VOL. XLIII.—No. 16. No. 318 BROADWAY, NEW YORK.

*For Prospectus and Advertising Rates see Page* iii.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
**Price of the pictures alone, $1.50 each; $5 for the set.**

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *FEEDING THE MULTITUDE.*

REV. DR. J. MCCLUSKEY BLAYNEY, of Frankfort, Ky., has recently accomplished a fishing performance which is worthy of chronicle. In the Trout Lake waters of Wisconsin he took 238 large-mouth black bass weighing 336 pounds, in a single day. Reckoning the working day at ten hours, the take would mean twenty-three fish per hour, or one every two and a half minutes. Such a score gives evidence of the abounding fertility of the waters, and testifies to the good luck of the fisherman and not less to his assiduity, muscle and staying power. The Doctor made a big score, one not easily to be surpassed by the every-day fisherman.

To rate the incident merely as a scoring of so many fish taken in so few hours would be, however, to make but low and vulgar account of a performance that is in itself not particularly creditable, but which might yet be dignified if done for a worthy purpose. To yank out a boat load of 238 bass in a day is of course a feat of which in itself neither Dr. Blayney nor any other right-thinking angler would be particularly proud. For one thing, and looking at it merely from the standpoint of getting amusement out of the fishing, such a snaking out of a mess of fish means a waste of raw material which properly utilized might afford a lot of fun. If those 238 bass, which were hustled from water to boat in ten hours, had been taken as an angler who was fishing for the fun of the thing would have taken them, they would have furnished entertainment for rod and reel for many a day. Dr. Blayney we assume is an angler who would prefer to fish in such a manner as to derive the most satisfaction from the pursuit; and the very fact that he was content to deprive himself of so much of the genuine pleasure as he might have enjoyed in the time at his disposal, and instead of angling took to yanking, should be taken as indicating that he had in view something other than the mere fun of fishing. While no record is given of the disposition of those 238 fish, it goes without saying that they were taken for some good purpose.

The catch was made in an unnamed lake in the Wisconsin forests, some twenty miles from the Trout Lake Hotel; and as fish are reported plentiful in the immediate vicinity of the house, we are not to assume that the guest from Kentucky had been employed by the steward to fish for the hotel table. Indeed had this been the case, the Doctor would have felt slight satisfaction in the feat; it would have been classed among those things which, as the French say, may be fitting to be done but are not fitting to be boasted of. Rather are we to understand that to the Doctor's ready ear had come some tale of destitution—of forest fire victims, it may have been—who were sorely in straits for food; and he was prompted to go fishing that he might provide for the alleviation of their distress. If thus the Reverend Doctor was following the example of the Master whose minister he is, we may be assured that no one of those 238 bass taken in the depths of the forest was wasted. For on the memorable occasion of the miraculous provision of the loaves and the fishes, it was commanded, after all had eaten, to gather up the fragments that remained, that nothing might be lost. If a like careful using of the bounties of nature was enjoined by Dr. Blayney upon those who fed of the fishes he had provided, that fact must have heightened the satisfaction he indulged for having made a catch of bass so extrordinary to meet an emergency so unusual. Every angler, even when he fishes for sweet charity, likes to feel that none of his fish are wasted; and no one, who fishes with interest loftier than mere stupid count, would care to catch 238 bass in ten hours with an apprehension that they might be left to decay.

It is not every day that an angler finds occasion to fish for the relief of the destitute. We congratulate Dr. Blayney that to him on his summer vacation such an opportunity was given, and that he improved it so well. His deed stands out as pure gold, in noble and worthy contrast with the base metal of count fishing. For there are fishermen, we regret to say, who finding the opportunity would catch 336 pounds of black bass in a day with never a thought of what was to become of the fish, and with not a shadow of concern as to whether or not the catch was made for any good purpose. Such wanton killers know neither the pleasures of angling nor the satisfaction of charitable deeds.

### *OF FOUR THINGS BEWARE.*

TRAGEDY treads close upon the heel of mirth. We set out on pleasure, and it is like to end in sorrow. Of four things beware—a loaded gun, an unloaded gun, a catboat and a pretty face.

The story, which a Chicago shooter tells in our game columns to-day of his bursted gun on a North Dakota ducking water, came perilously near being a story of fatality to have been told by some other than himself.

In an interior village of this State, one day last week, a son returning from a shooting excursion, came into the house with game and gun. The father picked up the gun, thinking it to be unloaded, pointed it at the mother, said in fun, "Suppose I should shoot you;" pulled the trigger for a joke; and shot her dead.

Last Sunday four young men of Staten Island set out in a catboat for a day's sail on the New York Bay. The craft foundered in a gale, and only one of the four was left to tell the story of joy turned into mourning.

In this city the other day Secret Service detectives took into custody a fugitive from justice, for whom they had been looking for twelve years. A trusted employe of the Government, holding a responsible position in Washington, this man once joined a party of congenial spirits for a shooting trip to the West; there they stopped at a farm house; he became infatuated with the daughter; took her to Washington; embezzled public funds to meet her extravagant demands; and became a fugitive, his life miserably wrecked from the time of that shooting trip West.

And yet four of the most harmless things in all the world are a loaded gun, an unloaded gun, a catboat and a pretty face.

### *THE ADIRONDACK FORESTS.*

NEW YORK will vote next month on the adoption of a proposed new constitution. One of the new provisions relates to the forest preserve and reads:

> The lands of the State now owned or hereafter acquired, constituting the forest preserve as now fixed by law, shall be forever kept as wild forest lands. They shall not be leased, sold or exchanged, or be taken by any corporation, public or private, nor shall the timber thereon be sold, removed, or destroyed.

This is not an ideal disposition of the public forestry question; but it is perhaps the wisest one under existing circumstances. The woodlands of the State, like the woodlands owned by individuals, are properly a source of revenue. Rightly exploited wild forest lands would yield an income year after year in perpetuity, and without impairment of the capital. Such scientific systematic forestry obtains in most of the government preserves of Europe; and it might be established in this country, if it could ever be conducted as a public service and not as new form of private jobbery. As a matter of fact no subject of legislation at Albany in recent years has been more perplexing for an honest man to deal with than that of the disposition of the State forest lands. No projects ostensibly in the public interest have concealed so many niggers in the woodpile; there have been few other subjects of legislation in which the advocates of what they considered the public advantage were so liable to find themselves being used as tools to further the schemes of designing speculators and land grabbers. The ideal solution of the New York forestry problem would be found in a scientific and honest administration of the wild lands. If we may not have this the disposition embodied in the new section of the constitution should be adopted. It will at least save what is left of the woods. At some other day short of the lion and lamb age, it may be possible for a great State like New York to reap the advantages of this natural reserve in a more reasonable manner, for the public good, free from the plunderings of Adirondack forestry schemers.

### *THE WALTON MEMORIAL.*

THE projected London memorial of Izaak Walton will consist of a stained glass window in the church of St. Dunstan's in the West; and the cost is estimated at $500. St. Dunstan's was selected as an appropriate place for the memorial inasmuch as Walton was long a vestryman of the church, and filled several other offices in the parish. The church registers too record the death of seven of his children, his first wife and her mother. The circular which Mr. R. B. Marston sends us further points out the fact that by reason of his "Lives" of eminent Divines, Walton is closely identified with the church. It was too, as every reader of Walton will remember, in "S. Dunstans Churchyard Fleetstreet" that in 1653 hung the sign of Rich. Marriot, who then and there made a lasting name for himself in the annals of literature by giving his imprint to the first edition of the "Angler." The shrine for the memorial has been happily chosen; we doubt not that the window itself will be quite as appropriate in character.

American anglers are invited to contribute to the fund now raising for the purpose; and it is to be hoped that the United States may not be without such a representation, for our British cousins surely may not claim exclusively to hold the regard which nineteenth century anglers feel toward their prototype of the seventeenth. Indeed why should not we ourselves have some tangible memorial of Walton on this side of the water? There must be Waltonians in America quite willing to provide something of the sort if it were projected to meet their approval. The parks in our cities give room to monuments to many a subject less deserving than the fishing vestryman of St. Dunstan's.

One of these days, when times shall have mended, and returned prosperity shall have made the occasion auspicious, such an American memorial enterprise may successfully be undertaken.

### *RUM AND REINDEER.*

IT will be recalled that a most interesting experiment n stocking a country with wild game for a food supply is now in progress in Alaska, where a herd of imported reindeer has been put out and protected. Reports were received last week, saying that the deer have now firmly established themselves, and are multiplying at a rate which gives promise of the complete success of the far-sighted enterprise. Large numbers of the new-comers, unused to the natural phenomena of precipices, have manifested an unexpected degree of cervine stupidity by incontinently leaping over the cliffs to destruction, but the species is gradually becoming wonted to the novel surroundings, and the Alaskan reindeer herds individually and collectively may be reckoned as on a sure footing.

Coincidently with this philanthropic provision of venison for his empty stomach, the Eskimo is receiving from his white brothers an inordinate stock of fire-water to make him crazy and kill him. Alaskan whisky traders are driving a brisk industry in "rot-gut" whisky and doctored rum. The liquid agencies which have killed off such multitudes of Indians in this country are working out the fate of the Eskimo there. In the face of such a condition the Alaskan reindeer scheme is but a paltry measure of relief to offset certain destruction. It is a race between reindeer and rum; and the odds are all with the rum. Of the result there can be no doubt. Where the deer will save one Eskimo, the rum will kill a dozen.

### *THE MINNESOTA TEST CASES.*

THE full text of the important Minnesota test cases is given on another page. They are worthy of careful study, for in them are set forth the sound principles of game protection; and the decisions themselves give the clinching to strong and well shapen laws. The findings of the court are in fullest and heartiest keeping with the spirit as well as the letter of the Minnesota statute; they sustain and make effective a scheme of game and fish protection admirable in plan, detail and practical working. Of the Minnesota system we shall have more to say; it is well worth study.

# The Sportsman Tourist.

## MAKING A RAISE.

FUR-HUNTING—that's what we intended doing the coming winter. The whole of the past summer we had spent in prospecting for mineral, but the autumn had come, snow already covered the summits of the mountains and we had struck nothing; and now the three of us sat in solemn conclave in Joe Dalton's cabin one fine October morning a few years ago. This cabin was situated on a ranch in the Flathead Valley, northwestern Montana, and we were discussing where to go. So far nothing had been settled. The season was too far advanced for an extended trip and we hadn't funds enough to outfit ourselves. Finally Joe deferred matters until the evening, as he wanted to ride to town, nine miles away, for the mail. He was out of tobacco, too, which was a still more serious affair.

It was 7 o'clock before he returned and we were at supper, and after unsaddling his horse he tossed a letter and two newspapers on to the bunk, drew up to the table, helped himself to a large portion of venison stew and commenced eating without further ceremony, and presently Fred inquired what made him so late.

"Business," replied Joe, as he ladled away at the stew. "I got on to something this afternoon that's worth looking into. I'll explain after a while, but I'm just about hungry now—haven't had a bite since breakfast."

It was evident from Joe's look of suppressed excitement that he had something of importance to communicate, and after finishing his meal he lit his pipe, blew forth a vast cloud of smoke, and heaving a sigh of deepest content, proceeded to unburden himself.

"Who d'ye think I saw down town to-day?"

"How should we know?" said Fred; "unless some of the boys have returned from the Libby Creek excitement."

"No, it's none of them. It was Dutch Billy."

"When did he get back?" "Where's he been to?" "Did he have any luck?" and for a moment Joe was assailed by a running fire of questions. Billy had mysteriously disappeared over two weeks ago, having left in the night for parts unknown, with a heavy pack on his back, a belt full of ammunition and his old Sharps rifle. He was a first-rate hunter and was given to making periodical excursions, always on foot and alone, into the depths of the great forest that stretched far away to the north and west of the Flathead Valley, emerging therefrom with sundry proofs of his skill in the shape of skins and furs, sometimes of considerable value.

"He's on a terror of a spree," said Joe. "He got a bear skin and five beaver hides and sold 'em at Randall's store for $25 and a gallon of whisky. He never said where he'd been but old man Ray met him on the Kootenay trail packing his wad. When little Billy's sober he'll never open his head, but when he's full he's a fool like all drunken men, and he let out to me that he'd struck two fresh beaver dams."

"Why didn't he stay and catch the beavers then?"

"His grub played out, and I guess he was thirsty," said Joe, "but he camped in a meadow near a river, he said, and I got points enough to know that place if we could only run across it, and I mean trying my best, you can make your mind easy on that."

"Well, that's a cute trick! You mean getting in ahead of Billy then and trying for them yourself?"

"You bet I do,' said Joe emphatically, "what'll that little whisky bloat do if he gets 'em? He'll only blow in what they bring, same as he's doing now. It's free for all in these parts, and we've just as good a right to make a raise as he has—and a better one—'cause we'll make good use of it."

"Of course we will," assented Fred, "but when 'll Billy start after them?"

"Billy 'll never leave town while he's got a cent, and then it'll take him a week to get sober. You boys get the outfit ready to-morrow and I'll go after some flour for we're nearly out. Then we'll pack old 'Breed and start in the evening."

Any faint scruples of mine regarding prior rights and the laws of *meum* and *tuum* (as interpreted in that none too law-abiding section) were speedily overcome by this convincing logic, and we at once commenced preparations. Beaver skins were valuable, and getting very scarce hereabouts, and the man who found a colony of them was regarded as one with a moderate bank account to draw upon.

There seemed no need to publish our movements to the neighborhood at large, so we started on our wild goose chase by moonlight. The old pony, which Joe had traded from a half breed Indian long before, was burdened with a large pack, and we went afoot, for feed might be scarce and the fewer horses we had to attend the better in such an expedition as the present. We had a small tent, our blankets, cooking utensils, an axe, six heavy double spring traps and a good supply of provisions and ammunition, and, of course, our rifles, for we were ready to take in anything we ran across.

The Indian trail to the Kootenay River was soon reached, and, leaving the open valley, we entered the forest and were soon entirely away from civilization. About 10 o'clock we came to a little grassy opening and camped for the night. Early next morning we were under way again, and now the country was rougher, the trail winding among low, rolling hills, and around swampy places where grew tangled clumps of red willows. We stopped at noon on a little stream that flowed to our right, ate a hurried meal, and started again. The timber was very fine here; giant pine and tamarack trees stood towering over their lesser fir and spruce brethren, but the density of the undergrowth prevented an extended view in any direction, and, after ascending a low hill, we followed the trail down into a wooded hollow along which another stream ran, and here we once more halted.

"This is as far as I'm anyways certain about," said Joe. "The Clearwater River is off east to our right about four miles, and this little creek puts into it. Billy took two days to get there, and he spoke of an old landslide that had dammed up the river in times gone by, but there was no getting any sense out of him. Now, if we can find that landslide we're solid. It's the only thing we've got to guide us, anyway."

There was no trail from here on as we turned down the little stream and followed its course. Joe had troublesome work leading the pony around fallen trees and through the dense brush, but the little gulch gradually widened into a comparatively open river bottom, and presently we emerged from the woods in a small meadow of some twenty acres in extent. It was completely encircled by forest, but looking ahead over the treetops we saw a line of wooded mountains. They were not far distant—half a mile to the lower slopes perhaps—and then we knew we were near the Clearwater, for it skirted the base of the hills.

Choosing a flat place just inside the timber, we pitched our tent under a spreading fir tree, and while Fred started the supper, Joe picketed his pony and I cut a good supply of "mountain feathers" (fir browse) and spread the blankets out for our bed; and after a hearty meal we passed the time in smoking and speculating on the outcome of our venture as we sat by the cheerful camp-fire. Our first need was some fresh meat, and as deer tracks had been seen all the afternoon, we decided to go hunting on the morrow, and, fatigued with our day's tramp, we turned in early.

It was a little after daylight when I awoke. The fly of the tent was not quite closed, and through the opening I could see old 'Breed standing motionless at the end of his picket rope, his ears pricked up and gazing intently across the meadow. I knew the old pony's ways, and this one told me he saw something unusual. Gently, very gently, I crawled from beneath the warm blankets. The boys were still sleeping soundly, and gaining the opening without arousing them, I looked out. A light fog hung over everything, but I could easily see across the meadow, and about half-way around to the right stood a whitetail deer, just at the edge of the brush, apparently surprised at our unwelcome intrusion, yet impelled by curiosity to remain. With a laudable wish to gratify that curiosity, but in a somewhat unexpected manner, I quietly reached for my rifle. The shot was an easy one, not over 70yds., and the sharp report of the piece broke abruptly on the perfect stillness that reigned over the forest that foggy October morning. I saw the deer bound forward on to the grass, wheel suddenly and rush back into the woods, and Joe and Fred were on their feet in an instant. Within five minutes a fire was started and I walked over the wet grass with Joe to look for my game, which I knew had been hit, and we found it lying dead just inside the timber. The ball had struck just behind the shoulder, and gone diagonally through it, coming out the opposite flank.

We soon had the deer, which was a six months' buck fawn, strung up to a branch in camp, and by the time it was dressed Fred had breakfast ready. That lucky shot of mine meant a saving of time and trouble, and we were highly elated at our good fortune. The meal concluded, we decided to explore the river and its tributaries near by, so we proceeded down our little stream in company. Just at the further extremity of the meadow stood a great fir tree with heavy masses of foliage spreading out like a canopy some 10ft. above the ground, and underneath it were signs of human occupation. A rude fireplace of stones held the ashes of a fire, and a bed of soft browse had been made, while on a limb hung two circular hoops of willow, and all this had been done quite recently.

"We've struck the right spot," said Joe. "That's Billy's camp."

Of this we had no doubt whatever, and it was but a short distance to the brink of Clearwater. Its banks were low and level, and, although well timbered, were free from underbrush, and here we separated. Joe started off down stream, while Fred and I crossed the little tributary and went in the opposite direction. After following the devious windings of the river for two miles or more, we approached a place where the stream appeared to fork, but before reaching this spot a promising-looking little creek was encountered and we decided to examine it. We had carefully scrutinized every foot of the river bank, and hadn't seen even a beaver cutting, although a mile or so up the little tributary we came to some old workings, but they were uninhabited now, having been trapped out long ago, and after a careful, though fruitless, examination, we started back to camp, reaching there late in the afternoon, somewhat tired and very hungry; but Joe had returned and had an appetizing supper almost ready, to which we did full justice, for that venison steak was perfect.

If we had been unsuccessful Joe had fared no better. He had followed the stream for nearly three miles to where it made a sharp bend, and some very old beaver signs around a muddy slough that adjoined the river proved a poor reward for his pains, so we decided to reverse matters on the morrow, we going down stream and Joe examining the river above the point where we had turned off.

We were up early next morning, and this time took a lunch with us, as we intended being away all day, and by 9 o'clock Fred and I reached the bend Joe had mentioned. For a mile or so the Clearwater had been trending away from the hills, but now it swung inward, meeting the mountain abruptly, then turning off again along its base, and on reaching this spot we emerged from the woods into an open space on the river bank, which here rose vertically from the water. As we did so we obtained an unobstructed view of the opposite bank and saw the very thing we were seeking.

The hillside ran up steeply there and the continual sapping of the fast running water had, in times gone by, loosened a large mass of earth and rocks which had slid down into the stream, partially damming it. A great quantity of driftwood, brought down by the spring freshets, had accumulated here, and one large tree had jammed against the bank on which we stood, thus enabling one to cross to the other side. The scar on the mountain slope left by the landslide was plainly visible, although overgrown with brush and small trees, but if Dutch Billy's incoherent ravings contained a grain of truth this was surely the place.

But where were the beaver dams? We could see quite a distance down stream and there was not a sign of one. In fact the river was much too rapid for such work and there were no tributaries entering here. I scanned the opposite bank closely but could see no encouragement whatever. Some tall leafless cottonwoods were scattered along it, and in one place some willow bushes concealed the outlet of a little rill or spring, but it was so small that we never gave it a second thought, and after a brief consultation we decided to cross the stream on the jam of driftwood.

The wide sweep of the Clearwater encircled a large, densely wooded flat, and the hill which arose behind it was here broken into by a hollow that seemed to run back a considerable distance. Our intention was to follow along the base of the hills and strike the river bank opposite our camp, but we were soon struggling with some of the thickest brush I ever encountered, and after crawling through acres of fallen trees and a mixture of willow bushes and jack-pine thickets tangled in every conceivable manner, we ascended the slope a little way, and between the tree trunks obtained a view of our position.

Thick forest—that was all we could see. Great yellow pines reared their lofty tops above a sea of spruce and fir trees, and here and there the bare, naked-looking tamaracks rose to as great a height. We could look almost into the hollow mentioned, and it was considerably larger than we had thought—quite a basin in fact—and down its center ran an irregular line of cottonwoods, which still retained a few of their golden leaves, and we could see more patches of yellow among the sombre foliage on the flat, and look which way we would, our eyes rested upon a rolling expanse of forest, broken only by the silvery line of the Clearwater as it pursued its sinuous course toward the Flathead.

"There must be a creek, Fred, along that line of cottonwoods."

"Yes, it looks like it from here," said he. "Let's go down and try it again."

But the further we traveled the worse matters became. Some swampy ground overgrown with masses of red willows and a liberal admixture of thorns now confronted us, and after slowly working my way through these, I was joined by Fred, who fancied he had found an easier way, but was now softly breathing maledictions on such places in general and this one in particular.

"Hold still a minute, Fred—what's that noise?"

We listened intently and heard the rippling splash of falling water. It seemed to be up toward the gulch and not far distant. This had to be investigated, and ten minutes later we were near the sound, but the willows grew thicker than ever and cost us a hard struggle to get through it. But then came our reward.

A little stream flowed out of the basin, where it had its birthplace, and this had been utilized by some beavers in the cleverest way imaginable. The little depression along which it coursed had been blocked by a large dam built of branches and small logs and plastered with mud, and this had formed a still, deep pool, which extended up the hollow some little distance, gradually shoaling until it met the running waters of the brook. Great numbers of cottonwood saplings had here been cut down and their white stumps were visible everywhere, and it was plainly seen that the work was quite fresh, while the whole locality was buried in such impenetrable brush that we marveled at Billy's cleverness at finding such a well hidden little bonanza. But Fred and I exchanged glances of the keenest satisfaction, for we had evidently "struck a perfect picnic," as he expressed it.

A beaver house was visible across the pool, but no sound broke the stillness save that of the water as it splashed downward over the dam, so we quietly withdrew. For the next three hours we crawled and struggl d in the rank heavy growth of the willow swamp, but were well rewarded for our pains. We found another and a larger beaver dam further up the stream, and after thoroughly exploring the whole basin we started back—along the side of the hill this time—to our bridge and then to camp.

"Well, Joe, what luck to-day?"

"Not much," said Joe, as he laid down a large frying pan of sizzling steak. "I struck the place where Billy got his beaver, though. If you fellows had kept on up the river instead of turning up that little creek, you'd have found it."

"Are there any there now?"

"Any there now? D'ye think Billy's that sort? Why, there was only one fam'ly anyway, an' you bet he got the last of 'em," spake Joseph scornfully.

"And if *you* had gone on around that bend, you'd maybe have found what *we* found," said Fred; and over our supper we described our little discovery to Joe's profound delight, and he thereupon, with sundry rare and emphatic expressions, vowed to replenish the common exchequer, and that right speedily.

Although well up at catching "land fur," we knew but little of beaver trapping, but Joe was an expert at the business, so he took command, and next day we all three went, taking with us a hatchet, Joe's long rubber boots and the six traps, while Fred carried his Winchester. We gained the shallow water at the head of the lower pool, and at once proceeded to business.

"Keep away from the bank, boys," said Joe, as he donned the rubber boots, "a beaver's mighty keen-scented and easily scared. Fred, cut me a dead stick—a dead one mind—'bout five feet long and an inch thick, with a little knot or branch at one end."

A little grove of cottonwood trees fringed the bank across the pool, and a good many of these had been cut down and stored away for winter use by the beaver. The bark forms their principal food, and the wet, slimy bank showed plainly where they landed, and now Joe waded carefully to this spot. The water was about a foot deep here and he placed the heavy beaver trap about six inches out from the bank. Now a beaver always lands at the same spot, and matters were so arranged that when one swam to the landing place and felt about with his hind feet for the bottom it would plant one of them on the pan of the trap. The long dead stick was passed through the ring on the trap chain and then driven firmly into the bank in an almost horizontal position, the object of this being to guide the captured beaver into deeper water and drown it by the weight of the trap. This is the method invariably followed, and after setting another Newhouse No. 4 at another slide on our side of the pool, Joe waded out on to dry ground and rejoined us.

"Two's enough for this place just now," observed he, "it's a small dam, and if they get thrashin' around much the rest might get up and leave, so we'll handle 'em gently at first. Now where's the next place?"

The upper and larger dam was not more than 200yds. away, and by making a detour we avoided much of the dense undergrowth we had encountered on the previous day. We were just approaching the upper end of the pool when a ruffed grouse ran out of a willow bush and fluttered up on to a branch. In an instant Fred had dropped the hatchet and raised his rifle.

"Stop that, stop, don't shoot around here," cried Joe hurriedly.

"Why not, Joe? I can take his head off slick as a

whistle," said Fred, as he reluctantly lowered his piece and gazed longingly at the bird.

"No, the less noise we make here the better. We've plenty of meat yet and don't need that beauty. I'll want three more dead sticks like the last one, so sail in and get 'em."

It took quite a long time for Joe to choose his places and get the traps nicely set. There were two beaver houses built of sticks and mud down toward the dam and in the deep water, but both these and the dams were left sacredly alone. He explained this presently by saying he preferred starting as far away from headquarters as possible, and gradually working down to them, although he had known men, he said, who would cut a hole in the dam itself the first thing, and catch the beaver as they came to repair it by setting the trap there. But Joe preferred his own way, and the result proved the soundness of his views.

"But why are you so mighty particular about having dead sticks for the sliding pole, Joe?"

"Why, 'cause if you put a green one there they'd most likely cut it off and pack it away and the trap with it," said Joe. "Aint they cutting green sticks all around there? Now, let's make for camp, and I'll bet old 'Breed agenst a dollar we'll have fur to dress to-morrow."

Joe prophesied correctly. When we reached the traps next morning we found a fine large beaver in the first one we had set, in the little pool. It was dead, having been drowned quickly and without making much disturbance apparently, while at the upper end two had been caught, both being kittens, as the young ones are called. We reset the traps and carried the dead beaver away from that vicinity, and after taking off the hides deposited the carcasses under a large tree a little way out on the flat from the hillside, and in an open place. A beaver skin is stretched by being laced to an oval hoop made of willow, and those we found hanging in Billy's camp came in handy. That afternoon was spent in dressing the hides, a process of great importance, for furs to fetch a good price must be well handled and nicely cleaned of all fatty matter. Had those beaver been caught later in the winter they would have been worth more money. But they were in very fair condition, so we were glad to get them.

During the next three days we caught five more beavers, and then they seemed to be getting very shy and suspicious. Twice Joe found his traps sprung—one at each dam—and nothing in them. The weather, too, which had hitherto been very fine, now turned cold and cloudy. November was approaching, and we might expect snow at any time, for the ground was usually white by the end of October in these parts.

Joe's luck, too, seemed to be changing. There were some beaver to be caught yet, but all his skill did not avail him; so he and Fred took the hatchet and cut a gap in each dam that lowered the water for fully two feet. Then a trap was set under water just inside the dam, and the very first night we got a beaver at each place. It snowed a few inches deep that night, too, and it was evident that our little expedition would soon be over.

"There," said Joe, as he and Fred returned about 2 o'clock next day with the skins; "them's the two finest and largest hides we've got yet, and if we get one more, I'll be satisfied."

"Well, sit down and get your dinner; it's all ready."

"Yes, and so are we," broke in Fred. "And if we'd had a rifle along we'd not have been back quite so soon. A bear has been feeding on the dead beavers we dumped under that tree, and he's covered what's left of 'em with leaves."

"A bear!" I replied, surprised at this information. "I'd have thought they had all holed up by this time. Are you sure the sign's quite fresh?"

"Of course it is," replied Joe. "He was there early this morning and his tracks were made in the snow, and what's more, he'll be back there again this evening, so if you want some fun, take your rifle and lie in wait for him. I'd go myself only I'm too tired."

I considered the matter a few moments. The place was nearly three miles distant, and I would have to watch until too dark to see any longer. But the moon was nearly at the full; so I took my powerful repeating rifle and a dozen cartridges, and started immediately. Great numbers of deer evidently inhabited this locality, for their tracks seemed everywhere, and I twice saw the branching antlers and waving flags of two magnificent bucks. But we had seen deer nearly every day, and I was now on a different errand, and by 3 o'clock I had crossed the river and was making my way along the side of the hill in search of a good place from which to obtain a clear view of the bait.

This was not so easy to find, but at last I decided to sit on a fallen tree that was well concealed by bushes and not more than 60yds. from the beaver meat. I could see the pile of leaves raked together by the bear, but the warm afternoon sun streaming through the trees was rapidly removing the white fleecy snow that mantled the foliage of the spruces, and the continual drip, drip of the water, added to the feathery masses that were falling in all directions, had marred the spotless carpet on the ground, so that I could not see the tracks our visitor had made. For some time I sat in perfect stillness. The silence was only broken by the distant murmur of the Clearwater and the nearer ripple of the little stream that flowed through the gap Joe had made in the beaver dam, while now and then the sharp upward swish of a branch would be heard as it let its snowy burden tumble downward. Once the rustling flutter of a grouse startled me, so close was it. Then I saw the slender form of a doe as she slowly browsed her way into a little open glade and stood there unconscious of danger. But dusk was now approaching and no other visitor appeared as my glance roved over the white scene below me, so I once more concentrated my attention on the dark pile of leaves by the tree, and as I did so a wild thrill of excitement went through me. How the brute had come without my seeing him I don't know to this minute. But there stood a black bear, slowly pawing away the leaves and rooting among them with his nose. For the first time in my life I knew what "buck fever" meant. The muzzle of my rifle moved in quivering circles as I tried to hold it steady, but with a deep breath I was forced to lower it again. Still the bear continued digging among the leaves, at last uncovering a red-looking object, and now he stood broadside to me, with his paws upon the meat.

Now for it. I dared not trust my holding powers, but laid gently back on the sloping hill and rested my rifle between my knees. The bear's black hide contrasted beautifully with the white ivory foresight and I held for the shoulder as near as I could.

A bright line of fire cut suddenly into the gathering gloom, and the thick smoke hung for a moment as the reverberating echoes of the sound died away among the hills. I just caught a glimpse of my friend as he disappeared among the brush, but the smothered roar he uttered told me something, and the blood-stained snow said more, so I followed the trail at once. To pursue a wounded bear into the brush in semi-darkness is no joke, but the broad crimson splashes thrown at every jump convinced me the chase would be a brief one. The track led through the brush, then wheeled round the point of the mountain, and the basin out of which our beaver stream flowed was evidently where my stricken friend intended going. But his strength rapidly failed him, and just as I entered a little opening I saw the bear rear up near a pine tree and essay to climb it. But one foreleg hung limp and useless and the jaws were red and gory as the poor brute swayed feebly against the pine. I was less than 20yds. away, and now a second ball pierced the breast and shattered the spine of the hapless bear, and before the sound of my shot ceased rolling up the valley, the last spasmodic kick announced the end.

It was long after dark when I reached camp, but the bright moon made traveling easy, and the wild snort of the startled pony when he got a whiff of the bear skin heralded my return to the boys, and when I dropped my burden in the camp their joy and surprise were complete, for it was a fine hide and in excellent condition. They had finished their supper but mine was ready, and I did justice to it. Then, before turning in, we agreed that Fred and I should stretch and clean the bear skin on the morrow while Joe would pay the usual visit to the traps.

His journey proved a fruitless one, so it was decided that night over the evening pipes that the following day would be our last in camp, and while Joe put a few finishing touches to our furs, the traps should be brought in by Fred and myself. We found one small beaver had been caught, but nothing else had been touched, so we returned to camp with the skin and steel traps and passed the remainder of the day in preparing for our homeward march.

Old 'Breed's pack was a good deal lighter than when we first started, for our provisions were almost done. But eleven beaver skins and the large bear hide, with the tent and blankets as well, made a bulky load, and it was after nightfall when we reached the cabin on Joe's ranch. Moreover, it was snowing freely, and not until two days after did we meet any of our acquaintances, who were all too much accustomed to these erratic little movements on our part to exhibit any curiosity regarding our absence. Nor was Dutch Billy any the wiser. His prolonged "spree," as he termed it, left him without a cent; and he went to work cutting timber to raise another grub stake, and by the time the raise was made winter was too close for him to think of visiting his find. But we often wondered what he thought when he found his birds had flown, and our wonder was mixed with admiration when we talked over Billy's knowledge of woodcraft as displayed in the discovery of such a well hidden little windfall.

As for ourselves, we passed a glorious winter on the money those beaver skins brought, and had many a rare day's sport among the deer, besides securing another pile of furs. But then, as Rudyard Kipling says, "that is another story."

CHARLES GREENWOOD.

## THE NORWEGIAN SNOWSHOE OR SKI.

LOS ANGELES, Cal., Sept. 28—*Editor Forest and Stream:* I have been much interested in the experiences of Mr. Hough with the long snowshoe or *ski* of the Norwegians and Swedes. Like him I have often wondered why the American people, who love outdoor sports in winter, could be so intensely stupid about the finest of all out of door playthings.

The first winter I spent in the woods of northern Wisconsin, over thirty years ago, I learned both kinds of snowshoes and quickly laid aside the netted shoe as a fraud when the other could be had. It bears the same relation to the *ski* that the old velocipede does to the modern bicycle—you can do lots of work on it but there is little play. I am mightily in love with the bicycle, which is a wonderful plaything, especially on the miles of fine streets Los Angeles has all the year, but I agree with Mr. Hough most fully that the long snowshoe beats it. He makes a distinction, though that I never discovered, or rather he intimates the possibility of such, in speaking of ground where the web shoe is at home. I never found any ground where the other was not equally at home. When the snow is very soft and fresh it is work with either, the web shoe loads more than the long one and is more tiresome because it has to be lifted. When the snow is stiff enough and deep enough to make easy traveling with the Indian shoe, then the other will beat it day in and day out, in timber, among logs, or anything else. Where logs are very thick or hills very steep the web shoe will be better, but soon you are on smoother and more open ground where a thousand twigs are sticking up through the snow which the long shoe slides over or pushes aside without you looking at them, while they will snag the other if you attempt to make the same speed. I I have seen Norwegians who could go through or over anything with them with apparent ease, but this takes years of practice. On open country the difference in the speed of the two kinds of shoe is ridiculous. But the difference in learning is also very great. It takes but a few weeks to become quite proficient with the webbed shoe, but the other is much harder than skating, though the first stages are more easy.

The difficulties of getting up hill are not as great as Mr. Hough's experience will justify. I found that the Scandinavians, most of whom are experts, learn them in in childhood and get along well with the shoe in any shape. In the several winters I played on them in the woods and on the open country I found out many improvements. One was to countersink a place 8 or 10in. long on the bottom and fasten a strip of deerskin (off the shank where the hair is stiff) with the hair running backward. If carefully put on this will hold you well in going up hill if the grade is not too great or the snow too glassy, and without interfering much with high speed down slope. Where this won't do, if the hill is at all long, you will save much time and comfort by tying a handkerchief, strap or bit of soft rope around the shoe and lift it a little at each step. If you have it ready it takes but a moment to slip it on or off both shoes.

Going up hill on them is not the same as with the bicycle. You lift your own weight, as in walking, and not by machinery, as with the bicycle. Consequently you can ascend a far steeper hill if they do not slip back. When it comes to a very steep hill the Indian shoe is much the best, and on some hills the only shoe on which you can make a direct ascent. But, as with the bicycle, the speed and ease of the *ski* anywhere but up hill are so great that the drawbacks of up hill amount to little in the general results. Where great speed is not needed three parallel grooves ½in. wide and ⅛in. deep, rounded at the bottom, will prevent side slipping unless the snow is very hard. When the snow is glassy it pays to put in a strip of thin iron like the blade of a case knife or longer, like the centerboard of a boat. Let it project ⅛in. or more from the bottom and be made sharp and beveled where it first cuts the snow. Fix it on a little pivot and fasten to position with a button or two. It can be easily arranged to raise or lower like a centerboard.

Balling of the snow under the foot and slipping back in the tread does not seem to bother experts much, but there is no use in being bothered with either. A strip of deerskin cut where the hair is long, strong and stiff, as on parts of the neck, and fastened in the tread with the hair running forward will almost entirely prevent backslip and balling. If the snow occasionally balls on this, which on some days it may do a little, especially under the heel, which is very annoying, it may be knocked out in a moment, whereas without hair it sticks very tight to the wood.

A little guard of strap iron on each side the heel is a good aid to the beginner, and may be taken off easily when not wanted. Take a strip of thin iron (not too thin) about eight inches long and an inch wide, or an inch and a half will do. Bend this up two inches at each end (or more, if necessary—so high you don't tread on it) and so that it will not interfere with the one on the next shoe, a very important point. Screw this on the tread under the deer skin. You will find it of great help to hold your foot in place, and gives leverage in curving in working up hill and all side swings of the shoe. If you are sure that it don't interfere, it is no disadvantage for a racing shoe; while for a traveling shoe it is a great advantage for any one not a first-class expert, such as it takes years to make. You want nothing behind the heel.

With the long shoe, as with the Indian shoe, buckskin moccasins with plenty of stockings under them are the thing of all things, and Arctic rubbers I imagine next, though I never used anything but moccasins. There is no bar to hurt the ball of your foot, as on the Indian shoe; but boots or shoes will not do well, if at all.

The shoes should never be tied to the foot, as it may at any time be dangerous. It only prevents losing them, which had better be done by a string from the top of the toe strap hooked into your pants or tied around your ankle.

I never found so much trouble as Mr. Hough did about the snow sticking to them and requiring so much waxing. I made mine of seasoned ash, well polished with emery paper. I then daubed them well with a mixture of pine pitch, such as is found on the ends of logs in the pineries, with beeswax and tallow in equal parts. This I ran into the wood with a flat iron as hot as it could be without burning. About once a month was often enough for this, and sometimes I let them go nearly all winter without any trouble, but then the snow was rarely soft.

Mr. Hough says nothing about the use of these shoes in the sleigh track. They are almost as fine a plaything there as anywhere and it was the performance of a Norwegian there that first set me crazy about them. On a strip of perfectly level "tote road" in the woods, hard as a floor, he ran away from about a dozen of us. We ran our best and stayed with him for about a hundred yards and then one by one we began to weaken while he ran on half a mile further and came back at about the same speed without being a bit blown. He offered to bet fifty dollars that night in the camp and pulled the money, that he could go to mill, thirty miles, in three hours. Nobody took the bet but several who were well acquainted with him said they had no doubt that he could do it. On a mile and a half course of level ground near my home I have often made a mile and a half in ten minutes without being any more tired than I am in making that time on a bicycle on a pretty good road, but I could never equal the pace of that Norwegian. In such work both shoes run in the same track of one sleigh runner without interfering in the least if properly made.

Speed on such ground as well as most anywhere is much aided by a pole, which should always be carried for safety in going down hill. This should be of hickory, rock-elm, ironwood, or some other tough wood and thick enough to allow you to throw your whole weight back on your right hand, in short, strong enough to sit on suddenly. It should be about seven feet long, or more, and shod with iron sharp enough at the point to catch in ice or hard sleigh track, and an inch and a half or so above this should be a button an inch and a quarter or so in diameter to catch on ice or hard snow and hold you with certainty and quickness when you want it to. Unless so fixed keep out of sleigh tracks on rolling country and off of steep hills when the snow is at all hard or you are liable to get into serious trouble. I was nearly knocked out once by one breaking with me on a heavy grade. A team came around a curve ahead of me and I threw my whole weight suddenly on it. There was a neat little circus there.

A racing shoe should be about 10ft. long, or even more for a heavy person, and sprung in the center so that it will stand up 3 or 4in. above the ends with no one on it. This will then distribute the weight evenly over the whole when one is on it. It should have no grooves in the bottom or anything to make friction, or possible interference with the other shoe, which latter may be very dangerous. But for a cross country or traveling shoe I found 6ft. long enough and much easier to handle. Mr. Hough would have enjoyed his trip much more I think had he had such a shoe with the improvements above described. I have found this kind very much better for the woods and for hunting, though when the snow is deep and stiff enough for good fun with any kind of snowshoe no decent man has any business hunting anything but hares, grouse or squirrels. Four inches is about as wide as they can be safely made without interfering. For racing they should be a little narrower.

The speed attainable by an expert with these shoes in

good condition is something beyond all conception. The friction is less generally than that of a bicycle would be on a downhill cement pavement with the chain off. The law of acceleration of gravity and the skill of the rider are the only limitations. That provoking law, resistance increases as the square of the velocity, has little application here, for it matters little by what figure you multiply practically nothing. The result is still practically nothing.

The step is a half push and half slide with a push from the pole. It is easily learned, but this is not learning the shoe by any means. The exertion is the least I know for the same speed. I once made twenty-five miles in five hours one afternoon and thirty the next morning in six hours, carrying a rifle and blanket on my back and 10lbs. of traps without feeling a bit tired. This was in sleigh track. This time could be much exceeded by many persons, but there never was a time when I could have done it on foot on the best road without complete exhaustion. I am not strong and never was, so from that one can tell what a tough expert can do.

I must add to Mr. Hough's remark. They beat even skating. Crazy as I used to be about that, I like the Norwegian shoe even better. With skates you are like a cat on a carpet, can show strength, quickness, infinite grace and variety of motion, but you are still tied to a small level space that grows quickly monotonous. With the *ski* you are a bird. The world is yours as far as it can be with anything.

There are plenty who can tell much more about these shoes if they would. I could tell some more, too, but have not the time just now. T. S. VAN DYKE.

# Natural History.

### Is He Pluto's Emissary?

WHILE looking through the *Audubon Magazine* some time ago for help from Miss Merriam in the identification of a bird, which in journeying from "lands of snow to lands of sun" had made my hill-home a resting place for a season, I came upon some bird legends which I read over again, and with increased interest, inasmuch as I had that day heard one as strange as any of those, and about a friend whose reputation I know is none of the best. Yet I cannot be persuaded that our beautiful blue-jay belongs to the personage who rules over a region of which the temperature is said to be but a few degrees colder than that of Yuma.

However, you shall hear the whole story and judge for yourself.

It was Saturday. The jays were very loquacious, and as I stood admiring their blue forms and loud, cheerful voices as they called from treetop to treetop, I was all unconscious of the presence of my maid close behind me, until she exclaimed: "Oh, yes, Mr. Jay; you's got back, has ye?"

"Got back from where?" I questioned.

"Why, from Torment, of course. Didn't ye know that?"

Certainly I did not, but I plied her with questions which drew from her answers that hinted of so rich a mine of superstition regarding the poor jay, that I commenced working it at once. After sifting the gold from the dross I have a tradition that is not only known and believed, for the most part, by the older generation of negroes, but is being told to the younger.

I was quite a time in finding one who could tell me the "why," though all knew the fable, and, with a single exception, gave it in pretty much the same words. As old "Uncle Bell" was the one possessed of superior knowledge, he shall voice the majority report. Looking a bit sheepish—as they all do when questioned—he answered me thus:

"What I knows 'bout jay birds? W'y I knows dey goes t' th' sea nine times ev'ry Friday, gits one grain of san' from th' shore, an' flies with hit in the'r mouths t' the'r marster in hell. An' th' wick'd 'll burn jist 's long 's thar's a grane ov san' lef' ennywhars."

Here the old man was quite overcome for an instant, then he drew closer to me, and sinking his voice almost to a whisper said "what does you tink bout dat? y'u knowes they haint nebber gwine t'git hit all toted; they caynt, *no they caynt*. An' I doan—like t' tink 'bout—no wun a-burnin'—an a-burnin' furev'r-n-ev'r does you?"

When I assured him not only that I did not enjoy contemplating such a future for any of my friends but that I repudiated the whole story, he shook his old head wisely and left me with: "I dunno chile, us'd better look out." The witness, our wood-sawyer Willis, whose testimony differs from all others, has, notwithstanding his lack of adherents, much better proof of his position, for when questioned, he not only affirmed that "th' jays tote 'trash' nine times ev'ry Friday t' make th' fire hotter to burn up we's souls with, in the 'Bad Place,'" but that he has actually seen them engaged in the business.

Now, while no one can with safety discard this report, the other is open to question, unless a jay with the sand in his mouth be put in evidence. BARRY.

### Pelican on the Niagara River.

BUFFALO, Oct. 9.—While out gunning for snipe Saturday, Oct. 6, on the Niagara River, below the International Bridge, "Jake" Koch, a well known sportsman, shot and killed a full grown pelican. It is very unusual to see such a magnificent specimen of the bird in these parts and "Jake" feels as proud as if he had shot a flock of turkey buzzards. He brought the bird uptown and nailed it over the door of Fred Gerot's place on Washington street. Hundreds of people have viewed it with as much curiosity as they would a megatharion. It measures seven feet four inches from tip of wing to tip and has a pouch fully a foot in length and six inches deep. "Jake" thinks the bird was on its way south, and strayed out of the usual course pursued by the species.

Snipe shooting in unusually good in the marshes down the river just now. H. J. BALLIETT.

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

# Game Bag and Gun.

## DUCKS AND DISASTER.

FOX LAKE, Wis., Oct. 9.—*Editor Forest and Stream:* I have just received the following letter from my old chum and companion in many an outing; and as it is a well told story of a pleasant trip, barring the finish, and as it shows the stuff he is made of, without any extra flourishings, I take the liberty of sending it to you for publication.—W. E. W.

CHICAGO, Oct. 6.—*Dear Old Boy:* Presume you are wondering what has become of me. A week ago to-day I was invited to go with a party of four to Dawson, N.D., thirty miles this side of Bismarck. We reached Dawson Tuesday morning. I took both guns with me; and after breakfast we started with a team for a lake about eight miles southwest, reaching there about 9:30.

The ponds and lake were covered with ducks, brant and geese. Mac and I started for one of the smaller ponds. The first thing to get up was an old prairie cock, who had about 40yds. start of the little gun; but he gave it up and fell dead as a mackerel before he had gone 10yds. further. "Pretty good for a left hander," says I.

Well, we got to the edge of the marsh and found it a little the toughest proposition I ever saw. The rushes and canes were at least 10ft. high, but had been bent over by the wind to about waist high, and such a network—you had to lift your feet as high as your waist every step; and with hip boots on 10yds. of that would tucker the best man that ever lived. We took turns breaking a path, and at last got to the water, which was nowhere over 12in., with the mud about the same, but of such tenacity that it nearly pulled a leg off every time you lifted your foot. We finally got on a bog that reached nearly across the open water and got to business.

The wind was blowing a gale from the north with occasional squalls of sleet and snow. The birds were moving in fine shape. First it would be a bunch of teal, then a pair of mallards, then a flock of redheads, then a couple of canvasbacks. I made some of the prettiest misses you ever saw, but finally got the hang of it, and the little gun would double them up, 30, 40, even 60yds., and nearly every one stone dead. We ran out of shells in about an hour and went for more. You can gamble I had all I could lug.

I had been there about two hours and had picked up twenty-five or thirty nice birds. Mac took out all he could carry of them. About 3 o'clock he called me to come to lunch; I hated to leave and stayed about half an hour longer before starting. Then I had gone a few rods when a pair of redheads came along; my feet were stuck in the mud and I had to try a right-handed shot. I found myself flat on my back, wondering what made the gun sound so loud. I looked at it and 3in. from the breech of the left barrel was a hole about 4in. long, taking out the whole top and side. Then I felt a twinge in my left wrist; and looking at it saw a ragged hole with a piece of iron sticking up just in sight. I pulled out a half section of the barrel about an inch long, and then came a stream of blood. I took my handkerchief, tied a knot with my teeth and one hand and twisted it around the arm the best I could; but it still bled very fast.

I found that I could'nt pull my boots out of the mud, so I pulled my feet out of the boots and started out; got along fairly till I struck the rushes; then it was tough. I would fall from exhaustion every few feet and thought once or twice I would have to give up; but the thought of wife and babies braced me up and I finally got to the edge of the marsh on hard ground and in sight of the boys, who came to me as fast as they could run.

I was wet to the waist and it was very cold, but those ponies weren't very long going the eight miles to a good surgeon. Dr. Bland, of Ohio, who gave me the best of attention and delighted me by saying that the tendons and bones had by almost a miracle escaped injury. I was so glad to get out of it so well that I minded the probing and stitching but very little. Got home Thursday night pretty tired, but the arm is doing finely and if I have no setback will be well in three weeks. FRED.

## IN THE LAND OF THE PAWPAW.

SOUTH MISSOURI, Oct. 1.—The Ozark region is alive with game about now, notwithstanding the shameless habits of the game hog (of whom this section like all others has its share), and the violator of the laws who stalks the callow brood and pots a dozen at a swoop. As I wrote some time since, quail are everywhere, and to paraphrase a bit, the time for the shooting of quail has come and the voice of the shotgun is heard in the land, which from the time Phœbus "hooks up" his chariot and runs the stars to cover, until the orgies of the katydids begins in the gloaming. If quail were much more plentiful it wouldn't be much sport hunting them.

As for turkeys, they are only less in numbers than the quail. This is a dry country—not in a temperance sense by a long shot—but owing to its elevation and the peculiar subterranean drainage, water is scarce from April till winter, standing or running, though rains are ordinarily seasonable and plentiful. Springs are not plentiful after the spring months, which is reasonable. Turkeys as a rule raise their broods where they can get water without hauling it too far. The pot and lawless hunters roam the woods about hatching time and spot the broods, or know from the previous season and locality of water supply where to find them, and then as soon as the young have any flesh on them, these sneaking violators of all decency in sportsmanship hie on their murderous quest. Yet notwithstanding this, so wary and smart a bird is the turkey that one has not far to go in any direction to learn of their whereabouts. I do not say to get them always. I have suceeded in bagging but one gobbler, in the category of whoppers, and "By the beard of Mahomet" that turkey's was 8½in. long. I have heard of a number of "gangs" of from twenty-five to a hundred, not to mention smaller ones of which I am cognizant. An acquaintance who resides down the railroad a few miles, told me yesterday that an old hen turkey made her nest and raised a fine brood just across the track from his house and not more than 150ft. therefrom (the track), and the Ft. Scott and Memphis is no one or two trains a day road either. The vagaries of the wild turkey are passing strange, and likewise its smartness.

The cotton-tail of '94 is now in its juiciest prime and to be kicked out of almost any brush heap or thicket. It can get under way mighty fast, but not quite so fast as a load of shot from a good gun. The hindlegs of a fat hare of tender years, or more properly months, together with the loin thereof, judiciously stewed and thereafter browned in hissing butter, will fetch a man before the dinner bell rings.

As for squirrels, they are measurably plentiful; the gray in the creek bottoms—where you find a creek with a bottom—and the fox in the ridges. And this latter rodent is about the smartest of the tribe that I have ever "met up" with. His ways are not as the ways of his gray brother, but to paraphrase some more:

> His ways are ways of stealthiness,
> And all his paths are—

Well, past finding out. He's always on the watch. He never forgets. A gray squirrel does sometimes, and thinks about something to eat; but a fox squirrel is always thinking of the man with a gun, and the second he hears a noise or sees a motion, if he's on the ground he gets on the thither side of a tree before he starts up, and he goes straight to obscurity and there he stays, while you are in blissful ignorance that there is a squirrel within five miles. Now a gray will, when startled, jump up on the side of a tree ordinarily, and wiggle his tail and bark until he is satisfied as to the cause, or if he is up a tree, if you'll wait a spell, will show himself or come down; but a fox squirrel never comes down or moves. I don't know what ever becomes of them. A gray has the bump of curiosity well developed, while it never was made in the fox, and he never opens his head except to eat—I suppose he does then—and is as noiseless in his movements as the traditional Indian. Why he keeps to the plateaus and ridges while the gray haunts the bottoms, I haven't learned. It maybe that the latter is like most other animals, and wants a drink once in a while, while the former is well off or better without it. He's an abnormal freak anyhow.

Deer are not very numerous hereabout, though they are by no means unknown. I know of four within two miles that have been repeatedly seen this season and once run by dogs, but there is no water here to run them into, to butcher them, thank fortune, and as the cover is good they stand a fair chance of saving their pelts. Further east, in Shannon county, down in the St. Francis swamps, and over in Arkansas they are plentiful a-plenty.

I was over on Jack's Fork of the Current with a friend a while back, for a week, and had a hurrah with the turkeys, ducks, squirrels and bass, and not least by any means, the pawpaws, which are not game by any means though mentioned in the same category. Oh! no, I didn't miss the pawpaw. I might miss a squirrel or duck, but when I shot a glance from my eagle eye on to a pawpaw it was mine. Did you ever eat a pawpaw? No? I'm sorry. 'Tis years since last we met. In the halcyon days of lang syne, more than two-score years agone, when I was an innocent lad wandering by the sinuous and classic Turtle Creek in southern Ohio, or milking the cow at 3 A. M. that I might be among the forest aisles when first the shadows begun to vanish and the unsuspecting squirrels came forth from their holes that they might scratch fleas and fall beneath my deadly aim, the pawpaw and I were introduced, and my youthful affections were lavished with all the wealth of my bounding nature on that luscious, custardy, mouth-watering fruit, and now after the lapse of many years I find my long lost love amid the wilds of Jack's Fork, and with a gladsome smile I joyfully turn to it, as does the spavined and crippled horse after years of buffetings turn to the succulent clover upon which he is turned to die. Eheu! Eheu! O. O. S.

## NEBRASKA PRAIRIE CHICKENS.

BEATRICE, Neb., Oct. 7.—Traveling in Nebraska during the last three weeks over the major portion of the State, I could not help having brought forcibly to my attention the fact that game of all kinds and particularly prairie chickens are fast disappearing. Why the sportsmen of the State will not awake to this fact is a mystery I cannot explain. I carry my gun with me, and whenever an opportunity presents itself I am eager to go out in the country for a few hours' shooting, but those occasions are becoming more painful to me every year, owing to the growing scarcity of the birds.

I know a great many sportsmen throughout the State and get from them a very good idea of the game prospects. Their reports of chickens become more gloomy every year. That the bird is rapidly becoming a thing of the past is only too clear. "Not a chicken in the county" is a remark that is almost universal. Mr. D. E. Fuller, in the issue of Sept. 29, stated a fact when he said chickens are a rare bird in that section. They are rare in most sections of the State. The district to-day in Nebraska in which they are at all plentiful is in the unsettled sand hills in the northwestern part of the State, and they will not be so there long. "Diamond Walt" mentions a party of market-hunters as leaving Grafton for the sand hills. Why, the hills are full of such parties. A number of sportsmen friends of mine living at Hastings have just returned from a two-weeks' hunt near Telford, and tell me that within half a mile of their party seven different outfits of market-hunters were in camp and making big shipments daily.

Some of these days a State sportsmen's association will be formed, when it will be too late to protect the game, and they will deplore the scarcity of game and pass mighty resolutions, and petition the Legislature and all that sort of thing, and raise funds to import birds and attempt to restock the depleted covers. Why cannot such an association be formed now to see that the present laws are enforced? The laws are all right; all that is needed is to enforce them. It will be a little trouble, but not nearly so expensive as restocking, and much more satisfactory.

The general reason given for the scarcity of chickens is that they died from lack of water. They died, it is true, but not from that cause, and long before the drought struck Nebraska. Quail are fairly plentiful; how is it that they survived? I have been out twice during the past week and saw quite a number of bevies each time, but not the faintest sign of a chicken.

While at Sutton I spent an afternoon with two friends most pleasantly. We found nine bevies of quail, and though the young dog we had with us would not work, we managed to walk up quite a number and bagged 53. Several more were killed, but we could not find them. That provoking dog would stand around and wag his tail in the most amiable sort of way, and bark his approval every time a bird got up, but he utterly refused to look for dead birds; that wasn't his line of business. Coming

home, my friends pointed out a field in which five chickens had been found and killed earlier in the season, and added that those birds were the only ones seen or killed this season in their section. A few years ago chickens were thicker than blackbirds in that neighborhood, but the market-hunter has been around since then.

By the way, "Diamond Walt" speaks of that bevy of quail at the Grafton Park. They must be something more than the common variety. I didn't know that quail piped "Bob White" so late in the season. W. R. H.

## NEWFOUNDLAND AS IT IS.

ST. JOHN'S, Newfoundland, Oct. 2.—*Editor Forest and Stream:* I have just read a letter in one of your recent issues bearing the signature of Richard Dashwood, known here as General Dashwood, an English general, in which the writer announces that my book, entitled "Newfoundland in 1894; a Hand-Book and Tourist's Guide," is "full of gross exaggerations respecting some subjects on which it treats." The principal of these subjects on which he alleges I have exaggerated "grossly" is the soil and climate of the island. The soil, he declares, is poor and barren, "except in a few isolated spots," the reports of fertile soil in the Exploits, Humber and other great valleys, he affirms, have no foundation in fact, while the climate "is all against farming, the summer being too short and too cold."

These are bold assertions, but they are unaccompanied by any proofs except the *ipse dixit* of General Dashwood. In the chapter of my book devoted to the agricultural resources of the island, I was careful to make no statement that was not sustained by the highest and best authorities and to affirm only what was warranted by facts. My statements are based mainly on the Reports of the Geological Survey, but also on a mass of other corroborative evidence. That survey was commenced thirty years ago by one of the most eminent geologists of the day—the late Alexander Murray, C.M.G., F.G.S.—who had been a colleague of Sir Wm. Logan for fourteen years in the geological survey of Canada. Since his death it has been continued up till the present time by Mr. J. O. Howley, F.G.S., whose ability and veracity are too well known here to be called in question. If General Dashwood's assertions are true then these two distinguished scientific men have been systematically lying, and either wilfully or stupidly deceiving the public. After years of careful and laborious examination of the whole island, they affirm that its agricultural resources are very great, and that it contains between four and five millions of acres admirably adapted for settlement and for cattle and sheep raising, while its timber and mineral resources are extremely valuable. I have quoted their reports and added the testimony of observant travelers, of railway engineers, of governors and others who had every opportunity of collecting exact information and who are incapable of deception. I have added statistics taken from the census as to the actual products of cultivated land, the value of which in 1891 was $1,562,392. A residence, on my own part, of forty years in the country, and the information obtained by traveling and by personal intercourse with the people, might be supposed to count for something. As to the climate, the evidence I have adduced shows that the General has been guilty of "gross" misrepresentation, and that the climate is well suited for farming.

General Dashwood is perfectly aware of all this, and yet in the face of this evidence he calmly declares that the soil is barren, "of a poor, sandy, stony nature," and the climate unsuitable for agriculture. He treats with contempt the conclusions of scientific men who have spent thirty years in careful explorations of the interior, and ignores the opinions of statesmen, travelers and educated men who have spent their lives in the country. Facts are against him, but "so much the worse for the facts." In vain have committees of the Legislature and agricultural societies presented, again and again, highly favorable reports of the soil and climate. In vain have trained observers explored the island in all directions. He dogmatically contradicts them all and declares that there is no agricultural soil here, only a wretched "compound of sand and stones." He expects us to accept his unsupported statements, and regard all the others as fools and falsifiers.

I venture to take my stand with those whom I have named and to pronounce General Dashwood guilty of "gross exaggerations" and misleading assertions in his attempt to depreciate the country.

He does not act without a motive. The General having retired from the active duties of his profession, devotes himself to sport. He is a "mighty hunter"—in particular an eminent deer slayer, and he "gives his whole mind" to the work. For some twenty years he has made an annual visit to Newfoundland, and spent a good part of the summer and autumn months in shooting; so that at length he has got to consider the island as one of his preserves. He feels bound to take care of it and not let it be transformed into a wretched agricultural country, seamed with roads and railroads and dotted with farmhouses, to the loss and disgust of all true sportsmen. In an unguarded moment he once denounced to Mr. Howley, our geologist, "these blanked railways, as they would be the means of driving away the deer and destroying the only decent hunting ground left to sportsmen." He has accordingly devoted his energies for years to depreciating the island, and kindly and disinterestedly warning settlers from coming here, and advising capitalists against investing in our railroads. This has become a fixed mania with him, and we have learned to tolerate and laugh at him. In 1888 he was present at a meeting of the Royal Geographical Society of England, at which a paper highly favorable to the island was read by an English traveler. He rose and protested that "the land described as agricultural consisted of rocks and bog and the timber scrub." Many million feet of this "scrub" timber are now annually exported, and it is accepted in the markets as the finest pine lumber. I brought him to book about this and other utterances in a letter published in the Proceedings of the Geographical Society as well as in our local press; so that we have been fair foes ever since. The new railway to Port-au-Basque has renewed his alarm, and my book, in which I commend it, has kindled his wrath afresh. Hence he runs a tilt against it.

He has not even the grace to speak well of the island as a sporting country. He wants to keep it for himself and friends. In particular he dreads the advent of the Yankee sportsmen and kindly informs them through the columns of your journal, that there is really no game worth coming for; but he throws suspicion on himself by coming as usual this year and going out on shooting excursions. Some two or three years ago, he and some other sportsmen are reported to have slaughtered some seventy or eighty deer, leaving their carcasses to rot and taint the air, so that the creatures fled from that part of the island, to the great loss of the local inhabitants. To prevent a recurrence of such unsportsmanlike slaughters, leading to an extermination of the deer, the Legislature passed a law fixing $100 as the annual charge for license to non-residents, for shooting deer, and enacting that not more than six stags should be killed by one person in one season. This has caused the cup of his indignation to overflow, as his letter shows.

To assail my book is a small matter; but I submit the General ought to have paused before he ventured to attack our new railway and arrogantly declare that "it could never pay," and broadly hint that those who spoke well of it were influenced by selfish motives. What can he know of the matter except that it may disturb his deer? The people of Newfoundland are practically unanimous in their approval of this railway, which will open up the fertile lands, the mineral and forest areas, and impart an impulse in the direction of progress such as the country has not known before. At all events the railway is honestly built by the colony itself, the bonds being guaranteed at 3½ per cent. by the Legislature. It may be presumed we know our own business quite as well as the gallant General who does his best to thwart a great national enterprise. We are unable to see why a great island, one-sixth larger than Ireland, having vast natural resources, as I have proved in my book, should be allowed to remain undeveloped, in order to furnish a sporting ground to visitors from other lands. M. HARVEY.

P. S.—I beg to forward a copy of my book to FOREST AND STREAM. I may add to the foregoing that Gen. Dashwood knows very little about the interior of the island. When he arrives he reaches his hunting grounds, which are the high and barren regions, by the shortest route, and the fertile valleys of the Garden Exploits and Humber have never been traversed by him, nor has he ever been in the splendid valleys of Bay St. George or Codroy. From the wild and barren hunting grounds he forms his opinion of the whole island. H.

## SOME SQUIRREL SHOOTING.

INDIANA, Oct. 1.—This morning, Sept. 29, was one of the ideal squirrel mornings—warm, partly cloudy, and not any wind. As I have never outgrown my boyish fondness for the sport, and my wife was to be away for the day, leaving me to lonesomeness, and I was anxious to give a new nitro powder a thorough practical test, it was soon settled that I would drive as far as Bean's woods, two miles down the road, with my wife, and then hunt back toward home. Now the proper time to get into the woods for squirrels is just before daylight. At this time of year they can be heard chipping beech nuts and acorns before it is light enough to see them, but I did not get into the woods till 9 o'clock. By this time they have done feeding and are mostly taking things easy, in a fork or on a big limb, so there was not a good prospect for lots of shooting, but there was the pleasure of a stroll through the grand old woods, admiring the big old oaks and poplars that were giants when the Indians hunted beneath them. I could look up for squirrel "sign," too, and learn whether it was worth while to come again, and it was probable if they were plenty that an occasional one might show himself.

The woods were entered along a rail fence that ran across it, and I walked along a cattle path beside the fence. The dead leaves were so dry that it was useless to walk on them. The woods are full of woodpeckers, every one of them busy picking beech nuts or acorns, and hiding them under the shags of hickory bark, in hollows of the trees, and in holes they dig for the purpose in rotten wood. They are busy as a swarm of bees, and every one of them are chattering till they make a perfect bedlam, and the beech nut burrs they loosen are dropping continually. Looking under a number of beeches I find many burrs, but none af the inner covering or shell of the nut, so woodpeckers did it all. Next I look under a white or pig nut hickory, and find lots of outer hulls but no inner ones, and no nuts on the ground. Gray squirrels had no hand in this. It was flying squirrels did it, in the night. Gray ones would have eaten the nuts in the tree and dropped the chips, but under a big white oak I find many shells and chips, and half-eaten acorns. That was a squirrel, and no doubt a fox squirrel, for the grays are not fond of white oak acorns if they can get pin oaks or beech nuts.

Just then my attention was attracted by the peculiar, half angry, half protesting cry of a wood pecker; a noise that he makes only when a squirrel comes near one of his deposits of food. He was sixty yards away and too many leaves in the way to see him, but after stealthily approaching half way, I canght a glimpse of a fox squirrel's tail disappearing round the body of the tree. Getting closer I threw a stick beyond the tree hoping to bring him round, but it didn't work. The noise of the falling stick started a gray one barking on the opposite side of a thicket, and he was answered by another a hundred yards away. This was getting interesting. There was no doubt about there being enough squirrels. Guided by the barking a very slow and quiet sneak was made through the thicket till a glimpse of a shaking, bushy tail was seen not over thirty yards away. The leaves were too thick to see anything else, but a shot at the tail brought down the whole squirrel.

The shot stopped the other one's barking, and neither it nor the fox squirrel could be found, though looked for long and carefully. Further along in the woods, a gray ran up a small tree and jumped on to the body of a larger one, when a fox squirrel came round the body of the tree, and then there was a race, the gray seemed in deadly fear of the other, and the other one determined to catch him. Through the tree tops, up one tree and down another, out on long limbs and into the next tree, round and round its trunk, out to the end of a limb and into another tree, they raced so fast that it looked more like flying than running. The race was ended by the gray taking a leap that the other would not venture. It was a level jump of fully twelve feet, and nothing but mortal terror would have given such desperate energy to the muscles that propelled that squirrel. Seeing he had distanced his enemy, the gray climbed into a high fork and rested, while the fox lay out on the end of the limb where he gave up the chase and chattered his rage and disappointment.

It now seemed about time for me to take a hand. The gray was in plain sight, but full 50yds. away, and there was a hole in the other tree that he would doubtless run into if any attempt was made to get nearer. The fox was 45yds. away, but would have to come toward me if he moved, so it was thought best to take a chance at the gray and then look out for the other one. When shot at the gray ran into the hole and the fox made a dash along the limb toward the body of the tree. A snap shot with the second barrel brought him. He fell just like he had been hit with a club, and never kicked.

The next find was a gray that ran up a tall poplar stump quite near by, but he only showed a glimpse of himself as he jumped from the ground and ran up the other side. Now I'll stand still and perhaps he will peep round to see what became of me. Is that the squirrel or a knot on the side of the stump about 30ft. high?

There are so many leaves in the way I can't tell, but when I move my head to get a better view the thing disappears, and too late I know it was the squirrel, and chide myself for not knowing at the first look at the stump that there were no knots on it. It is all right now though, for he has run up 20ft. and jumped on to a long beech limb and is in plain sight, running toward the body of the tree, making a beautiful running shot, which kills him very dead indeed. Then follows more strolling among the big trees, admiring their stately shafts and imagining what stories they might tell if they could talk, till the game is almost forgotten; but there! was it a glimpse of a squirrel or a chipmunk or a bird at the root of that tree. I wait a minute and then a fox squirrel shows himself an instant on the side of the tree 6ft. above the ground, and that is the last that is seen of him, for the tree is hollow.

Only a little way beyond here one runs up to the lowest limb of a bushy beech, and sits on the limb close to the body of the tree. He is not thirty yards away, and as I slowly raise the gun I think I'll just knock him right out of his hide; but when the gun cracked, he jumped to the ground and ran away through the underbrush, surprising me so I forgot to use the second barrel. It was one of the mysterious misses we all make sometimes. The shot had fairly skinned the little limb on which he sat, and half a dozen shot had glanced off the smooth beech bark of the tree in a direction that ought to have taken them through his body. I was now at the further end of the woods, and it was time to be hunting toward home; so the same ground was hunted over, but without a find till near where the two had evaded me soon after entering the woods. Here one ran up a tree, and presently showed a nose and pair of small ears, which were instantly withdrawn behind the tree. Shortly afterward he showed himself fully, all ready to jump and land at a hole in a tree six feet away; but a lucky snap shot got him. Another one showed up in a tree twenty feet beyond the first one, and was killed at once. Then another one barked, and I tried to stalk him, but did not get a sight of him. Another one barked, and I got a glimpse of it running over the treetops, but lost it.

When near the end of the woods a big fox squirrel came out of the adjoining clover field, where he had doubtless been looking for grasshoppers, and seeing me took refuge in the nearest tall tree, and was discovered sticking his head out of a fork eighty feet above the ground A shot tumbled him out, but he caught on some limbs half way to the ground, and the second was used for safety, as the trap-shooters say.

It was now nearly noon, and I had to carry a vigorous hunter's appetite one and a half miles, most of the way through open fields, to reach home and a hot dinner to stop the inward longings. There was one small piece of woods to go through, and I had the fortune to bag two fox squirrels in it, making one very long shot and one very easy one. The gun, the squirrels and my legs all got to feeling pretty heavy by the time home was reached, but they were trifles to the hunger that assailed me; but beefsteak, coffee, fresh bread and butter, held down by half an apple pie smothered in cream, soon stopped all uneasiness.

After dinner I skinned the squirrels in the following manner: Under the root of the tail make a cut through the skin about 2in. long, as though to take a strip about 2in. wide off the animal's back, running lengthways with the body. Skin the under side of the tail back for an inch, and cut the bone in two, but do not cut off the skin of the tail. Put the tail on the ground, put a foot on it, take hold of the squirrel's hind legs and pull. The skin will tear diagonally across the body, coming clear round the body before it is stripped down to the fore legs. Take hold of the lower end of the skin which still covers the hind quarters, and pull till the body and hind legs are well uncovered. Now take hold of the skinned hind legs and pull till the skin is stripped from forelegs and head, entirely. Next, hang the squirrel by the skin which is still left on the hind feet, and finish the dressing. There will not be a hair left on the carcass except perhaps a few where the first cut was made, and the work can be done quicker than it can be described.

Squirrels are not considered aristocratic game, but if drawn as soon as killed, and properly cooked, they are good enough for anybody. They do not afford the pleasure of seeing a good dog work, like game birds, but they do afford opportunity for the slyest kind of still-hunting, and exercise one's eyes in close and patient looking, and no one can hunt them well without making a careful study of their habits. They are in season, too, when other game is not, and serve to tide over a dull time in the shooter's calendar. O. H. HAMPTON.

### Some Offhand Definitions.

JERSEYVILLE Ill.—I suppose I am one of the jury you appeal to in your editorial of Sept. 22, "Guilty or not guilty," I answer "not guilty," and long may he live to enjoy the sport that justly belongs to him. L. S. H.

If not presuming too much, I would be pleased if you would define what a market-hunter is, what is a game hog, what is a pot-hunter. Suppose a party of hunters go into camp for a few days or weeks, and that they sell their surplus game to help pay the expenses of the trip; are they market-hunters? L. S. H.

[A "market-hunter" is one who hunts for the purpose of selling his game. A "game hog" is one who kills an unreasonable amount of game. The term "pot-hunter" appears to be used for "game hog" and "market-hunter." We should say that the party of hunters who sell surplus game could not be classed as market-hunters.]

## GROUSE IN THE POCONO MOUNTAINS.

The first week in October my friend Wm. H. and myself left the little town of South Bethlehem, Pa., bound for McMichaels in the Pocono Mountains. We had one English setter, a little undersized, but a fairly good dog on ruffed grouse, and a pointer bitch—not the best dog in the world, by any means, but one that was an all-day worker, and the most staunch and surest bitch on grouse that it has ever been my good fortune to shoot over. It was a beautiful day, and we rode along at a rattling clip, enjoying the scenery and pure mountain air, and talking about the great things we would do on the morrow. Wm. H. knew every foot of ground in the Pocono Mountains, and he was just as expert after the wily grouse as he is tracking criminals, for he is Chief of Police in our town.

Early the next morning we started for McFall's Gap, about a mile from our hotel. It was a bright, crisp, frosty morning, and it made the blood tingle in our veins as we walked rapidly across the fields to the starting point. By the time we reached the Gap the sun began to peep above the hills, and our spirits rose accordingly. William took one side of a brook that flowed through the Gap and I the other, the dog working between us. In this way we proceeded about a quarter of a mile without the dog showing any signs of game. We began to think we had made a mistake in working this gap so early in the morning, as the frost lay quite heavy on the leaves, and it would have been better later in the day. Suddenly the bitch began to show signs of game, and I told William to be on the lookout. She roaded along the bed of the creek for some seventy-five or eighty yards, when a large cock grouse burst cover, with a noise like a big bass drum, some fifty or sixty yards ahead of the dog. "Mark," called I to Bill, and I am sure if any man can mark down accurately in a thicket he can, for I never saw his equal. He demonstrated his ability as a marker time and time again on this trip. We kept the dog working pretty close to the guns for another hundred yards, when suddenly she showed decided signs of the bird being near at hand. Stealthily she crept through the rank growth of bushes, her belly almost touching the ground, and in that position froze to a good solid point, eyes almost starting from sockets and saliva dropping from mouth. I knew the bird was close by. Whistling to locate my partner on the other side of the creek, I told him to get ready, for I was confident the bird would cross the stream. I urged her to flush, but she remained immovable. I hated to flush the bird myself, as my chances for a shot would be very slim; but there was no help for it, it had to be done. I worked my way carefully through the thick brush, and had gone but a few steps ahead of the dog, when up got the grouse, and my yell "Mark!" was answered by the crack of William's 12-gauge, and one more grouse's career was ended then and there.

After the bitch had retrieved the bird, and we had admired it to our hearts' content, we moved on slowly hunting all the likely places and sunny corners they like so well. We had gone but a short distance, when W. called "mark," having flushed a pair of birds on his side. Before the words were fairly out of his mouth, a large grouse swung into an opening, barely ten yards ahead of me. Throwing my gun hastily in position, I pressed the trigger, but the bird did not fall, and I actually thought I saw that bird wink at me, as he sped like an arrow up the stream. "Did you get him?" called W. from the other side. I was so crestfallen that my reply was scarcely audible, and I had to repeat it several times.

We were now getting into such dense cover, and the ground was such that all our shooting had to be snap-shooting and quick snap at that. We worked our way gradually through this thicket, and as we were nearing the opposite bank, a pair of birds flushed not ten steps to my right. Quickly covering the first pair as best I could, I pulled, and at the same instant heard the report of W.'s gun. There was a tremendous fluttering and thrashing around where I supposed my bird had fallen, and an instant later the bitch brought in the bird. W.'s shot had not been so effective; in other words he had scored a goose egg. He declared that it was the same birds I had missed a short time before, but he had marked the bird, and we felt sure of getting another shot at him. Our expectations were soon realized. We had gone not over two hundred yards, when up got the bird, away off to the left. We sent out a couple of urgent invitations for him to stay a while, but he declined. I never had a more forcible illustration, which brought to my mind so clearly the little story, written, I think, by S. T. Hammond, of "The One-Eyed Grouse of Maple Run," in his book "Training vs. Breaking," for I candidly believe that this bird was a very near relative that famous one. I am sure we raised that bird six or seven times but could not get a shot at it.

By this time we were nearing the head of the gap, and it was very hard traveling, and we had all we could do to leap from rock to rock, without paying much attention to the bitch or the birds. The mountain stream came tumbling and roaring over the rocks at our feet, and I felt sure it was an ideal trout stream. I afterward found that my surmises were correct; it fairly teems with trout. We finally reached the head of the falls, and came to a large, flat piece of territory, known as the barrens. It was grown up with scrub oak, and huckleberry bushes, about waist high, and there we saw the bitch do a very fine piece of roading. She began to trail, and show signs, as soon as we left the gap, and kept this up for at least a quarter of a mile. Finally she stood for an instant, then moved on, stood again, this time "for keeps." Bill was back of me, and a little to my right. I took but a few steps, when a bird flushed to my right, flew across, and gave me a left-quartering shot, about forty yards. I took plenty of time, followed him carefully, pulled in about two feet ahead of him, and at the report of the ten-gauge down he went like a rag. I had broken my gun, and was just about feeling for another shell, when up got another, but flew to my right. Hastily snapping the gun I gave him the left barrel, but I did not know whether I had killed him or not, as I was shooting black powder and the smoke came back in my face, until I heard W. exclaim, "You knocked the stuffings out of him." We put up another bird on the barrens but could not get a shot as both failed to mark them.

From here we went to Grass Lake, about two miles distant, and in due time we reached the lake. After lunch there it was decided that W. was to take one side of the lake and I the other. The lake is about half a mile long and a quarter wide, and is quite famous for deer. W. showed me one or two of their runways. I had gotten about half way around the lake, when I put up a very large cock bird in the thicket, or rather the dog did; and as he was climbing over the tops of the trees I gave him the right barrel. I realized my mistake instantly. I had shot under him. Hastily raising the gun so that the bird was lost to view, I gave him the left and was rewarded by hearing him drop with a thud full 50yds. away. I do not over-estimate the distance, for I know full well 50yds. in cover is a good long shot, and there are not many birds killed over that distance.

Going on, I met W. at the other end, but he had poor success, not having put up a bird; and as it was getting late and we had a good ten-mile tramp before us we decided to return. We were near home, when a bird flushed from the mountain road and flew directly between two saplings. It was the work of an instant for W. to throw his gun from his shoulder and nail that bird right there. We arrived at the house in good time for supper. Six great big grouse were what our bag contained that night. I suppose that a great many of my brother sportsmen will think this was not much of a bag, but any one who is used to hunting ruffed grouse on a rough mountain side can appreciate that it takes good, strong, quick shooting and indefatigable efforts of both man and dog. We were very well satisfied with the day's result, as neither of us laid any claims to being a Carver or a Bogardus.

That night, while sitting around the fire, we were much interested in the stories told by the natives concerning the early days of the Poconos, and how deer and bear had been shot within sight of the house. Their stories were corroborated by W., whose father had spent all his life in the mountains, and W. himself had driven deer time and time again out through some of their numerous runways, for some brother sportsman stationed there.

The next morning I thought I had not a joint in my body; I was so lame and stiff I could hardly get down stairs. After a little exercise, however, I felt much better. After breakfast we started for a piece of cover half a mile distant, a splendid place for birds at that season of the year. On entering the cover the bitch showed signs of game, and working along carefully soon pinned him. Getting in the best positions we could, I threw a stone about where I supposed the bird lay; I must almost have struck him for he rose from the very spot where the stone landed. He cracked his wings about twice when W. scored a nice clean kill, such as it does one good to see. After the bird had been retrieved we swung a little to the left, when W. flushed one, but too far off for a shot. He marked him down in a little neck of woods that extended down into a pasture. We started after him; W. was to go down and try and get a shot as he broke cover, and I was to remain by an old rail fence, feeling confident that if W. missed the bird would fly across the corner of the field and give me a good open shot. In this, however, I was mistaken, as the sequel will show. W. worked carefully down the edge of woods and had almost reached the extreme end when the bird burst out from under his feet, giving him a fine straightaway. W. promptly sent two loads after him, but the only harm done was to shoot two big holes in the air. Instead of the bird cutting across the corner where I was stationed he took it straight across the pasture, a good 75yds. away. I imagined that I saw a few feathers fly as I pulled on him and asked W. about it, as I was not positive. He told me that if any feathers flew they were fast to the bird. But what could you expect of a man who had made so bad a miss as he had. We followed up the game, however, and after working around the bitch came to a stand near an old treetop in a heavy thicket and out came the bird—on the other side, of course. By a long shot I managed to scratch him down, and it was only a scratch, for by the time the bitch brought him to me he appeared to be as lively as ever, and I hated to kill him. I do not think a shooter should be satisfied with merely a scratch down, but should kill as cleanly as possible; it gives better satisfaction. I was shooting a 10-gauge, 9½lbs., with 4½drs. powder and 1¼oz. No. 6 shot, and I did not find the load too large nor the gun too heavy. In my opinion an old grouse will stand more killing than any bird I know of.

We hunted several good pieces of cover that afternoon, with fair success, and when we started for the house it was quite late. W. knew of a good ravine that we would pass on our way home. The wind had risen suddenly, and we were anxious to work through before it blew too hard. Arriving at the ravine, W. followed an old road, while I was to work along the left hand ridge. We had gone but a short distance when W. told me that he had raised a bird, and that I had better come down to where he was. Keeping the dog to heel, we started to walk it up. We had gone a couple of hundred yards, when out from a tree got the grouse, good 40 or 45yds. away, and flew with the wind, which was blowing very hard by this time. When I threw up my gun I was in very serious doubts if a load of shot would ever overtake that bird, but it did, and I have thought of that shot many a time since. It seems to me that I pulled in full 10ft. ahead, yet my allowance was all right when the bitch brought in the bird. It proved to be a hen bird, and one of those small, sleek, gamy birds that we run across once in a while. She was a flyer, and no mistake.

We arrived at the house about dark, as tired and hungry as two men could be and live. On emptying our coats, we found we had seven nice, big birds, an increase of one over the previous day.

The following morning we were up bright and early, and when I let the bitch out of the barn, she was so stiff that I did not think we would be able to use her that day. After a short run she began to limber up and was in better shape than before, more steady and settled down to business. The setter had given out the day before, so we did not take her along. We harnessed the horse and drove to the top of the mountain, about five miles distant. When about half-way there we flushed a bird from the side of the road, and saw perfectly well where it went down. We were both "dead sure" we could walk to the exact spot. I wanted W. to go after him, as my gun was in the case under the seat, and he had his gun across his lap, but he said no, and insisted upon my going, and taking his gun, I finally did so, leaving the dog with him in the wagon. I walked, as I supposed, directly to the spot, but there was no bird. I kicked and stamped around on the brush within a radius of 50yds., but could not raise him. When I turned to my right and made a circle for the wagon, a good 100yds. from where we saw the bird go down, he arose, a good distance ahead of me. I covered the bird the best I knew how, but it was useless; he kept on. When I reached the wagon W. asked me how I could ever miss that bird. I told him that his gun was no good, and he very kindly informed me that it would have been just the same if I had started out with my own gun. I had nothing more to say, as I was of the same opinion.

Arrived at the top of the mountain we worked through a likely piece of cover, and soon put up a bird which W. knocked down in great shape. After finishing that strip we turned to our right and entered a large swamp, but the cover was so thick, it was almost impossible to see a bird 10ft. ahead, although we heard them getting out quite frequently. Working our way through to the other side, we ran across a typical mountaineer, with a little cur dog to tree birds, and no mistake that man could give his city cousins pointers on hunting grouse. He had seven grouse, and it was not 9 o'clock, and had shot them all with an old single-barreled gun. Continuing on our way, it was not long before we put up another pair of birds, and we had the good fortune to bring them both to bag. From that time to late in the afternoon, we had indifferent success, only picking up a bird or two, and decided to start for the house. Passing through a stubble field, in which there was a large patch of thorn apple, W. remarked that he had never failed to put up a bird at that time of day—about the time they came out to feed. This day proved no exception to the rule. He stationed himself over in the woods near a fence; the direction, he said, which they were sure to take when flushed; I took the dog and started in working toward him. We had gone but a few steps, when the bitch stood, and out got a pair; one was on the opposite side, which I did not see at all, and the other started up over the top of the hill; I pulled on the one going over the hill, and at the report of the gun it dropped several feet. It could just drag itself along above the stubble; I did not fire the other barrel, as I thought it useless, expecting to see the bird drop every moment. What ever became of that bird is a mystery to me, for it seemed that we searched every inch of that ground for 500yds. around; our search was in vain. In the meantime, W. had accounted for the bird that flew in his direction, and so ended our last day's hunt in the Pocono. While our bag was not as heavy as it might have been, we both felt perfectly satisfied, as we worked hard, and our birds were killed in a good legitimate manner. Next day we started for home, both promising ourselves that we would repeat the trip in the near future.

Bethlehem, Pa.

## A CARIBOU HUNT IN NEWFOUNDLAND.

On Sept. 15 W. A. Whiting, Howard Fuguet and I started on a hunting trip in Newfoundland. Our starting place was the Bay of Islands, on the western coast. The steamer Harlaw makes fortnightly trips to the towns along this coast, the scenery of which is grand in the extreme. We arrived at the Bay of Islands on the evening of Sept. 14, and that night we procured our licenses, which cost $100 each, but I think it will soon be reduced. There is a small house here, kept by Mrs. Petrie.

The next morning we started out in a river boat with our five men, bound for the Willow Steady Hills. Our route lay down the bay and up the Humber, and thence up the Willow Steady River to the foot of the great rapids. These rivers are quite large with many rapids, and their scenery is one grand panorama of beauty.

Our guides were Henry McWhirter, John Nichols, Jack McCormick, Tim McLellan, cook, and John Gusher, boatman and packer.

The first night's camp was made on Deer Lake, which is a broadening of the Humber, nineteen miles long and several miles wide. Our next camp was made at the portage for the Willow Steady Hills, which we reached about 4 P. M., and made preparations for our twelve-mile tramp next day. This tramp we found a very hard one; half the time being up to our knees in mud and water. The caribou barrens are very hard walking, and the woods a terrible tangle of underbrush and fallen timber, but in places are covered with the heaviest carpet of moss I have ever seen, into which one often sinks knee deep. The effect to the eye is very beautiful, and the ground looks like a carpet in green hues.

After lunch I struck out ahead on one of the barrens. I saw some distance away a caribou feeding. I got up within about 200yds. and shot it as it ran across the barren. It proved to be a barren doe, and was very fat, and some of its meat made a good supper for our tired party that night. The men had very heavy loads and all hands felt glad to reach the Willow Steady Hills. These hills are bare for the most part and swampy, with the gulches wooded, and back of them is a vast mountainous country heavily timbered, but interspersed with caribou barrens of all sizes.

Our first day's hunt was quite successful and we got some fine stags, having seen at least fifty caribou and a good many ptarmigan.

We stayed here a week, and every day we saw caribou, but they became less plentiful every day, so we moved over to the marshes on Grand Lake which trip took us back over the portage by which we came in and thence up the Humber and over a seven mile portage to Grand Lake. This is a beautiful sheet of water, another broadening of the Humber, and fifty-two miles long. On the marshes here we got some sport and saw a great many caribou. During our stay in the Willow Steady Hills, a black bear was shot and another wounded—over the carcass of the caribou that was shot on our way in.

We were in camp fifteen days and we were all satisfied with the sport we got.

The scenery is grand and the climate bracing. The only drawback was the black flies, as we had come away without any tar oil.

The country is hard to hunt in, but to those sportsmen who are willing to work hard and to rough it, Newfoundland presents a fine field for sport. The stalking is very exciting at this time of the year, one who kills his game earns it. Later on when the caribou are moving south, they can be killed almost anywhere on the Humber or Willow Steady rivers, or on any of the numerous runways, by simply waiting for them to come along, but such sport does not appeal to most sportsmen.

There is a railroad being built from St. John's by way of Grand Lake to Bay of Islands, and next year the sportsman can go from St. John's and meet his guides not far from good hunting grounds. The men we had proved a fine lot of fellows in every way, I can honestly

recommend them; especially can I do so in the case of Henry McWhirter and John Nichols—McWhirter resides in New Richmond, Province of Quebec, but he intends to move to Bay of Islands. These men are thoroughly familiar with the best hunting grounds of Newfoundland both on the east and the west coast. In June and July one can get good fishing on these rivers.

I would strongly advise those who are not willing or able to rough it to stay at home. To such that are not afraid of hard work and are fond of sport, Newfoundland offers a good field.

In conclusion I would like to say, in regard to the discussion in FOREST AND STREAM as to caribou does not having horns, that the majority of those we saw had horns, and some quite large ones, and then again I saw some that had none. The guides say that barren does have none. H. W. HAMLYN.

HONOKUS, New Jersey.

## CHICAGO AND THE WEST.

[*From our Staff Correspondent.*]

### It Rests With the Ducks.

CHICAGO, Ill., Oct. 12.—The season is now at hand when it is fair for the duck shooters to expect the first of the flight of the northern pintails, mallards, etc. Indeed, a few birds have put in an appearance, but in no such numbers as to warrant the belief that any general migratory movement has begun. There is no promise of a repetition of last year's phenomenal abundance of game. Those who glutted to the extreme of their ability the desire to kill may reflect that the birds they slaughtered last year cannot come back this year to be killed again—or does their childishness and improvidence extend to the belief that a dead bird lays eggs? We could almost think so, in view of the frequent statements urged in extenuation of offenses against sporting decency. "If I don't kill them, some one else will." When I hear a man say that, I always pity his intellectual weakness so much that I hardly have time to get angry with him.

Anyhow, the season is here, and the shooters are here, both the decent and the indecent. It all rests with the ducks. Let us hope. Let us dream. Perhaps after all, dead ducks do lay eggs and come again, or if they do not, will do so in the sweet bye-and-bye. In the sweet bye-and-bye, my brethren, perhaps we shall be able to eat our cake and still have it. We shall, perhaps, then be able to kill 75 or 100 mallards in a day, and have them all come back again to be all killed over again. Bless you, my children, how wise, how provident and how logical you are!

### Somewhere.

A friend in the woollier section of the West writes me the following, to which any one wanting a good trip may well give heed:

"SOMEWHERE, Kan., Oct. 8.—I am going hunting into Colorado, and shall be there on or about Nov. 15. There are black-tail (mule) deer, Virginia deer, antelope and wild turkeys, some quail and many turkeys. The law is such that a person cannot kill many even if he gets the chance, but it is wild country, queer people and a nice place to camp, and oh, I don't know what else, just camp. I am willing to have two men go with me. I want men that don't expect to kill much, that are easily satisfied, that are willing to put up their part of the expenses, which will be about $1.50 a day each, and which will include horses, food, a cook and outfit. I won't take any one as a companion and place them as I would have to unless he is a gentleman. I like newspaper men, doctors, lawyers and ministers. I won't promise much of anything but I am going and it is the best place I know of in the West to spend my fall vacation according to my tastes. I don't tell exactly where it is as this is not intended as an advertisement for anyone to go into my country without me. Consider it as an invitation because you are a sportsman and a reader of the FOREST AND STREAM. If you want to go write to me care of E. Hough, 909 Security Building, Chicago, Ill., and if some one is not ahead of you in application you may see me climb a tree and get out of the way of a certain bear that I have hunted which has returned the compliment by hunting me several times. I am going to try her once more on or about Nov. 20.—W. J. D."

### 'Tis Trude, 'Tis Pity, and Pity 'Tis 'Tis Trude!

Last week I spoke of the elk exploits of lawyer A. S. Trude, whom I do not hesitate to call the greatest criminal lawyer in Chicago—if this story about his killing the elk be true. I am willing and hoping that Mr. Trude is going to appear and make a defense, and explain how he justified his notions of law and his notions of killing together. But now Mr. Trude being three times called in open court, comes not, neither makes defense. Much as I regret to say it, therefore, I feel forced to give credence to the report that he did kill eight elk illegally. The next gentleman to join the ranks of Dr. Thomas, Gov. Hogg, *et al*, is, I fear, Mr. Trude, vaunted as a great sportsman of Chicago. 'Tis Trude, 'tis pity, and pity 'tis 'tis Trude!

Dr. Thomas, this is Mr. Trude—Mr. Trude, Dr. Thomas. I hope you will be very good friends.

### Jumped Their Bail.

This week Assistant Warden Goelter arrested Moses Murphy, Buck Walter and Budd Smith, or men giving those pleasant names, on the charge of killing song birds along the Des Plaines bottoms last Sunday. The men put up their shotguns as bail, but when the trial day came they did not appear. The warden holds the guns for Justice Porter.

### Some Snipe.

Your uncle John Watson was down at Maksawba Club on the Kankakee this week after a little of his favorite sport of jacksnipe shooting. He got 90 birds in two days, and that surely is good bag enough for anyone. Mr. Watson uses his old dog Hector on snipe. Shooters at Watson's Park may have noticed the setter, and though the pointer Cyclone surpasses him at retrieving pigeons, the older dog is said to be hard to beat on snipe in the field.

I often hear men speaking of shore bird shooting in the East, and they tell me of sport at yellowlegs, etc. Out here we don't shoot yellowlegs, or rather turn up the nose at one who does. I think I am safe in saying that on the last day I was up on the Horicon marsh I could have killed 500 of these birds if I had wanted to. They were in great flocks everywhere about, and so tame they almost flew into the duck blinds. I suppose after a while we will be glad to shoot yellowlegs, but now when anyone out here speaks of "snipe" he always means the bird commonly called jacksnipe.

### Hard Time.

Mr. D. Pride, long known to the craft of shooters in Chicago but more lately of California, is back in Chicago this week on a business visit. Mr. Pride says the hard times have left the sportsmen of southern California in bad financial shape, so that they don't hunt anything so so hard as they do money, but he looks for better days when the springtime cometh.

Mr. O. H. Hampton, of Indiana and all over, is a traveling man, and he, too, says that business is dull. "I don't mind that, though," said he, "for I got a three months' vacation which I put in on my farm down in Indiana, and I killed 80 squirrels. You have to shoot those gray squirrels with a shotgun, because they won't hold still." (But I don't think a squirrel ever ought to be shot that way. A squirrel has just as good a right to have some of the fun as we have.)

### Displeased Again.

I am displeased again, this time over a recent statement in FOREST AND STREAM that a muscallonge had been "pulled out" of a lake. This expression is a very common one, usually among those who yank, snake, snag or jerk their fish, in contradistinction to those who take, kill, land or capture their fish. "I'll bet I can pull out more fish in a day than you," is a favorite remark of an acquaintance of mine who never saw a gaff hook or a landing net. Now, a fish isn't a cork, you know. To read this literally and with due regard to usage of the English language, we might infer that the fish had in some way become jammed, fastened or wedged in the waters of the lake, and was only to be removed by direct application of a considerable physical force. The ethics have it not thus.

### Gun Men and Guns.

Mr. S. A. Tucker, of the Parker gun, and Mr. A. G. Courtney, of the Lefever gun, were both in town this week at the same time. "I can't say that I see any actual improvement in the business situation," said Mr. Courtney, "though of course there is more trade than for the past year. Dealers are buying of us, because they have have nothing left to sell, having run out all their old stock, which they have not replenished during the year just past. They are buying, but buying only for immediate consumption."

"We are selling some goods," said Mr. Tucker, "and I think there will be a little picking up in the trade. You may say one thing, though, that for one of our manufactures we have been having more demand than we could supply. We are putting out now, you know, our new $100 list gun, with the real Sir Joseph Whitworth steel barrels. This I am ready to maintain is the handsomest gun on the face of the earth, and it is good all the way through, as good as a gun can be made. It is odd, but we have sold every one of these high-priced guns we could turn out, and we are ready for more just such hard times. Now, I will tell you—"

*Oct. 13.*—Mr. M. R. Bortree, president of the National Protective Association, and as tireless an enthusiast and steady a worker as ever labored in the uphill work of game protection, sends me a letter from Mr. W. W. Barrett, the State superintendent of irrigation and forestry, and commissioner of fish and game for North Dakota, whose office is at Bismarck, N. D., in course of which Mr. Barrett says:

"Every effort possible with adverse circumstances is being made in the Northwest to prevent the illegal shipment as well as the killing of wild birds and game. This granted, the success of this department in that direction is worthy of commendation, especially when it is remembered no money has been appropriated for this work. All the great transportation lines have given assurance to the writer, they will do the best they can to prevent illegal shipments from and in our State.

"Though I adhere to the strict enforcement of the game laws, my associations or dealings with the sportsmen have been most pleasant thus far.

"I consider we have what I may call more than a fair amount of prairie chickens, grouse, ducks and wild geese this fall.

"I trust our next legislative assembly will so improve our laws and make such provisions that this department can counteract the prevalent opinion among sportsmen that they can't come into our State and ignore our laws in regard to fish and game. It is the intention of this department to see the laws are rigidly enforced the remainder of the season.

"Should you, or your game warden discover in your city any game shipped from North Dakota, I would esteem it a geeat favor if you will give me all attainable facts in regard to the matter.

"I am pleased to note what you state in regard to shipments of game into Chicago since Oct. 1.

"I hereby renew my thanks to you for the interest taken in aiding this department. Your Association is rendering valuable aid to the entire Northwest."

There is ample chance for Mr. Barrett to find work in North Dakota among local and visiting violators. I have repeatedly mentioned one point, viz., Dawson, N. D., where the non-shipment law is continually, openly and flagrantly violated by non-resident sportsmen who come there in special hunting cars and send home sacks of game. There are hundreds of points which need watching as much. Mr. Barrett naïvely states in his letter that he "does not take any game paper." If he does not take FOREST AND STREAM, he of course doesn't know what is going on in such matters over in his own State, so I shall send him a few copies of late issues and a letter or so which may be of use to him if he is hankering to get somebody arrested for breaking Dakota game laws. It is the fact that the game of Dakota is gradually but surely passing away under the murderous and increasing assaults yearly made by local and non-resident, legal and illegal shooters.

### Will Try the Gun Tax.

Mr. Bortree thinks it will be a good idea to try and get the $1 per gun tax put into the Illinois law the next session of the Legislature, at which time usual changes in the game law will be submitted by the sportsmen He thinks a great fund could thus be raised for protective purposes. This gun tax would hardly pass the distinguished body of our Legislature, and opinion is very much divided on the motion. The main benefit I can see derivable from the idea in its fulfilment would be the general advertising it would give the subject of game protection. Advertising and agitation are at present about all the sportsmen can do. It is discouraging work but there are many who say that the results of it are beginning now to be distinctly noticeable. This I believe, and I believe it will become more and more dangerous for violators, be they sportsmen or not sportsmen, to put in practice their selfish and destructive designs.

It is not always the country shooter or the market-hunter who deserves reproach. I have seen as beastly a spirit of butchery among so-called sportsmen as I ever saw anywhere else, nor do I believe that the name of sportsman or sporting club always covers a clean or innocent heart. Thus I hear from my old friend, Valentine Hicks, of Ashton, Ill., that the gun club of a certain country town not far from Ashton (I have not legal proof and cannot give the name) this season killed illegally all the prairie chickens around their own town before the season opened. On opening day they left their own barren fields and came over to the section near Mr. Hicks, where the farmers have an association prohibiting shooters from coming on their lands. To the credit of these farmers, be it said, they arose and drove the "gun club" shooters, the "sportsmen" back home.

The facts about game law violations creep into print oftener and oftener these days, and it is harder and harder to break the laws of the statute books and of common decency in even the wildest parts of the country and not get found out and told about. The Rockies and the Adirondacks, Dakota and the pine woods country, Texas and Wisconsin, all have shown poor concealment of the deeds of law breakers. Witness Minister Thomas and Lawyer Trude, of Chicago; Governor Hogg, of Texas, and many others who won unenviable fame. Some day I think I shall suggest that FOREST AND STREAM take a page or so and print this roll of dishonor.

It is time the roll of dishonor were shortened. It is time that the old days were done, and that the old, sinful, cruel, outrageous and unjust waste of the people's property were stopped. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## BOSTON MEN AND WOMEN IN MAINE.

BOSTON, Oct. 13.—The hunting season is on in full blast in Maine, and if we are to believe one-half of the newspaper reports the amount af big game already taken is double that of the same length of time in the season of 1893. One favorable feature for the hunters is the fact that the weather has been unusually dry, and the moose and deer have come to the water more than usual for so late in the season. This has enabled the jack-shooter to get in his work. Mr. Geo. H. Cutting, of Andover, a guide who is usually successful in taking deer, writes me that there are no beechnuts in the woods this fall, and that the deer are still in the swamps and feeding on browse. Partridges he still finds to be very scarce, and this doubtless is the true state of the case. Black-duck shooting seems to have been good on some waters, for so early in the season.

Mr. Edward A. Dow, of Woburn, started Thursday for a two-weeks' trip to Richardson Lake and vicinity. He will visit Camp Stewart and probably stop a part of the time in a camp on the Richardson Ponds. He is a good deal wearied with business, and goes as much for the rest as for shooting, though "both guns go along." Mr. Will Cutting, of Andover, is his guide. Mr. Frank F. Dodge, partner of Mr. Dow, is just back from a hunting and fishing trip to Nova Scotia waters. He has found a lake that greatly pleases him, and has put in an application to purchase the land on a certain point that projects well into the lake for a camp site. He is much pleased with the treatment he received from guides and the people generally. Even the customs and revenue officials made matters as pleasant as possible for him. He will have a partner in his new camp.

Mr. L. W. DePass returned the other day from his two weeks' vacation on the Cape, at Marshfield, where he was quartered with a farmer, and a noted raiser of ducks. This farmer has had big flocks of ducks for years, and they go to the salt water creeks and bays to feed. They have mixed and interbred with wild ducks in a way that would make a naturalist wild if he attempted to classify them. The farmer is a good deal of a gunner himself. He clips the wings of his tame ducks and they make excellent decoys. The wild ducks fly down among them, when the hunter in the blind has only to cause them to rise and then shoot at the ducks that are in the air. When the flock of wild ducks starts to fly away the tame ducks that cannot fly *quack-quack* and often draw them back for another shot. Mr. DePass got several black ducks and one or two mallard, though the season was not far enough advanced nor the weather yet rough enough for good shooting. Coot he found to be remarkably plenty, but they were not coming to the tame duck decoys. He got a dozen or more chicken plover. Winter yellowlegs he found to be rather scarce. There had not yet been any good flights.

The FOREST AND STREAM'S editorial last week concerning the tendency of women to take to outdoor sports was admirable and timely. After reading it I took up a Maine daily paper, and almost the first item I read was an account of the shooting of a deer by a Mrs. D. S. Thompson, of Livermore Falls, Me. The game was killed at Eustis.

The next day I took up another paper and found flaming head lines concerning the shooting of a moose by Mrs. George Walker, of Newton Centre, Mass., on John's Pond, a sheet of water some two miles southeast of Kennebago Lake. SPECIAL.

### Maine Game Abundant.

EUSTIS, Me., Oct. 12.—*Editor Forest and Stream:* The first snow of the season is falling and finds us practically barefoot, my hunting shoes having been accidentally burned up last night. This comes at the wrong time, as I have just located some large moose not far off and expected to have killed one before many days. Deer and bear are seen in every direction; caribou are still on the mountain tops near by, while partridge (ruffed grouse) are a drug on this market. I shall try to return her in December, this being the best location for game th have yet found. GEORGE W. LARUE.

## MINNESOTA TEST CASES.

### State v. Rodman. Same v. Cobb.

(Supreme Court of Minnesota. July 25, 1894.)

Game Law—Constitutional Act—Police Power—Title of Act—Excessive Fines.

1. Gen. Laws 1891, c. 9, § 11, as amended by Gen. Laws 1892, c. 124 § 9, construed as prohibiting the having in possession, more than five days after the commencement of the closed season, certain kinds of game, although lawfully taken or killed during the open season.

2. *Held*, that this statute is a proper exercise of the police power of the State to protect and preserve wild game, because reasonably tending to prevent the unlawful killing of such game during the closed season.

3. It is within the police power of the State to enact such laws as will preserve from extermination or undue depletion wild game adapted to consumption as food, or to other useful purpose; and to that end the State may adopt any reasonable regulations, not only as to the time and manner of taking or killing such game, but also imposing such limitations or restrictions upon its use, or the right of property in it, after it is taken or killed, as will tend to prevent such extermination or depletion.

4. *Held*, that the subject of the amendatory act of 1893 is sufficiently expressed in its title.

5. The provisions of section 11 of the act, as amended, are not obnoxious to that part of the constitution which prohibits the imposition of excessive fines.

(Syllabus by the Court.)

Cases certified from district court, Ramsey county; John W. Willis, Judge.

C. W. Rodman and R. E. Cobb were separately indicted for violation of the game law, and demurred to the indictments. The demurrers were overruled, and certain questions certified to the supreme court. Orders affirmed.

Pierce Butler and W. E. Bramhall, for the State. Briggs & Countryman, for defendant R. E. Cobb. D. D. Williams, for defendant C. W. Rodman.

Collins, J. These defendants were separately indicted for having in possession, more than five days after the end of the open season, parts of the flesh and meat of deer, contrary to the provisions of Gen. Laws 1891, c. 9, §11, as amended by Gen. Laws 1893, c. 134, § 9, which reads thus:

> No person shall catch, take or kill, or have in possesion or under control for any purpose whatever, any fawn, at any time, nor elk, moose, caribou or antelope, before the first day of January, 1898; nor any variety of deer, at any time between the twentieth day of November and the first day of November following, except that when the same have been lawfully caught, taken or killed, they may be had in possession or under control for five days, after the time herein limited, for use in the manner and for the purposes herein allowed. Whoever shall offend against any of the provisions of this section shall be guilty of a misdemeanor, and shall upon conviction thereof be punished by a fine of not less than fifty dollars nor more than one hundred dollars and costs of prosecution, or by imprisonment in the county jail for not less than sixty days nor more than ninety days for each and every such animal so caught, taken, killed or had in possession or under control.

Upon the argument of demurrers to the indictments, it was admitted by the prosecution that the deer referred to had been killed in the open season. The court, having overruled the demurrers, certified to this court the following questions of law as having been raised on the argument, and decided in favor of the State, viz.: "(1) That chapter 124 of the General Laws of this State for 1893 is unconstitutional and void; (2) that the Legislature had not the power to make it an offense to have in possession birds, animals or fish during the closed season, which had been killed and reduced to possession during the open season; (3) that if the Legislature has the power it has not exercised it, and this act does not make it an offense to have in possession during the close season birds, animals or fish which have been killed and reduced to possession during the open season; (4) that the act is void by reason of the excessive fines imposed by it; (5) that the indictment does not state a public offense."

1. By the third and fifth propositions the same question is raised, and they go merely to the construction of this act, and for that reason should be first considered. The contention of defendants is that the act should be construed as prohibiting only the having in possession during the closed season game unlawfully caught, taken or killed. On this we need but to say that the language of the act is so clear, plain and unambiguous as to leave no room for any such construction. It is perfectly obvious that it makes it an offense to have in possession during the closed season any game caught or killed in the State, the time when it was caught or killed being immaterial.

2. The first, second and fourth propositions raise the question of the validity of the act. The points made against its constitutionality are: First, that the Legislature has no power to make it an offense to have in possession, during the close season, game lawfully killed and reduced to possession during the open season, especially for the reason that it deprives a person of his property without due process of law; second, that the act violates the constitutional requirement that no law shall contain more than one subject, which shall be expressed in its title; third, that the act so far as it relates to punishment for having game in possession, is in violation of the bill of rights (Const. art. 1, § 5), declaring that excessive fines shall not be imposed, etc.

It is claimed that the act in question proceeds upon the plan of first declaring all wild game and fish within the State to be its absolute property, and then, upon that basis, providing how, and under what limitations, persons may acquire a qualified right of property in them from the State. Counsel for defendants contend strenuously that the State has no proprietary right in animals *ferœ naturæ*, and can acquire none by mere legislation; that such animals are *bona vacantia*, in which a right of property can be acquired only by reducing them to possession. If it was the intention of the Legislature to declare all wild game the property of the State in a proprietary sense, that feature of the law might be subject to counsel's criticism; but that question is not material here, for it is not necessary to resort to any such doctrine as the source of the power of the State to adopt police regulations for the preservation of wild game within its borders.

We take it to be the correct doctrine in this country that the ownership of wild animals, so far as they are capable of ownership, is in the State, not as proprietor, but in its sovereign capacity, as the representative, and for the benefit of all its people in common. The preservation of such animals as are adapted to consumption as food, or to any other useful purpose, is a matter of public interest; and it is within the police power of the State, as the representative of the people in their united sovereignty, to enact such laws as will best preserve such game, and secure its beneficial use in the future to the citizens, and to that end it may adopt any reasonable regulations, not only as to time and manner in which such game may be taken and killed, but also imposing limitations upon the rights of property in such game after it has been reduced to possession. Such limitations deprive no person of his property, because he who takes or kills game had no previous right of property in it, and, when he acquires such right by reducing it to possession, he does so subject to such conditions and limitations as the Legislature has seen fit to impose. It is upon this principle that laws have been sustained which restricted the use of such game to the people of the State in which it was caught or killed, and prohibited its being shipped out of such State as an article of commerce; the reason being that to permit game to become an article of commerce, even during the open season, would stimulate the killing to an extent leading to its total extermination. In short, the object to be attained is the preservation from extinction or undue depletion of game; and the Legislature may pass any reasonable laws to effect that end, even to the extent of restricting the use of, or right of property in, the game after it is taken or killed. All so-called game laws proceed upon that principle, and their constitutionality has rarely, if ever, been successfully assailed. Organ v. State, 56 Ark. 267, 19 S. W. 840; State v. Geer, 61 Conn. 144, 52 Atl. 1012; Magner v. People, 97 Ill. 320; American Exp. Co. v. People, 133 Ill. 649, 24 N. E. 758; Gentile v. State, 29 Ind. 415; Phelps v. Racey, 60 N. Y. 10.

No court would be justified in declaring unreasonable the provision limiting the time to five days after the commencement of the closed season, during which a person may lawfully retain possession of game taken or killed during the open season. What this provision aims at is not the mere fact of possession of game lawfully obtained, but to prevent its being unlawfully taken or killed. If it were permitted to have possession during the closed season, without limitation, of game taken or killed during the open season, it would inevitably result in frequent violations of the game law, without the least probability of a discovery. Game is usually found in secluded places, away from habitations of men, with no one to witness the killing but the hunter himself. The game would have no earmarks to show whether it was taken or killed in the open or the closed season, and hence conviction under this statute would ordinarily be impossible, and the law would become practically a dead letter. In these days of cold storage warehouses, the mere lapse of time after the expiration of the open season would furnish little aid in an effort to prove that the game had been taken or killed out of season. The regulation is one which reasonably tends to prevent the taking or killing of game in the closed or forbidden season, and is therefore a legitimate exercise of the police power. Roth v. State, 7 Ohio Cir. Ct. R. 62; Phelps v. Racey, supra.

There is nothing in the point made by counsel for defendants as to the construction of this "five days" limitation. The evident intent of the Legislature was to extend the open season for possession five days beyond the end of the open season for killing.

We fail to discover any merit in the point that the subject of the amendatory act of 1893 is not expressed in its title. The title of the original act, approved April 20, 1891, is "An act for the preservation, propagation and protection of the game and fish of the State." The title of the amendatory act is, "An act to amend an act for the preservation, propagation and protection of game and fish of the State of Minnesota, approved April 20, 1891." It would be difficult to conceive of a title that would more clearly express the subject of an act pertaining to this matter, and every provision in both the original and amendatory acts is entirely germane to the subject legislated upon.

The only remaining question is whether the act is obnoxious to the constitutional provision against the imposition of excessive fines, or the infliction of cruel or unusual punishments. The latter clause of the provision is directed, not so much against the amount or duration of the punishment, as against the character of it—what was in mind being those punishments which were cruel and degrading in their nature, and which had been condemned by public opinion years before the adoption of our constitution. The punishment for offenses against the game laws are usually graduated in one or two ways—either by making the unlawful killing or possession of each animal a separate and distinct offense, or (which works out the same result) by graduating the penalty according to the number of animals killed or possessed, so that the greater the offense the greater the punishment. This method of graduating punishment is distinctly recognized in many of our criminal statutes. Our game law is not more severe in its penalties than the game laws of other States, the validity of which in this respect has rarely been questioned, so far as we have discovered. Blydenburgh v. Miles, 39 Conn. 484; State v. Craig, 80 Me. 85 13 Atl. 129; Association v. Durham, 51 N. Y. Super Ct. 306. See, also, Mims v. State, 26 Minn. 494, 5 N. W. 369; Cooley, Const. Lim. 401. While the fines imposed are certainly large, yet we cannot say that they are excessive, in a constitutional sense. A large discretion is necessarily vested in the Legislature to impose penalties sufficient to prevent the commission of an offense, and it would have to be an extreme case to warrant the courts in holding that the constitutional limit had been transcended. Orders affirmed.

### State v. Northern Pacific Express Co.

(Supreme Court of Minnesota. July 25, 1894.)

Game Law—Constitutionality—Shipments Out of State—Criminal Law—Review on Appeal.

1. State v. Rodman and State v. Cobb, 59 N. W. 1098, followed; holding that certain provisions of Gen. Laws 1891, c. 9, as amended by Gen. Laws 1893, c. 124, entitled "An act for the preservation * * * of the game and fish of the State of Minnesota," are valid.

2. The provision of the act prohibiting the shipment out of the State of certain kinds of fish caught within the State is not an unlawful interference with interstate commerce.

3. State v. Byrud, 23 Minn. 30, followed, to the effect that, when a criminal case is certified to this court, we will only consider such questions as appear from the certification to have been raised and passed on in the court below.

(Syllabus by the Court.)

Case certified from the District Court, Otter Tail county; L. L. Baxter, Judge.

The Northern Pacific Express Company was indicted for violation of the game laws. Demurrers of the indictment were overruled, and certain questions certified to the Supreme Court. Orders affirmed.

J. H. Mitchell, Jr., and Tilden R. Selmes, for appellant. H. W. Childs, Atty. Gen., and W. E. Bramhall, for the State.

Collins, J. The defendant was twice indicted for violations of Gen. Laws 1891, c. 9, as amended by Gen. Laws 1893, c. 124; one indictment being under Sec. 17, for having in its possession during the open season fish which had been caught in an unlawful manner in this State during such open season, and the other under Sec. 22, for having in its possession fish lawfully caught in this State, but not of the species excepted from the operation of this section, with the intent to ship the same out of the State. The trial court, having overruled demurrers to the indictments, certified to this court the following questions as having been raised by defendant, and determined by it, namely: (1) That chapter 124 of the General Laws of this State for 1893 is unconstitutional and void; (2) that the Legislature has not the power to prohibit, during the open season, the receiving by a common carrier, for the purpose of transportation, of fish which have been illegally caught within the State; (3) that the act is void by reason of the excessive fines imposed by it.

The first and third have been fully considered and disposed of in State v. Rodman and State v. Cobb, 59 N. W. 1098 (opinions just filed).

On the second question the defendant's contention is that the provisions of the act prohibiting the shipment out of the State of fish caught within the State unlawfully interferes with inter-State commerce. The complete answer to this is that the fish had never become articles of commerce, within the meaning contended for by defendant's counsel. Under the laws of the State they had, it is true, become private property, but of a qualified and limited character; one of the attached limitations being that they should not be shipped out of the State—that is, should not become the subject of interstate commerce. The purpose of such a provision as a means of preventing a rapid and undue depletion of certain kinds of game has already been adverted to in the State cases just mentioned. Similar provisions are very commonly found in laws for the preservation of game, and have been generally upheld as valid. Organ v. State, 56 Ark. 270, 10 S. W. 840; State v. Geer, 61 Conn. 144, 22 Atl. 1012. It must be remembered that defendant is not charged with having in possession fish caught and killed in another State, but in this.

Defendant's counsel have argued some questions which have not been certified up by the trial court, the most serious thereof being that in the first indictment it is not alleged that defendant knew that the fish had been caught in an unlawful manner. But under the rule laid down in State v. Byrud, 23 Minn. 30, and repeatedly followed, we can only consider such questions as it appears from the certification were raised and passed on in the court below. Orders affirmed.

## AMONG THE TEAL.

Lima, O.—Our destination was the Lewistown Reservoir, a 25 mile drive from home. We have an interest in one of the numerous club houses that line the banks of the Reservoir, and on arriving at our shanty we soon make ourselves at home. Awaking in the morning we heard the light, drizzling rain falling on the roof, and knew that we had an ideal duck day, and we started for the prairie, where it is low and marshy, and can be waded with hip boots. As we emerged from the tall undergrowth and cat-tails, what a sight met our eyes! There, in an open body of water, were feeding at least 800 teal, with a few mallards scattered through the flock.

There were ducks by the hundred, and every one out of range. Not a blind could we find anywhere near that would bring us within gunshot of the birds. Our only chances were to walk them up or wade them up. They got up with a rush and a splash. Our first few shots failed to hit and we found that we were shooting behind. I had by this time waded out to a good blind, and was anxiously awaiting a chance to retrieve my poor shooting. "Mark, here comes a flock of eight." I cut loose with my first barrel and bring down two, and with the second barrel score one. Sam succeeds in getting one from the same flock. It is now getting late, and the ducks are flying high and scattering. By 7 o'clock the flight is over and we turn our attention to plover for awhile and then go back to the shanty with ten teal and seven plover.

Dinner over, we start out again and our success is varied. Sam gets a widgeon and four teal, and I succeed in knocking down a black mallard, four teal and a rail.

The next morning we were in our blinds by daylight, but did not succeed in getting a shot at duck. There was no flight at all; all of them must have left the day before. The weather was now getting warmer and the outlook for better shooting was not encouraging, so we packed our traps and came home, well pleased with the short outing. We did not have as large a game bag as we sometimes read about, but 20 ducks and 19 plover to two guns in one day, through this section of the country, is worth reading about.

We hope to try them again when the storms in the North shall have brought down the large ducks and an occasional flock of geese. Selmo.

### Some Illinois Shooting.

Jerseyville, Ill., Oct. 8.—Oct. 1 opened the quail season in Illinois, and many of our shooters have been out after the birds. Some returned with fair bags, while others had but few. They all report plenty of birds, but that fully one-half are too small to shoot. The fact is that the law is wrong, that is the opening of the season is unreasonably early and should be changed trom Oct. 1 to Nov. 1, then close Jan. 1 instead of Dec. 1. I am told that many of the birds started were no larger than sparrows. Now, this is all wrong and should be amended. Give the birds a chance to grow first and then hunt them. I am not one of those who argue that a quail will raise two broods in one season, but believe that where small birds are found it is owing to the fact that the nest has been destroyed or from some other unknown cause. Quail begin to travel in this section about the middle of September and continue to do so until about the middle of October. During this time they can sometimes be found in flocks of fifteen or more.

I do not think that they prefer this mode of traveling, but that it only occurs when they chance to meet, and that they separate into coveys when roosting time comes. During the time they travel they often find their way into towns along their route, and can be heard whistling from the gardens, trees and housetops. L. S. H.

### Four Snipe Out of Five.

Orangeville, Md., Oct. 8.—On the 3d of this month we saw Mr. J. A. Hartner of Orangeville, Ind., kill four out of five, all on the wing at once. A. L. Petty,
J. E. Evans,
Ed. Zink.

## PNEUMATIC BOATS.

A SCHOOLBOY once got zero in his reading lesson for accidentally transposing the words gun boats and gum boots, thereby making a sentence in the history of the Civil War read: "Admiral Porter ascended the Mississippi in his gum boots." His rendition would not have seemed so ridiculous to any one who had seen the Layman pneumatic sporting boat, which is really a pair of wading boots with inflated tops. With these "gum boots" Admiral Porter could easily have ascended the Mississippi and been just as dry as in his gun boats.

The Layman boat, as it is called, is now on exhibition in the window of a Broadway store in New York.

It is a combination of hip wading boots with a top attachment, which, when inflated, resembles a large life-preserver. When not inflated this upper part may be worn like a vest, the weight resting on the shoulders, and so worn would scarcely attract more attention than a vest. Few observers seeing a sportsman thus equipped would suspect that he carried with him the means of crossing the deepest rivers dryshod, or of navigating any waters suitable for a small boat. The boat attachment is inflated either by means of a small pump or simply by the mouth. It contains four airtight compartments, which of course are inflated separately. This insures safety in case of an accident. It is asserted that any one of the four compartments would easily sustain the weight of a man, even if the other three were punctured. The boat in the water draws about 3½ft., and is perhaps 3ft. long by about 2ft. broad. It will easily carry two men, and its inventor has taken two or three children with him on short trips.

THE PNEUMATIC BOATS.

The advantage of this at first glance apparently superfluous buoyancy is the great stability gained. It enables the heaviest ducking charges to be fired from the boat without the slightest danger of capsize, and it also enables its owner to carry with him a heavy load of game, guns and ammunition.

The boat is propelled by the feet of the occupant. The boots are provided with flaps that open when pressed backward and close when brought forward for a new stroke. The inventor says that the motion is a little tiresome at first, but that one soon becomes accustomed to it and then it is as easy as walking.

The boat is provided with a small and inconspicuous rudder, which is really a most important adjunct. It is not intended to steer the boat, as the word is generally understood, and it is not provided with a tiller or hand lines. In fact, it is stationary. Its purpose is to keep the boat pointed in one direction, as it naturally steers all too easily by the feet. Without this rudder the boat would be more apt to turn in a circle than go ahead.

The circumference of the boat is provided with rings, loops and small sockets, which serve a number of purposes, from towing strings of live fish to erecting a duck blind. A storm cape, which fits snugly about the top of the boat, is provided for rainy weather. This would also be useful when the boat was tried in very rough water.

That the boat is thoroughly practical is proved by a number of tests made by the inventor and also by others. A prominent sportsman of Little Rock, Ark., spent several hours one day in futile efforts to capsize the boat. The most he could do was to fill his boots with water. The boat remained as buoyant and stable as ever. The other day the inventor walked dryshod across the harbor of Bristol, R. I. This is open water, 1½ miles across, exposed to quite a sweep of wind, and was rough the day the experiment was made. Nevertheless, no water was shipped, and the trip was made in forty minutes.

The weights of the boats vary, from a maximum of 20lbs. to a minimum that only adds 4lbs. to the weight of the boots.

They will prove an addition of great importance to the equipment of duck hunters and sportsmen in general who wish to visit overflowed lands or bodies of water that for various reasons are barred to ordinary boats, and they will add one more link to the chain of causes that is lessening our game supply, inasmuch as they will render heretofore inaccessible fastnesses open to assault.

J. B. BURNHAM.

### President Cleveland's Deer.

LYNN, Oct. 13.—*Editor Forest and Stream:* Inclosed please find clipping from the Lynn *Daily Item* of Oct. 10:

The President and party, including ex-Gov. Russell, Private Secretary Thurber, E. C. Benedict and R. W. Gilder, had an exceedingly rough passage from Naushon to Woods Holl, Wednesday, in steam launch Coyell, owned by Com. Forbes. No one expected them to cross in the face of such a storm. * * * The party had good success deer hunting, Tuesday, at Naushon, and brought home some specimens.

I should like to inquire if there is not a law against killing deer at all seasons in this State. I understand that Commodore Forbes owns the island of Naushon and has stocked it with deer. Does the law allow that if a man does own the deer he can kill them in Massachusetts at any time? A. L. N.

[The Massachusetts law forbids killing deer in the counties of Plymouth and Barnstable; elsewhere they are unprotected. Naushon is in Dukes county.]

## THE ST. MARY'S LAKE COUNTRY.

BLACKFOOT AGENCY, Mont., Sept. 28.—*Editor Forest and Stream:* I had intended to write you a detailed account of my trip to St. Mary's, but finding my time too fully occupied, gave up the idea. From Sept. 1 I spent two weeks there with H. R. Norris as guide. I killed one ram and two goats, and a great many grouse and ducks. While skinning my sheep, a ewe and lamb came up within 50yds. of me, apparently as much interested in me as I was in them. After watching us curiously for a short time they leisurely went up the rocks and out of sight.

The goats I killed on Mount Going-to-the-Sun.

From our camp at the head of Munroe's Basin I explored Going-to-the-Sun and the basin on its western and northern sides. I found this basin to contain quite a good-sized stream, which is the north fork of the main North Fork of the St. Mary's. It contains a series of waterfalls of rare beauty, the highest of which is probably 150 to 200ft. in height. From Going-to-the-Sun we had a magnificent view of the country west and southwest. The Gun Sight Pass (named by you) was shown me by Mr. Norris. We saw no bear, though found signs quite plentiful.

The weather was very good, with the exception of one storm of wind and snow, in which I lost my hat, getting back to camp with a towel on my head, and so raising visions of falls and injuries galore in the minds of our people in camp.

Fish were rising only sparingly to the fly, but we were enabled to keep our table well supplied, my wife being especially proud of a speckled beauty weighing 3½lbs. which she hooked and landed.

At the discharge of the upper lake I had the pleasure of meeting Mr. Stimpson and wife, who intend making quite a stay in that country. He is the kind of a sportsman that makes better sportsmen of all he meets.

GEORGE S. MARTIN.

### Plenty of Bears.

BETHEL, Me., Oct. 8.—Bears have never been known so plentiful in the fall of the year in the vicinity of the Rangeley Lakes as this autumn. There have been over fifty bears killed on the border of the forests in Oxford and Franklin counties in the last four weeks, and not a day passes without some being trapped or shot. It is thought that lack of beech nuts and berries in the woods has caused them to seek food in the open country. They commenced depredations in the farmers' cornfields and continued it in the orchards and sheep pastures. Twenty-five bears have already been killed in the towns of Byron and Mexico alone since the first of September. And in Bethel and Newry upward of twenty more. If any one is spoiling for a scrimmage with bruin he can be accommodated by watching on some of these moonshiny nights in any of our back orchards.

Last week Perley Parker, a 12-year-old boy of Bethel, shot a bear in an apple tree in the orchard of Howard Chapman with a partridge charge in a $3 muzzleloader. Gray squirrels are also unusually abundant.

J. G. RICH.

### If Rabbits Could Fly.

BOSTON, Oct. 11.—*Editor Forest and Stream:* I tramped all day through the woods of East Walpole in search of ruffed grouse, but never could get within speaking distance of him, he is such a bashful fellow. I could just get a view of his tail as he would rise on soaring pinions and sail away over the treetops.

I got three simple-minded and confiding rabbits and one gray squirrel. If the rabbits could fly I would not be recording their capture. I found the squirrels very wild and only to be captured by still-hunting.

I noticed a bluebird among a flock of sparrows; they did not desire his company judging by the way in which they would pounce upon him.

One meets the cheery little chickadee everywhere. Go to the woods when snow hides the earth and you will see his little black head bobbing up serenely. JAY PEE.

### Game in the Rainy Lake Country.

WEST DULUTH, Minn., Oct. 12.—Lots of ducks with us now, and grouse and partridge shooting is very good. My last trip through the woods showed an abundance of deer, and upon a recent trip by canoe into the Rainy Lake country we saw many moose and caribou in the streams, often approaching within 100ft. of them, and probably had the finest chance that will ever occur for securing pictures of this noble game, but unfortunately did not take a camera with me. Shall do so on my next trip. Rail and shore birds have been unusually plentiful this fall. E. J. L.

### Virginia Quail and Ducks.

VIRGINIA BEACH, Va., Oct. 9.—We commence to shoot quail on the 15th. The country is fairly alive with birds; some of the quail have hatched three times. Sportsmen will find good accommodations here and plenty of sport. It costs $5 per day for team, guide, etc., etc. The duck season opens the 20th inst. Already large numbers of ducks and geese are seen going over at evening.

E. L. G

### Three Thousand Replies.

SOUTHERN RAILWAY, NEW YORK, Oct. 11.—*Forest and Stream Pub. Co.*—GENTLEMEN: Several issues ago you put a notice in your paper calling attention to a book called "Art of Wing Shooting." This notice has poured into our office about **3,000** applications for copies of this book. We have exhausted the supply we had on hand and have written to Washington for additional supply. Will you kindly make mention of this fact in your next issue, and should we not receive the books will return the stamps sent to us. I was not aware before that your paper had such an extensive circulation, as we are getting letters from all parts of the United States and Canada.

ALEX. S. THWEATT, Eastern Passenger Agent Southern R'y Co.

### Chickens, Ducks and Geese

are going to be very plentiful along the line of the Northern Pacific this season. Make your arrangements to go and get some of them. Send Charles S. Fee, General Passenger Agent, St. Paul, Minn., 4 cents in stamps for "Natural Game Preserves of the Northwest."—*Adv.*

AN error appeared in the advertisement of the Layman Pneumatic Sporting Boat in the last issue of FOREST AND STREAM, whereby the price of the plain boat was quoted at $25, and the boy's boat at $20. The correct prices are, respectively, $26.50 and $22.

# Sea and River Fishing.

## OKOBOJI IN SEPTEMBER.

BLAIR, Neb., Sept. 20.—Ever since I can remember I have heard of the great sport attending bass fishing in September, and each year I have promised myself that I would experience that pleasure or know the reason why; but somehow when the cool nights and mornings of that month arrive and news comes that chickens are ripe for picking, my piscatorial sporting blood thins very rapidly, and I—well, I don't go fishing. In the spring, when the opportunity presents itself, no one is a more devoted desciple of Izaak Walton than I; no hour is too early to rise and no one more reluctant to reel up at night; but nevertheless Sept. 1 always finds my rods and tackle packed away for the year, and I am busy oiling up my gun and loading shells for the fall campaign.

This spring, during our camping trip at Okoboji, my friend George and I had several conversations on the subject, both agreeing that it would be a good idea to try it, so I was not very much surprised a couple of weeks ago at the receipt of a letter from George requesting me to pack up my traps and join him in an effort "to get some of those bass things." Accordingly I was ready when the train bearing himself and wife arrived from St. Paul, and together with my wife, joined him for Okoboji.

The afternoon of that day found our little party of four disconsolately gathered on the lake shore watching the waves pound the landing stage to pieces, and it didn't take us long to make up our minds that we would have no fishing that day, for no boat would have floated many minutes in the heavy sea. Wending our way back to the hotel in an unpleasant frame of mind, we met a gentleman just returning with a dozen tempting looking jacksnipe, which he claimed to have shot on the shores of the Gar chain of lakes. He averred that he had only seen fourteen; but George and I thought he did not look like a man who would kill everything in sight, so we concluded to just look around a little ourselves. Hastily donning shooting coats and boots we started forth with visions of full game pockets. We walked and walked, and then walked some more; but no jacks could we find, and at length having made the circuit of the lakes—some ten or twelve miles, we concluded that hereafter we would not rashly doubt a brother sportsman's statement; and voted ourselves a couple of chumps. We saw a few ducks, but with the exception of three they were entirely out of reach. Of these we did manage to pull a couple down out of the clouds; mine being a male woodduck that increased my respect for the far reaching powers of my new gun.

The second day dawned with every promise of fine sport and we started early and fished long, the wind, however, soon died completely away, leaving the lake as still and glassy as a mill pond, and though we all worked diligently the results for the day were only a couple of fair sized bass, half a dozen pickerel and four ducks shot by my wife.

The third day we started for a bed of marshes in East Okoboji, a long pull from home, but reached there only to find the wind rising so rapidly that our ability to hold the boats against it soon ceased and we reluctantly turned back.

After a hard pull of three miles against the wind we reached the opening to the Gar lakes and started in. It was bad enough in the spring; but hard as our progress then was, it was no circumstance to the present time, the lakes are at least 1½ft. lower than in June, and the weeds in First Gar Lake resembled an unmown meadow, the channel did not have 6in. of water in it, but made up for the lack of water with a couple of feet of sticky mud. Landing our passengers and sending them around the shore we managed to drag the boats through. After all our exertions, however, Middle Gar Lake, our objective point, proved as windswept as the larger lake and our labor was for naught. George did manage to land two good sized bass, but the others of us had not even a strike.

Coming back through the weeds I missed the only good thing of the trip—a flock of eighteen blue-winged teal almost knocked my hat off. My gun, of course, was not in reach, and before I could get my hands on it they were half a mile away. They probably realiz-d my harmless condition for they passed within twenty-five yards of me and not five yards high.

The fourth and last day was but a repetition of the others—a regular gale blowing all the while, no fishing possible and ducks too scarce to bother with. We held a council of war which resulted in our starting for home that night, thoroughly dissatisfied with our first fall fishing trip. The only gleam of sunshine was the discovery of a couple of ideal duck passes that we may try when the fall flight begins. W. R. H.

### Some Good Surf Fishing.

MORRISTOWN, N. J., Oct. 12.—It is with much interest that I occasionally read of fine fresh-water fishing in FOREST AND STREAM, and thinking that your readers might also like to hear of some salt-water work with rod and reel that was good enough to suit the most ardent surf angler, our friends Guild and Hulit not excepted, I append the following as the result of four partial days, being of about five hours each, by four rods:

First day—150 croakers, sea trout and kingfish.

Second day—70 bluefish, averaging 10lbs. each; 12 red drum averaging 20lbs. each.

Third day—6 blues, averaging 3lbs. each.

Fourth day—2 blues, averaging 2lbs. each; 40 sea trout, croakers and kingfish; 39 red drum, averaging 20lbs. each.

Then two rods landed the following, fishing one tide each day:

First day—5 red drum, averaging 12lbs. each; 12 croakers and sea trout.

Second day—44 red drum, averaging over 20lbs. each, the largest of which fell by good luck to the rod of the writer and weighed 57lbs. This, I believe, has never been equalled with rod and reel, standing on the beach and casting in the surf; one rod taking 24 and the other 20.

Third day—16 red drum, averaging 15lbs. each; 2 blues, averaging 5lbs. each.

Fourth day—9 red drum, averaging 15lbs. each, and not one of these fish was wasted. BIG REEL.

## TEXAS SALT-WATER FISHING.

SEVERAL weeks ago I took a month's vacation, and with my wife went down on the Texas coast at Aransas Pass on fishing bent. My varied experiences while there would make interesting reading in abler hands than mine, but I will try to give as much information as possible for the benefit of FOREST AND STREAM readers.

How we fished in the Corpus Christi channel for stingarees and sharks as an additional attraction to the smaller fish; how we sat on the deck of our little sloop at night cracking crabs and eating their sweet flesh; how we enjoyed the surf bathing on Mustang Island, and how we gathered shells and coral beans on St. Joseph's Island were merely pleasant incidents of the trip. Fishing was what we went for, and fishing we had.

The sport that I enjoyed more than all else was the surf fishing. To wade out as far as you can keep your footing, to where the breakers occasionally hit you in the face simply to show they are there, and then to cast your mullet far out into the white, foaming waters; to wait a few moments for the strike sure to come, and then to battle with a gamy redfish or trout, while struggling to keep your footing on the smooth sand, is an experience not soon forgotten. Here, too, the man with the rod and reel has the advantage of the heavier cast line, having more control over his tackle.

The tarpon fishing was excellent. One morning, while fishing in the Pass, I saw five tarpon landed within an hour. Another day six were caught, and all these within plain view of the beach.

Of course I tried to catch a tarpon. My outfit was good and I confidently expected success, but my hopes were shattered. Although I felt and saw them, none came within reach of the gaff.

Saturday morning I started out, seated comfortably in the stern of the skiff with Wilbur handling the oars. For half an hour we trolled up and down the Pass, when all at once I felt a slight nibble at my bait, as though some small fish had struck it. The next moment the tip of my rod bent over and the reel sang a tune pleasant to the ear. Then I knew that I had a silver king. In an instant he was out of the water, shaking his head violently, with his mouth wide open. He failed to dislodge the hook and so jumped again and again. At last, when bearing with a steady pull I felt the line slacken, and reeling in, found the fish was gone. During the next half hour I had four strikes, but all escaped. At this point our fishing was interrupted by a heavy squall which compelled us to seek the shore, and after it had passed the fish ceased biting. It seems to me that this manner of fishing for tarpon is more sportsmanlike than still-fishing, as practiced in Florida. There is no chance for the fish to gorge the bait, and it is a question whether you will be able to land your fish or not. That it can be done is proven every day during the season. Perhaps the best feature of this fishing lies in the fact that there is no waiting five or six hours for a bite. You may feel confident of hooking as many fish as you care to handle if the weather conditions are at all favorable.

I would advise brother anglers looking for genuine sport to try the fishing on this coast. It can be guaranteed. And if any one should desire further information I will be pleased to furnish it. W. M. S.

SAN ANTONIO, Texas.

## TROUT STALKING.

THIS sport when the conditions are favorable may be accounted the most fascinating, exciting and artistic method of taking the speckled beauties.

The season in the northern waters of Maine is September when the summer heat is over, and when the cool days and nights have lowered the temperature of the surface waters down to 63° Fahrenheit, and below.

The field that of a placid lake or pond where trout abound when the surface is entirely smooth, or agitated only by faint ripples.

The afternoon is more favorable than the morning, although some days are throughout favorable.

With the above conditions, and a light boat and companion guide at the stern who can skillfully propel the boat over the water with scarcely a ripple from the paddle, and with a light casting rod of good length, and a light leader and a No. 8 or 10 fly, and a landing net, one is equipped for the sport.

It may be sunny or not, overcast or clear, it matters not if the wind is absent or light, but on a bright or sunny day the necessity of skillful work is more apparent than when the sky is overcast or dull. When the sun is shining or partially obscured, the boat should be worked between the sun and breaks, to the advantage of the fisherman and the disadvantage of the trout. The effect of shadow is light compared with the advantages so gained.

Many of the lakes and ponds in Maine where trout abound are favorable localities for this sport, although all are not, and there are usually quite a number of days in September when the temperature of the surface water and other features are entirely favorable.

I will confess to have allowed some decades of fishing experiences to pass before I became familiar with this sport, which of late years I have looked forward to with much interest and expectation.

The trout, which were plentiful near the surface from the going out of the ice until the middle of June when the surface water warmed up to a temperature of 65°, have sunk away to cooler depths, where they remain until the surface water again becomes favorable from the cooler weather of autumn.

But in surface stalking one does not get so large fish as in spring trolling, for it is the medium sized fish that gives itself the frolicsome play of surface feeding, weighing from ¼lb. to 2½lbs. in the waters which I frequent, averaging a trifle over ¾lb.

There are certain autumnal days when the conditions are favorable, when it would seem as if all the medium-sized trout in the waters were surface feeding.

Not in an eager and conspicuous manner with splashing breaks and flashing swirls, but in a quiet sucking in from the surface of the varied ephemeron which plentifully abound, in a manner so quiet as to be observable only to the experienced eye.

No minnow, however minute, can agitate the surface of the water more delicately than a 1½lbs. trout, if he wills it, and he does when so feeding, although the occasional more conspicuous break and swirl occurs in the presence of an unusually attractive lure, apparent to the most ordinary sight.

Equipped, the boat is propelled deftly by its stern paddle over the feeding water. The fisherman is seated in the middle of the boat casting softly to the right and left with the progress of the boat, for the advantage of a possible surface trout that may be about. A delicate apparent minnow break is observed off to the right, perhaps 50, perhaps 100 or more feet distant, of which, as soon as over, nothing remains to mark the exact spot except a possible air bubble or two. The boat is propelled toward the side of it, to within 35 or 40ft., when the cast is given over or near the spot. Perhaps the fluttering fly is taken at the instant of its fall, for the trout may be directly beneath, but generally not, for the fly is almost always taken below the surface, which position the fly will assume on a long cast and a slow draw.

The trout is likely to have moved 10 or 15ft., perhaps more, but he is almost sure to be picked up in the neighboring area if he has not been alarmed by unskillful movements of the boat or its occupants.

Often an active trout will be on the go as feeding, and by the time the boat has reached a position for casting over the first break, a second will be observed still beyond a possible cast, presumably from the trout which made the first break, and before the second break can be reached a third appears still further on, and sometimes so on, and I have often followed up and secured my trout which has carried me by a dozen breaks and fifty or sixty rods beyond the initial appearance.

Ordinarily, if a break occurs within a few boats lengths distance, which can be speedily reached, the chances are more than half in favor of securing the fish. If within casting distance the fish is almost sure of being secured.

Often breaks will occur so near the boat that nothing can be done but for the stern man and caster to remain motionless until the boat, if under a headway, may pass on, when the chances are half in favor of the trout being picked up in the rear. If the boat is still the chances of taking the trout are diminished, as the motions essential to shortening line and the proximity of the trout are likely to alarm the fish, and when alarmed he invariably strikes down. Occasionally the breaks are so plentiful that one may take half a dozen fish without moving his boat. I remember an instance a few years ago, when accompanied by an English fishing friend whose experience had been mostly in the dry fly drop of the Thames, where he had notable success, that we caught well out on the pond fourteen trout averaging nearly a pound in weight, without touching the paddle to the water, and my friend became exceedingly enthusiastic, which he well might be.

This fishing must not be confounded with pool fishing, or that which we often find in isolated ponds which are unfrequented, and where the little chaps, entirely uneducated to the penalty of the hook and fearless, will crowd about a raft or boat until a hundred or more may be picked up.

The fishing I refer to is the stalking of the fish in well frequented waters, where they are sought and followed up under the peculiar conditions which regularly occur where the trout are scattered over the surface, and not in schools, and must be sought for by their feeding breaks, a fishing distinctive in character, and which I am sure is not extensively practiced by all fishermen.

It is not probable that localities favorable for this stalking exist about all trout waters, but there are hundreds, I dare say, of lakes and ponds in Maine, where it can be most successfully followed. MOLECHUNKAMUNK.

## ANGLING NOTES.

### Greetings from the Old World to the New.

IT is very well known that Mr. Robert B. Marston, editor of the *Fishing Gazette*, London, founded the Fly-Fishers' Club in that city, or as Mr. Basil Field has said: "Francis Francis reduced it to words and R. B. Marston impressed it with life." Since the organization of the club Mr. Marston has served as its honorary treasurer and he perhaps better than any one else understands how desirable it is that such a club should exist in a community of fly-fishers, and appreciates the good that may come to the craftsmen in this country when drawn together into an organization similar to that in London.

The following letter of greeting and good wishes from Mr. Marston, received by last mail steamer, will be read with pleasure by the fly-fishers in America who contemplate banding themselves together for mutual benefit:

"LONDON, Sept. 28.—*My Dear Cheney:* I have noted with great pleasure in FOREST AND STREAM that there is a strong movement on foot to form an American Fly-Fishers' Club (why not American and Canadian Fly-Fishers' Club, seeing that there is so much fine salmon and trout fishing in Canada). I am quite certain that if the right men get interested in it it is bound to be a success, and the fact that you are taking it up so warmly is a guarantee that your best men will join.

"I must refer you to the annual reports of our Fly-Fishers' Club for particulars of the success that ours has been, but even they would tell nothing of that bond of brotherhood which has been created by the fact of members of our club meeting in all sorts of out of the way places and finding that they are members; it is, as Senior well said, a bond of sentiment which holds us together, but when that sentiment is love of fly-fishing and all that that means, I do not know where you will find one stronger.

"I wish the new club success from the bottom of my heart. I am certain that it will mean a high ideal of sport for sport's sake only, and as the years roll on a power to enforce laws against illegal fishing, slayers of innocents, 'fish hogs,' *et hoc genus omne.* Yours ever sincerely, R. B. MARSTON."

I doubt not that my friend, William Senior ("Red Spinner"), to whom Mr. Marston refers,, and who succeeded Francis Francis as angling editor of the London *Field,* and is one of the executive committee of the Fly-Fishers, would send greetings similar to those of his friend and colleague if he should see that such a club was proposed in this country, and thus we would have Godspeed from the successor to the man who reduced the first Fly-Fishers' Club to words, as well as from the man who impressed it with life.

### Proposed Fly-Fishers' Club.

Mr. H. S. Bull, who conducts the angling department of the *Times-Union* (Albany) has this to say in a recent issue of that paper: "Albany has a very large number of fly-fishermen who are not only enthusiasts but experts in the art. Not many years ago a fly-casting association was formed and one or two tournaments held, but during the past five or six years it has fallen into a condition of innocuous desuetude. There is a project on foot, however, that will once more stir their enthusiasm, and perhaps as an indirect result lead to a resuscitation of the old organization. Early in September Mr. A. N. Cheney very forcibly urged in the columns of FOREST AND STREAM the formation of an American Fly-Fishers' Club, that paper heartily backed the suggestion editorially, and since that time letters have been received from prominent anglers all over the country favoring the proposition and offering assurances of co operation. I am very glad to be fully in accord with Mr. Cheney's idea, and the *Times-Union* may be counted as among the most enthusiastic supporters of the new association. Last week's issue of FOREST AND STREAM has the following," etc., etc.

Because of the reference to the fly-casting association in Albany which held tournaments, one should not get the idea that it is proposed to have tournaments or anything of the sort under the auspices of the Fly-Fishers' Club when it is formed, as I believe it will be. The National Rod and Reel Association was an organization purely for contests of this kind, but the Fly-Fishers' should be a social club only.

Such a club, however, must of necessity in time exercise a healthy influence over game and fish legislation (I use the two terms fish and game because they seem to be inseparable in our statutes), if not by direct action as a body, then through an interchange of views and a focusing of sentiment favorable to the best interests of the fish upon those who make the laws for their propagation, protection and preservation. Such a club must also become an educational body, as it will centralize information regarding fly-fishing, and gather together the thoughts and experience of anglers from the various parts of the country represented, to be discussed, adjusted and disseminated after the wheat is selected from the chaff.

Another feature Mr. Marston has already referred to in his letter, but it should not be within the province of the club to offer prizes for fishing or fly-casting contests.

### Planting Landlocked Salmon.

The first plant of fingerling landlocked salmon has been made in Lake George, New York, and all things considered, it was very successful, more so perhaps than any previous plant attempted on the same scale. Heretofore it has been found a difficult matter to move a carload of fingerling Atlantic or landlocked salmon a long distance as successfully as other species are moved, or as successfully as the fry of the salmon may be moved; but experience is a great teacher, and none are quicker to avail themselves of such teachings than the men of the United States Fish Commission, for they have the courage to admit failure, wholly or in part, and profit by it. I believe the first carload shipment of fingerling salmon was made in 1890, when car No. 2 started from Maine with 20,000 to be delivered at Glens Falls, N. Y., for the Hudson River. The car came no further than Troy, when all that remained alive of the fish, 10,329, were planted above the Troy dam.

On Oct. 4 car No. 4 left Green Lake, Maine, with 12,000 fingerlings of the landlocked salmon. This car is not fitted as are three other cars of the Commission, with steam pump, circulator and injector, and large tanks holding sixty gallons of water each, and the fish were transported in 100 cans of the ordinary type. At Portland there was a delay of several hours, and when the car reached Albany it had to remain on a side track until the next morning, which was Saturday the 6th. From the time the fish were put in the cars until they were planted, something over forty-eight hours, the men on the car worked the cans night and day with dippers and siphons to aerate the water. When I met the car on the main line of the D. & H. R.R., Capt. T. C. Pearce, in charge, said the fish were doing nicely, such as were left. For a moment I could not ask how many were left, but the loss figured up 1,946, far less than I had dared hope would be the result. The loss occurred almost entirely at Portland and Albany, where the car was side-tracked. From the time that I joined the car I never saw a better-behaved lot of fish, and not one died, as the conveyance was constantly in motion. At Lake George it was necessary to double up the fish in forty cans to go on the steamer and afterward in wagons to the streams. Even then, as a rule, the salmon remained at the bottom of the cans. Messrs. Britton and Sauerhoff, who went down the lake on the steamer with me, said that the salmon acted better than at any time since leaving Green Lake, and they attributed it to the Lake George air.

The water in the cans at destination was 54°, and in the brooks it was 54° and 55°. The salmon were a strong active lot and when turned into the stream acted as though they liked their new home. If anyone should wonder why the salmon were shipped in cans when they might come with less loss in one of the other cars, I can say there was reason for it. When I notified the Commission that the steamer on Lake George would make her last trip on Oct. 6, and that the steamboat train would be taken off after that date, the other cars were not available and the fish had to come. The Delaware & Hudson R. R. and the Lake George Steamboat Company furnished free transportation for car, men, etc., and gentlemen at Lake George furnished teams on same terms to take the cans to the streams.

### Hudson River Fishways.

The time is approaching when the New York Legislature will be asked to provide means for building fishways in the Hudson River to let the salmon up to the headwaters and suitable spawning grounds, and I welcome everything favorable to the success of this movement.

In spite of the fact that it has been known for eight years that when salmon fry are planted in the stream they will go to sea and return as adult fish, as far as the obstructions will permit, we hear once in a while that the Hudson is not suitable for the fish. Expert opinions on this subject are of value. In a recent letter from Dr. W. H. Drummond, of Montreal, president of the St. Maurice Club, and one of the owners of the Godbout and Mistassini salmon rivers (not the Mistassini River which flows into Lake St. John, and noted for ouananiche, but a river on the north shore of the St. Lawrence), in which he commended most heartly the movement to organize an American Fly-Fishers' Club, he had something to say about the Hudson as a salmon river:

"The success so far achieved there goes to prove that with proper protection, fishways, etc., salmon would breed as free (comparatively) in the Hudson as in the Restigouche. But until I read your paper delivered before the Mohican Club, I was under the impression that the Hudson had been at one time a salmon stream. It is a marvelous thing, when one thinks of it, the persistency of the heredity instinct in the salmon. Even now in a small, narrow, but swift-flowing stream near Sherbrooke, P. Q., ninety miles from Montreal, fish are occasionally netted or speared in spite of the fact that the water is poisoned by acids and other impurities, and blocked and coated by sawdust, etc., to an extent that would seem to preclude the possibility of a fish living in it twenty-four hours. But sixty years ago this stream, Salmon River, swarmed with fish. At Three Rivers, on the St. Lawrence, eighty-five miles from Montreal, there was caught in a net last season a female fish weighing 22lbs. It is many years since salmon regularly spawned in the river above mentioned, but these sporadic cases of atavism undoubtedly do occur, perhaps oftener than the interested public are aware, for many of our inland habitans cannot recognize a salmon when they see it. It is simply '*un gros*' or '*un belle poisson.*' However, they don't care much about the game qualities of any fish, merely a case of

"A primrose by a river's brim
A yellow primrose was to him,
And it was nothing more!"

### Memorial to Walton.

It has been proposed to erect a memorial to Izaak Walton in London, the memorial to take the form of a stained glass window in St. Dunstan's Church, with which Walton was so long connected. The window will cost about $500, and the matter of raising the money is in the hands of Mr. R. B. Marston, St. Dunstan's House, Felter Lane, London, to whom subscriptions may be sent. The circulars sent out with subscription blank attached have an excellent portrait of Walton, and I can send a single copy to anyone who may desire it. Mr. Marston will make no charge of any kind for expenses.

### When a Record is Permissible.

For many years I have denounced the catching of a large number of brook trout for the purpose of boasting of the number taken, and yet there is a time when it is not only permissible but praiseworthy to boast of the number of trout that a man or a number of men may have caught. A very dear friend wrote me the last of September from Diamond Pond, New Hampshire: "If you were only here you would enjoy capturing the spotted sides. The ponds are chuck full, and the jumping toward evening is incessant. We are fairly snaking them, but the trout do not run large—average half a pound." As a result of this snaking with a fly 700 brook were taken, and they are now in the breeding tanks of the New Hampshire Fish Commission at the Colebrook hatchery, where their eggs will be taken and the young fish hatched artificially.

That is the kind of a record worth mentioning.

A. N. CHENEY.

### Notes from the Fishing Waters.

PRINCE'S BAY, N. Y., Oct. 13.—Splendid catches of striped bass have been made the past week. Trolling with sand worms seems to be the most successful method, but a great many are caught by standing and casting into the surf. Several parties have captured from ten to forty in an afternoon or morning, just as the tide happens to be. Yesterday I. Smith caught nine beauties, some of his fish weighing over 6lbs. The whole lot were of good size. Anybody wanting any of this sport can find it between Petler's Hotel and Seguine's Point. R. L. H.

VINEYARD HAVEN, Mass., Sept. 29.—Striped bass fishing has been very good at Squibnocket this season.

R. W. C.

### Some Colorado Fishing.

ESTES PARK, Col., Oct. 9.—Estes Park is situated in the very heart of the Rockies, at an elevation of 8,000ft., and north of Long's Peak. This park is fifteen miles long and ten miles wide and contains three beautiful rivers, which are filled with trout. Our native trout is the mountain trout, with black specks, but we have the rivers stocked with Eastern and the rainbow. The fishing during July, August and September is very good, but no fisherman is allowed to keep a trout that is less than 3in. in length. A good trout fisherman can take 75 trout a day if the weather is fine, the fish averaging in weight about 4oz. The largest trout caught this summer weighed 1¾lbs. dressed and quite a number weighing 1lb. were caught at intervals during the season.

I was out fishing one day last week and caught 125 from 9 A. M. to 4 P. M. in the Thompson Cañon. Many people come here from the East to fish during the summer. S. N. H.

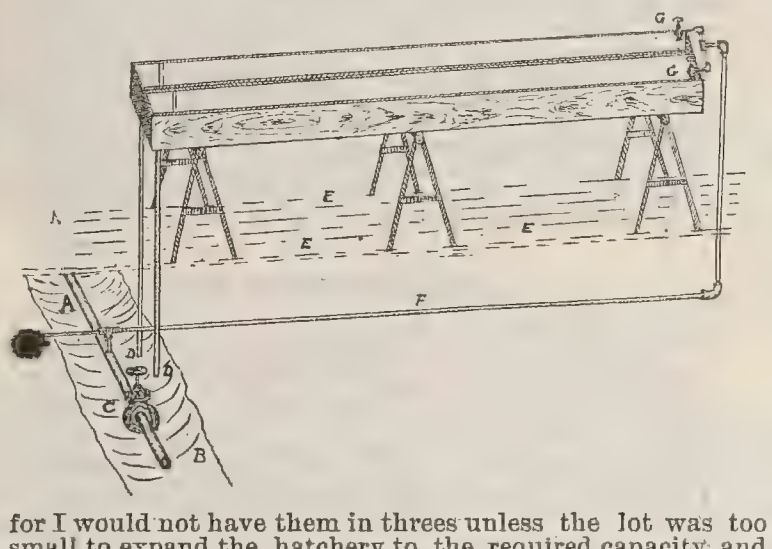
### Sure and Easy Fishing, but Expensive.

STATE GAME PROTECTOR CARR has made several visits to this village in the last few days, looking up facts reported regarding different cases of illegal fishing and hunting. It appears that some time ago one of our local sportsmen and a young Owego attorney, who is also a Newark Valley boy, taking advantage of the low water in a creek near North Maine, by the use of a net took some half dozen of trout from a pool there. The penalty for this is $25 for each fish. Monday's *Record* says that the Owego attorney settled his offense for $25. It is reported that the Newark Valley man has since also settled his case for the same sum. It is also reported that Mr. Carr is hot on the trail of some other parties in town whom he suspects of shipping partridges from this station, and also some parties who were hunting birds before the season opened.—*Newark Valley Herald.*

### Fishing for Count.

BALTIMORE, Oct. 11.—*Editor Forest and Stream:* Mr. Cheney, in your issue of the 13th inst., echoes my sentiments on the subject of pot-fishermen. Any man, when in camp or otherwise, who will kill any larger number of fish than can be consumed by them or their immediate friends, and kill such fish purely for record or for count, is a pot-fisherman pure and simple.

Pot-fisherman does not apply to a man who fishes to sell his product—he is a market-fisherman, and so long as he confines himself to the code has as good right to fish, and to sell his fish as one does to fish for sport. The difference is that the first named fishes for count and many of his catch may be lost for food, and the last sells the product of his labor in the market. We all draw a line between a pot-fisherman and a pot-hunter in our sportsman's definition of the terms, and I fully agree with Mr. Cheney in what he says on the subject. E. S. YOUNG.



## Fisheulture and Fish Protection.

### Improved Supply for Hatching Troughs.

A WOODEN distributing trough running across the head of a series of hatching troughs has been the regulation mode of supply in hatcheries since they have existed, and the practical worker knows what a nuisance they are. Running the length of the building, the least settling opens the joints, and their length forbids their being moved after having been built in position. Then a bit of sapwood or heart in some spot will decay, and the whole trough will be condemned and a new one made. The life of such a trough may be from four to ten years, but it is always under suspicion of leaking at any time. I have one, now seven years old, that has been caulked and pitched several times, and still drops a little here and there, and it may last another winter; still if I were to put in more wooden supply troughs, I would line them with sheet lead of sufficient thickness—at least 3lbs. to the square foot—to allow the replacing of a board when required, or I would line an old trough with lead and prolong its life indefinitely.

Of course a slovenly superintendent who is content to have leaky troughs, a wet floor, and to slosh around in rubber boots, cares nothing for a leak here and there, any more than he does to see men spit on the floor of his hatchery, and it is not for him that this is written.

The subject of dry and clean floors interested me years ago and still does. My floor is clean but a trough that leaks a few drops, just enough to show, is an annoyance, and I have one, a 60ft. distributing trough, which never has been tight. Having been called to plan a hatchery at Bath, Steuben county, N. Y., this season, I arranged for a row of troughs on each side of the building, with a 6ft. aisle in the middle at the foot of each series. The troughs were arranged by twos,

for I would not have them in threes unless the lot was too small to expand the hatchery to the required capacity, and as the water was to be brought in a 6in. iron pipe for some 600ft., with a fall of about 10ft. to the hatchery floor, my old ideas naturally ran to having the pipe branch above the building and flow into two distributing troughs, one on each side, and to discharge from the hatching troughs under the floor. I had long used brass gate-valves in wooden supply troughs, and as there were to be eighteen troughs on each side I finally decided, after sitting a half hour on a stump, that the inclosed sketch would be an improvement on any method yet devised, and I send a plan which I hope to introduce into all stations under my charge for the following reasons:

1. Absolute control of the supply without a drip when shut down.
2 Saving a portion of the space occupied by the supply trough.
3. The ease of cleaning the main pipe A, by the full-sized gate, which when shut entirely down causes water not used in the troughs to flow over the upper dam into the ponds.
4. Discharging in a central ditch under the floor.
5. Cheapness in construction and lasting a hundred times as long as wooden troughs.

When summed up there is little in this plan to suggest much thought or study, but it is new and did really take a little consideration to get it up, and the mark of a muddy hand, slapped on a pair of four-dollar trousers still remains to show how I emphasized my "Eureka," up in Steuben county.

At my Long Island station I run the waste water back under the hatching troughs in 4-inch soil pipes to a waste trough outside the building, because the ground under the hatchery is lower than the ponds outside, but at Bath the case is different and the arrangement shown is the best for the situation, if carried out as planned; and as it is a different mode of supply from any in use as far as I know, it seems worthy of illustration.

The main pipe will be pierced for nine 2-inch uprights with "tees" to branch to each side, under the floor; these will bend up and over the troughs, ending in a "tee" with two one-inch branches and gates, which, with a head of several feet, will give the required flow. FRED MATHER.

COLD SPRING HARBOR, N. Y.

### Frog Culture.

*Editor Forest and Stream:*

The query of "E. C. M.," of Chicago, in regard to frog culture in the United States, may be answered in the negative. There is no book on the subject so far as I know, and if there were I think I should know of it. I don't know of anything published on the subject, except two or three articles of mine written a few years ago, about the time when frogs first became an article of trade in the New York markets. My first acquaintance with frogs—that is, to any extent—was when I went to look at forty acres of land now in the center of Chicago nearly forty years ago, which was offered me for $1 an acre. The only value of the land then was for a frog farm, and having then only recently returned from Europe, where I had visited such an establishment, the thought occurred to me as I looked over the wretched swamp covered with green scum, and was deafened by the cries of the bullfrogs, what an excellent place it was for rearing these batrachians. We have advanced since then, and may now share with the French the name of frog eaters, although we have not got so far as the cultivation of the animals.

We have no *Rana esculenta*, the edible frog of Europe. It is a really pretty creature, with its plainly marked yellow line down the back, which is greenish brown. It is not so large as our *Rana mugiens*, the common bullfrog, which is eaten here and often found in the New Jersey marshes to a length of 8in., and which I have seen take in and swallow a duckling. It sometimes weighs over 2lbs. The pretty green spotted frog (*Rana palustris*) a better jumper than Mark Twain's sporting frog, noted as the victor in a match in which this truthful historian "jockeyed" the opponent's champion by feeding it with a pound of buckshot just before the match came off, and which I have seen jump clear 7ft. on my lawn, is often caught and eaten here. In the Hackensack meadows this frog used to be exceedingly abundant, but the enterprising New Jersey boys have of late years reduced its numbers almost to extinction.

Some years ago, when pedestrianizing in the vicinity of Paris, I heard a noise like the rumbling of distant thunder, but seeing a clear sky all around I was led to investigate the cause of the phenomenon. Following the direction of the sound I soon came to an inclosure from which the babel proceeded. It was indeed a confusion of tongues. It came from the other side of a high board fence, and as I was peeping through the cracks to investigate, I was approached by a Humpty Dumpty of a little Frenchman, nearly as broad as he was long, who invited me inside to inspect "*mes grenouilles.*" The farm occupied about five acres (two hectares, the little frog-eater told me), and he thought he had more than ten thousand frogs. From the noise I thought he might have ten millions, and so I told my host, at which he laughed immoderately and said it was their singing time, just about sundown, when the frogs begin their love songs. The whole place was a series of ditches, with grassy banks between them. Going along these banks one could see myriads of frogs sitting in the long grass at the water's edge, and myriads more with their musical instruments just visible among the water cresses which mostly filled the ditches.

The frogs were fed? *Certainement, mon cher monsieur.* Horse beef from the abattoir, chopped fine, was served twice a day, and flies and gnats helped to keep them fat and rotund. Mosquitoes were plenty, and they helped out for side dishes. There are other "*grenouillieries*" (as we should say, froggeries) about Paris, and many thousands are sent in daily to the markets. Only the hindquarters are sent, neatly skinned and dressed and packed in baskets among the sprigs of watercresses, which are washed and tied in bunches and sold.

A little way off there was a snail (*escargot*) farm (*escargotterie*), where these luscious mollusks were reared for sale in the markets as material for soups and other mysterious dishes of which the French have so extensive a repertoire. I visited there the next day and found it something like the *grenouillieric*, except that the owner explained that he had great trouble to keep his stock from climbing over the fences and straying away into the adjacent market gardens, where they would ruin a whole crop of lettuce in a night. Lettuce is the main feed of the snails, and the banks between the shallow ditches, here also filled with watercress, were planted thickly with this vegetable.

One of the most curious sights of the Paris markets is the small tables covered with snow-white linen, on which numerous edible trifles are exposed for sale, such as dressed sparrows, larks (you may buy half of one), joints of fowls, hindlegs of frogs, and snails in bowls of chopped green stuff, small cheeses and tiny pats of butter about as small as we use on a small piece of toast. We may come to this in time possibly ourselves, and then we shall have frog and snail farms around our big cities, just as we have strawberry farms, henneries and broiler chicken factories and dairies, and farmers will have more lucrative crops to grow than 50-cent wheat. H. STEWART.

## New Publications.

### Walton and the Earlier Fishing Writers.*

A RECENT addition to our angling literature is to be found in "The Book-Lovers' Library," with the title "Walton and Some Earlier Writers on Fish and Fishing," by Robert Bright Marston. It is one of the most companionable of books, and the author in his treatment of the subject has stamped it with something of his genial personality, and it is plain to be seen that the book has been written for pure love of that which is best in the history of the contemplative man's recreation.

There is a charm about the author's pen-work which he comes honestly by, through inheritance from his father, "The Amateur Angler," as he takes his reader into the sanctuary of his library, so to speak, and offers him an easy chair and creature comforts while he discourses about the old authors on his book shelves.

I wonder if this manner of establishing friendly relations, a sort of camp-fire confidence, between author and reader is peculiar to angling writers, for I had occasion to note it in another angling author not very long ago.

Naturally the editor of the 100th edition of Walton is on familiar terms with the Father of Anglers, but as one reads Mr. Marston's later work it is discovered that he is on no less familiar terms with Dame Berners, compiler of the first book upon angling in the English language; John Dennys, the angler poet; Leonard Mascall, the pioneer fisheulturist in England; Thos. Barker, to whom Walton was indebted for directions how to make and use a 'flye for trout;" Gervase Markham, and others high on the roll of fame who blazed the way for others to follow in the paths of angling literature.

Mr. Marston brings out one curious error in the first edition of Walton in a way that I do not remember to have seen noted. Westwood's Chronicle of the "Compleat Angler" records certain errors briefly; namely, "and p. 245, 'contention' instead of 'contentment';" but this gives no idea of the sense in which the word was used. The error occurs in the last verses given in the original edition, and in the last two lines, which read:

"And if contention be a stranger, then
I'l nere look for it, but in heaven again."

Only a part of the first edition (1653) was printed with this fatal error to the sense of the verse, "which," as Mr. Marston says, "when Walton discovered it, doubtless made him put on his hat and go with all speed to his friend and publisher, Richard Marriot, to stop the press."

The author quotes from a circular sent to him offering a copy of Walton for sale: "We here offer a *perfect copy* of this precious little gem, for every page is genuine, and there is not so much as a page in *fac-simile*. The last perfect copy brought by auction £310 [about $1,550] and the present one we consider to be reasonably priced. It is the first issue of the first edition, and contains the misprint on page 245, 'contention' for 'contentment.'"

To this the author adds: "The price asked was £235 (about $1,175). All good 'Waltons' go to America. Messrs. Pickering & Chatto have since informed me they sold this fine copy to an American collector."

Mr. Marston's book is delightful reading from beginning to end, and is full of rare information about the old angling writers that will be new and interesting to most readers, but I have given so much space to Walton that I must leave the other old worthies to speak for themselves in the book.

I have, however, a small bone to pick with the author. In a note on page 60 he says: "On referring to my copy of Rev. W. B. Daniel's 'Rural Sports,' I find I am able to supply an omission in the 'Biblio-

*"Walton and Some Earlier Writers on Fish and Fishing." By R. B. Marston, editor of the *Fishing Gazette*, Honorary Treasurer of the Fly-Fishers' Club. London: Elliot Stock. New York: Armstrong & Son. 1894.

theca Piscatoria,' which made no mention of the edition I have—Royal 8vo, printed for Longman, Hurst, Rees & Orme, Paternoster Row, 1807; also to correct an American angling writer, Mr. A. Nelson Cheney, who in one of his pleasant Angling Notes in FOREST AND STREAM, January, 1893, claims that the multiplier reel was invented in America about the year 1820. In this 1807 edition of Daniel's 'Rural Sports,' not the first edition of the work, there is a fine engraving of a brass multiplying reel." Then follows mention of an advertisement in 1770 of "the best sort of multiplying winches, both stop and plain." I was somewhat surprised to read that I had ever made any claim in regard to the date or place of invention of the multiplying reel, for to be perfectly candid, I never knew anything about the matter, and do not now, except as I have learned from this very book, but I examined a file of FOREST AND STREAM to be sure that I had not quoted some one on the subject, and found that neither there nor elsewhere, at the time specified or any other time, had I said anything about the invention of the multiplying reel. About two years before the date given I did say that Walton knew nothing about the use of the reel, and did not mention it in his first edition, and the mention of it in later editions was evidently borrowed from "Barker's Delight," 1651; he being the first to mention and describe the reel in English—for it is established that the Chinese used reels in the 11th century.

I wrote to Mr. Marston upon reading the impeachment and pleaded not guilty, unless he could prove it upon me, and in due course of mail he replied as follows:

"*My Dear Cheney:*

"I will have a real good hunt for that statement about your having claimed multiplying reels, and if you don't hear from me to the contrary by the 1st of July please consider you are right and I am wrong, and that I will correct the statement in any second edition that may be called for. The fact is I fear the 'domestic earthquake' referred to in my book swallowed up the page of FOREST AND STREAM which I had before me when I made the statement. I am very sorry indeed if I have made you responsible for what some one else said, and it looks as if I had done so. * * * Ever sincerely yours, R. B. MARSTON."

It is a matter of no consequence any way, but I am sure of a correction, for the book is bound to pass through several editions, and always be a delight to those who own a copy. A. N. CHENEY.

# The Kennel.

## FIXTURES.

### DOG SHOWS.

Oct. 30 to Nov. 2.—Terrier Show, by New England Kennel Club, at Country Club, Brookline, Mass. D. E. Loveland, Sec'y, 128 Tremont street, Boston.

### FIELD TRIALS.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B Wells Sec'y.

Nov. 13.—New England Field Trial Club, Members' Sweepstake. A. R Sharp, Sec'y, Taunton, Mass.

Nov. 16.—Eastern Field Trials Club, at Newton, N. C. All-Aged, Eastern Subscription and Selling Stakes. Entries close Oct. 1. W. A. Coster, Saratoga Springs, N. Y., Sec'y.

Dec. 17.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

## That Pointer Deal at Pittsburgh.

*Editor Forest and Stream:*

In the report of the Pittsburgh dog show published in your issue of Sept. 22, your correspondent, E. B. Elliott does me a great injustice in stating that Klee and Dean acted in a most reprehensible manner in their dealings with Dr. Daniels, of Cleveland.

If Mr. Elliott had but taken the pains to inquire into the real facts of the case, and then told the plain truth, his article could not have failed to place me in a proper light before the public.

Now for the benefit of such of your readers as may not have had the opportunity to read what Mr. Elliot said, I will quote that part of his report which refers to my transaction with Dr. Daniels; which is follows:

"In light-weight bitches a new one came out and won very easily, and a real good one she is, too: she has a head that could be improved by a trifle more length in muzzle, a shade throaty, has grand legs and feet, ribs and hind quarters, and is a high quality bitch. She was bought by Dr. Daniels for $100 before the judging, and her owners Messrs. Klee and Dean accepted a deposit on her, but acted in a most reprehensible manner in regard to her, for after she had won and they had obtained an offer of $100 more for her, they managed somehow or other to get the bitch out of the show, and there was great difficulty in making Messrs. Klee and Dean return her, in fact not till the treasurer of the club had cashed Dr. Daniels's check, and offered Mr Klee the cash, at the same time threatening to have him arrested if he did not return the bitch, did he see fit to act rightly in the matter, and he then conducted Mr. Woodside and Dr. Daniels's agent to a grocery store a mile and a half away, where he had the bitch hidden."

Now let me explain my position and show the unfairness of Mr. Elliott's insinuations.

In the first place I agreed to sell the bitch to Dr. Daniels for $100 on a cash basis. He paid me $10 as a guarantee and agreed to pay me the remaining $90 before taking the bitch away. I wrote him out an order for the bitch, but informed him that I must have the balance of the money before the bitch could be taken away. Daniels took the order, folded it up, placed it in his pocket and told me he would send the money to me after arriving home. I then agreed to this, providing the money arrived before the last day of the show; and with the understanding that unless the money made its appearance by that time the order would be revoked and the deal declared off. On becoming aware of the fact that Dr. Daniels did not intend to live up to the agreement I went to the superintendent of the show, but he refused to revoke the contract, and told me that the man that came to him with my order would get the bitch. Having no other course open I then consulted an attorney, who advised me to first try and make an arrangement and have the oder rescinded and in case of failure in that effort to get my bitch out of the show in any way I could, and to take her out clandestinely if I could get her out in no other way.

I followed the advice of my attorney, and in my subsequent actions I was simply following the line of legal instruction for which I paid the regular fee, and was doing what any other business man would have done under similar circumstances: when I took my bitch out of the show and placed her under the care of a friend.

When Mr. Daniels produced his check and the treasurer of the show cashed it, the exact stipulations of the contract, as agreed to by me, were carried out, and I then produced the bitch.

If, in the first place, Mr. Daniels had agreed to pay me the money, as I required that it should be paid, or had the superintendent of the show consented to give me protection, the bitch would never have been taken out of the show.

I did not take the bitch away with the expectation of getting more money for her than Mr. Daniels offered, but because I wanted that protection which any man would have demanded under the circumstances, and was refused it.

HENRY KLEE.

NEWCASTLE, Pa., Oct. 12.

[We do not see where the above differs materially from the account of the transaction as related by our reporter. How did Mr. Klee know it was the intention of Dr. Daniels not to live up to his bargain; *i. e.*, to pay for the bitch before the end of the show? This suspicion seems to have been without grounds, as he (Dr. Daniels) subsequently sent his check, thereby acting quite within his agreement. This is a case where a show committee of a show not held under A. K. C. rules is distinctly at a disadvantage.]

## Brownstown Kennel Club's Show.

IT may not be generally known that there were two dog shows held the same week in Pittsburg, but such is a fact, however, as besides the Pittsburg Athletic Club's show the Brownstown Kennel Club were also holding a show on the South Side. There were about 150 entries at the latter, mostly pointers, setters and poodles. Some of the "regulars" lost a good deal of amusement by not attending. However, Messrs. Jarrett, Hoyt, Eberhart, Ben Lewis and Elliott "got on to it" and were well repaid for their trouble in getting there, for it was in a somewhat out of the way locality to say the least, and when one did arrive at Brownstown it was not easy to discover where the show was, but once there the fun began. The arrangements for benching and feeding the dogs were not up to date and the lack of disinfectant in some parts of the spacious building was very noticeable, but the worst of all was the lighting arrangement; only coal oil torches being provided, and in some places it was hard to find, not to mention see, the occupants of the benches. However, as an offset to these drawbacks a good stage was provided for judging and the rings were well served by attendants.

All the time the judging was going on a string band discoursed in dulcet tones, which, as can be imagined, added greatly to the enjoyment of everybody, dogs included. It was somewhat difficult to ascertain the owners and full particulars of the dogs, the entries all being entered in a huge book with no index, so every time the manager and secretary wanted to learn anything he had to wade through this volume until he struck the entry he required, which made it somewhat monotonous in getting out a list of awards, but fortunately he was pretty well posted on most of the dogs and their owners, otherwise it would have been a hopeless task to have discovered what dogs were there at all, as they were allowed to be taken in and out at their owners' convenience

Mr. Davis, of Messrs. Davis & Winters, the black and tan enthusiasts, was appointed to judge all the breeds, but subsequently when the show committee learned they had so much talent present, the following were asked to judge and accepted: Mr. A. G. Eberhart, poodles; Mr. H. Jarrett, collies; Mr. E. Bardoe Elliott, pointers and setters, and Mr. Davis the rest. Mr. Elliott had not time to finish his classes, so the setters were also judged by Mr. Davis. The pointers and setters were by far the best classes, there being really some decent dogs shown and there was quite a good collection of small, white curly poodles shown by a Mr. Tegetmier. Refreshments were provided for the judges and their friends after the judging, but unfortunately a disturbance among the dogs below caused the host to decamp down-stairs with the only lamp available, leaving his hosts in the dark to finish their refreshments and get down-stairs (rickety one at that) into the main hall as best they could. But they had lots of fun, and the Brownstown Kennel Club's show will long be remembered by all. E. B. E.

## Mitchell's Bay Again.

*Editor Forest and Stream:*

I have been out prospecting, looking up some good grounds for shooting later on; but found birds very scarce in all my old favorite places. I was also looking for better grounds to place Mr. Armstrong with my string of dogs. The birds seem to have left the old grounds, and we finally found ourselves at Chatham. If any of your American readers think we have no English setters, just let them take a look in at Chatham, Ont. They will have no trouble in getting a carload in short order. Mr. W. B. Wells, Dr. Kime and Mr. McGregor can fill the first car with dogs that will hold their own in any company. A large number of birds have been turned down at different places near Chatham, so we decided to give the dogs a spin and try our old field trial ground. Early on Monday morning Messrs. Wells, Spracklin, Armstrong and myself started with eight dogs, Mr. Wells taking the well-known Matane and Luke, myself Brighton Tobe and Brighton Clip, and all put down together. I I assure you it did not take long to cut the ground out, and it kept me busy calling Wells to let up. I could not go his pace. Armstrong had the two pointers Lady Gay Spanker and Faustina, but I did not get the names of Spracklin's dogs. They succeeded in finding birds, but we found none. This will compel the club to go to last year's grounds at Mitchell's Bay. This is a very fine place, situated on the lake, with plenty of hotel accommodations.

Everything points to a good entry, and if any of our American cousins think it easy to pick winners here, we shall be pleased to have them all come and bring their best dogs. They will get a sportsman's welcome with plenty of English roast beef, and the well water is good. We hold our meeting to select the judges on Friday next at Chatham, and their names will be announced later. Entries for the All-Aged Stakes close Nov. 1. T. G. DAVEY.

LONDON, Ont.

## Alleged Theft of a Dog.

CHICAGO, Ill., Oct. 13.—Mr. O. Nillsson of 1656 Dewey Court, Chicago has or had a fine pointer dog which was valued highly by him. One day last week, as witnesses state, Dr. E. Otto of 1643 Belmont avenue, stopped before Mr. Nilsson's place, and enticing the dog to him took him away in his buggy. Nilsson went to Otto's office, and claims that he found the dog there and wanted to take him away. Otto told him that if he touched the dog he would kill him. Otto claimed that he had raised the dog himself. Thereupon Nilsson got out a writ of replevin and took possession of the dog. The suit was set for to-day, Oct. 13, at 2 P. M., but Otto took a continuance, and the ownership of the dog is still a mooted question legally. The case is now set for Oct. 17.

Several owners of valuable dogs who live in the neighborhood of Mr. Nilsson's residence have lost dogs lately. Among these is Mr. E. Thomas, the gun man, who bewails the loss of a setter which he had owned for some time, and which he valued highly. E. H.

## Gordon Setter Trials.

*Editor Forest and Stream:*

As the New England Field Trials Club have postponed their field trials at Assonet Neck, Mass., to Nov. 13, I desire to say that the Gordon setter field trials will take place there immediately after, say on Nov. 14.

This will give owners of Gordons three weeks more time to prepare their dogs, and I hope will result in increased entries and prizes. For entry blanks, etc., write

JAMES B. BLOSSOM,
President Gordon Setter Club of America.

NEW YORK CITY, Oct 11.

The genial assistant secretary of the A. K. C. is feeling very proud this week. A litter of eight bull pups is enough to make any man feel that way in these days. The average bulldog breeder considers himself fortunate if he gets a litter of two and raises one. Mr. Lewis's litter is by Mr. Dudley Winthrop's noted dog Stanley out of a daughter of that dog. The pups are nine days old and as strong and vigorous as any one could wish.

## U. S. F. T. Club's All-Age Entries.

*Editor Forest and Stream:*

Inclosed please find list of entries to this club's All-Age Stake, trials A:

### ENGLISH SETTERS.

ANTONIA—Eldred Kennels' black, white and tan bitch (Antonio—Miss Nelly Y.).

MINNIE T.—W. W. Titus's black, white and tan bitch (Dick Bondhu—Bettie B.).

HOOSIER BOY—Joseph H. Hunter's black, white and tan dog (Antonio—Daisy Hunter).

DAISY HUNTER II.—J. H. & J. A. Hunter's black and white bitch (Antonio—Daisy Hunter).

GLEAM II.—Maj. J. W. Renfroe's black, white and tan dog (Gleam—Tube Rose).

DAN BRYCE—Dr. Geo. Eubanks's black and white dog (Bryce—Dora Gladstone).

BLLE DAN—Dr. G. Chisholm's black, white and tan dog (Harry Blue—Sauta).

MAYBERRY'S GABE—H. H. Mayberry's black and white dog (Harry Blue—Sauta).

LAST HOPE—H. K. Devereux's black, white and tan bitch (Alamo—Rhet).

DICK FOX—Blue Ridge Kennels' black, white and tan dog (Chance—Countess Rush).

ALLENE—Blue Ridge Kennels' black, white and tan bitch (Gath's Mark—Ruby's Girl).

BESSIE SHOUPE—Blue Ridge Kennels' black, white and tan bitch (Gath's Hope—Countess Rush).

BLUE RIDGE MARK—Blue Ridge Kennels' black, white and tan dog (Gath's Mark—Ollie T.).

SADIE ROSS—Bob Cooper's black, white and tan bitch (Gath's Hope—Tempest).

INDIANA BELLE—Gill T. Kerr's black, white and tan bitch (Gath's Hope—Lulu Hill).

DAN'S LADY—T. Goodman's black, white and tan bitch (Dan Gladstone—Lilly Burges).

TOPSY'S ROD—Avent & Thayer Kennels' black, white and tan dog (Roderigo—Topsy Avent.)

TATE—Avent & Thayer Kennels' black, white and tan dog (Jean Val Jean—Mamie Avent.)

DAN BURGES—J. M. Freeman's black, white and tan dog (Dan Gladstone—Lilly Burges.)

PHOEBE LIVINGSTONE—J. W. Schriver's black, white and tan dog (Gath's Mark—Cosette.)

GLEAM'S SPORT—Manchester Kennel Co.'s lemon and white dog (Vanguard—Georgia Belle.)

GLEAM'S PINK—Manchester Kennel Co.'s black, white and tan dog (Vanguard—Georgia Belle.)

RODFIELD—P. T. Madison's black, white and tan dog (Antonio—Nelly Hope.)

LADY CATE—W. B. Stafford's black, white and tan bitch (Rock—Madge.)

MATTIE—Arthur C. Ely's black, white and tan bitch (Rock—Madge.)

### POOINTERS.

GYPSY LAD—Blankenbaker & Garr's black and white dog (Brick—Gypsy Queen).

DON—D. P. Ritchey's liver and white dog (Tricket's Coin—Moulton Patti).

ROMP III.—R. J. Martinez's liver and white dog (Coney's Fritz—Dolly).

STRIDEAWAY—E. O. Damon's liver and white dog (King of Kent—Pearl's Dot).

HESSEN'S BOY—Louis McGrew's black and white dog (Duke of Hessen—Barmaid).

TWINKLE—Glen Rock Kennels' liver and white dog (Duke of Kent II.—Bessie Kapas).

TICK BOY—Stoddard & Kidwell's black and white dog (King of Kent—Bloom).

LITTLE NED—W. M. Kerr's liver and white dog (Ridgeview Dazzle—Kate Claxton).

QUEEN REGENT—W. N. Kerr's black and white bitch (King of Kent—Vickery's Daisy).

DICK BEAUFORT—J. H. Alexander's liver and white dog (Spotted Boy—Gip Beaufort).

LADY PEG—W. T. Hunter's liver and white bitch (King of Kent—Lass of Bloomo).

RODERICK T.—T. L. Tinsley's liver and white bitch (Dash Ranger R., Jr.—Fanny Kennerley).

LAD'S LADY—L. W. Blankenbaker's liver and white bitch (Lad of Rush—Lady Margaret).

LADY MARGARET—Major J. R. Purcell's black and white bitch (Dick Swiveler—Countess Bang).

SAM BANG—Major J. R. Purcell's lemon and white dog (Dick Swiveler—Countess Bang).

ST. BLAIR—Major J. R. Purcell's liver and white dog (Guy—Lady Spotswood).

REX FAUST—W. B. Stafford's liver and white dog (Rex—Molly).

HEMPSTEAD DUKE—Hempstead Farm Kennels' dog.

P. T. MADISON, Sec'y.

## The N. E. K. C. Whippet Races.

AS THIS sport is practically new to the general run of dog showers it will not be out of place to give the rules under which the club will run off the handicap:

Rule 1. Color, weight, name and sex must be sent in at the time of entry; if a pup, age must be stated.

Rule 2. All false entries shall be disqualified.

Rule 3. All dogs must be weighed in before the first heat is run, or they will forfeit the right to start. No ounces allowed, every dog to run at weight entered.

Rule 4. To ascertain if a dog is out of weight, put on two ounces; if the dog draws the two ounces he is out of weight and is disqualified.

Rule 5. Every dog to start from the mark on which it is handicapped. Scratch dog to start from the right side of the track and the other dogs to be placed next to him in accordance with this rule; if there are two scratch dogs or two dogs on the same mark, they must toss for choice of position. The marks of all dogs remain the same, no matter what dog fails to weigh in, or what dog may be withdrawn.

Rule 6. All dogs to start by report of pistol; any dog slipped before pistol is fired shall be disqualified. A missfire is no start.

Rule 7. One runner-up only shall be allowed each dog, and runners-up must keep on a line with their dogs. The referee shall have power to disqualify a dog if, in his opinion, a runner-up is acting unfairly on the track.

Rule 8. Each runner-up must be ten yards over the finishing line before his dog finishes or the dog will be disqualified; the runner-up for the second dog, in the final heat, has the privilege of weighing the winning dog; if the winning dog has four ounces over the weight that he is entered at he is disqualified.

Rule 9. All dogs to run with colors on, but no dog will be disqualified, should the color be omitted either by accident or carelessness.

Rule 10. In case of a dead heat in one of the rounds it must be run over at once; the party refusing to run loses the heat, but the remaining dog must run over the course before the heat can be claimed as won. Should a dead heat occur in the final, the two dogs must run the heat again within ten minutes. The dog refusing to run over shall lose his prize money and also all bets.

Rule 11. In case a dog is held at the mark, the pistol firer shall have the right to declare all betting on the heat void. The dog held at the mark in a final heat will afterward be handicapped as if he had actually won.

Rule 12. After the bell has been rung for a heat, five (5) minutes will be allowed for dogs to be placed on their marks; any dog failing to be at the marks on time forfeits all rights.

Rule 13. No other attendants but the slipper and runner-up shall be allowed on the track at the marks. Any party violating this rule shall have his dog disqualified by the pistol firer.

Rule 14. The referee shall flag the color of the winning dog in each heat. The referee's decision shall be final, and subject to no appeal whatever in any court of law or otherwise.

As this handicap, which will be held at the Country Club Brookline, Mass., will be such an open affair, many of the whippets being practically unknown, there is no reason why every terrier man should not endeavor to nominate an entry, as the purse is a good one, to say nothing of the fun there will be in the running

# DOG CHAT.

A couple of weeks since we drew attention to a proposed auction sale of trained setters to take place at the Netherwood Farm Kennels, Plainfield, N. J., giving particulars of the dogs, their pedigrees and so on. The sale is now definitely announced in our business columns to be on Oct. 27, at 2 P. M. The sale comes at an appropriate time and the dogs should be well disposed of. It is rumored that, in addition to a number of young pointers and setters from the Netherwood Farm Kennels, the Rinada Kennels and Mr. R. A. de Russy will take advantage of the opportunity to dispose of some of their young pointer stock. Since writing the above, Messrs. Russy and Banks have decided to enter a number of their young pointers; notice of which is given in our business columns.

A meeting of the executive committee of the Canadian Kennel Club will be held in the Queen's Hotel, Toronto, at 3 P. M., on Friday, Oct. 26. The following is the business to come up: To consider agreement with the A. K. C., draw up rules for field trials, receive reports, elect new members, consider membership and registration fees, and miscellaneous business.

Dr. F. H. Hoyt has purchased from the Chesterford Park Kennels the well-known black and tan terriers, Rochelle Oolah, winner in the challenge class at Louisville and Pittsburgh, Rochelle Mab, winner of first Lexington and Columbus, and Betsey, winner of first Toronto last year, beating Gypsy Girl; first Des Moines and first Pittsburgh. Dr. Hoyt bought them at auction at the recent Pittsburgh show.

Judges, if only for their own protection, should see to it that dogs which are absent from the class they are to adjudicate upon are so marked in the judge's books. It is impossible for reporters to cover every ring at a large show, and unless they have this guide, in the present loose way of benching some of the breeds, mistakes in the identity of the dogs are sure to arise.

### The N. E. K. C. Officers.

Having an hour to spare before train time, while on a visit to Boston last week, we dropped into the rooms of the New England Kennel Club on Tremont street. The door was wide open. Passing through the ante room we found a full meeting of the board, convened to discuss and arrange the preliminaries for their great terrier show that comes off the end of this month. It is not difficult to get a quorum in this club for the list of officers now is a working one, progressive and composed of fanciers representing many of the most important breeds. A glance at their *personnel* might not be out of place. There was Edward Brooks, the president, whose fancy is of the Dandie order, but spelled with an ie, and he is one that would rather see his dogs at work than win a blue ribbon. O. W. Donner likes field dogs, and though his interest is passive at present, in former years and up to quite lately his name was familiar in field trial circles. Then there is George A. Fletcher, who has probably seen more officers elected in this old club than any of his confreres; well, he likes collies, but he isn't such a fanatic that he wants all the other breeds killed off. Another well known kennel owner, C. Stedman Hanks, comes forward with a welcoming shake; he is comparatively a new man at the game, but as owner of the Seacroft Kennels holds a strong hand in Russian wolfhounds, and is getting up with the big guns in smooth fox-terriers. Then Sam Hammond's smiling face looms up; what does he go in for? field dogs, but he likes a game terrier, too, and, more than anything else, to be with the other "boys." James L. Little is there too; Clumbers are his hobby and he owns the best over here, and he thinks "quite some" of his Scottish terriers, too. H. H. Hunnewell, Jr., we had met very early in the day, and you cannot talk anything but wire-haired fox-terriers with him, and play Cribbage to win; he may make a few remarks *en passant* about his brown poodles, but he'll come round to the wires again if you let him. A. B. Cobb is taking hold of smooth fox-terriers, owns some very fair ones and is importing a good bitch. Lastly comes D. E. Loveland, the secretary, who is ready in his quiet way to give any inquisitive Bostonian all the information he wants about dogs, and especially about the coming terrier show. How can a club help being popular when it has such a practical lot of men at the head of it. John E. Thayer was not there, but we all know that there is not a better stayer in dogdom.

### The Terrier Show.

The whippet races was the principal subject under discussion, and before the meeting broke up an enticing programme had been arranged. One hundred and fifty dollars will be given in the whippet handicap, divided as follows: $75 to first in addition to the sweepstakes of $2 for each entry, $37.50 to second, $22.50 to third, and $15 to fourth. The handicapper will be Mr. M. J. Finn, of Natick, Mass., whom we are told has considerable experience in this new sport. Mr. Jas. Mortimer will name the order in which the dogs finish; the referee has not yet been appointed. The entries close 11 A.M., Oct. 30 with D. E. Loveland, 125 Tremont street, Boston, or on the grounds on that date, and the fee is $2 for each dog.

The American Fox-Terrier Club have come gallantly to the fore as usual, and donate their Grand Challenge cup, value $300, for the best fox-terrier in the show, and $100 for the best kennel of ten fox-terriers, and should be productive of a grand display; $25 is given for the best stud dog, to be judged by the winnings of progeny in Club Stakes. This is a capital idea, for while it is an encouragement to breeders, it is also a guide to the novice. Best pair $25, and the same amount each for the best puppy, best American-bred smooth dog, best kennel of four wire-hairs, best wire-haired dog shown with two of his get, $15 to go to the stud dog's owner and $5 to go to owner of each of his get. The best wire-haired dog or bitch will also win $25, and $15 each is given for best wire dog or bitch in open classes, and best wire puppy. In addition to this there will be a sweepstake of $5 per kennel for the best terrier in the show; entries for this close at 12 M. on Oct. 30, the first day of the show. Premium lists can be had at this office.

The Boston *Herald* of Oct. 7 publishes a capital account of the Seacroft Kennels and its noted occupants. A lot of space is devoted to pictures of the well known dogs and these are exceptionally good, being reproduced from photographs taken on the spot.

As a result of the split in the English Schipperke Club, to which we alluded last week, a new club is being formed by Mr. Geo. R. Krehl under the name of the St. Hubert Schipperke Club. Mr. Krehl has written a very interesting article on this smart little terrier if that is the correct name to give a dog that, however, does not go to earth. We have been favored with a copy, but as there are so few people interested in the breed in this country we cannot spare the space to publish it *in extenso* at present. It seems that English breeders have been producing a schipperke that is at variance with the correct Belgian type, and becoming aware of this through a visit paid to the kennels of the principal Belgian exhibitor, Mons. Reussens, Mr. Krehl with the idea of getting back into the right channel, after considerable trouble was allowed to purchase the famous dog, champion St. Hubert to convince English breeders that the black, pricked-eared, wire-haired terrier of England, alias schipperke, is not the true type. The English dogs are deficient in the two main characteristics of the breed—the mane and the fringe on the back of the thighs, termed *culotte*, which turns inward. The manes on these Belgian dogs, Mr. Krehl tells us, are marvelously abundant. Certainly the dogs of this breed over here are not possessed of this feature to any extent. St. Hubert is offered to the new club by his present owner so that breeders may have an opportunity to obtain his services at a slight fee. To those of our readers who may feel interested in this breed we may say that the schipperke is an excellent and faithful little watchdog, who does not readily make friends with strangers. He is very active, always on the alert, and very courageous in defending objects left in his charge, but also gentle with children. A characteristic peculiarity of the breed is their exceeding inquisitiveness and lively interest in everything about them, their excitement being expressed by sharp barks and the bristling mane. They are game and good vermin dogs. Another peculiarity of the breed and one that adds to their smart, quaint appearance, is the absence of a caudal appendage, which absence is sometimes natural, through the process of evolution, these dogs having been docked short for many generations.

Dr. Foote did not show Brittle Beaut at Danbury. It was Brittle Bright that took second to Mister Great Snap.

Considering its popularity, there is no breed, and especially one that has a specialty club, that receives less booming in the papers than the collie. Still, it must be remembered that some of the largest prices have been paid for imported stock, and America now owns several collies whose names are household words in the "fancy" of both worlds. Collies are being continually imported, and the very latest is the Scotch collie Provost Alexander, from Mr. Scott's kennel in Scotland.

The entries in the different beagle trials so far heard from promise some good running. Considering the fact that there are three meetings to be held within so many weeks, the number of entries secured in each stake must be considered especially gratifying. Those who are fond of the sport and wish to hear some hound music, can do so at the N. B. C. trials at Hempstead, L. I., on the 29th. The headquarters of the club will be at Roth's Hotel. Hempstead is on the Long Island Railroad, and one can go from New York city either by the Thirty-fourth street ferry or James slip ferry, foot of New Chambers street, and from Brooklyn by the Flatbush avenue station. Dogs must be at Hempstead, L. I., not later than 10 A. M. on Monday, Oct. 29, and Class A will be started at 1 P. M. the same day.

The New England Beagle Club's trials will commence Oct. 23, at Oxford, Mass., which is easy of access from Boston, being not far from Worcester, and can be reached from New York by the Fall River, Stonington or Norwich steamboats.

Mr. W. L. Washington, the well-known Irish setter breeder, is now a member of the Elliott-Washington Steel Co., of New Castle, Pa.

Mr. Joe Lewis writes us that it is his intention to make a field dog of his new purchase, the English beagle Robino, as the few times he has had him out he has worked remarkably well considering his condition.

Mr. A. B. Cobb, of Newton, Mass., is gradually getting together a nice kennel of smooth fox-terriers. His latest acquisition is the winning bitch Marton II., by Despoiler ex Damosel. Before being shipped she was bred to the well-known Devereux, son of the crack dog champion D'Orsay.

Our Chicago contemporary says it prides itself on its show reports, that they occupy a plane of their own—they do, and we do not wish to rob them of that distinction. Our contemporary also occupies another unique position in that while it pats the men who make their reports on the back with one hand, it stabs them with the other. To FOREST AND STREAM was vouchsafed the privilege of protecting Major Taylor, who wrote the Providence report in the *American Field*, from insinuations that no journal should allow its representative to be subjected to. When a kennel journal engages a reporter in whom it has confidence enough to allow him to represent that journal at a show and his name to be signed at the end of his report, it is especially the duty of that journal to protect that reporter from personal insinuations such as are to be found in a letter in our contemporary's issue of Oct. 13. Questioning a reporter's ability may be allowable, but to admit a slur upon his honesty from one who cannot even claim to be a disappointed exhibitor is, to say the least, in very bad taste. There are certain ethics of journalism that our contemporary does not seem to understand, and this is one of them.

Mr. Blossom's Heather York and Flomont and Comus and Venus were not at Providence show. Comus is one of the dogs we said should have been mentioned. The judge's book did not intimate that the dog was absent, and knowing him to be a good one, though in the careless benching of the Gordons we could not place him, gave him the benefit of the doubt.

Mr. J. F. Stoddard, of Georgetown, N.Y., has bought from Mr. C. S. Wixom the beagle bitch Velvet, winner of first in novice class at Philadelphia. He proposes to train her for the field and add another practical field beagle to the list of bench show winners.

When we draw attention to the new advertisements every week this does not mean that the student of our business columns must neglect to read the others. There may be a bargain among them that he did not catch last week. W. H. Pierce, the well known Irish setter breeder, wants some dogs to train; has excellent game facilities. W. P. Fraser offers well bred Scottish terriers. F. Glass a brace of thoroughly trained field dogs, cheap. H. Reeder & Co., trained rabbit dags, etc. J. M. Kelly, Irish setter and pointer. J. H. Whistler, collies. E. G. Faile, beagles. E. W. Fiske, cocker spaniels. Swiss Mountain Kennels renew their yearly stud card with a reduced fee on champion Middy and their four St. Bernards. From Spratts notice we see that Lad of Kent takes the cake.

A couple of weeks since we alluded to a letter which appeared in the Toronto *Globe* containing assertions and insinuations, which we spoke of at the time as requiring some contradiction on the part of the bench show committee of the Toronto show. Mr. Postlethwaite, in the *Globe's* issue of Oct. 13, writes a manly letter showing the ridiculousness of the charges and also proving conclusively that the superintendent had nothing to do with the selection of Major Taylor as judge of setters and pointers at the Toronto show. In fact, the latter was proposed by Mr. R. Junor and seconded by Mr. W. P. Fraser, and in opposition to Mr. Stone's nominee. It is also proved by affidavit that Mr. Stone had no interest in the dogs he showed for other owners, other than as a superintendent wishing to do the best for absent owners, and his own dogs, from the Forest Kennels, were handled by some one else. One part of Mr. Postlethwaite's letter bears on the question of officers of a club exhibiting dogs and is as follows: "The propriety of committeemen showing dogs has more than once come up for discussion, but the difficulty of forming a committee of dogmen who do not own dogs or will refrain from exhibiting them cannot easily be got over, besides it is a general custom in the United States, and honest judges would not allow themselves to be influenced by any such consideration, while it is a regulation here that committeemen who handle dogs while being judged shall remove their badges before entering the ring." Right-thinking men cannot but be pleased at the stand the committee have taken in this disagreeable affair; and we only regret that space forbids our publishing the whole letter.

### New England Field Trials.

*Editor Forest and Stream:*

At a meeting of our field trials committee last evening it was decided to run our Members' Sweepstake on Tuesday, Nov. 13, instead of Oct. 23. This was done at the request of members having entries in the stake.

ARTHUR R. SHARP, Sec'y.

OCT. 9.

[This notification arrived too late for our last issue. This change of date was suggested some time since in these columns, as many sportsmen who are interested in the New England beagle trials, to be held the same week, would have had to forego one meeting or the other had the original dates been held to.]

### A Tale of a Smart Dog.

THE article in FOREST AND STREAM of Oct. 13, "A Tale of a Dog," is one of the best and most scientific I have ever read, and I have read many. I shall bring it before our Society for the Study of Comparative Psychology in connection with Society of Comparative Medical and Veterinary Science here. This will really help the dog.

WESLY MILLS, M. D.

MONTREAL, Can., Oct. 13.

## ANSWERS TO CORRESPONDENTS.

G. W. D., Broctkon, Mass.—You can do nothing now. If given in time an injection of soap and water would probably have counteracted the mistake.

A. C. C., New York City.—Is it not unusual for a fox-terrier to shed his coat at this season? What is the remedy? Ans. No. This is the time for shedding; it might also be due to irritation of the skin. Brush the dog every day, and also wash him in a solution of creolin (1oz. to a pail of warm water) once or twice a week.

C. W., New York.—Please give me remedy for corns and to make hair grow on them. My great Dane bitch has corns, thick calloused cushions on forelegs and same on hips. I have stopped their increase by attention to bedding and washing with tar soap. Ans. Apply the following daily:

| | |
|---|---|
| Salicylic acid | ʒ iss. |
| Flexible collodion | ʒ i. |

A. L. P., New York city.—Glad to hear your St. Bernard pup objects to corn meal mush. It is not good dog food. The handiest food you can have is dog biscuits soaked with warm water or soup; the best are advertised in our business columns. If you care to go to the trouble of preparing the food for your three months old St. Bernard and setter pups, get some good meat bones, make a soup with vegetables and pour this over stale bread. Alternate the bread with oatmeal and rice. You can also boil lean mutton and beef, and when thoroughly cooked mix the meat with the bread, etc. You can feed raw meat chopped up without bone or fat, two or three times a week. Let them have some knuckle bones to gnaw. If you feed scraps from the table see that the pieces of meat are chopped up and don't feed chicken bones or any bones that are small enough to be swallowed. Sour milk and clapper are good at any time.

# Hunting and Coursing.

## FIXTURES.

### FIELD TRIALS.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.

Oct. 29.—National Beagle Club, Hempsteat, L I. Geo. Laick, Tarrytown, N.Y., Sec'y.

Nov. 5.—Brunswick Fur Club, North Acton, Mass. Bradford S. Turpin, Dorchester, Mass., Sec'y.

Nov. 7.—Northwestern Beagle Club, at Columbus, Wis. Louis Steffen, Milwaukee, Wis., Sec'y.

### COURSING.

Oct. 16.—Kenmore Club's annual meeting at Goodland, Kan. C. F. Weber, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.

Oct. 23.—Western Kansas Coursing Club's meeting at Leoti, Kan. W. O. Allphin, secretary. E. H. Mulcaster, judge. R. Taylor, slipper.

Oct. 30.—Cheyenne Coursing Club, at Great Bend, Kan. Ira D. Brougher, Sec'y.

Oct. 30.—Altcar Coursing Club's autumn meeting at Holyoke, Col. S. W. Vidler, secretary. Basil Hayman, judge. R. Taylor, slipper.

Nov. 14.—California State meeting at Merced, Cal. J. R. Dickson, Secretary.

## HUNTING AND COURSING NOTES.

The prospects for a record meet at Merced, Cal., next month are very bright. According to the San Francisco *Call*, it is expected that upwards of seventy dogs will go to slips. Judge Grace and Slipper Wren are urged to do a little training as upon these two well known and able men will fall most of the real hard work. The Sacramento leashmen are especially active in preparing their dogs for this event and expect to bring back most of the money. The Friscos however will have something to say about this. Messrs. Healy and Eagan have a strong team in charge of W. Creamer. They are Fireball by Skyrocket, out of Slygirl; Empire by Shortstop, out of Bessie; Fearless by Monarch, out of Teressa J. and Applause by Midnight, out Flying Jib. No greater breeding than this can be found in any kennel.

• • • •

The Genessee Valley Hunt had an ideal day's sport on Oct. 8, although they were not able to kill. The meet was at Temple Pines at 8 A. M., and the first fox was started in the Crossett Pines, but went to earth before the hounds got fairly going. The second fox was found north of Geneseo and gave them a good run, but finally saved his brush by crossing the Genessee. The distance covered was about twenty miles.

• • • •

The American Coursing Club has made a good move in inaugurating the new stake—the American Waterloo cup. Coursing men need such a stake, one that will stand above all others, and the winning of which will convey much renown, in the same light that the English Waterloo cup is held. Our Huron friends, with their usual enthusiasm, guarantee $200 added money, so that this will insure a stake well worth running for by the best greyhounds in the country. Nominations are now open and should be made to Mr. F. B. Coyne, the secretary of the A. C. C., Huron, S. D.

• • • •

At the Leoti, Kans., meeting, to be held after the Kenmore meet, the Leoti Stakes, for 32 or more all-aged greyhounds at $10 each (non-members $12.50) will be run off. The prizes will be: Winner 50% of entrance money and $50 added; runner-up 50% of remainder and $25 added; the balance of entry fees go to third and fourth with $25 added, divided equally. The Western Puppy Stake is for 16 or more greyhounds whelped after Jan. 1, 1893, entrance $5 (non-members $7.50; to first 50% of fees and $30 added money; runner-up 50% of balance and $20 added; third and fourth dogs receive the remainder of entrance money, equally divided; 10% will be deducted from all winnings for expenses.

## AMERICAN COURSING CLUB'S MEETING.

THE eighth annual meeting of the American Coursing Club at Huron, S. D., was a decided success in the quality of the competition and its management, though in respect to the number of starters the showing was inferior to the events of some previous years, for which the financial depression is undoubtedly the cause. Times are such as to keep many good sportsmen in close attendance to business. But so far as enthusiasm and interest in coursing are concerned, they are unabated. It has not fallen off as a sport in the esteem of its supporters; the times limited the scope of its public expression. A few special causes contributed to lessen the entries, one of which was the serious illness of two of Mr. H. C. Lowe's dogs, which, he explained, prevented him from attending and taking part in the competition, since the sick dogs needed his personal care. But the prospects for next year are bright as evidenced by the support already subscribed to the new stake for next year.

All the details of the competition were most complete and satisfactory.

Though not the safest for riding, the grounds were excellent for coursing, being level enough to afford a good view of the courses, and not so hard as to injure the dogs' feet.

The numerous badger holes, which were a constant menace to the safety of the rider, many times afforded the rabbits safe harbor when pressed closely for their lives. They were plentiful as need be, possessing great strength, with powers of speed and endurance which taxed oftentimes the coursing abilities of the dogs to the utmost. Though some were very fast, but few were so fast but that the dogs could press them closely and score on them.

Since the first meeting at Great Bend, in 1886, great progress has been made, both in the improved physical quality of the greyhound and his coursing powers. Then the loafer which ran cunning, the awkward dog which ran wide in his turns, the soft-hearted dog which was easily discouraged and the ones of poor type and short pedigrees were not uncommon, nor were they uncommon for a few years afterward. But the dogs of the present are alert and gamy, in form a combination of beauty and strength, with wonderful powers of speed and endurance and control of action. The number which ran wide in their turns at this meeting was small indeed.

There was quite a good attendance of owners and visiting sportsmen, gentlemen of the right sort who can hold a competition as it should be; that is, skilfully and in good fellowship. Among those present were Messrs. J. Charlton, and W. H. Charlton, Minneapolis, A. P. Slocum, Oakes, N. D., J. Herbert Watson. Brooklyn, C. H. Scott-Durbin, Hawarden, Iowa; J. H. Rew and T. Bresbine, Artesian, S. D.; A. Melrose, Orange City, Iowa; Michael Allen, Chicago, H. G. Nichols, Mitchell, S. D., B. Hayman, Chicago, Mr. H. C. Waterhouse, Lisbon, S. D., Dr. G. Irwin Royce, Cannon Fales, Minn. and C. H. Vinton, Redfield, S. D., A. C. Bradbury, Englewood, N. J.

The judging was most satisfactorily done by Mr. E. H. Mulcaster, of Fox Lake, Wis., of whom it can be said that he exhibited all the qualities of a good judge, he rode well, he was in the right place at the right time during a course, and every part of his duties progressed with the skill which comes from knowledge, experience and good intention.

The slipper, Mr. Jos. Dodds, of Mitchell, S. D., won much praise for the superior manner in which he conducted the slipping. He proved most efficient.

Dr. G. Irwin Royce acted as slip steward, and thereby assisted materially in keeping the competition going without unnecessary loss of time. And by the way, the coursing interests of to-day owe a great deal to Dr. Royce for his earnest labors in establishing public coursing east of the Rocky Mountains. The meeting at Great Bend in 1886 was due largely to his personal efforts in organizing such material as was then available. Of the numerous obstacles to be overcome and the personal attention required in interviewing and corresponding, few of the present day realize. But the years have not diminished his fondness and enthusiasm for the sport, nor is it probable that they ever will.

Two Huron gentlemen assisted in the interest of the coursing, Mr. C. L. Pratt as field marshal and Mr. C. C. Langley as flag steward. Both were efficient. There was a large number of spectators in attendance each day, particularly on the second day, when it seemed as if nearly all the carriages in town were in the coursing field. The crowd was orderly and well behaved.

The members of the Huron committee, Messrs. John Longstaff, John A. Sauer and F. B. Coyne, were attentive in cordially welcoming and assisting the visitors; in short, all that earnest effort, good fellowship and good intention could accomplish toward the success of the meeting was done.

The club held a special meeting on Monday evening to consider the rearrangement of prizes in the *American Field* cup stake, wherein there was $50 added money to second prize and none to first, the $100 cup not being donated this year. All those directly interested in the competition agreed unanimously to have the $50 added money divided, $30 to first, $20 to second.

The regular meeting took place on Oct. 10, Dr. G. Irwin Royce in the chair. Following is the list of officers elected: President, Dr. N. Rowe; Vice-President, A. P. Slocum; Secretary, F. B. Coyne, Huron; Treasurer, C. H. Vinton, Redfield, N. D. The executive committee was increased to five instead of three, namely, J. Charlton, John Sauer, A. Melrose, Michael Allen and H. C. Lowe. This committee was also elected as the ground committee. The resignation of Mr. T. W. Bartels was accepted. The secretary was instructed to notify all members in arrears of dues, etc., that they would be suspended from membership if the dues were not paid before the expiration of two months from the date of notice.

Mr. C. H. Vinton was elected to membership. A vote of thanks was passed to FOREST AND STREAM and the *American Field* for sending representatives to attend the meeting. A vote of thanks was tendered Mr. J. Herbert Watson for his efforts in behalf of the club and earnest support of coursing matters.

American Coursing Board's rules govern the date (Jan. 1), which limits the age of Derby entries.

The meeting, Mr. B. Hayman in the chair, adjourned till Thursday evening.

Mr. J. Charlton and J. Herbert Watson were elected a committee to represent the A. C. C. in respect to representation before the American Coursing Board. The finances were reported as good, debts all paid and $100 in the treasury.

### The American Waterloo Cup.

The club accepted arrangements for a new stake which had been informally perfected the night before. The conditions are: Number of entries limited to 32; entrance fee $25 and $200 added money, making the stake of $1,000 value. The $200 are guaranteed by the citizens of Huron. Twenty per cent. of entrance to be paid at the time of nomination, 40 per cent. on March 1, 40 per cent. on July 1. Nominations are transferable through secretary; they are to be numbered so that when 32 are reached nominations close. This stake is the American Waterloo cup, and as its title implies, has a national import instead of a mission as an advertisement for a weekly journal.

The next meeting of the club will be held at Huron, S. D., on Tuesday, the second week in October, 1895.

For the new stake 18 nominations are already subscribed and 10 per cent. paid in on each. The nominations and number nominated by each one are as follows: J. H. Rew 3, J. H. Watson 4, M. Allen 3, Columbus Coursing Kennels 2, Melrose & Durbin 2, H. C. Waterhouse 1, C. H. Vinton 1.

Thus, at this meeting, the club was assured of almost support enough to guarantee the success of the next meeting. The secretary was instructed to prepare a circular embodying the conditions of the new stake and mail them to the coursing men.

For the purpose of resting dogs between rounds, the two stakes were run in alternate sections, the coursing beginning with the Derby.

### American Coursing Derby.

There were twenty starters. The quality of the competition was of a high order, the puppies showing powers of coursing quite equal to those of the aged dogs. The winner, Glenlyon, exhibited great ability to stay close to the hare in its sharpest and most cunning turns, and his endurance was extraordinary. Butterflies, second, also was swift and nimble in turning, with great endurance. Thomas B. Reed distinguished himself as a good performer, though disposed to be a bit wise as to method.

SUMMARY.

The conditions and order of running is as follows: For greyhounds 18 mos. old or younger, $10 entrance fee. Fifty per cent of entrance money to the winner, with $75 added by the club. Fifty per cent of remainder with $25 added by the club to the runner up. Fifty per cent of remainder equally to third and fourth dog.

Ten per cent of entrance deducted for expenses of the club.

*First Round.*

Columbus Coursing Kennels' red dog Glenwood (Glenkirk—Gilda), beat A. P. Slocum's fawn bitch Cleopatra (Rendezvous—Roy's Canary).

Eastern Coursing Kennels' fawn bitch Butterflies (Royal Crest—Drytime), beat H. G. Nichols's black bitch Crow Wing (Sir Hugo—Fleet).

Michael Allen's fawn dog Fear Not (Glenkirk—Gilda), beat J. Charlton ns. N. P. Whiting's red bitch Nanna (Glenkirk—Innocence).

Melrose & Durbin's fawn bitch Gilkirk (Glenkirk—Gilda), beat J. H. Rew ns. Nagle & Willet's fawn bitch Lady Creighton (Fox—Fanny).

J. Charlton ns. Warren & Fisk's fawn and white dog Glenkirk (Glenkirk—Scandal), beat J. Charlton ns. N. P. Whiting's red dog Chartist (Glenkirk—Innocence).

J. Charlton ns. Warren & Fisk's fawn and white dog Glenlyon (Glenkirk—Gilda), beat Melrose & Durbin's fawn dog Robert le Diable (Miller's Rab—Lady Del Glendyne).

Eastern Coursing Kennels' red dog Dakota (Glenkirk—Gilda), beat Columbus Coursing Kennels' black bitch Lady Dedlock (Miller's Rab—Lady Del Glendyne).

M. Allen's white bitch Maid Honor (Miller's Rab—Nettlefield), beat J. Charlton ns. N. P. Whiting's red dog Lucian Swift (Glenkirk—Innocence.

C. H. Vinton's fawn dog Thomas B. Reed (Glenkirk—Gilda), beat H. G. Nichols's black bitch Coon (Sir Hugo—Fleet).

Eastern Coursing Kennels' red bitch Trilby (Royal Crest—Drytime), beat J. Charlton ns. N. P. Whiting's red bitch Minnehaha (Glenkirk—Innocence).

*Second Round.*

Butterflies beat Glenwood. Glenlyon beat Maid of Honor.
Gilkirk beat Fear Not. Thomas B. Reed beat Trilby.
Master Glenkirk beat Dakota.

*Third Round.*

Butterflies beat Master Glenkirk. Thomas B. Reed a bye.
Glenlyon beat Gilkirk.

*Fourth Round.*

Butterflies beat Thomas B. Reed. Glenlyon a bye.

*Deciding Courses.*

Glenlyon beat Butterflies and won first. Butterflies second.
Thomas B. Reed third.

TUESDAY.

There was an exceedingly stiff wind from the northwest which blew steadily all day. The temperature was comfortably cool. Jacks were found in fairly sufficient numbers for the competition. There were some excellent courses during the day. The weather was clear and the ground in good condition for running. As the day advanced the number of spectators constantly increased, a large part being ladies.

*First Round.*

CLEOPATRA—GLENWOOD.—The first rabbit was not sighted favorably for a slip, but Cleopatra struggled, slipped her collar and started for the rabbit, but was unsighted. She was caught and put in the slips before any harm was done. This was the only time during the meeting that a dog got out of the slips in such manner. In the run-up Glenwood led, wrenched and turned, then Cleopatra took possession, she beginning to run up her score too late, as the rabbit took to earth. Glenwood won.

BUTTERFLIES—CROW WING.—The former led and the rabbit soon holed. There was nothing done. Two courses were run before these dogs were again put in the slips. Butterflies led and held possession for about a half mile, and on soft ground placed Crow Wing. The rabbit holed, neither dog scoring many points, though Butterflies won easily.

FEAR NOT—NANNA.—The former drew steadily away from Nanna and made wrench after wrench and turn after turn without letting her in. He showed great cleverness in turning.

GILKIRK—LADY CRAIG.—Lady loafed from the start, Gilkirk running true in a long course scoring several turns and a kill.

CHARTIST—MASTER GLENKIRK.—they ran a good course. Master Glenkirk raced away from Chartist in the run-up, sticking close to the rabbit, placing Chartist several times only to again take possession. He showed great speed and quick turning, winning easily.

GLENLYON—ROBERT LE DIABLE.—The former in a long and driving course beat Robert almost pointless. He drew away in the run-up turned the rabbit several times placed Robert, taking the rabbit away again. Glenlyon in a fine drive tripped the rabbit. In a corn field they were unsighted. Glenlyon won easily.

LADY DEDLOCK—DAKOTA—Soon after they were put in slips, a fire was seen to start furiously on the prairie behind the wagons. For a half hour there was the most energetic fight to extinguish the fire, the strong wind fanning and spreading it persistently. It was kept in narrow limits till it reached a road where it stopped. Dakota beat the bitch pointless. He raced to the rabbit, did all the scoring, turning often and getting in quickly again, keeping Lady out at every turn, pressing the rabbit to a kill.

MAID OF HONOR—LUCIEN SWIFT.—Maid gained a length, turned and placed Lucien. A few exchanges followed, in which Maid showed the greater speed and cleverness in turning. The rabbit was pressed very closely from start to finish, holing at the end of about a quarter-mile course. Maid won.

THOMAS B. REED—COON.—The dogs were hardly well straightened out when the rabbit turned to the right across a narrow stretch of grass where Thomas became unsighted. Coon worked the rabbit alone for nearly a mile, then Thomas again caught sight, joined in, made two or three wrenches and a kill and won.

MINNEHAHA—TRILBY.—They ran a fine course of about a mile, scoring constantly, and making a close finish. Trilby had a slight lead to the rabbit, and held possession for about a mile when Minnehaha got in and made wrench after wrench and turn after turn. Trilby just saved himself by going in strong at the finish, making a drive and a meritorious kill.

The first round in the All-Age Stake was next begun and run through before the Derby was resumed, and this round occupied the remainder of the day.

WEDNESDAY.

A stiff but not uncomfortable northwest wind prevailed during the day. The weather was clear and pleasant.

*The Derby—Second Round.*

GLENWOOD—BUTTERFLIES.—Butterflies got the run up by favor of the rabbit bending its course toward her. She made the first turn, and after a few exchanges got possession and held it to the end of a long and pumping course, winning handily.

FEAR NOT—GILKIRK.—The jack bent around in big curves one way and another before straightening out, the dog Fear Not showing a bit the most speed at the start. Gilkirk outscored him in the exchanges, and drew many lengths away from him in a straightaway lead, showing decided superiority.

MASTER GLENKIRK—DAKOTA.—Master ran up with surprising swiftness, riding the rabbit from the start, and killed at the end of about 200yds., beating Dakota, pointless. The swiftness of his drive at the finish was extraordinary.

GLENLYON—MAID OF HONOR.—The former was superior from start to finish. He led to the rabbit, wrenched, drove it in a long curve, let Maid in for a short time, went in again and worked the rabbit to a kill at the end of a mile, running a meritorious course.

THOMAS B. REED—TRILBY.—The latter led up to the first turn, when Thomas got in and pressed the rabbit to several turns, when it holed. The dogs drove it constantly and there was scoring to the finish. Many times they drove forward to kill, but the rabbit saved itself.

*Third Round.*

BUTTERFLIES—MASTER GLENKIRK.—Master raced to the rabbit, took a turn or two, then seemed to shorten his pace. Butterflies took the lead, wrenched and turned, pressing the rabbit till it holed, beating Master easily.

GLENLYON—GILKIRK.—They ran side by side for about 100yds. when Glenlyon drew ahead, held the rabbit for a turn or two, after which it was first one and then the other turning, Gilkirk beginning to roll up a score at the finish which she ended by killing too soon. It was a good course, closely contested, Glenlyon winning.

THOMAS B. REED a bye with Glenwood.

THURSDAY.

The cloudy sky cleared up toward midday. A late start was made.

The finals were well contested. There was a large crowd out to see them.

BUTTERFLIES—THOMAS B. REED.—The latter in his course did not run perfectly true, though there was no aggravated exhibition of running cunning. Butterflies led and took two or three turns, when Tom got in and made a turn. Butterflies made a spurt and both killed. Butterflies won.

Glenlyon ran a bye with Fear Not, the course being about a half mile, when the rabbit holed.

Some courses in the All-Age Stake were next run.

*Deciding Course.*

GLENLYON—BUTTERFLIES.—Glenlyon led and held possession for a few turns, when Butterflies came in and there were a few exchanges, after which Butterflies began to score and Glenlyon in good time was fortunate enough to kill. He was going a little wide in his turns toward the end of the course.

This ended the Derby. Glenlyon won first, Butterflies second and Thomas B. Reed third.

### The All-Age Stake.

There were 12 starters in this stake, and the work was of a good quality. The order of the running was as follows:

For all greyhounds at $20 entrance fee; 50 per cent. to winner and $30 added by the club. To runner-up 50 per cent. of the remainder and $20 added by the club. To third and fourth 50 per cent. of remainder and $25 added by the club.

*First Round.*

Eastern Coursing Kennels' black and white bitch Southern Belle (Laocoon—Axis), beat A. P. Slocum's black bitch Rachel (Lights o' London—May Flower Queen).

J. H. Rew's brindle bitch Jessie Green (Sir Hugo—Fleet), beat Eastern Coursing Kennels' black dog Royal Crest (Greentick—Royal Rate).

J. Charlton ns. N. P. Whiting's fawn bitch Innocence (Thornwood—Burning Shame), beat M. Allen's black and white bitch Grace O'Malloy (Master Rich—Hawthorne Belle).

J. H. Rew's brindle dog Frank Green (Sir Hugo—Fleet), beat M. Allen's white and black dog St. Clair (Lord Neversettle—White Lips).

A P. Slocum's white and black dog Rendezvous (Major Glendyne—Lady Dublin), beat Melrose & Durbin ns. T. Thackeray's brindle bitch Cigarette (Sailor—Snip).

Eastern Coursing Kennels' brindle bitch Miss Dollar III. (Eden Castle—Miss Harkness), beat F. B. Coyne ns J. R. McNickle's black dog Laplander (Trales—Dick's Darling).

*Second Round.*

Southern Belle beat Jessie Green. Rendezvous beat Miss Dollar III.
Frank Green beat Innocence.

*Third Round.*

Frank Green beat Southern Belle. Rendezvous a bye.

*Deciding Course.*

Frank Green beat Rendezvous and won first. Rendezvous second.
Southern Belle third.

*First Round.*

SOUTHERN BELLE—RACHEL.—Rachel took the lead a few lengths in the run-up, held possession for a half mile, making repeated wrenches and turns, when Rachel got in and was scoring when they were unsighted in weeds. Belle won easily. The course was a long one of about two miles.

JESSIE GREEN—ROYAL CREST.—Jessie gained a lead of three lengths in the race to the rabbit, made a turn and placed Royal, then fell. Royal turned and ran wide, letting Jessie in again; she made two turns. At the end of about a mile and a half course they lost the rabbit. Jessie won easily.

INNOCENCE—GRACE O'MALLEY.—Innocence showed the better speed and cleverness for a half mile, then Grace made a go-by and led to the hole where the rabbit escaped. Jessie won.

FRANK GREEN—ST. CLAIR.—Apart from the run up and a turn or two, St. Clair was not in the course, which was a long one. Frank held possession for nearly a mile, scoring constantly and holding. He got a severe fall in a buffalo wallow, but soon got in the course again, took possession and finished with a neat kill.

RENDEZVOUS—CIGARETTE.—Rendezvous raced away in the run up and was cleverer in turning. The rabbit ran into a hole.

MISS DOLLAR III.—LAPLANDER.—They ran close for two hundred yards, then Miss worked the rabbit alone over a long course, scoring on it repeatedly. She gradually drew ahead till she was many lengths in the lead running out of sight.

WEDNESDAY.

After the second round of the Derby the stake was resumed with the

*Second Round.*

SOUTHERN BELLE—JESSIE GREEN.—Belle was the quickest to the rabbit, took a few wrenches and placed Jessie. Then followed a fine exhibition of rapid work, knocking the rabbit to each other. It went to earth at the end of a half mile, and Belle won.

FRANK GREEN—INNOCENCE.—Innocence made a strong run up, leading Frank to the turn. Frank had the better in the exchanges in a long course, having his own way at the last, ending with a kill.

RENDEZVOUS—MISS DOLLAR III.—Excepting a few moments in the middle of the course, when Miss made three or four wrenches, Rendezvous had all the advantage. He raced to the rabbit, scored for a half mile, when Miss got in for a few points, after which he held the rabbit till it holed.

THURSDAY.

*Third Round.*

SOUTHERN BELLE—FRANK GREEN.—The first slip was to a short course of about 200yds., which the judge very properly decided was no course. The points scored were nearly equal through the course, and the curve followed by the rabbit made the test most imperfect. On the next rabbit Frank held possession for nearly a mile, beating Belle almost pointless. The rabbit went to earth.

RENDEZVOUS ran a bye with Rachel. It was a most punishing, long course, in which the former got two severe falls, which undoubtedly impaired his performance in the next course. Rachel got one hard fall.

*Deciding Course.*

FRANK GREEN—RENDEZVOUS.—After the run-up Frank showed a pronounced superiority in speed and cleverness, winning easily.

Frank Green won first, Rendezvous second and Southern Belle third.

Thus ended a pleasant meeting, remarkably free from accidents considering the dangerous character of much of the riding. There was but one fall, and that was a hard one. On the first day, while riding at full speed, Mr. A. C. Bradbury's horse fell. Aside from a badly lamed shoulder and a severe shaking up no injury was done.

The Huron brass band serenaded the winners, closing a pleasant event in music. B. WATERS.

## "Old Hurricane."

*Editor Forest and Stream:*

Several fox hunters arranged to have a fox hunt on the morning of Sept. 1, and they offered me the use of a splendid mule and cart to drive to the hunting grounds, some ten miles from Olive Branch, Miss., about eighteen miles from Memphis.

When Dr. D. and I alighted from the train at 5 o'clock on the evening of Aug. 31, the mule and cart were waiting. The Doctor was not expected, but a horse was soon saddled for him and we were speeding on the road to Shinfox Crossing, the camping ground.

Three hunters joined us with several hounds, and others with their hounds from this side of the creek preceded us. The hunters and hounds from the other side of the creek dropped in, until the 9 o'clock supper found about twelve fox hunters, and nineteen and a half couple of hounds, ready to devour the repast. Lights were ordered out at 10 o'clock and the hunters proceeded to find the soft side of 12in. wooden benches, or sprawling full length on the schoolhouse floor, sought the fickle goddess—sleep. I tried to balance 212lbs. on a bench 12in. wide, but Morpheus was frightened away by the continual talking of those present. If there is any such thing as transmigration of souls and those present could select where theirs would go, there would be twelve additions to the hounds; indeed they did not wait until death; they are followers of Minerva and make a good pack. They gave tongue all night, the trail never got cold, many never closed their mouths; their tails have the true hound character in size; their bristles were often raised so their hats fell off at the mention of some other fellow's hound leading theirs. They had good noses, too; one, next day, said a skunk smelt like an opossum.

It was J. Payne's blue dog Alabama, that was going to make monkeys of all the others in the pack, or Powell's Pert, the Nancy Hanks of the pack, or Rover, the lemon and white dog, was going to set the grass afire with his speed, if he did not sulk and refuse to run, which he was sure to do if another dog jumped the fox before he did; or it was Lyle R. Payne's red dog that was going to carry a search-light and pilot the pack from start to finish. Spears, Dexter, Hunter and others were not going to surrender their reputation as champions to any new rival. All owners had finished a long chapter on the merits of their favorite hounds—none had demerits, when the writer dropped an unexpected bomb in their midst that caused them to be silent for awhile. I quietly asked what dogs caught the fox and led the pack at the great run they had at Byhalia, Miss., a few weeks ago. They did not dream I had heard of the run. The facts are, many of those present with the same unbeaten hounds, were to have a race after a noted fox near Byhalia, Miss. Some of the Byhalia boys, hearing when the meet was to take place, and where the hounds were to commence, sent a man on one of their best horses to drag a large beef bone over the grounds. He started one hour before the race and ran the horse and dragged the bone for three hours, and then dropped the bone in the creek bottom. Most hounds prefer to run a cur or beef bone to a fox. When the hounds struck the scent of the beef bone they were off like a tornado, their owners having to ride like demons to keep in hearing, which they did.

"And they hollered until I thought their throat,
Would bust wide open at ev'ry note.

The poor hounds were run to a frazzle and when they came to where the bone was left, they shut up and commenced to fight and munch on the bones. Each owner, claiming his dog made the catch, rode rapidly to where he expected to see the hounds pulling the fox to pieces. They were horrified to see the hounds fighting over the bones, and the anathemas of the hunters were so great they shook the acorns from the trees. If it is known to the owners who played the beef bone trick on them, there will be a scrapping match at Byhalia. In this case silence would indeed be golden.

Three o'clock came and weary at heart and sick at soul I jumped to my feet with a yell! This exclamation brought the crowd to their feet; but with a yawn I remarked I was dreaming. We then commenced preparing for breakfast and feeding the horses, mules and hounds.

The man of great wealth measures his pleasures by what they cost. Some of the New York Four-Hundred's pack, horses and trappings are imported at fabulous prices; the hunters they ride cost thousands, and the maintenance of these hunts is very expensive. I see that at a hunt held at Geneseo, N. Y., the other day, more wealth was present than there is in the whole city of Memphis. There were men at our hunt that keep from one to three hounds, willing in camp to sleep or try to sleep on the soft side of a plank, and have no other incentive but the pure love of the sport and whose cup of bliss would be full if they could only see their favorite hound lead the pack. The mounts, instead of being costly imported hunters, were horses or mules of the plow. I rode the boss mule for a fox chase; when his running mate McCargo's riding horse, was in front, the mule would be close to the horse's heels or die in the attempt. You had only to sit in the saddle and let him go. If a rail fence was reached he would give a few twists to his tail and make an onslaught on the fence; no rail fence could stand it and you would follow the fence, if not up to the trick. He would discount any gambler playing straddles. If following his running mate, he would straddle without swerving, if in his way, a sapling one could make four rails to the cut from. I never met with but one accident on him; that was when we rode into a yellow jackets' nest. It took two hours for the other boys to find me and two hours more to dig me out of a mud hole, and my wife a week to be sure it was I. The limbs of the trees hit me upper cuts, jabbed me in the side, pummeled my back blue, closed both eyes, and I needed some fig leaves or something else when found.

Breakfast over, horses and mules were saddled. The morning star, that glorious harbinger of the approach of another day, now sent out its brilliant rays, and the horn sounded to saddle; the dogs were uncoupled and the horses were soon mounted. I have been for many years a great advocate of form in racehorses, bird dogs, hounds or anything where speed and endurance cut any figure, but I never saw so many hounds show up in better form, and all seemed ready and willing to make this the race of their lives. We had only a half mile to ride to reach the "Hurricane grounds," so termed from the fact that a hurricane passed through there some years ago, leveling all the timber for a space of three miles square. Here the foxes lie up during the day in the jungle of young growth of bushes or briers too thick to ride or walk through, except in the roads, and too thick in many places for hounds to run with any speed. The fox, being smaller, can get through faster and with more ease than the hounds. We hoped to jump "Old Hurricane," so named from his place of living. Some of the hounds were mere puppies, and would run anything from a grasshopper to a bear; others were reliable foxhounds if no cur dogs or beef bones were around. As soon as we reached the creek, which is in the center of the "Hurricane" grounds, the "trashgang" commenced giving tongue on coons, rabbits, minks or anything else they crossed.

Mr. Spears, with several reliable hounds, was to draw the cover, and Mr. R. Payne, with several other good hounds, was to draw the sedgelands adjoining, where the fox was apt to feed at night on the numerous rabbits that infested the sedge and fields. Mr. Payne ran up against land-owners armed with double-barrel guns when he came near their cultivated lands, the farmers telling him their crops were a dead-line and no hounds could cross over alive. About forty boys and as many hounds had run over the crops in the same locality a short time before. The farmers were informed we were the Old Guard and not a blade of their crops would be injured, as no boys were along, and with this assurance we were allowed to proceed on the hunt.

Payne's dogs soon had a cold trail, Spears's a hot one, and in ten minutes a jump. The race was now on. The "trashgang" and all the other dogs but two were harked to and were driving the fox for all he was worth. One of the two dogs refusing to go in was the lemon and white, already mentioned, the other was a bachelor's pet—the "Boy" he called him. The pack sent the fox scudding to where we were sitting in the road. The owner of the lemon and white dog failing to hark him in commenced to ride him down, but the dog ran through a wire fence and saved himself. This acted like a charm in forcing the dog to the pack, and when once in he led the others for quite a time, and ran throughout the race.

The owner of the "Boy" could neither whistle nor holler, though he tried to do both, and seeing that riding the hound down worked so well in the other case, he tried to do the same with the "Boy," but the mule he rode was such a good friend of "Boy," he refused to go on the hound. "Boy" soon joined the pack and his mouth, unlike its owner's, could give tongue, and like some of the owners during the night, he never seemed to close it after he once got in the race.

Each hunter chose a different location to see the run, and the hounds and fox were often viewed, the former never being out of hearing long at a time. Their cry was like the waves of old ocean. A wave of music would come with a great roar, then another great wave, then the fox would carry the hounds along the creek and the sound almost died away; but, like a cyclone, it would burst forth again as they ascended the bank and came nearer to us. The fox would take a cast and draw the hounds out of hearing for a few minutes, when presently you would hear the faintest sound as they drew toward us, the music increasing in volume as the hounds came nearer and sweeping by like a hurricane, their cry soon became fainter once more, until it was only the echo one heard. The hounds would come on as if they were going to drive the fox over us in the road; the fox would swerve by to one side, and the hounds' eyes looked like great balls of fire, they were so fiercely in earnest.

The fox carried his brush like a thoroughbred—at a slight elevation above his back; his great leaps were as light as a ghost's; his red coat had the sheen of burnished gold as he ran up the creek's side, his eyes dancing with cunning and he seemed to be in the heyday of happiness, as he pricked his ears to hear how far the hounds were behind. Then he ran a log, leaping so far off the far end of it that he seemed to have wings. The music now came floating in from the pack in great billows that overwhelmed all other sounds; the fox came gliding through the brush and ran across the road like a flash; his signal of distress had not yet been hung out.

The hounds came in by ones and twos and threes, a dozen bunched—none of those bunched could shake the others, and no hunter was allowed to holloa until the hounds had passed him. The fox is keeping to the meanderings of the creek, disdaining the logs, then he lifts himself up and, like a feather blown across the creek, lights running on the opposite bank. The hounds continually shift leaders. Now it is Alabama, who in turn surrenders to Pert; she lets the lemon dog forge ahead and snaps at his tail in rage as he passes. Lyle, Payne's dog, now sets sail to the front and overhauls the leaders as if they were at a standstill. Then the little black and tan, Dexter, and his brother Morgan, the latter with wide open mouth, now have a driving run for the front and the leaders melt before them like snow before a July sun. They run as if coupled together, and the sly dog fox, now distressed, is looking at this or that log to see if it has a friendly hollow, as he knows there are many around. Darting in a sink hole in the creek bank he is lost to view. The hounds coming up commence digging for him, the horn is sounded, the signal the race is over, and the hunters assemble at the hole, where a council of war is held. The foxes being too scarce in this section to dig out and kill, the hounds are whipped off and the owners commence telling where they saw their dog lead the pack. Only one owner, R. Payne, saw another dog in front of his when they passed him, though others saw his dog Lyle leading as often as any other dog.

The run settles nothing. Each owner thinks his hound the best. The dreary ride of ten miles back to Olive Branch now commenced. The fiery rays of the sun seemed to melt hunters, horses and hounds. The latter as they trot along the road drop at every spot of shade, their tongues loll out and it takes several toots of the horn to induce them to resume the weary, hot, dusty march back home. Some may think they can catch "Old Hurricane," but the boys of DeSoto county, Miss., will bet all the mules they own, if run at night, that he can neither be caught nor holed. After the crops are marketed they will cover all the cash the other side want to put up, and you can break the county if you kill or run him to earth. P. H. BRYSON.

MEMPHIS, Sept. 4.

## National Fox Hunters' Association's Trials.

THE National Fox Hunters' Association, of which little has been heard lately, has not gone to earth as many had supposed, but is still in the running. The initial meet of the association will take place Nov. 19 at Olympian Springs, Ky.

The stakes are: The Derby, for foxhounds under eighteen months of age, entry fee $5, divided as follows: 50% to first, 30% to second and 20% to third.

The Champion Stake, for all ages, $5 entrance fee, divided as above. The winning of this stake also confers the club's title of champion.

It will be remembered that we gave some particulars of the rules drawn up by this Association, but as they differ somewhat from the general run of such rules we therefore print them in full, and fox hunters who intend entering their hounds should give them careful attention, as it is the intention of the Association to fully carry out their provisions so as to insure an orderly and well-conducted meeting:

Rule 1.—No nominations can be taken or entries made except by or through a subscriber who shall be a member of the club, and thereby becomes responsible for said entry.

Rule 2.—The entrance money must in all cases accompany the nomination. No entry shall be valid until fee is paid in full.

Rule 3.—The number of entries from any one kennel or pack shall be limited to six. The age of a dog shall be calculated up to and inclusive of the first day of the hunt.

Rule 4.—Subscribers must file with the secretary the names of the hounds he intends starting, on or before 9 P. M. of the day preceeding the trial. Every hound entered at any trial held under these rules, must have been the bona fide property of the person making such entry, ten days before closing of entries. The entries must clearly identify the dog by name and, if known, its date of birth, name of its sire and dam and the name of its breeder; should any of these particulars be unknown to the exhibitor, it must be so stated on the entry blank. Every hound entered must be registered in the N. F. H. Association stud book. The cost of such registration is fifty cents and the penalty for non registration is disqualification and the forfeiture of entry fee and prizes won. Any subscriber taking an entry in a stake and not prefixing the word "names" to a hound which is not his own property, shall forfeit that hound's chance of the stake. He shall also, if so requested, deliver in writing to the secretary, the name of the bona fide owner of the hound named by him.

Rule 5.—If any subscriber should enter a hound by a different name from that in which it last ran in public, without also adding the late name of the hound—said hound shall be disqualified. A castrated dog or bitch shall be barred; any such running shall forfeit any and all prizes won.

Rule 6.—Objections or protests to any hound must be made in writing to the committee, and accompanied by a deposit of $10, which shall be forfeited if the objection is not sustained by the committee. Should an objection be made which cannot at the time be substantiated or disproved, the hound may be allowed to run under the protest, the club retaining his winnings until the objection is either withdrawn or decided. Should he be disqualified, the others shall be placed the same as if he had not been in the stake.

Rule 7.—The committee or club may refuse any entry they may think proper to exclude; and no person who has misconducted himself in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for money due under an arrangement for division of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the club, shall be allowed to compete in any trials that may be held under the auspices of this club.

Rule 8.—No entry can be withdrawn without consent of the committee. Party so offending may be debarred at future trials or penalized at the discretion of the club.

Rule 9.—The president shall appoint a field trial committee of three from the members of the club, one of whom shall be an officer of the club and chairman of said committee. It shall be the duty of this committee to be present throughout the meeting and to have entire control and charge of same, and see to the proper enforcement of the rules and regulations; all objections, protests and disputes arising, to be submitted to and acted upon by them. An appeal to the club from their decision must be made in writing, accompanied by a deposit of $25, which will be forfeited if their decision is sustained by the club. The committee shall select the master of hounds and appoint the necessary field stewards. The committee shall order the hunts and have power to call off same after consultation with the judges.

Rule 10.—The owner, his handler or his deputy may hunt a hound, but it must be one or the other. When the owner has deputed another person to handle him he must not interfere in any manner, nor will he be allowed to ride to hounds.

Rule 11.—Riders to hounds shall be limited to the handlers with entries in that particular hunt, at the end of which they shall retire until their hounds again come into competition; the judge, the M. F. H., flag steward and members of the press, who obtain permission from the committee.

Rule 12.—The M. F. H. shall have charge of the hounds in the field. He shall give the handlers any information they need as to direction, to enable them to keep within reasonable distance of the hounds. He shall instruct handlers and outsiders not to converse with, or in hearing of the judges about the work done or merits or demerits of any of the competing hounds. It should be his duty to report any and all infringements of this rule to the committee. The offender shall be subject to a fine or expulsion from the grounds, at the discretion of the committee. He shall ride to the hounds and shall direct the handlers and assist the judges in every proper way possible. It shall be his duty to notify by conspicuously posting in camp the night before, the hour and place of starting on the following day. He shall also call the hunt off when officially notified to do so. He shall carefully examine all hounds entered, and if any are affected with contagious diseases, or any bitches in season, he shall promptly report same in writing to the committee, who shall officially notify owners or nominators, and bar same from the trials.

Rule 13.—The field stewards where practicable, should be sworn in as deputy sheriffs. They shall be held responsible for the proper conduct and behavior of spectators and participants, and shall see that spectators are kept at a proper distance from, and do not interfere with the hounds participating. They shall also see that there is no destruction of property. They shall report to the committee throughout the day for instructions.

Rule 14.—The flag steward shall, if possible, keep both hounds and spectators in view, and by a series of flag signals notify the field stewards of the general direction of the hounds. He shall also act as assistant to M. F. H. in directing and calling off the handlers.

Rule 15.—There shall not be less than three or more than five judges, who shall be elected by the officers of the club. They must not be interested directly or indirectly in any one of the hounds, and must be hunters of large fox hunting experience and capable of closely following the hounds. They shall be subject to the general rules of the club and report for duty each day to the committee. They shall have the fullest discretion consistent with the rules in determining the merits of the dogs. Should an appointed judge be unable to fulfill his engagement or become disabled, the committee shall have the power to fill the vacancy, or not, in such a manner as they see fit. Judges are requested to select a reserve award in case one of the winners should be disqualified, the prize may not fail of being awarded. The judges shall continue the running from day to day until a majority of them are satisfied. Their final decisions shall be rendered in writing to the committee. They cannot recall or reverse them on any pretext whatever after being so given. If any person openly impugns the decision or actions of a judge, on the grounds or in the camp, he may be fined, in the discretion of the committee, not more than $25 or less than $5.

No person shall attempt to influence a judge's decision either before, during or after a race. If the party so offending is a member he shall be expelled from the club; if otherwise, he shall be fined and sent from the meeting.

The handler hunting a dog may speak to and urge him on in a proper manner, but he shall be cautioned twice by the judges for making unnecessary noise or disorderly conduct, and if after such caution he continues to so offend, he may be ordered from the field. Should a handler ride over or purposely interfere with an opponent's hound, the owner of the hound so ridden over or interfered with shall have the privilege of saying which one of the offender's entries shall be barred, or shall have the option of selecting at the end of that particular hunt one of the offender's hounds, which will remain in the stake, and he shall be entitled to claim one-half of said hound's winnings, if any.

A hound that fails by action or note to work fairly on a trail, and runs "cunning" to get an advantage, shall be discounted in the discretion of the judges.

A hound left on "a jump" or thrown out "on a loss taken off," shall not be penalized if it works diligently to "get in," and succeeds in a reasonable time.

A hound "thrown out" and "coming in" and refusing to hunt or "go in" to others in full cry, shall be marked and barred. Should the pack become separated the judges must divide and carefully note the work of each pack, and immediately upon reassembling individually report work noted.

A hound lost during a run and not returning until the trials are partly or wholly finished, shall be given credit, provided the judges are satisfied that he has been running. Testimony of interested parties not to be taken on this point. Any person allowing a hound to get loose and join in the chase shall be fined not less than $5. If the loose hound belongs to an owner of one engaged in that particular chase, such owner shall forfeit one-half of his winnings, if any, unless he can prove to the satisfaction of the committee, that he had not been able to take up his hound after finishing his last chase.

No hound shall be eligible to compete in trials that has been hunted or kept within a radius of fifteen miles of the ground hunted, within three months preceding the trials.

When two or three hounds, similar in appearance, are drawn to hunt in same pack, if the judges so desire, they may have different colored collars placed upon each. The M. F. H. selecting collars for the purpose.

The entries in a stake shall be numbered and divided into packs containing not over eight each; said division shall be made by drawing lots under supervision of the judges. When possible, a kennel or owner should not have more than one hound in each pack. After the first round the judges will order such hounds as they elect to run in the following rounds. Judges have the privilege at any time during the trials, to order any hounds (except those that have been barred) "in" again, but if said hounds have not been hunted as often and as long as those with which they are to compete, they shall run a bye, sufficient in the minds of the judges to equalize their work with their competitors. The judges shall make their decision upon the uniform principle that the hound showing the most aptitude and ability to find, trail and catch a fox, is the winner. The principle is to be carried out by estimating the work done upon the following scale of points:

Points.—Hunting 20, trailing 20, speed 20, endurance 20, giving tongue 10, judgment and intelligence, 10—100.

ROGER D. WILLIAMS, Chairman Committee.

### National Beagle Club Field Trials Entries.

THE entries for the All-Aged Stake 13 to 15in., number 15, and for the class for 13in. and under, 4. The Derby has 5 entries—total 24.

CLASS A, ALL-AGED, DOGS AND BITCHES, 13 TO 15IN.

BUCKSHOT—George F. Reed's blue ticked dog (Dave—Daisy).

NELL R.—Geo. F. Reed's black, white and tan bitch (Ned—Haida).

BLANCHE—Miss E. C. Kreuder's black, white and tan bitch (Frank Forest—Ina).

GAY—Rockland Kennels' blue ticked bitch (Rover—Kitty).

LOUIE FITZ-LEE—H. A. P. Smith's black, white and tan dog (Fitzhugh Lee—Maid).

MOLLIE L.—Mark Lewis, Jr.'s white, black and tan bitch (Don—Mollie).

JOE—Guy D. Welton's black, white and tan dog (Billy—Katy).

DIME—Wm. Sayby's black, white and tan bitch (Judge—Baby).

HELEN—Somerset Kennels' black, white and tan bitch (Storm—Una).

MARVEL—Somerset Kennels' black, white and tan bitch (Bounce—Ferol).

ROYAL ROVER—G. A. Buckstaff's black, white and tan dog (Rover—Singer G.).

MILLARD—Hempstead Farm Kennels' black, white and tan dog (Burk—Little Fly).

GLORY—Hempstead Farm Kennels' black, white and tan dog (Storm—Una).

MUSIC—Hempstead Farm Kennels' black; white and tan bitch.

CRY BABY—J. B. Lozier's black, white and tan dog (Racer Jr.—Beastie).

CLASS B, FOR DOGS AND BITCHES, 13IN. AND UNDER.

LAICK'S ROY—George Laick's black, white and tan dog (Rover—Minnie L.).

RAGS—Rockland Kennels' black, white and tan dog (Little Wonder—Jessie).

LADDIE—N. A. Baldwin's black, white and tan dog (Royal Krueger—Midge).

LITTLE KIT—Daniel F. Summer's lemon and white bitch (Jack—Fanny).

CLASS C—DERBY FOR BEAGLES WHELPED ON OR AFTER JAN. 1, 1893.

LAICK'S ROY—Geo. Laick's black, white and tan dog (Rover—Minnie L.), March 9.

LUCY S.—Daniel F. Summers's black, white and tan bitch (Frank—Jip), Feb. 1.

CLOVER—Rockland Kennels' black, white and tan dog (Roy K.—Fanchette), June 25.

NELL R.—George F. Reed's black, white and tan bitch (Ned—Haida), Sept. 12.

DIAMOND—Cielfeld & Shallcross's black, white and tan dog (Frank Forest, Jr.—Diamond Krueger), May 7.

GEORGE LAICK, Secretary.

## Yachting.

A REPORT which bears every evidence of probability has come from London to the effect that an order for a new challenger has been definitely placed with Mr. Watson by the Dunraven syndicate, and that work will be commenced immediately. Equally important is the statement that the new cutter will be fully as large as Britannia, Vigilant and Valkyrie. The exact length of the design is left in doubt, but it is more than likely that, having gone so far as 87ft. already, Mr. Watson will now forestall the chance of being outbuilt by the defending vessel by taking the full limit of 90ft. l.w.l. The type of yacht which is likely to result is not pleasant to contemplate, as the length of the mainboom in the 87ft. boats is up to 100ft., with a sail area of 12,000, and any proportionate enlargement to 90ft. l.w.l. means a more costly and less useful boat, to say nothing of the serious detail of getting a boom that will stand.

THUS far there has been no indication of a formal challenge, but the challenger is under no necessity of sending one before the middle of December, should he choose to wait so long. Until a challenge does arrive, the holders of the Cup are in nominal but most profound ignorance of the fact that they have a big task before them in arranging building syndicates, the mere preliminary work which must precede the actual designing and construction of the defending yachts. It is highly probable that the design of the new challenger has been pretty fully matured by Mr. Watson long before this, and that details and specifications will be in the hands of the builders in a very short time. Following the usual course the challenger is likely to be well in frame or planked before a single contract for a defending yacht is signed, and then there will be a repetition of last year's work, three or four boats out in an incomplete condition by July, each sailing wonderfully fast by herself, and all showing a woeful lack of preparation when they meet for the first time, in August. That the defenders have been uniformly successful in the past is no excuse for wasting the first two or three months of the season in idle sailing, and depending on the August cruise and the three trial races for all working up and alteration.

THE head of the new syndicate, Lord Dunraven, is too well known here to require more than a mention. The second member, the Earl of Lonsdale, is also well known in this country, which he honored with a visit some half dozen years since as the manager of a burlesque troupe which scored a well-deserved failure. His career as a yachtsman is rather brief, the main incident being his ownership this season of Deirdré, Lord Dunraven's 20-rater of 1893.

The third member is Capt. Harry McCalmont, a gentleman better known from his connection with the turf than as a yachtsman though he has owned for some years the small steam yacht Giralda. This yacht he has just replaced by a very large and magnificent vessel bearing the same name, which will probably be seen in New York waters next summer.

### The Cruise of the Oriole.

WHEN the thermometer begins to climb into the nineties the nomadic instinct, inherent in every true lover of nature, rises with the temperature, and he feels an ardent desire to "take to the woods" or the water, there to worship at a shrine whose varied beauty never palls. Inspired by this community of interest, on a beautiful morning in August, a party of ten invited guests boarded the little steam yacht Oriole (owned and commanded by John W. Truesdell of Syracuse) for a week's cruise along the waterways of central New York. The start was made at 8 o'clock after receiving the adieux of numerous envious friends who had assembled on the banks of the placid Erie Canal to bid *bon voyage* to the pilgrims, whose Mecca was the far-famed Watkins Glen at the head of Senaca Lake.

A sail of half an hour brought us to the Gere's Lock, through which we passed into the Jordan level. The channel here, instead of being filled with the muddy, malodorous liquid to which we are accustomed, presents an entirely different aspect. "Clinton's Ditch" of ante-bellum days has vanished, and in its place is a clear, transparent stream, fed by the waters of the beautiful Otisco and Skaneateles lakes. The ugly stump fence and low, scrubby underbush which once lined its banks have given way to majestic trees, whose sweeping branches almost touch above our heads. After passing the Camillus feeder a scene of almost entrancing beauty met our astonished eyes, and it did not require a very vivid imagination to transform it into a vision of tropical splendor. The young sumacs looked like great palms; the unsightly objects of other days were draped and festooned with the vines of wild clematis and grape, which hung in graceful profusion over the water, and so clearly reflected in its depths that for miles we seemed to be passing through fields of living green.

Never did a more congenial company start out on pleasure bent. The scientist forgot his laboratory, the business man his office, the housewife her cans, and the "three little maids from school" their books and their beaux.

Soon, an inward monitor apprised us that the noon hour was approaching, and a huge steam cooker was brought out filled to the brim with the good things of earth. This cooker, closed securely, was attached to the boiler by a pipe, the super-heated steam turned on, and the dinner was soon cooking itself, while we were gliding rapidly along, looking for a pretty spot when we might disembark and spread our folding tables.

In an hour's time, dinner was announced, and eleven happy, hungry people sat down to a feast fit for the gods; when all were satisfied, the men lounged and smoked in blissful content, while the "mater" and her hand-maidens cleared away the loaves and fishes. Many hands made light work of washing and stowing away the dishes, and soon everything was tidied up and we were again under way.

At 4 o'clock in the afternoon, at Montezuma, we entered the branch canal, which connects the Erie with Cayuga and Seneca lakes. When we reached the first of the many locks, located on this canal, we were dismayed to learn that they were all closed and sealed at 6 o'clock P. M. The tenders, however, being afflicted with an "itching palm," crossing it with a piece of silver proved an open sesame, and after considerable delay we succeeded in passing the last of the portals guarded by these belligerent genii.

When we left Waterloo the shades of night were falling fast and we were still several miles from the harbor, which we hoped to enter before tying up for the night. The channel here was narrow and strange, the lighted lamps on the deck caused the overhanging branches of the trees to cast weird shadows upon the water, and a feeling akin to awe took possession of us as we peered out into the darkness and silently wondered if we were soon to make port or if we were destined, like the Wandering Jew, to go on and on forever. At 9 o'clock, however, the lights of Geneva gladdened our eyes, and pursuing our devious and winding way around the foot of Seneca Lake, we were soon safely landed and on our way to the Franklin House, where we stopped for lodging and breakfast.

At 10 o'clock the next morning, after the Captain had interviewed the oldest inhabitant as to the prospects of a blow, the cry of "All aboard" was heard and soon with colors flying, we were out on the broad bosom of Seneca Lake. Accustomed as we were to the bustling activity on our own little Onondaga Lake, it seemed very strange that during our long run of forty miles to the head of Seneca Lake we saw neither sailboat nor rowboat, no craft of any kind except the large steamboats which ply between Geneva and Watkins.

As we rounded Long Point, about half way up the lake, we experienced a little rough weather, but found a safe harbor on the other side.

While the dinner was again cooking itself we landed and soon spied out the nakedness of the land. A few years ago this place was a noted summer resort, but some blighting influence had done its work, and it is now deserted. Two immense hotels rise grand, gloomy and peculiar, their broad piazzas covered with what seemed to us to be the dust of ages. A peep through the barricaded windows revealed nothing but dirt and cobwebs, but we had not time to moralize upon the ephemeral existence of the average summer hotel, for the younger members of the party had donned their bathing suits and were already sporting in the water. Even the shrill whistle of the steam boat, conveying the welcome announcement of dinner, failed to entice them from their sport, and it was not until "our special artist on the spot" threatened to turn the camera upon them that the shivering girls ran quickly to cover. By the way, a small picture of two of them, taken on the wing, is among our most cherished possessions.

Dinner disposed of, the little boat swept and garnished, at 3 o'clock we were again under way, and twilight found us at Watkins, the objective point of our trip. While the men were busy preparing a safe anchorage for the boat, the women were on the dock, interviewing various people as to the best hotel in town. Allured by the euphonious suggestiveness of "Glen City Hotel," we settled on going there, and the result fully justified our decision, for, on being driven thither, we found a large and elegant colonial mansion, the only outward suggestion of its uses being a modest lettered arch over the gateway. This house, built by Gen. Watkins as a residence early in the present century, is set in the midst of spacious grounds, the façade completely covered by the beautiful wisteria, whose wealth of foliage entwines and encircles the huge columns of the piazza until nothing of their original beauty can be seen.

On entering the lofty hall we were received by mine host Buell, who from the first manifested an almost paternal interest in his happy guests.

An air of quiet elegance pervaded the place, and so hospitable was our reception that we felt like honored guests at an old English manor house, rather than the weary wayfarers who merely sought a comfortable place in which to eat and sleep, preparatory to exploring the famous Watkins Glen. Our rooms were cool and quiet, sweet and clean, and after refreshing slumber and a good breakfast, we started out to begin our tedious climb through this one of nature's most wonderful achievements. Far abler pens than ours have described its beauties, and we forbear to weary our readers with repetitions.

Surely, "the groves were God's first temples," and who of us could stand by the Cathedral Pool or upon the dizzy height under the beautiful rainbow fall without experiencing a feeling of reverence and awe, or fail to bow the head in silent worship of nature's God, who had "moved in such mysterious way, his wonders to perform."

After a steady climb and descent which covered about six miles, we returned to the hotel for dinner, after which we decided to drive a distance of three miles and explore Havanna Glen. This ravine is much shorter than Watkins, but well repays the enthusiastic visitor for the aching limbs and weary eyes incurred in traversing it. In some respects it differs greatly and many consider it vastly more beautiful; be that as it may, no one should visit the one without seeing the other.

Another's peaceful night's rest, another good breakfast and bidding good-by to our genial host, who with his able corps of assistants had done so much to render our stay pleasant, we sailed away toward Geneva. Again we stopped at Long Point for our dinner *al fresco*, but we did not tarry long, being anxious to reach Seneca Falls before dark. At just 6 o'clock we passed the last lock, our little craft was tied up and we proceeded to the Stanton House.

We made an early start the next morning, and at 10 o'clock were at Cayuga where we entered the lake and started for a cruise upon its waters. We steamed away past Union Springs and Aurora, and noon time found ourselves in a little sheltered bay on the east shore, where we anchored and made ready to dine. After an hour or two spent in this retreat we turned our boat and headed toward Union Springs where we proposed to spend the night.

The monotony of the trip was again varied with a little blow. The merry refrain, "We sail the ocean blue" was silenced, and some anxiety was depicted upon the faces of the "merry merry maidens," but with our careful captain at the helm of our sturdy little craft, we weathered the storm and reached Union Springs in safety. Here we learned that—as Paddy would say—the best hotel in town was the Sanitarium. The idea seemed queer to us but after receiving a warm welcome from Dr. Pierce and his wife, and spending the night at the "Hygeia," we decided that the experiment, though novel, was eminently successful.

Having but two days more to tarry before reaching home, we were bound to make the most of our time. So bright and early the next morning we started for Sheldrake, Kidder's Ferry, Ithaca, anywhere or everywhere our vagrant fancies might lead us; but, alas! for the best laid plans of men and women, before we had fairly reached the middle of the lake, which had looked so calm and peaceful when we started, the wind freshened and we were obliged to seek the first harbor which offered. It proved to be at East Varick, on the west shore. Here, to our surprise, we were welcomed by two young Syracusans, the Hosmer brothers, who are proprietors of the hotel at that beautiful point. We remained here several hours, and after enjoying a fine dinner, served by our friendly hosts, we re-embarked.

We reached Cayuga at 7 o'clock P. M., and proceeded to the Titus House, where we tarried but a night. The next morning the sky was overcast, a fine rain was falling, and we prepared for a wet journey home; but, happily for us, the Clerk of the Weather relented, and before 10 o'clock the mists had rolled away and Nature, with her cleanly washed face, was smiling again. As blessings brighten as they take their flight, so it seemed to us that our last day out was the happiest day of all the seven, enlivened as it was by jest and song, and after dinner a dance on the green. At 7 o'clock P. M. we reached Syracuse, and the now sedate men and matrons, with the "three little girls in blue," wended their way homeward, wearied but happy.

We often wonder, when recalling the pleasures of that journey into Arcadia, why so many people go so far afield in search of change and recreation, when within a few miles from home, at trifling expense, they can find such varied and beautiful scenery. We can conceive of no more restful spot in which the weary denizen of the city's mart might spend a month, the "world forgetting, by the world forgot," than at the Glen City Hotel; and soon, when nature shall have put on her robes of red and gold, of russet and brown, where could one view such a glorious panorama, painted by the Master's hand, as at Watkins Glen.

I. C. T.

### The October Gale.

Some three weeks ago a cyclone of more than usual violence was announced as likely to strike the vicinity of New York by a certain night, which prediction failed utterly, there being only a moderate breeze and a little rain. The storm however did much damage at sea and on the Florida coast. On Oct. 9 a similar prediction was made of a dangerous gale approaching from the southern coast, to arrive next day, but in spite of the lateness of the season the prediction passed unnoticed by yachtsmen. This time, however, the Signal Service was right, the gale not only held its force and direction all the way up the coast until it struck New York, but it proved to be especially violent. Serious damage was done ashore, a partly erected building was blown down, falling on a tenement house and killing nine persons and injuring thirteen more. In Englewood, N. J., a large chimney fell through the roof of a house and killed a young lady who was sleeping in her room. A large gas tank partly erected in Ravenswood, opposite New York, was blown down, and a great deal of damage was done to homes, chimneys and factories about New York, Long Island and Westchester county.

The small yacht fleet about New York suffered very serious damage, many yachts being totally destroyed. At New Rochelle Banshee, 40-footer, owned by H. C. Doscher, was stove in badly, dragging ashore; Amazon, Dr. Z. E. Lewis, and Edna, schr., C. H. Noxon, were totally wrecked, as were Goblin, slp., T. T. Richards; Margory, cutter, E. T. Birdsall, Amy and Vindex. Among the yachts sunk or badly damaged on the beach, were Francisco, Lethe, Imp, Triad, Gladys. The floats and houses of the New Rochelle Y. C. and the Corinthian Mosquito Fleet were also damaged. Mr. C. Oliver Iselin's fine residence on Premium Point had just been put in order for the reception of Mr. and Mrs. Iselin, who returned from England the previous day. The sea and wind worked havoc with the seawall and lawns and even flooded the cellars and first floor. Mr. Hunters house at Potter Beach was unroofed and nearly demolished.

A number of yachts was at anchor in Larchmont Harbor, including Viator, Magic, Audax, Pyxie, Rajah, the two 21-footers, "Blonde and Brunette" and Hoodoo. Viator and Magic both dragged their anchors and were only saved from going ashore by the steam yacht Emmeline, Mr. S. W. Roach, her captain, running a serious risk in towing them to more secure berths. The naphtha launch Florence, a cabin boat costing some $4,000 and owned by Mr. Marshall, was totally wrecked, and "Blonde and Brunette" and Hoodoo shared the same fate. Orienta, cat, was sunk, and Olga was driven on the beach, while other small boats were more or less damaged.

At Greenport the famous Dilemma went ashore and was totally wrecked, and a great many small yachts were sunk or wrecked at other points on Long Island. The storm was very severe on the Communipaw shore of New York Bay. The cabin cat Mary, owned by W. E. Ellsworth, parted her moorings and went ashore beside the railroad trestle at Bayonne, her starboard side being badly stove in. At Staten Island a number of yachts were driven ashore or on the railroad trestle, the yawl Whistler being sunk. The full extent of the damage has not been reported, but the losses mentioned above are only a part of it.

### The Cannes Regattas.

THE following is a later and more complete programme than the one we published a few weeks since of the races at Cannes next spring:

March 1.—Prix d'Honneur, Cannes, in eight classes; over 20-rating, not exceeding 20-rating, not exceeding 10-rating, not exceeding 5-rating, not exceeding 2 tons, not exceeding 1-rating; also for cruisers above 10 tons. Rating according to the rule of the Union des Yachts Français.

March 2.—Union des Yachts Français special prize for yachts exceeding 2-rating; first heat.

March 3.—Matches for all kinds of sailing boats, and illuminations, etc., in the evening.

March 4.—Match for the Ogden Goelet and James Gordon Bennett cups, of $1,100 and $800, the first for yachts exceeding 20-rating and the second for yachts not exceeding 20-rating. The Winslow cup for yachts not exceeding 6-rating; first heat.

March 5.—Review of steam yachts and banquet in the evening.

March 6.—Two hundred dollars, $80 and $20 for yachts not exceeding 5-rating; $120 for yachts not exceeding 3-rating. Special prize given by the Union des Yachts Français for yachts not exceeding 2-rating; second heat; $60, $30 and $15 for yachts not exceeding 1-rating.

March 7.—Four hundred dollars, $125 and $20, for yachts exceeding 20-rating; $400, $125 and $20, for yachts not exceeding 20-rating; $400, $125 and $20, for yachts not exceeding 10-rating. Winslow prize, 5-raters; second heat.

March 8.—Union des Yachts Français prize; deciding heat. Winslow prize, for 5-raters; deciding heat.

March 9.—Grand Prix de Monte Carlo, for yachts over 20-rating of l'Union des Yachts Français; first prize $2,000, second prize $1,000. Match for yachts not exceeding 20 rating; prize $1,000.

March 23.—Nice town prize for yachts over 20 tons; prizes, $1,000, $400 and $200. Yacht Club de France tonnage rule. Monte Carlo prizes for yachts not exceeding 20 tons, $400, $200 and $100. Nice Committee prizes for yachts not exceeding 5 tons; prizes, $100, $50 and $25.

March 24.—Yacht Club de France International cup ($300), to be raced for three times in different places. Union des Sociétés du Littoral prizes, for yachts not exceeding 5 tons.

March 25.—Yacht Club de France prizes, for French-owned yachts.

March 26.—Match from Nice to Monaco and back, for three prizes, for yachts over 10 tons.

March 27.—Match between the winners of two series.

### Miramichi Y. C.

CHATHAM, N. B., OCT. 11.

THE yachting season closed with a race in a rattling southwest breeze, with fierce gusts that buried lee rails and turned copper bottoms up to windward spectators in a way to make a yachtsman's best girl shut her eyes. The course was a zigzag one, five miles to windward and back, and the windward work was against the current. The race was sailed inside of two hours. The struggle between Learig and Oriana was very pretty; Oriana caught and passed the big fellow, but was passed again by her. The open yachts gave up the race. The record is as follows:

| | Length. | Start. | Finish. | Elapsed. | Corrected |
|---|---|---|---|---|---|
| Learig, A. S. Burr | 27.00 | 2 39 20 | 4 33 00 | 1 53 40 | 1 53 40 |
| Starling, B. R. Bouthiller | 25.00 | 2 40 18 | Did not finish. | | |
| Oriana, J. L. Stewart | 23.09 | 2 40 20 | 4 35 00 | 1 54 40 | 1 51 11 |
| Kilbride, John Sargeant | 22.09 | 2 41 30 | Did not finish. | | |
| Maude, J. C. Miller | 23.09 | 2 43 00 | 4 38 00 | 1 55 00 | 1 51 31 |

This was Oriana's third victory out of four races this season. Last year, her first season, she won only one out of four against the same opponents.

## YACHT NEWS NOTES.

Nada, steam yacht, C. R. Flint, has just been fitted with a new Almy boiler at the shops of the Almy Water Tube Boiler Co., Providence. The yacht was needed in a hurry for a duck shooting trip to the Chesapeake, and the old Mosher boiler was taken out and a new boiler made and set in its place in just four weeks. The company has an order for a battery of boilers of 1,200 horse power for a new steam yacht.

Isis, cutter, has been sold by J. McCormick to J. J. McCue, of the Brooklyn and Williamsburg yacht clubs.

The Jamaica Bay Y. C. has elected the following officers for 1895: Com., H. F. Hewlett; Vice-Com., Louis Bossert; Rear-Com., William Scheer; Treas., L. M. Pearsall; Fin. Sec'y., L. D. Burnham; Rec. Sec'y., Louis Pfing; Meas., J. Van Alen; Fleet Surgeon, Dr. J. Mayer; Board of Trustees, H. F. Hewlett, Louis Bossert, William Scheer, O. L. Schwencke, C. E. Pearsall, Philip Leibinger, J. C. Lefferts, Charles Engert and John Landmann.

Ruth, schooner, Henry Marquand, is out at Morgan's yard, New London, for a complete rebuilding, including a modern counter.

Valkyr, cutter, has been sold by Leroy Fales to H. L. Witherson, of New London.

Madge, cutter, now owned by George P. Golding, of Rochester, is now being broken up. She is the famous Watson boat sent out to New York by Mr. James Coats in 1881.

Capt. Charles Barr is now in the Presbyterian Hospital, New York, laid up from a fall from the bowsprit of Gloriana while the yacht was hauled out at Piepgrass's yard.

The reported sale of Satanita is positively contradicted by the recent English papers.

Columbia, steam yacht, of New York, with the owner, J. H. Ladew, and several guests on board, called at Chatham, Miramichi River, on Oct. 11, for water, and left for the goose shooting grounds at Shippegan and Miscou. She was greatly admired by the New Brunswickers. All the steamers in port saluted with their whistles, and she replied in the same way. Vice-Commodore Stewart offered the hospitalities of the Miramichi Y. C. to the party, but the yacht stayed only long enough to get water and see the town.

The Stevens Y. C., composed of students of Stevens Institute, Hoboken, have elected the following officers: Com., A. A Dal Molin; Vice-Com., B. C. Clark; Rear-Com., W. W. Ward; Sec'y, S. A. Hasbrouck; Treas., C. H. Hunt; Fleet Capt., F. E. Overton; Meas., F. R. Chambers, Jr. The dates for the club regattas in 1895 were fixed for June 6, July 18 and Sept. 5. The annual cruise to the eastward will start from the summer station at Greenwich, Conn., on Aug. 7, and the regatta for the Commodore's cup will be sailed off Newport during the cruise. The date will probably be Aug. 14 or 15. The annual dinner and dance will take place at the New York Jockey Club house, Morris Park, on June 4 next. C. Oliver Iselin has been elected an honorary member of the club. The following new boats have been enrolled: Steamer Vida, sloops Vesta, Carmen, Sistra and Marguerite, and schooner La Paloma. There are 137 members in the club and 46 yachts have been enrolled.

# Canoeing.

## Lake Huron and the Au Sable River.

(*Concluded from Page 323.*)

Sunday, Aug. 13.—In the forenoon we all turned out and enjoyed a long stroll over the sand hills. On ascending a hill of considerable elevation we had a splendid view over Lake Smith, Lake George and Lake Burwell; beyond the latter on an elevation stands the pretty little town of Thedford, away to the eastward the spires of the churches at Park Hill may be seen on a clear day. Lake Huron is also visible. While returning to camp we startled a couple of red foxes from their lair, and witnessed an exciting stampede as they scrambled up a steep hill and scampered away to a place of safety. Returning, we remained quietly in camp for the remainder of the day.

Aug. 14.—We were astir early. Breakfast over, we loaded up, and shoving off a paddle of a half mile brought us to the foot of the rapids, where, leaving the main stream, we entered the Lake Burwell drainage cuts, and following this for about a quarter of a mile, made a short carry and launched our canoes in the river above the rapids. The river at this place is about five rods wide and very deep, and a more promising place for bass would be hard to find. The east bank is very abrupt but along the west side a fringe of coarse grass, lily-pads and bulrushes extends for several miles.

Crossing the river, we trolled along this fringe of grass, back and forth, for an hour or two, but never had a nibble. The Quartermaster asked the Captain what he thought about it. "Fished out," was the laconic reply. We then moved up stream some distance, and tried once more, with about the same results. At last the Captain anchored his boat and commenced casting into a deep pool at the margin of the rushes, and almost immediately had a strike, but before he could recover slack the fish had wound his line around a "sawyer" log, and breaking loose took the leader with it. The Captain remarked that he didn't care for the leader, but he did hate to lose the fish.

While this tragedy was being enacted the Secretary had landed and gone along the shore to a mass of drift timber, over which he was seen to be carefully picking his way toward a large, half submerged stump, from which he intended to make a cast. Before reaching it, however, he discovered that it was already occupied by a large water snake, at sight of which the Secretary came to a dead halt and stood eyeing it keenly, with the apparent intention of mesmerizing it. Failing in this, he commenced a series of demonstrations calculated to intimidate his snakeship; he hissed, shooed and waved his arms in a circular manner, but it was no use, it would not intimidate worth a cent. At this juncture the Captain had the hardihood and brazen-faced audacity to suggest to the Secretary that he sprinkle some chloride of sodium on its tail. The Secretary utterly ignored this advice, and fetching the tip of his rod around with a swish, awoke the saturnine reptile into life and activity and impressed upon it the unhealthy condition of the neighborhood. It immediately fled, *sans ceremonie*.

On the Secretary returning to the company he exhibited a fine string of fish, the reward of his efforts in dislodging the snake.

Repairing to the shade of a large pine, we straightened ourselves out on the greensward to rest and to await the return of the Captain who had taken his gun and gone in search of specimens. We had laid for some time and had begun to wonder why the Captain did not return, when we heard the report of his gun, and in a short time he appeared in sight, bearing on a stick at arm's length an enormous water snake, which he exhibited with much pride to an admiring crowd.

We remained at this place till after dinner, and then entering our canoes paddled leisurely up stream, enjoying every foot of the way. The swamps had given way to higher and dryer ground, the timber became more dense, extending down to and overhanging the water, affording us an agreeable shade. The water, too, had become purer and more transparent, and many fine fish were seen darting away before our advance. We easily secured all we could make use of, and then feeling a yearning desire for a change we went ashore to straighten our limbs.

After a rest we again moved up stream, creeping under the overhanging trees for the shade they afforded us from the sun. Gliding silently along in this manner we, on rounding a bend in the river, came unexpectedly on a whole rookery of blue herons; the shore was lined with them; they were perched on every limb and bush that would support their weight. As we approached them they rose like a great blue cloud and floated away out of harm's way. A mile further on we pulled in on the north bank and camped in a fine grove of scrub oak, nicely secluded, and miles from a human habitation.

Tuesday, Aug. 15.—On shoving off this morning the Secretary ran into a narrow channel behind a small island, and following it for some distance found that it ended in a *cul de sac*, and was forced to turn back, which he did under a heavy fire of chaff from the others, which, however, did not seem to disturb the equanimity of the Secretary in the least. On his rejoining us we again moved on for about a mile, when, coming to a particularly fishy-looking stretch of water, we dropped our lines overboard, and almost immediately the most exciting sport that we had yet had commenced; each angler had special and urgent business of his own to attend to, and in less than a mile of river we secured all the pike, bass and bream that we could possibly make use of, and ceased to take them before it became slaughter.

We pushed on rapidly for a few miles, starting up a good many wood duck, some woodcock, jacksnipe and wild pigeons, as well as a host of shore birds. There are no streams entering the river between Grand Bend and its mouth, the supply being wholly kept up by innumerable springs issuing from its banks. Along this portion of the river the water is very pure and clear, though the river is quite shallow and the bottom visible everywhere, from which grow the most beautiful and curious aquatic plants and grasses. The country, too, had become more level and the trees taller, their broad tops frequently festooned with the wild grape and other vines.

The Secretary, who had been induced to make the cruise in the hope that it might benefit his health, now began to show unmistakable signs of improvement. He called a halt, and demanded that we go ashore and prepare dinner, declaring that he was starving. We had been there before ourselves and, knowing the urgency of the case, we hastily prepared dinner and when it was ready invited the Secretary to begin, which he was not slow to do, and shortly remarked that "these fish are amazingly good," the potatoes, boiled in their pelts, "delicious" and the tea the best he had ever tasted, though "powerful strong;" he had regained his appetite at last, a thing he had been a stranger to for years.

Having appeased the Secretary's hunger, we again resumed our journey, the first few miles of which was very interesting from a piscatorial point of view, but after this we found the water shoaling rapidly. This continued for about a mile, when our further progress was completely barred by the shallowness of the stream. Between us and Grand Bend lay a stretch of a couple of miles of a succession of deep pools connected by short stretches of very shallow water.

The Captain and Secretary went ahead to investigate, and after they had gone over about half of the distance the Captain returned and reported it bad enough but declared his intentions of going through or know the reason why. No further discussion was necessary, all unnecessary clothing including boots and stockings were stacked in the cock-pits and rolling up our trousers, we started up the stream in single file, towing the canoes through the shallows and into deep water, when we again resumed our paddles until the next shallow was reached, when the old process was repeated. At about a half mile we came to a dam that we could not tow over by any manner of means; we, however, found a small break in the dam through which we effected a passage by tilting the canoes and hauling them through edgewise, then a stretch of deep water brought us to a point where a carry was unavoidable. We overcame the difficulty quickly though somewhat laboriously by passing a tent pole under the bows of the canoes and by two carrying on this, and a third at the stern, we soon had them over without having to unpack.

The Secretary now returned, having gone over the whole distance—and reported, "Lots of trouble ahead, boys," stating that there was a clean carry of sixty rods between the last pool and the new drainage cut at Grand Bend. "Well," remarked the Captain, "it don't make any difference whether it is sixty rods or two miles, we are going through, just the same."

We moved on again, and after about a dozen carries had been made, we reached the last pool, where we pitched our tents on a lovely green spot on the north bank and within a few rods of a fine spring of water. It was certainly a fine camping place, but we did not realize this until a tremendous supper had been disposed of, and our minds were in a mood susceptible of receiving impressions.

In the evening we inspected the great drainage cut, an excavation of about 30ft. in depth and 300ft. in width, where it passes through the sand hills. How far they proposed to extend it we failed to ascertain. The portion completed to where the great steam shovel was at work scooping out the tenacious blue clay would be about half a mile. Having satisfied our curiosity, we returned to camp, and being very tired after the labor of the carries, we turned in and were soon fast asleep.

Wednesday, Aug. 16.—Long before many of the campers were astir this morning, we had breakfasted, made the famous sixty rods carry, clawed over a dam in the cut, and running down, dragged over a bar at the mouth of the cut, and were afloat on the placid waters of Lake Huron. Heading our canoes to the westward we sped away on our return journey. We had made about six miles along this dreary shore, when, the sky becoming overcast with very rainy looking clouds, we pulled ashore and went in search of a place to camp. Failing in this, we were returning to the beach, when the Treasurer discovered a large adder lying sunning himself on the sand. As some of the party had never seen this species of snake or its performances before a cordon was formed around it and it was put through its exercises by a few gentle prods of a stick. Immediately on being touched it flattened its head, neck and body and remained in that condition until the Captain, who interpreted its action as a sort of a bluff game, landed a vicious blow at it with a club that forever ended its usefulness.

Continuing our journey in a light drizzle of rain along this dismal coast, where there is not a human habitation for about twelve miles, and where there is not a single pleasing feature to relieve the dull monotony of its coast line, was not pleasant and we were glad when at last we sighted the mouth of the Au Sable. As it had ceased to rain by this time we ran into the mouth of the river and landed to stretch our limbs. As the weather still continued to improve we pushed off again, and after a vigorous paddle of seven miles, we landed about 2 P. M. at our old camp under the white birches, having made twenty miles since morning. Though thoroughly tired, a good dinner soon put us in the best of good humor, and we set to work at once to get up the tents, after which we built a high wind-break of green boughs on their exposed sides, which proved a great comfort during the night and the day following.

Thursday, Aug. 17.—We were stormbound all day, but succeeded in putting in the time pleasantly enough in gathering and feasting on luscious thimble berries and sand cherries, both of which were to be found in the greatest abundance at this camp.

Friday, Aug. 18.—On turning out this morning we were pleased to see the lake quite calm, and as speedily as possible breakfast was disposed of, the boats packed, and we were off. Rounding Kettle Point, we steered for the slate cliffs and went ashore. We found the faces of these ledges of slate covered with the names of people who had visited them carved in the soft rock, some of them quite old. The Kettles, from which the point derives its name, are quite abundant, and may be seen from a boat in calm weather. They are imbedded in the slate rock, are spherical in form, and vary from 16in. to 4ft. in diameter. They are of a concrete nature and are principally composed of carbonate of lime. There are also some very interesting fossils, the most abundant of which is the little amber-colored, microscopic spore carps, which may be seen with the aid of an ordinary glass.

We were in the midst of a very animated discussion on the probable species of ancient seaweed these fossils belonged, when the Commodore, who had been closely observing the weather, settled the matter in short order by remarking that "if you all want to get hung up on this shore all night, just stay right where you are." We did not stay for a minute, but shoved off immediately. For the first two miles we had to pick our way through among savage-looking reefs, at times having to get out and drag the canoes over them. But at last, when opposite Jeff's resort, we got clear of them; and, a fine breeze springing up, we hoisted sail and were soon bowling along at a pleasant pace.

We had not progressed more than a couple of miles when the atmosphere began to assume a decidedly dirty appearance. The sky became overcast and away to the eastward a heavy mass of dark, portentous clouds were steadily moving in our direction. As we came abreast of Lake Valley Grove the wind changed to N. E. and having a sweep of several miles soon kicked up a dirty sea. The Treasurer here got foul of a big boulder and had a lively scramble for a little while, but got the Yukon off at last without injury. A mile further on we got a breeze that knocked us down pretty badly, and at Cedar Point we had to come on the wind and had a mighty close shave to clear a reef projecting out from the Point; we then stood in to a small bay in the hope that we might find a safe harbor, but the sight of the waves pounding on the boulder-lined shore with such terrific force deterred us from making the attempt.

We had now no choice left us but to make the run to Hillsboro Creek and with the waves boiling, hissing and seething around us, and the wind howling and shrieking in the rigging, it took all the nerve we could muster to face the music, but we headed out of the little bay and were soon battling with the waves that were constantly breaking over our starboard quarter. At times we were forced to turn tail until an ugly comber had passed and then to claw off from the ugly shore, but as our little cockleshells were behaving beautifully, and as we were nearing our destination rapidly, we began to feel a little more at ease, and shortly came in sight of a green patch of verdure that we recognized as the goal of our hopes. In half an hour we were abreast of it and earnestly searching for a smooth piece of beach and a soft place to land. The Commodore headed the Ojeek straight in for the beach, and as she glided on gracefully, rising on the white crested waves and then disappearing in the trough of the sea, to reappear again, she looked a thing of beauty, and justly the pride of her owner.

The Commodore had laid his plans to ride in on the crest of a comber, but, alas, for human calculations, it was not to be. When within a rod of the beach the Ojeek was carried back by the undertow, and then, a great comber rising up behind her like a wall, curved over and enveloped the whole outfit. The next that was seen of the Commodore was the peaked top of that old slouch hat of pre-historic and toadstool pattern, as it came up out of the surf, shedding water like a thatched roof, then his shoulders appeared above water, next his body, and finally the little Ojeek. In a moment the Commodore was out of her, and grabbing her by the stem took her up the beach on the run.

The Captain followed next, the Gallinipper gliding in beautifully, he seemed to have a sure thing of it, and to be sure of landing safely, but it, too, was not to be; he had to bow to the inevitable. As the Gallinipper came up the second time the Commodore caught her and beached her safely. In the meantime the Secretary and Treasurer had landed about forty rods up the beach, and on the Captain and Commodore rejoining them found the beach strewn with their goods and chattels, while a varied and miscellaneous assortment of spars, paddles, boots and sundry articles of wearing apparel were floating about promiscuously on the water. In explanation of this strange phenomena the Treasurer said that his boat had been imbibing water in large doses through a rent in the cover for some time, and finally, a large comber breaking over her, had burst the cover in and she filled and swamped. He then jumped out, and from this time till his feet touched bottom in shallow water so many events crowded one on another that what actually did occur is shrouded in mystery.

The Secretary on seeing the danger in which the Treasurer was placed, went to his assistance, but, getting into the breakers, was piled up on the beach among a nest of ugly boulders, but came out of the scrape in good shape, having suffered nothing worse than getting his feet wet. He then went to the assistance of the Treasurer, and in a few minutes they had ripped the cover off the Yukon, jettisoned the cargo, and, slushing the water out of her, beached her, not much the worse for the rough usage to which she had been subjected. The Treasurer was thoroughly soaked, but was cheerful and game to the finish.

We then carried everything up to an unoccupied fish shanty, where we found a large stove in good working order. We soon had a fire going, and hanging up our wet clothing to dry we then prepared our dinner, which was devoured with keenest relish, it being long after the dinner hour. After this we felt wonderfully refreshed, were exceedingly comfortable and disposed to talk and be social. We could now look back on the events of the past few hours with a calm indifference and regard them as simple incidents, scarcely worthy of notice, especially as the danger was past.

After a slight shower of rain that was falling had passed, we set up the tents, and then spent the afternoon in rambling on the beach and in the fine timber. In the evening we devoted our energies for a spell to the polishing up of knives, forks, spoons, etc., with sand, as a little surprise to the folks at home, who are apt to judge of the cleanliness and tidiness of our camp life by the condition of these articles on their arrival at home.

Aug. 19.—We reached home late in the evening, thus ending one of the most delightful cruises of our experience.

Blue Beach.

## An English View of American Canoes.

The feature of the year's canoe racing has been the presence with us of Mr. Howard's canoe Yankee.

Although that type of craft may do well for the racing which is indulged in on the other side of the "herring pond," it is pretty evident that she is not a model that is likely to take the affections of English canoeists by storm.

Her success at Salcombe has been by no means phenomenal, in spite of her victory in the match she sailed against Mr. Brand's ⅛-rater Spruce. In that race, she appears to have had the best of the luck at the start, and in any case, such competitions, between craft of totally different type, prove nothing except that either boat is likely to win in her own weather.

Her racing up at Bourne proved that, for our courses, her extreme slowness in stays far more than offsets any advantage in actual speed reaching which her very small—and crank—midship section and displacement give her.

A well known authority on sailing has stated, and with that statement we quite agree, that the greatest pleasure in sailing a small craft is found in going to windward in smooth water. But one's pleasure in that form of sailing in this country, where *smooth* water is generally also narrow water, is very much marred if there is always present the haunting dread that the boat may miss stays, or at any rate is certain to be hanging about head to wind for quite an unconscionable length of time. It is quite possible that there may be some advantages from the point of view of the ardent anti-tobacco crank about a boat in which, as has been said about the Yankee, one cannot even stow a tobacco pouch, but, say we, perish the thought of cruising in such a ship. But there, of course she was never intended for any such purpose.

If it be true that the Racer of to-day is the Cruiser of to-morrow, and it used to be so at one time with canoes, then we must admit we shall be sorry for the would be cruiser who becomes the possessor of a boat of the type of the Yankee. For the sake of an extra bit of speed almost every quality which makes a boat worth owning is sacrificed. But, inasmuch as she does not exhibit that marvelous speed for which so much has been given up, it is possible that she will answer the only purpose for which she is apparently fit, viz., a beacon to warn what to avoid.

Some years ago we had a look at two of the three canoes which made the passage down the Danube from its head waters to the Black Sea.

They were useful looking craft of about 15 ft.×30in. with plenty of stowage capacity and full but easy lines, and in every way, apparently, well suited to the work one had a right to demand of them. It seems to us rather a matter for thankfulness that the conditions for canoe racing seem to allow a reasonable chance of success to just such a craft as can, at small expense, be converted into a cruiser which could do similar work to that done by those boats, and do it equally well.

However, we have not yet seen what effect the rating rule will have upon canoe design. It was adopted a year ago when canoeing was at such a low ebb that many of her most prominent votaries were actually graduating into larger craft. It is an easy descent from the deck seat of the canoe to the comparatively comfortable well of the yawl, or to the deck of something larger still; but the return step, except in the case of a few enthusiasts, is but seldom taken. So that at present there is a waiting attitude on the part of those who take an interest in the sport, for some of that young blood which is required to make things go.

Canoes will continue to be used for that cruising work to which they are best suited, but the racing canoe seems likely to have a hard struggle for existence unless ¼-raters become popular, and will admit the decked double ender to their ranks. The improvements that have been made of late years in ½-raters render it extremely difficult, if not impossibe for canoes of but little more than half that rating to compete successfully without time allowance; and that class racing without time allowance is desirable wherever possible will not, we think, be denied by many. At at rate it adds immensely to the interest of a race in the eyes of the onlookers when the "first in wins," and it must not be forgotten that it is from the ranks of those onlookers that the entry list, as a rule, is recruited.—*Model Yachtsman and Canoeist.*

# Rifle Range and Gallery.

## Iroquois Rifle Club.

Pittsburgh, Pa., Oct. 13.—The opening day of the seventh annual tournament of the Iroquois Rifle Club, which commenced Tuesday, Oct. 9, was a decided success. According to the programme, the first day of the tourney was a rifle shooting contest for members only at their indoor gallery range, 1717 Jane street, Southside. The conditions of the shoot were 50 shots, off-hand, on the Massachusetts decimal target, 25yds. range, the winner to receive a gold medal.

The contest was very close and exciting throughout, and some really fine scores were made, particularly Mr. Andrew Goldstrom's score of 555 out of a possible 600, defeating the former champion, Mr. Albert Hofmeister, by one point. The Iroquois boys have certainly not been idle the past year, which the figures below will prove, the general average being far above last year's contest.

The totals made were as follows: A. O. Goldstrom 555, Albert Hofmeister 554, August Colteryaher 540, W. Langhorst 540, L. G. Graul 539, W. J. Udick 536, August Hofmeister 531, Harry Sperling 528, F. G. Broadhead 524, L. W. Born 515, B. Kestner 507, J. Wood 506, W. Miller 490, G. Snider 497, Joseph P. Zoeller 494, Fred Miller 483, G. F. Pifer 480, J. W. Kemler 455, Ph. Weber 445, Charles Scheller 382.

The second day of the tournament was devoted to gun shooting. Fifty bluerock targets in five events of 10 singles each, known traps and known angles, A. S. A. rules, the winner to receive a handsome gold medal. The shoot was decidedly interesting and hotly contested throughout, especially between Mr August Colteryahn and Mr. Henry L. Born, each breaking 41 birds. They then shot at 10 singles to decide the tie and each broke 8. They again shot off the tie at 10 birds, Born breaking 8 and Colteryahn 7, whereby Mr. Henry L. Born won the gold medal. The weather was very unfavorable for trap shooting, the wind blowing across the traps at an awful rate of speed, which accounts for the poor scores being made. The scores in detail follow:

| | 1 | 2 | 3 | 4 | 5 | | | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| H L Born | 8 | 9 | 9 | 8 | 7 | —41 | W J Udick | 5 | 8 | 5 | 6 | 7 | —31 |
| A Colteryahn | 7 | 9 | 7 | 10 | 8 | —41 | P L Weber | 5 | 6 | 5 | 7 | 6 | —29 |
| A O Goldstrom | 7 | 9 | 6 | 9 | 8 | —39 | L G Gaul | 6 | 4 | 7 | 5 | 5 | —27 |
| I Wood | 6 | 5 | 6 | 8 | 10 | —35 | J P Zoeller | 4 | 6 | 5 | 5 | 6 | —26 |
| A Hofmeister | 5 | 7 | 7 | 6 | 8 | —33 | | | | | | | |

The third and last day of the tournament, all comers' day, was a decided success in every respect. A 100-yard rifle match was the attraction, and from 1:20 to 5:30 o'clock the merry crack of the rifle was kept up incessantly. The event was a ticket match, entrance $1 for first ticket and 50 cents for all succeeding ones; re-entries unlimited, 3 shots to a target; the best 3 tickets to count for first 2 prizes and the best 2 for the remaining prizes. Twenty shooters took part in the contest. Delegations from the Washington (Pa.) Rifle Club, Braddock Rifle Club, Monongahela City Rifle Club, Pittsburg Rifle Club and others were in attendance. The shooting in general was very good, especially Mr. J. W. Rothwell's, who took first money, making a total score of 83 out of a possible 90. Following are the results:

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| J W Rothwell | 28 | 28 | 27 | —84 | Geo C Hodgon | 26 | 25 | ..—51 |
| J A Huggins | 26 | 25 | 27 | —78 | A Green | 26 | 25 | ..—51 |
| L P Ittel | 28 | 25 | .. | —53 | D W Frazee | 26 | 24 | ..—50 |
| W C Galbreath | 26 | 26 | .. | —52 | J F Nicholson | 22 | 25 | ..—47 |

Mr. J. W. Rothwell took the special premium of $2 for making the most number of tens. Messrs. Ittel and Rothwell divided the premium of $2, for making the best single score of 28. Mr. T. H. Reiners captured the premium of $2 for making the highest single score of those not receiving any prizes, making 23 out of a possible 30.

At the indoor gallery rifle shoot in the evening there was a large attendance. There were 10 sweepstake events, with 15 entries each. The rapid-firing contests were a novelty, and created considerable interest. The tournament was the most successful one held by the club.

## Hartford Rifle Club.

Hartford, Conn., Oct. 13.—I inclose you scores of the Hartford Rifle Club made at their annual prize shoot held this afternoon. Stormy weather kept the attendance small, and at times made it nearly impossible to shoot, it raining in torrents. German ring target, 200yds., off-hand. The prize match was five shots to match the score of 17, 21, 14, 23, 19 shot for shot, thus a 21 for the first shot would count 4 off, as would also a 13, therefore the lowest scores win.

Prize match:

| | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| D S Seymour | 2 | 1 | 5 | 5 | 2 | —15 | H M Pope | 5 | 8 | 8 | 1 | 1—23 |
| H A Fox | 2 | 6 | 10 | 0 | 0 | —18 | F A Seaver | 6 | 5 | 9 | 4 | 0—24 |
| W J Dunbar | 2 | 1 | 4 | 9 | 2 | —18 | J C Wiseman | 9 | 15 | 7 | 8 | 7—46 |
| J Edwards | 5 | 3 | 4 | 5 | 2 | —19 | E F Oakley | 5 | 14 | 7 | 18 | 4—48 |

Bullseye target:

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Pope | 25 | 23 | 22 | 21 | 25 | 23 | 15 | 23 | 21 | 24 | —222 |
| | 18 | 21 | 23 | 21 | 23 | 19 | 24 | 22 | 24 | 19 | —215 |
| | 21 | 23 | 22 | 22 | 23 | 21 | 21 | 23 | 20 | 18 | —21 |
| | 25 | 14 | 16 | 25 | 20 | 24 | 16 | 23 | 22 | 24 | —21 |
| | 23 | 22 | 20 | 23 | 23 | 25 | 24 | 24 | 21 | 23 | —22 |
| Fox | 23 | 22 | 15 | 18 | 18 | 15 | 23 | 23 | 12 | 23 | —18 |
| | 24 | 17 | 20 | 21 | 21 | 21 | 18 | 20 | 23 | 23 | —20 |
| Dunbar | 25 | 19 | 22 | 15 | 23 | 21 | 16 | 21 | 22 | 16 | —20 |
| | 23 | 21 | 18 | 21 | 20 | 14 | 19 | 16 | 22 | 19 | —19 |
| | 18 | 22 | 13 | 18 | 18 | 22 | 17 | 15 | 23 | 16 | —19 |
| Edwards | 22 | 23 | 23 | 18 | 11 | 18 | 25 | 21 | 18 | 17 | —19 |
| Seymour | 21 | 17 | 18 | 16 | 21 | 21 | 19 | 22 | 16 | 23 | —19 |
| | 22 | 20 | 22 | 20 | 11 | 15 | 19 | 17 | 22 | 18 | —18 |
| Seaver | 21 | 22 | 23 | 15 | 11 | 12 | 23 | 17 | 10 | 10 | —16 |
| Wiseman | 5 | 21 | 15 | 12 | 14 | 21 | 17 | 7 | 13 | 17 | —15 |
| Oakley | 19 | 0 | 11 | 10 | 13 | 21 | 20 | 14 | 16 | 10 | —134 |

The first bullseye was made by Pope, the last by Seymour; best bullseye by Pope, .31in.; second, Seymour, .46in.; third, Dunbar, .48in.

H. M. Pope, Sec'y.

## Revolver Shooting in England.

The last shoot of the season of the South London Rifle Club took place on Sept. 25; it was a very dull day and a drizzling rain, but no wind. Mr. Winans beat the English 12-shot revolver record at 20yds. by scoring 81 points, the 18 shot by scoring 120 points, and the 24 shot by scoring 156 points. Below are details of the shooting:

| | 20yds. | | | | | | 50yds. | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Walter Winans | 7 | 7 | 7 | 7 | 6 | 7—41 | 7 | 7 | 7 | 5 | 6 | 7—39 |
| F Rand | 7 | 5 | 7 | 7 | 7 | 7—40 | 6 | 5 | 7 | 6 | 6 | 7—37 |
| C F Lowe | 5 | 7 | 5 | 7 | 6 | 7—37 | 5 | 6 | 7 | 6 | 4 | 7—34 |
| Lieut J Howard | 3 | 7 | 7 | 6 | 7 | 7—37 | . | . | . | . | . | . |
| Dr Howe | 4 | 6 | 7 | 6 | 6 | 7—36 | 6 | 4 | 5 | 7 | 5 | 7—34 |
| Clementi Smith | 7 | 7 | 4 | 5 | 7 | 5—35 | 6 | 4 | 6 | 6 | 6 | 6—34 |

The revolver championship of the club has been won for the 7th year by Mr. Winans, one year he did not shoot and one year he was second, since revolver shooting was started at the club.

All the members used black powder except Mr. Lowe who shot some of his scores with a smokeless powder and small charge.

Champion for 1894, Walter Winans (gold jewel). Revolver used, Smith & Wesson .45cal., U. M. C. ammunition. Score: 41, 41, 41, 40, 40, at 20yds.; 40 40, 39, at 50yds. Total 322 out of a possible 336, none of the shots out of the 6 ring.

Second (silver jewel), Capt. Heath, Colt revolver, .45cal., Eley's ammunition. Score: 41, 40, 40, 40, 40, at 20yds.; 39, 38, 38, at 50yds. Total 316.

Third (bronze jewel), F. Rand, Colt revolver, .45cal., Eley's ammunition. Total 314.

Fourth ($5), Dr. Howe. Score: 40, 38, 38, 38, 37, at 20yds.; 38, 35, 35, at 50yds. Total 299.

Fifth ($5), Pvt. C. F. Lowe. Total 294

Sixth ($5), Lieut. J. Howard. Total 287.

Seventh ($5), Clementi Smith. Total 287.

Eighth ($5), Kemp. Total 170.

At the North London Rifle Club on Sept. 26, there was a nasty puffy wind, but in spite of this Mr. Winans put on another highest possible score at 20yds. toward the championship. Below are details of the 20yds. scores:

| | | | |
|---|---|---|---|
| Walter Winans | 777777—42 | Capt Jones | 777444—37 |
| Andrews | 766777—40 | Major Palmer | 347575—31 |
| F Rand | 667766—38 | Knapp | 654564—30 |
| Carter | 577766—38 | Barrington | 473755—30 |
| C F Lowe | 667657—37 | Luff | 377445—30 |
| Clementi-Smith | 477577—37 | Lieut Baxter | 766425—30 |
| Brading | 775656—36 | Capt Evans | 472644—27 |
| Denyer | 666647—35 | Dr Orton | 456722—26 |
| Major Munday | 566764—34 | Capt Peters | 643543—24 |
| Dr Howe | 574567—34 | | |

The leading scores for the revolver championship of the North London Rifle Club now stand:

| | | 20yds. | | | | 50yds. | | | |
|---|---|---|---|---|---|---|---|---|---|
| Walter Winans | 42 | 42 | 41 | 41 | 40 | 40 | 30 | 29 | 305 |
| Rand | 42 | 41 | 40 | 40 | 39 | 39 | 28 | 27 | 296 |
| Andrews | 42 | 40 | 40 | 39 | 39 | 38 | 29 | 29 | 296 |
| C F Lowe | 40 | 40 | 40 | 39 | 39 | 39 | 27 | 27 | 290 |
| Skilton | 40 | 39 | 39 | 39 | 39 | 38 | 27 | 27 | 238 |
| Major Munday | 39 | 39 | 39 | 38 | 37 | 36 | 28 | 27 | 283 |
| Capt Cowan | 38 | 38 | 38 | 38 | 38 | 37 | 27 | 26 | 280 |
| Carter | 38 | 38 | 37 | 36 | 36 | 36 | 24 | 24 | 279 |
| Capt Richardson | 38 | 36 | 36 | 36 | 35 | 34 | 27 | 25 | 267 |
| Clementi-Smith | 35 | 34 | 34 | 34 | 34 | 31 | 29 | 28 | 262 |
| Dr Howe | 38 | 35 | 34 | 34 | 33 | 33 | 23 | .. | 260 |
| Ashby | 36 | 35 | 34 | 33 | 32 | 32 | 28 | 25 | 255 |
| Capt Jones | 33 | 32 | 32 | 32 | 30 | 29 | 22 | 19 | 229 |
| Luff | 34 | 33 | 31 | 31 | 31 | 30 | 26 | .. | 216 |

The revolver competitions at 50yds. finished for the season at the North London Rifle Club on Oct. 3, there was too much wind for high scoring; below are details. The scoring at this club differs from that at the South London Rifle Club, as the bull is 6 instead of 4in. at 20yds. and only counts 5 instead of 7 points. Scores at 50yds.:

| | | | |
|---|---|---|---|
| Walter Winans | 455555—29 | Carter | 454534—25 |
| Major Palmer | 445455—27 | Skilton | 443445—24 |
| Rand | 454455—27 | Capt Jones | 335444—23 |
| Major Mundy | 455445—27 | Barrington | 453955—22 |
| C F Lowe | 535545—26 | Capt Richardson | 540554—22 |
| Capt Evans | 452555—26 | Denyar | 504345—21 |
| Clementi-Smith | 453453—26 | | |

The two highest scores made during the season at 50yds. and which count for the revolver championship of the club are as below: Walter Winans 59 out of possible 60, F. Andrews 58

There are four more weeks of shooting at 20yds. The scores for the championship of the club at both 20 and 50yds. now stand:

| | | 20yds. | | | | 50yds. | | | |
|---|---|---|---|---|---|---|---|---|---|
| Walter Winans | 42 | 42 | 41 | 41 | 40 | 40 | 30 | 29 | 305 |
| F Rand | 42 | 41 | 41 | 40 | 39 | 39 | 28 | 27 | 296 |
| F Andrews | 42 | 40 | 40 | 39 | 39 | 33 | 29 | 29 | 296 |
| C F Lowe | 40 | 40 | 40 | 39 | 39 | 39 | 27 | 27 | 290 |
| Skilton | 40 | 39 | 39 | 39 | 39 | 38 | 27 | 27 | 288 |
| Major Mundy | 39 | 39 | 39 | 38 | 37 | 36 | 28 | 27 | 283 |
| Capt Cowan | 38 | 38 | 38 | 38 | 38 | 37 | 27 | 26 | 280 |
| Carter | 38 | 38 | 37 | 36 | 37 | 46 | 25 | 24 | 280 |

## Central New York Schuetzen.

New York, Oc. 13.—The New York Central Schuetzen Corps, Capt. D. Meersse, held their last monthly outdoor shoot on Oct. 11 at Union Hill Schuetzen Park; about 30 members were present:

Champion Class.

| | | | | | |
|---|---|---|---|---|---|
| G Zimmerman | 70 | 66—139 | F Schmidt | 65 | 64—129 |
| F Schroder | 65 | 65—130 | J Reitweissner | 47 | 44— 91 |
| H D Muller | 65 | 64—129 | D Meersse | 46 | 44— 90 |

Class I

| | | | | | |
|---|---|---|---|---|---|
| C Pletz | 60 | 59—119 | J Eisenhardt | 57 | 56—113 |

Class II.

| | | | | | |
|---|---|---|---|---|---|
| E Berkman | 64 | 63—127 | F Baumann | 58 | 58—116 |
| M Teschmaker | 62 | 56—118 | W Teschmaker | 61 | 54—115 |
| J Jorden | 64 | 54—118 | J Fagen | 56 | 55—111 |

Class III.

| | | | | | |
|---|---|---|---|---|---|
| W Holsten | 63 | 59—122 | J Forsch | 61 | 48—109 |
| M Ficken | 63 | 56—119 | J Loewe | 47 | 46— 93 |

Class IV.

| | | | | | |
|---|---|---|---|---|---|
| F Jutgens | | | | 53 | 45— 98 |

Bullseye target: Champion Class.

| | | | | | |
|---|---|---|---|---|---|
| F Schroeder | 3 | F Schmidt | 1 | G Zimmerman | 1 |
| H D Muller | 3 | J Reitweissner | 1 | | |

Class III.

| | | | | | |
|---|---|---|---|---|---|
| M Ficken | 1 | J Loewe | 1 | J Sbhneweiss | 1 |

Point target: Champion Class.

| | | | |
|---|---|---|---|
| G Zimmermann | 156 | J Reitweissner | 25 |

Class I. Class II.

| | | | |
|---|---|---|---|
| A Rohde | 21 | E Berkmen | 32 |

Man target: H. D. Muller 57, F. Schmidt 57, J. Eisenhardt 56, E. Berkmann 56, G. Zimmerman 56, M. Ficken 56, F. Jutgen 55.

Winners of class medals: Champion class, F. Schroder; Class III., M. Ficken.

Man target medals: First medal, H. D. Muller; second, F. Schmidt.

Henry D. Muller.

## A Central Fire .22cal. Repeater.

Brighton, Eng.—*Editor Forest and Stream:* Would the above be possible to make and would it be safer than a rim-fire for rapid shooting? I should much like to have the opinions of your readers on the subject.

This autumn I was shooting a rim-fire .22cal. repeater very rapidly, and at one of the shots I was struck in several places on the face. I could not make out how it happened, but think one of the cartridges must have exploded in the carrier from the friction, or else the rim of the cartridge burst in firing. To avoid this danger I am having a repeater of 22cal. altered to shoot central fire cartridges, and am having some of the cartridges made.

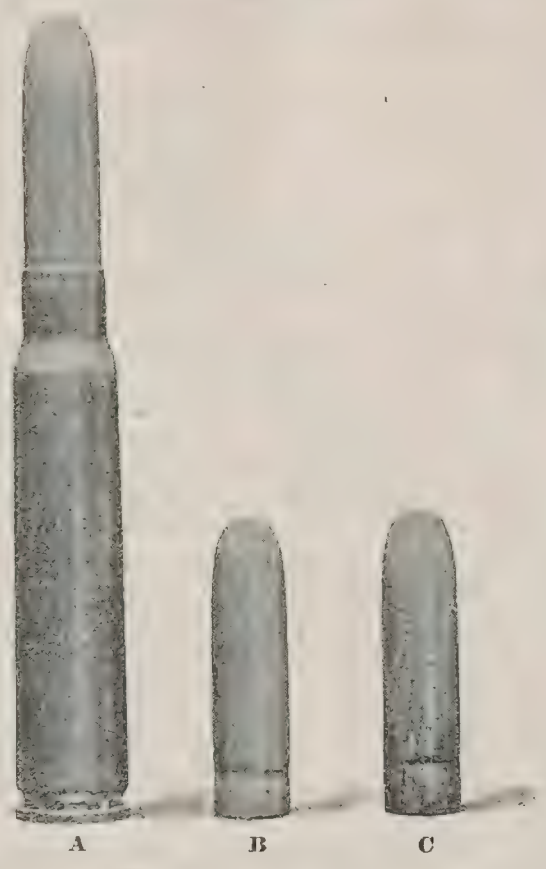
The first batch seem to have too large a cap and not sunk enough. I fear that there will be a difficulty to get a small enough cap to avoid the end of the bullet pressing on it from the cartridge behind it in the carrier.

The cap will have to be so very small as the blunt end of the bullet cannot be larger than 15cal. at most.

What would you advise in the matter? Walter Winans.

## Greenville Rifle Club.

Greenville, N. J., Oct. 12.—The Greenville Rifle Club held its weekly gallery shoot for class prizes this evening. Scores: First class—J. Boag 241, C. Boag 237, Collins 237, Plaisted 235, Scheeline 237, Purkess 238, Dorrler 244. Second class—Agnean 230, Charlock 221, Gotthardt 232, Chase 226. Third class—Hill 223, Graef 223.



The club will hold second annual gallery tournament on its headquarters range, Nov. 10 and 11. The programme is appended: German ring target, open to all comers, any .22cal. rifle with short rim-fire cartridges allowed, tickets (3 shots) 50 cents, re-entries unlimited; three best tickets to count for the first five prizes, two tickets to count for all others; only one prize and one premium can be won by one shooter; all ties divided; 18 prizes, ranging from $30 to $1. Premiums for the most rings shot during the tournament: First, a special prize (donated), an elegant diamond trophy mounted by Hayes Bros., value $40; second, cash $5, third $3, fourth $2, fifth $1; the well known shooting rules to govern. Chas. Rothweiler, Sec'y.

## Killing Power of the New .30cal. Military Rifle.

*Editor Forest and Stream:*

Your readers are aware of the fact that the small caliber military cartridge as adopted by the U. S. A. gives a muzzle velocity nearly double as high as that obtained with any ordinary target or sporting rifle loaded with the service charge of black powder and the regular lead bullet. They also know that the penetrative force of the steel or nickel jacketed bullet as employed by our army and nearly all military powers abroad is simply marvelous, and when compared to the penetrative force of the old rifles, or those adapted for a lead bullet, is even still greater in proportion to the velocity.

With these well established facts before him, and being further informed that the modern military infantry weapon produces a comparatively flat trajectory, and will do accurate shooting up to a distance where the ordinary rifle fails to do so, it would appear quite natural that the sportsman feels a desire to avail himself, if possible, of the advantages thus presented by the military rifle, and as previously pointed out. But he is likewise familiar with the fact that the penetrative force of a projectile of the nature here in question is by no means identical with a killing effect, and hence the question arises, what is necessary to be done in order to render the military rifle and the new military ammunition useful for the sportsman and for hunting large game? This question occurred in Europe several years ago, and I then, in conjunction with others, carried out a series of experiments with a view of solving this question. Tests of a similar nature and serving the same purpose were then, and have since been, carried out by numerous parties in various parts of the world. The conclusion arrived at by all concerned has been this: A steel or nickel-jacketed bullet, while justly recognized as a progressive step in point of humanity in warfare, means cruelty to animals when employed by the sportsman for shooting large game. It is very rarely the case that a bullet of this kind will cause instant death. A deer or bear hit with such a bullet in any part of the body, the head probably excepted, will still be able to travel miles after being shot, and, as a rule, will die a lingering death. The cause for this phenomenon is readily found. The bullet in passing through the body does not deform, and its channel is so minute that it will not serve to make the blood flow freely; in short it does not possess the elements requisite to produce an efficient killing effect—a sudden death.

A—30cal. smokeless powder rifle cartridge, exact size.
B—Metal-jacketed bullet before firing.
C—Bullet which has been fired through more than 1ft. of pine timber.

Yet a great many Mannlicher rifles, with which the new 30cal. rifle is almost identical, are at the present day employed by hunters in countries where a bullet traveling over a distance of several miles and capable of killing men or beast far beyond a point of the shooter's observation can be employed with little or no risk of endangering the life and limbs of his fellow men. It is very extensively used, for instance, by German hunters in Africa, and is by them pronounced by far the most efficient weapon for shooting large and dangerous animals such as the hippopotamus and rhinoceros. These sportsmen use a lead pointed bullet instead of the steel or nickel-jacketed projectile. The fore half of the bullet is made of solid lead and only the rear half consists of the regular material otherwise employed in the rifle. There are a great many cases on record where animals, as previously named, have been killed stone dead in their tracks with such bullets, and the opinion prevailing among African hunters is that no other rifle and no other ammunition will approach the .30cal. rifle in regard to killing power when the modified bullet is employed. The many incidents related by these, as a rule, very intelligent and trustworthy sportsmen, warrant the conclusion that such a bullet placed in the right part of the body of the toughest grizzly would immediately and forever take all the fighting stuff out of *Ursus horribilis*.

The length of the barrel of the military rifle has been found to render the weapon somewhat inconvenient for hunting purposes. European sportsmen therefore have the barrel cut off enough to obtain the length corresponding to that of the ordinary sporting rifle. Armin Tenner.

[The cartridge illustrated is adapted to the German military arm, and differs somewhat from the U. S. Army standard. The base of the latter is flanged to enable extraction instead of grooved as in this case, and the total length is somewhat less owing to the fact that the bullet is more deeply seated in the shell. Otherwise the resemblance is very close.]

## The Beideman Rifle Club

Opened its range for the fall and winter season on Oct 6. The members meeting at the range in one and twos, upon each member's arrival they were compelled to shoot an official score, which showed disastrous results to some of the cracks; yachting trips and various other sports no doubt had bad effects on their "hold." The boys all promise better results next week. Conditions 25yds., possible 250, ¼in. ring, targets 1½in. bull outside range, strictly off-hand, using Wurfflein rifles:

| | | | | | |
|---|---|---|---|---|---|
| A C McGowan | 236 | Wm Wurfflein | 232 | A J Yergey | 223 |
| J L Woods | 234 | W Gilbert | 229 | Dr E L Gardener | 223 |

Walt Gilbert, Sec'y.

## Schlicht Rifle Club.

West New York, N. J., Oct. 9.—The Schlicht Rifle Club held its weekly shoot for class medals last night. Seventeen members were present and participated in the competition. The scores are appended. Medal winners: Geo Schlicht, champion medal, 235; Jacob Diehl, first class, 235; Jacob Schlicht, second class, 230; Charley Meyer, third class, 233.

Scores: Wm. Schlicht 230, Aug. Tiebout 204, Ch. Meyer 233, Geo. Reichert 222, Fred. Lambrix 221, Jacob Schlicht 230, Aug. Meyer 231, Jacob Diehl 235, Geo. Dorr 229, Henry Aufderheide 230, Capt. J. Dedrick 231, Geo. Schlicht 235, Wm. Marrs 209.

## Buckeyes Beat the Shermans.

The Sherman Gun Club sent its four-man team to Dayton on Oct. 5 to do battle with the Big Four of the Buckeye Gun Club. The bad weather made the day an unpropitious one so far as big scores went, Heikes being far ahead with a total of 46 out of 50. As a result of this shoot the Dayton boys still hold the club championship. Scores:

| Buckeye G. C. Team. | | Sherman G. C. Team. | |
|---|---|---|---|
| Heikes | 46 | Ward | 40 |
| Raymond | 37 | Alkire | 37 |
| Cain | 36 | French | 30 |
| Rike | 35—154 | Porterfield | 19—126 |

The Buckeye team thus won by 28 targets. The trophy is a handsome solid silver, gold lined punch bowl, valued at $400. It was donated by the *Sporting Review* to the champion team of the State, which must defend its title against all comers.

The officials were: Referee—W. Fred Quimby, Newark, N. J. Judges—For Buckeyes, Andy Mumma, Dayton; for Shermans, Charles Strong, Springfield. Scorer—C. A. Young, Springfield.

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

Oct. 16-18.—Des Moines, Ia.—Highland Gun Club's fourth annual tournament; live birds and targets; $300 in seven guaranteed purses.

Oct. 18-19.—Elizabeth, N. J.—Elizabeth Gun Club's annual tournament. Live birds second day; lunch and loaded shells on the grounds.

Oct. 20-22.—Blooming Grove Park Association's fall tournament; live birds, targets, rifle shooting and fly-casting.

Oct. 22-24.—Emerald Gun Club tournament, at Dexter Park. Targets and live birds. Dr. G. V. Hudson, Sec'y, 9 Madison street, New York.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica.

Oct. 24.—Pittsburg, Pa.—North Side Gun Club's fall shoot, targets. For programmes address C. M. Hostetter, 520 Wood street, Pittsburg, Pa.

Oct. 25.—Richmond, Me.—New England Shooting Association championship tournament, under auspices of Richmond Gun Club.

Oct. 27.—Holmesburg Junction, Pa., P. R. R.—Keystone Shooting League's monthly shoot. For programmes address John C. Shallcross, Sec'y, 328 Walnut street, Philadelphia, Pa.

Oct. 30-31.—Marion, N. J.—Tournament at Marion, N. J., complimentary benefit to Mr. C. H. Townsend; promoters, M. F. Lindsley, W. F. Quimby, Al. Heritage and T. H. Keller; targets.

Nov. 6.—Rye, N. Y.—Rye Gun Club's all-day shoot, commencing at 9 A. M.; live birds and targets. E. J. Pope, Sec'y.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

Jan. 17-19.—Hamilton, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

April 3-5.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York.

May 14-16.—Dayton, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

June 19-21.—Cleveland, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

A tournament will be held at Al. Heritage's grounds, Marion, N. J., on Oct. 30 and 31, for the benefit of C. H. Townsend, late trap editor of Forest and Stream. We trust that all shooters who are so situated that they can do so will attend and thus help us to show our appreciation in a substantial way of the efforts of the beneficiary to promote our sport. Programmes may be had by addressing M. F. Lindsley, lock box 8, West Hoboken, N. J. W. Fred Quimby, T. H. Keller, Al. Heritage, M. F. Lindsley, committee.

The programme of the Central New York Trap-Shooters' League's seventh contest for 1894 will take place at Utica, N. Y., on Tuesday and Wednesday next, Oct 23 and 24. All events are shot at known traps, unknown angles. The first day is devoted to sweepstake shooting, the second to the team race, individual championship match and to sweepstakes. Mr. E. D. Fulford will have entire charge of the arrangements. Two sets of traps will be kept busy all the time.

The North Side Gun Club of Pittsburg, Pa., will hold a one-day shoot at targets on Oct. 24. All events will be shot under a handicap system, the handicap committee being Elmer Shaner, "Old Hoss" and "Jim Crow." Experts shoot at 5 unknown traps; semi-experts at known traps, unknown angles; amateurs at everything known. Programmes may be obtained from C. M. Hostetter, 520 Wood street, Pittsburg, Pa.

A series of three 100-bird matches have been arranged between T. W. Morfey, of Paterson, N. J., and W. G. Clark, of Altoona, Pa. The first match will in all probability be shot at Altoona on Dec. 17, the second at Paterson on Dec 19, the third at Holmesburg Junction, if the use of the grounds of the Keystone Shooting League can be obtained for the occasion.

The Elizabeth Gun Club's shoot, on Oct. 18 and 19; the Emerald Gun Club's three days' tournament at Dexter Park on Oct. 22, 23 and 24, and the Marion (N. J.) tournament on Oct. 30 and 31, the complimentary benefit to Mr. C. H. Townsend, will keep New York and New Jersey trap-shooters busy for the balance of this month.

With Elliott's sweeping challenge to Brewer and the world, and with the prospect of Brewer and Carver meeting in the near future on the grounds of the Kentucky Gun Club, at Louisville, Ky., live bird shooters have enough to keep them awake for the next week or two.

At the Grand street park, Maspeth, on Thursday last, Oct. 11, B. T. Langcake and P. Sullivan shot a match at 50 live birds a side against Stanley Dwyer and J. B. Collins, the stake being $600. Langcake and Sullivan won by two birds, the score standing 36 to 34 in their favor.

The Keystone Shooting League, of Philadelphia, Pa., with grounds at Holmesburg Junction on the P. R. R., will hold its monthly shoot on Saturday, Oct. 27. For programmes address John C. Shallcross, secretary, 328 Walnut street, Philadelphia, Pa.

At the Herron Hill Gun Club (Pittsburg, Pa.) shoot last week, the main event was a 20 live bird sweepstake, $20 entrance. J. E. England ("Bessemer") won first money alone with a straight score

Elliott's scores in his recent matches with Dr. Carver class him as the equal of any man in the world at live birds; a race between him and Capt. Brewer will be worth going to see.

The Frankford (Pa.) Gun Club will hold a shoot on its new grounds, near Bridesburg station, P. R. R., on Saturday, Oct. 20; shooting commences at 1 P. M.

The Memphis Gun Club has claimed June 4, 5, 6 and 7, 1895, as the dates for their tournament. The club adds $2,000 to the purses.

A gun club was organized recently at Rushville, Ill., under the title of the Rushville Gun Club.

Wet and wild weather on Saturday last knocked out many club shoots around New York.

## Hutchings vs. Lyons.

The Kentucky Gun Club, of Louisville, Ky., afforded lovers of trap-shooting a rare treat in the match between Messrs. Sam Hutchings and Harry J. Lyons which was shot on Oct. 4. The conditions were 100 birds, 50yds. boundary, 30yds. rise, for a small sum; a purely friendly match between gentlemen.

The score stood at the close 98 to 82 in favor of Mr. Hutchings, who shot in his usual brilliant and faultless manner, making some of the most striking kills ever witnessed on any ground. Mr. Lyons, who is not such a veteran, displayed great pluck in locking horns with so prominent an opponent, and, while he was beaten, has placed himself at one bound in the front rank as a tremendous opponent. Mr. Lyons used his own gun with indifferent results until the writer requested him to try his own Parker. With it he scored 59 out of 61 birds shot at, and one dead out of bounds. The bare statement of such a fact is not so astonishing until one knows that the birds were far better than the average, that for most of the time a very strong wind sent them whizzing to the right, making the shooting extremely difficult.

These gentlemen are matched to shoot a series of target matches under different rules, the outcome of which will be looked forward to with great interest. Both contestants used E. C. powder and No. 7 shot.

The Kentucky Gun Club ranks with any club in its *personnel*, while its appointments are first class in every particular. They use there a full set of novelty rule traps, and their background being a clear sky on every shot renders it one of the finest shooting grounds in the country. They also shoot a great many pigeons, and all in all it is decidedly a first-class club.

The 25-bird $25 sweep to be shot for there on Oct. 22 will doubtless draw together the finest shots in Kentucky. Gaucho.

## Elliott Challenges The World.

[*Special to Forest and Stream.*]

Kansas City, Mo.—Replying to Brewer's letter, Elliott has posted forfeit and issued a sweeping challenge to meet Brewer and all comers in series of 100 bird races, $100 a race, and $500 on highest aggregate score.

## CHARLESTON, S. C.

THE series of tournaments arranged for 1894 by the Interstate Manufacturers' and Dealers's Association was brought to a close on Thursday last at Charleston, S. C., Manager Shaner inscribing on the blackboard the words "Vale, 1894; Charleston, S. C.," after the completion of the programmed events about 5 P. M., Oct. 11.

From New York city to Charleston is rather a long jump to make for the purpose of attending a two-days' tournament, still FOREST AND STREAM's representative, accompanied by "U. M. C." Thomas and Ferd. Van Dyke, of the Winchester Repeating Arms Company, made that jump by way of the Atlantic Coast Line. Leaving New York at 9 P. M. on Monday, the train was due to arrive at Charleston at 11:18 next night. It might have been on time had it not been for the young cyclone and floods of rain which beset it the whole way from Petersburg, Va., to the South Carolina border line. During the afternoon, as the train speeded south, immense sheets of water were spread out on either hand, low lying grounds being transformed into miniature lakes and shallow creeks into swirling rivers; even level fields were covered inches deep with the water which had fallen so quickly that it had not had time to drain off. The wind also was blowing a full-sized gale, which, added to the lowering black clouds, boded ill for the next day's tournament. It was not until Florence, S. C., was reached that the spirits of the trio above mentioned began to revive. Rain had ceased to fall and the moon was beginning to make herself felt through the clouds. The wind was howling around the station, shaking both the cars on the track and the depot buildings, it is true, but the rain had stopped; that was something. Add to this the consumption of one of the best meals provided at any railroad restaurant in the South (Charlotte, N. C., perhaps excepted), and the revival of the drooping spirits will be better understood. As a point of interest, it may be mentioned that official statistics show that 3.40 inches of rain had fallen at Florence during the day.

It was almost midnight when Charleston was reached, after about as stormy a day's travel as one would ever wish to undergo. Hotel Charleston being closed for the purpose of a complete remodeling, the St. Charles Hotel was headquarters for shooters, as per programme announcement. Elmer E. Shaner, manager of the Interstate Association, was asleep in his room, No. 68, when the New York contingent arrived. A few raps on his door brought him from his bed only to impart the cheering intelligence that there would be no shooting next day, at any rate not until 2 P. M. "All the tents have been blown down," said he, "and even the screens have been flattened; at 5 o'clock this afternoon there was about 12in. of water covering the ground where the shoot is to take place. I'm going out there first thing in the morning to get things in readiness so that we may be able to commence about 2. Good night."

Such intelligence was hardly calculated to act as a soporific; still it might have been gotten over in good shape had it not been for another enemy of the god Morpheus. Charleston, like almost every other city, has its features. The earthquake was one, and the fact that for eleven months out of every twelve it harbors mosquitos is another. What some of those mosquitos did for us was certainly a plenty. A New Jerseyman would feel quite at home in Charleston; Van Dyke, for instance, never uttered a complaint.

The morning of Wednesday, Oct. 10, was bound to come, and a beautiful morning it was. The sun was shining brilliantly and a fresh, cool breeze was blowing. It was an ideal shooting morning. During the earlier hours of the day there was nothing to do but to wander around the city; look at the cracks in the walls of the houses, traces of the earthquake; visit the long, narrow market house and make the acquaintance of the city's scavengers, turkey buzzards by the score; take a hurried peep at St. Michael's church and Fort Sumter, and buy a souvenir spoon or two.

Among those registered at the hotel were Col. Anthony, Charlotte, N. C., who was suffering from a bad headache, caused by a tedious trip due to the heavy storm; a glance at the Colonel's score will show that he was decidedly off color; Capt. A. W. DuBray, representing Parker Bros., of Meriden, Conn, both talking and shooting the Parker gun; Mr. H. P. Collins, of Baltimore, the representative of the Dupont Powder Co.; "Dupont" Waddell, of Chattanooga, the Southern representative of the same firm, and Mr. C. C. Napier, representing Messrs. Hartley & Graham. Barring the above-named parties and Mr. Schwerin, of Sumter, who put in an appearance on Thursday morning, and a single member of Charleston's other gun club who shot on Wednesday afternoon, not a solitary visitor from any outside gun club was present; Savannah's gun club, with its large roll of members, was strangely conspicuous by its absence. The tournament was only saved from being a failure by the never-say-die way in which the members of the Palmetto Gun Club came to the scratch and entered right through the programme. The lateness of the season also militated against a large attendance, the rush of the cotton crop preventing many of the Charleston shooters from taking part in the tournament.

Hibernian Park, where the club's shooting grounds are located, is a full 40 minutes' ride from the city by street cars. From the St. Charles Hotel two transfers are necessary before the park is reached. The first car taken only runs about four blocks, when another street-line is struck; a transfer is made to another car, which carries one about half way to the park. A change is then made to a third car, which runs past the Magnolia Cemetery and the park, another nickel being charged. All the cars are small affairs drawn as a rule by one horse of an impoverished appearance. On Thursday morning, through the efforts of Mr. L. W. Bicaise, president of the Palmetto Gun Club, a special car for the shooters was run from the St. Charles Hotel direct to the park.

The park itself has gone to seed very considerably. It is a picturesque spot situated in a grove of most magnificent old live oaks. The hotel has no longer any pretensions, Governor Tillman, the Autocrat of South Carolina, and his State Dispensary Law, having robbed it of fully half its attractions. One hundred yards from the hotel in a northeasterly direction is a large dance hall about 90ft. long, erected on standards presumably to keep it out of the wet. Under the southern end of this hall is the gun club's room, the score being parallel to the building. The traps were virtually at the edge of the swamp, with a group of tall old pines to the extreme left which made left quarterers very hard to get on to. Between the hotel and the gun club's quarters, some of the tents of the members of the association were pitched. To the right were the tents of the S. S. Powder Company and Von Lengerke & Detmold; on the left were the Standard Keystone; to the right of the score and in rear of the blackboards was the U. M. C. tent; FOREST AND STREAM's and the E. C. Powder Company's tent being on the left.

By 1 P. M., thanks to Manager Shaner's energy, everything was ready for work. Screens had been rebuilt and the tents repitched. The water-soaked ground at the score was covered with a layer of plank to keep shooters from going out of sight. The whole was the result of one grand hustle. Although it was late in the day, a couple of extras were shot to give the boys a chance to get used to the ground. Then the first day's programme was commenced, five events being shot off before a halt was called. The scores made were, comparatively speaking, very poor, but there was an indescribable something about the place which made the targets hard to find; straights were rare, but when secured paid good money. In the unknown angle events the combination of five bluerock traps and as many mischievous little niggers fixing the angles was too much for most of those at the score. The little darkies chuckled audibly as the traps threw sharp left-quarterers into the grove of pines to the left only to be missed by the man who'd called "pull." Perhaps one of the strangest things was the frequency with which straightaways were missed; the sky line was capital, but still very many of them got away unharmed.

Van Dyke and his pumpgun, and "U. M. C." Thomas both shot well up, while of the locals, Post, Worthen and Petermann more than held their own, the latter being a very consistant shot. White was another who shot in good form, particularly on the second day.

The Palmetto Gun Club is a young organization, dating from June, 1891, with a membership of only 21, composed, however, of go-ahead individuals. The officers of the club are: L. W. Bicaise, President; Geo. A. Steck, Secretary; Geo. Swan, Treasurer; Geo. Petermann, C. A. Holle, John Wohltman, Geo. Swan and W. E. Post, directors. The present quarters of the club are only temporary; a piece of ground suitable for a club house and shooting park, situated a short distance west of Hibernian Park, is being negotiated for.

Although the entry list was a small one, the tournament was satisfactory, the entire list of programme events being gone through. The cyclone which struck Charleston with its full force on Tuesday, undoubtedly kept the attendance down. The management did all in its power to make things pleasant for the guests of the club and succeeded well in every particular, save one—the mid-day lunch, an important item. The failure in this respect was, it is understood, the result of a misunderstanding on the part of the caterer.

Below are given the scores:

*First Day.*

No. 1, 15 targets, entrance $1.50, $5 added, novelty rules:

*Second Day.*

Thursday, Oct. 11, the second day of the tournament, was another beautiful day, simply perfect for shooting. The scores made were, as a natural consequence, somewhat better. Col. Anthony was still off in his shooting, and it was not until well on in the day that he really struck his gait and began to chalk up good scores. Capt. Swan, Peterman and White shot really well when the acuteness of the angles in the unknown events are taken into consideration. Van Dyke, of course, was away up, the 18yd. mark in the novelty rule events proving no bar to good work with his Winchester. "U. M. C." Thomas did some good work, save in the closing events of the day, while Capt. DuBray gave telling object lessons in the far-reaching qualities of the Parker gun. The captain has with him on his trip a Parker gun fitted with Whitworth fluid steel barrels; with this gun, an American-made gun, equal to any specimen of the gunmaker's art turned out anywhere, Capt. DuBray did some excellent work, some of his breaks being made at phenomenal distances. Mr. C. C. Napier, the Southern representative of Messrs. Hartley & Graham, of New York city, was present during the tournament, as usual, making friends for himself and business for his house wherever he goes. Messrs. Collins and Waddell found very little trouble in talking up Dupont's smokeless, as the best shots among the locals were using that powder in an efficient manner. Scores:

No. 1, 15 targets, entrance $1.50, $5 added, novelty rule:

At the close of the programme for the second day, the unfinished programme for the first day was taken up and shot off. The scores made in these five events and in an extra, which brought the tournament to a close, are given below in a tabulated form. Each event was at 15 targets with a uniform entrance fee of $1.50.

EDWARD BANKS.

## Boiling Springs Gun Club.

THE following scores were made at the monthly live bird shoot of the Boiling Springs Gun Club at Rutherford, N. J., on Oct. 10:

No 1, 7 live birds, 30yds rise, 50yds. boundary:

| | | | |
|---|---|---|---|
| Paul | 1112122—7 | Huck | 1120112—6 |
| James | 1211122 -7 | | |

Match at 25 live birds:

| | |
|---|---|
| P Jones | 2012020220022020212212022—17 |
| Paul | 2220202011212022011102210l—18 |

## Little Rock Shooting Association.

LITTLE ROCK, Ark., Oct. 11.—The fall tournament held by the Little Rock Shooting Association, Wednesday, Oct. 10, was a most successful one in every respect. The weather was fine, one of those beautiful Indian summer days that we have at this season of the year. The air was cool and bracing, making it a most delightful day for trap-shooting. The visiting shooters were: J. E. Green, Nashville, Tenn.; Frank P. Poston, T. A. Divine and Irby Bennett, of Memphis, Tenn.; G. W. Hughes, A. R. Smith, Charles N. Rix and J. J. Sumpter, Jr., of Hot Springs, Ark. The grounds are very accessible; being located just across the river in North Little Rock and easily reached by boat, they are very suitable for the purposes to which they are put, having a sky background. The shooting was very good, and a glance at the score will show that the pace set by some of the shooters was a pretty hot one, and to be in it at all one had to shoot at an 80% gait. Dave Alexander made the best average, 88⅔%, winning 100 Winchester loaded shells. John M. Pemberton was second with 86⅔%, winning 75 Victor loaded shells. John W. Dickinson was third with 80⅔%, winning 100 Peters quick shot shells. T. A. Divine made the longest run of consecutive breaks, scoring 45 straight. Sumpter did not shoot up to his usual form, being badly handicapped by not having his own gun. He shot about six different guns during the day, but he said, "Just watch me when that Smith ejector arrives!"

Everything passed off smoothly, not a single kick being made during the day. When the shoot was finished everybody voted that they had had a good time and would come again in the future. Empire targets and expert traps were used and worked well, not causing any delay or interruption during the shoot. American Shooting Association rules governed. Four moneys, 40, 30, 20 and 10%. All events were known traps, unknown angles, except event No. 8; this event was shot handicap rise, one man up, unknown traps and unknown angles, use of both barrels.

Appended are the scores in detail:

No. 1, 15 targets, unknown angles, entry $1:

| | | | |
|---|---|---|---|
| Poston | 111110111011111—13 | Pemberton | 111111011111111—14 |

PAUL R LITZKE.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Pigeon Shooting Under Difficulties.

ALBANY, N. Y., Oct. 13.—There is a sharp rivalry existing between the pigeon shooters of Albany and Saratoga, and this has found frequent vent in individual and team matches, wherein the shooters of Sturgeondom have been pitted against the experts of the Spa. The honors have been about equally divided as regards the winnings, and these events have for the most part received detailed descriptions in FOREST AND STREAM. The latest bout was an individual match at live birds between A. C. Stone, of Albany and Mr. Wm. M. Smyth, of Saratoga, 35 live birds per man, $25 a side, the loser to pay for the birds.

The Albany shooters have at various times received disastrous defeat at the hands of the Saratogans, and as it was claimed that the latter had an advantage in shooting on their own grounds, where the matches have hitherto all been shot, it was agreed that this last match should be shot on neutral territory. A nice, unobstructed meadow on the estate of John T. Betts, of Brunswick (a suburb of Troy), was selected for the struggle. The day designated was Saturday, Oct. 13, and the afternoon found the Albany correspondent of FOREST AND STREAM standing in the shelter of a wagon shed with Billy Wadsworth, a fellow-towhsman, "Uncle Sammy" Goggin and a couple more Trojans (whose names he cannot now recall), and "Boss" Betts, watching the rain beating upon the orchard trees and the sodden grass with a persistency that was distressing to those contemplating a forced exposure to the storm.

Pretty soon Warren T. Lord, a neighbor of Betts,' drove up with several coops of pigeons, and a long carryall arrived a little later bringing Smythe, Livingston and Gibbs of Saratoga; Robinson of Troy; Greer of Albany, and Clement of Cincinnati, O. All hands then repaired to the shooting ground, which proved to be a wide plateau upon the summit of a "heaven-kissing" hill. Here they were joined by Stone and his inseparable friend, Lanman of Albany.

Wow! how the chilling southwest wind did blow through the many tinted whiskers, and how the driving rain did buffet us upon this unsheltered and exposed table land. None of the human species but a party of shooters and their allies would have stood out to shoot birds in such a storm. There was a noticeable absence of that hilarity which usually prevails at a shooting match; it was rather with saddened visages that the principals and their friends, enveloped in overcoats, mackintoshes and rubber armor, watched with half-closed eyes the flight of the birds, the effect of the shots, and soberly commented upon the varying phases of the shooting. A word about those birds. They were a fine lot, running almost entirely in dark colors. When they took wing quickly, as the great majority did, and dashed away, down wind, they could just beat a snipe in that kind of skating.

The match was a 35-bird race, and proved to be a close and interesting contest up to the 30th round, when the score stood 18 to 17 in favor of the Albanian; but in the next ten the Saratogan took an awful tumble, losing five birds, and with the loss of another in the next five his total showed only 26 killed out of 35 shot at. In the meantime Stone had been hitting hard for keeps, killing his birds cleanly, missing his 3d and 26th birds, and losing his 18th, 21st and 27th dead out of bounds. The boundary, by the way, marked a very limited area, for it was a 30-yard circle, struck from the center trap and bisecting a dead line that was drawn 3ft. *in front* of the firing point. The rise was 30yds., but otherwise American Shooting Association rules governed the match. Stone had things pretty easy after the 20th round, and won the match handily, as will be seen by the appended score:

| | |
|---|---|
| Stone | 2101111111111111•21•11110•11111111—30 |
| Smtyhe | 1122212•1•2211211201110100011201—26 |

A large number of pigeons was left over, and notwithstanding that the wind continued to blow and the rain kept up an unmerciful pelting, a sweep was called for and immediately received seven entries. The conditions were 10 birds per man, $10 entry, the purse divided 45, 35 and 20 per cent. The score tells the names of the winners:

| | | | |
|---|---|---|---|
| Smythe | 1222111111—10 | Levengston | 1001011202— 6 |
| Lord | 1111212110— 9 | Jack | 112101••0•— 5 |
| Stone | 1220•12211 — 8 | Wadsworth | 2•00•01010— 3 |
| Betts | 1101211202— 6 | | |

The undaunted shooters were not yet ready to "holler enuff," and a 7-bird sweep was entered upon with $10 entry, the purse divided as before. Score:

| | | | |
|---|---|---|---|
| Smythe | 0111111—6 | Wadsworth | 2110210—5 |
| Lord | 1112110—6 | Levengston | 01•11•2—4 |
| Stone | 1111100—5 | Jack | •101101—4 |

The victorious Albanian, Stone, flushed with success, will now endeavor to do up another Saratogan, Mr. Will A. Pike, at the same grounds, on Saturday next, Oct. 20.

HORACE B. DERBY.

## Emerald Gun Club's Tournament.

THE three days' tournament of the Emerald Gun Club of New York is drawing near, the dates being Oct. 32, 23 and 24, Monday, Tuesday and Wednesday of next week. Details of the programme were given in the issue of FOREST AND STREAM of Oct. 6. The first two days are devoted to targets, a varied list of events being scheduled for each day. Oct. 24 is live bird day, the *pièce de résistance* being the Empire City handicap at 25 live birds, boundary (approximate) 80yds., handicaps ranging from 26 to 33yds. The handicapping committee is composed as follows: Messrs. Jacob Pentz, Milt. Lindsley, F. Walters, L. H. Schortemeier and "Tee Kay."

The programme, which has been issued in book form, and copies of which may be obtained from Dr. G. V. Hudson, 9 Madison street, New York, contains the following "Short Synopsis of the Emerald Gun Club and Its Members:"

"On the 15th day of March, 1882, somewhat over twelve years ago, our gun club had its birth. Of the charter members there remain at present only three, our president, Mr. Richard Regan, our efficient recording secretary, Dr. G. V. Hudson, and the Hon. J. J. Ryan, who is still a high private. A successful career of over twelve years, without a break or interjection in its prosperity, shows conclusively that the club is managed on strict business principles, at merely a nominal cost for the pleasures of a membership. The initiation fee is $5; the dues $1.50 per month, the year around, whether a member attends a shoot or not. Thus the total cost a year is $18, 'play or pay.'

"At the monthly meetings a report of the club's finances being read by the treasurer, it is decided by vote of members present to hold a contest or not, as the balance in the treasury may justify. The income of the club allows from 9 to 11 shoots per year. Thus, from a memorandum kept by a member during the year, from March, '92, to March '93, reads: 'Number of shoots, 11; number of birds shot at by me, 110; number of dead birds taken home by me, 84, or 7 dozen, 60 cents per pair. Cost to club for birds shot at, $33; cost to me, $18; value of birds taken home, 7 dozen at $1.50, $10.50. Net cost of pleasure in shooting at 110 birds, $7.50! with a chance for a prize at that!" Point handicap and a handicap rises govern all contests and protect the beginner and ordinary marksman, thus the first prize last year was won by a class B man, second by a class C member, third by a man from class A, fourth and fifth by class A1, sixth by class B, and seventh and eighth by class A members. The number of birds shot at in club shoots exclusively, from the time of the organization of the club to the present time is 27,566, representing an original value of between $8,000 and $9,000. Many sweepstakes were shot besides, of which no record was kept.

"The club membership is limited to 50. There are now 46 on the rolls. At one time the membership was limited to 35, but applications were forced to remain on file for an indefinite period, that the membership was extended to 40, then 45, then 50, at which figure it remains. Though not much disposed in entering competitions, the Emerald Gun Club and its members have participated in many events of larger importance. Being a member of the New York State Sportsmen's Association for the Protection of Fish and Game, in both summer and winter conventions, the club has been represented at the State shoots in latter years. In June, 1891, Mr. William J. Simpson, a representative of the club, at the State shoot at Rome, N. Y., won the Lefever diamond medal by a straight score of 20 singles and 5 pairs of targets, a record never equaled before or since. In the contest for the Dean Richmond trophy, the most valuable prize ever shot for in the United States, the Emerald team divided second with the famous Fountain Gun Club of Kings. The team was composed of Messrs. Hallaway, Simpson and Schortemeier, and though behind at the beginning of the contest, Simpson missing but one bird and Schortemeier killing straight, one-half of the second prize was accorded to the Emeralds.

"In the next year's competition at Syracuse, in 1892, the second prize again came the way of our club, Dr. J. G. Knowlton, W. J. Simpson and L. H. Schortemeier forming the team, the first-named leading off with 13 out of 15, and one dead out of bounds, the last-named with 14 of his quota; the other scored lost, as Knowlton's was, and the "anchor," Mr. W. J. Simpson, one of the most reliable team men extant, killing straight. The same week the Emerald Gun Club team captured the championship of New York State in a team race at targets, 4-man team, 20 birds per man, with a score of 76 out of 80. Another record under the conditions of 5 unknown traps, individual scores, were as follows: Moore 20, Richmond 17, Schortemeier 19, and "Reliable Bill" Simpson 20—straight again. At the New York State Sportsmen's Association tournament, held at Rochester in June, 1893, the club was unrepresented by a team—but Messrs. Grieff and Schortemeier of the club, and Mr. Richmond, an ex-member, shot as the N. Y. County Gun Club team and won the muchly coveted Dean Richmond trophy and 60 per cent. of the entrance money. On Oct. 1, 1890, under the able captaincy of Col. J. H. Voss, the club won the Dexter Park championship in an exciting and close contest. This magnificent silver trophy, representing the championship of that year, may now be seen at the residence of Dr. G. V. Hudson. Nine other gun clubs sent teams of 10 men each—10 birds per man—to contest for it, and the total kills were as follows: Emerald 86, Unknown 85, Jeannette 81, Parkway 80, Northside 77, Glenmore 71, German 65, Crescent 64, Algonquin 64, and Acme 61. The individual scores were Gehring 10, Leddy 10, Remsen 10, Dr. Hudson 9, Dr. Leveredge 8, Hathaway 8, Butz 8, J. Maesel 8, Nowak 8 and Voss 7. The last named shot at his birds in the dim twilight and did well to get what he did. The Unknown Gun Club took the second prize with a total of 85. This day was a notable one in the annals of pigeon shooting. Billy Mills officiated then, as he will again at the Empire City handicap. In the autumn of the next year, 1891, in team shooting for a cup, the positions of the two teams was reversed. The Unknown Gun Club leading with the winning score af the previous year, 86, the Emeralds taking second prize with 85 and six other teams trailing. The make-up of the club teams was similar with the exception of the substitution of Messrs. Simpson and Schortemeier for two others of the former team who had resigned from the club. And now greeting to all visiting sportsmen. May you all have a good time and take your shares of the moneys, and greeting to the members of the N. Y. S. S. A., and if you consider our tournament a success, we ask for your support at the Saratoga convention of 1895, for the convention of 1896, as you will doubtlessly concede that it should take place in our vicinity after an interval of fifteen years."

## Elliott Defeats Carver.

KANSAS CITY, Oct. 13.—The third series of shooting matches between Dr. W. F. Carver and J. A. R. Elliott closed to-night and Elliott again demonstrated his superiority over Carver by winning two out of the three 100 bird races shot at Exposition Park this week. Elliott lost the first day's match by a score of 94 to 92, after a wrangle as to who should supply the birds. The Carver contingent having brought from St. Louis 300 birds and "Jack" Winston to do the judging for Carver. The St Louis birds were used but they failed to win the series for Carver, and Elliott again cracked all records of the 50yd. boundary by killing 100 straight on Friday and 99 out of 100 to-day, a record that he may truly be proud of. The race on Friday was a grand one and it is unlikely that its like will ever be seen again, Elliott winning on a staight score by the narrow margin of one bird, Carver only losing one bird out of the 100 and that fell dead against the fence. The birds were a good average lot, not over ten being flagged during the afternoon. The last bird according to Dr. Carver cost him £1,000, as the manufacturers of the Cashmore gun which he used have made him a standing offer of that amount if he should kill 100 straight in a match.

It was certainly hard luck for Carver, who showed his pique by challenging Elliott's shells at the 96th round; but it availed nothing, as there was only an ounce and a quarter of shot in them as weighed on a druggist's scales. James A. Bolen was selected as referee by Judges J. L. Winston and George Stockwell.

Elliott won the last race easily, Carver shooting recklessly after he saw that he could not win. There was a good deal of bitterness shown in this last series of matches, and the local sportsmen were sorry to see it. The birds on the opening day were very uneven, and a close watch on the birds showed that the Kansas City birds were at least 25 per cent. stronger flyers than the St. Louis "drivers," brought here by Fred Trescher. The birds on Friday were a good average lot, the first 100 being strong, hard flyers and quick to wing; but as the evening advanced they were slower to fly, but the light was equally poor. To-day the birds averaged only fair. Both men made some brilliant kills every day, and especially on Friday, when the excitement was intense. Elliott used a 7lbs. Greener, and Winchester shells loaded with 3½drs E. C. powder and No. 7 shot. Carver shot a 7½lbs. Cashmore and Winchester shells loaded with 3½drs. wood powder and No. 7 shot.

## Carver and Collenberger.

JERSEYVILLE, Ill., Oct. 9.—A match between Dr. W. F. Carver of world renown, and Moses Colenberger of this city took place here this afternoon at the Fair grounds. The conditions of the match were 100 live birds per man, American Association rules, for $100 a side and the gate money, the winner to take all, the loser to pay all expenses.

When the time announced for the match arrived, a large crowd of enthusiastic spectators had assembled on the grounds. Among the sportsmen present I had the pleasure of meeting Mr. George H. Admos, Jack Winston and D. De Wolf of St. Louis. The latter gentleman was Billy Crosby's backer against Dr. Carver in their recent matches at St. Louis. I also met a gentleman from Kansas City, Mo., but have forgotten his name, who has great faith in the Doctor's ability to defeat Jim Elliott in their coming matches.

Dr. Carver shot a Birmingham made gun No. 12, 7½lbs. ejector, using wood powder. Collenberger used his old reliable 10-bore lifter action, 9½lbs. Parker, using E. C. powder.

This might be called a heavy-weight match, as the combined weight of the two shooters is 435lbs.

Dr. Carver made many friends here among our shooters by his affability and gentlemanly deportment. The betting was light, as the majority thought Mr. Collenberger was outclassed. Nothing could have been more harmonious, as the best of feeling prevailed throughout. The birds were an extra lot of good, swift, strong flyers:

L. S. HANSELL.

## Shooting at Weir City, Kansas.

WEIR CITY, Oct. 8.—Below are given the scores made in a team shoot by members of the Business Men's Club on their grounds last week. McIlhany and Calhoun "chose up," the conditions of the match being losers to pay for the targets, and to furnish a supper for the winning team. Calhoun's team was short-handed on the day of the match, Kirk and Grant, two of the team, being absent from town. Mr. A. H. Piety of Topeka was here on business, and he was taken to fill the vacancy, his score counting for both the absent shooters. This was a little hard on Calhoun's side probably, but the victory was so decisive that no question of equity was raised. Score:

RAVELRIGG.

## Team Shoots in New England.

A recent issue of the Worcester, *Spy*, is responsible for the following: "A. W. Walls of the Worcester Sportsman's Club has made arrangements with the Wellington Gun Club of Boston for a series of team races between the two clubs. The shoots will be held monthly, and three will be held in each place. The first one in the series will take place at the Wellington Club's grounds on Wednesday, Oct. 31.

"One of the conditions of the shoot is that each club shall name ten men from which five men shall be chosen to represent the club It is not necessary, however, that the same five men shall compete in each shoot. Each man in each race will shoot at fifty birds, twenty-five Keystone system and twenty-five Keystone reversed system. Each Club will contribute $25 and the winner of the series will take the purse.

"The following men have been debarred from contesting in the match: Wheeler and Eager of Marlboro, Le Roy of Brockton, "Climax" and Rule of Lowell. These men are members of the Wellington Club, but as they do not reside in Boston, or immediate vicinity, the contesting clubs have agreed to debar them from participating in the shoots. The men named for the Worcester team are: Smith, Gilman, Davis, A. W. Walls, Mascroft, Hoyle, R. C. Walls, Kinney and Kenerson. The Wellington team will be made up from the following men: Dickey, W. W. Bennett, F. E. Bennett, Sanborn, Sawyer, Herbert, Stanton, Wadsworth, Paine and Adams."

## Shooting at Dexter Park.

OCT. 9.—The North Side Gun Club held its regular monthly shoot this afternoon. Edgar Barlow won the club shoot with a straight score of 7, several others being close after him. Scores:

Club handicap, 7 live birds, modified Hurlingham rules: Edgar Barlow (28) 7, Henry Meyer, John Jennings, C. N. Manning and John Menke (28) 6, Henry Wahlen (30) 5, John Tiernan and George Sims (28) 4, Louis Helmker (28) 3, John Brown (27) 2.

Miss and outs were then shot. The first, with seven entries, was won by John Jennings with a straight score of 4. The second, with six entries, was also won by Jennings, who killed 8 straight.

*Oct. 10*—The Parkway Rod and Gun Club held its shoot for the diamond badge this afternoon. The birds were good flyers and were helped by the strong wind which blew across the traps. Mr. James Bennett again won the diamond badge on the shoot off by killing 4 straight. Scores:

Club handicap, 7 live birds, modified Hurlingham rules, for the diamond badge: Class A—James Bennett (28), Lee Helgans (28), Anthony Botty (30) and T. T. Edgerton (28) 7, Henry Bramwell (28) 5. Class B—Thomas Short and David S. Van Wicklen (25) 7, Joseph Wooley (25) 4. Class C—Henry J. Selover (23) 4.

## Climax Gun Club's Handicap.

THE regular club handicap of the Climax Gun Club was shot off at Plainfield, N. J., on Oct 10. Twelve members took part in the shoot, W. Terry, with a handicap of 5 targets, coming out on top with a score of 25 out of 30; Brantingham, scratch, and Campbell, 3 targets, were close up with 24 each, Brantingham missing his twenty-fourth target. Score:

Regular club handicap, 25 empire targets and allowances:

| | | |

# Answers to Correspondents.

**No notice taken of anonymous communications.**

BOUNTY.—The Queens county (N. Y.) Supervisors pay a bounty of $5 on foxes and $2.50 on fox cubs.

E. J. R., New Rochelle.—Probably the bear story was a fiction. Ruffed grouse are common in your locality.

N. H., Sistersville, W. Va.—There is no bounty on English sparrows in New York State. You may obtain on application to the Agricultural Department, Washington, a report on the English sparrow in America, giving particulars of bounties offered by the several States, The bird is generally exempted from protection.

S., Newburgh, N. Y.—Will a 40-inch, 20-gauge muzzleloading shotgun kill a bird any further than a 30-inch full choke breechloader, same bore? ANS. A 30-inch full choke breechloader will kill further than a 40 inch cylinder gun of the same bore. The additional length of barrel is not nearly so great an advantage as the closer pattern secured by the chokebore.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

## ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

## MARSTERS HAS WORMS

**Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.**

**I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.**

One lot of Split Bamboo Fly and Bass Rods will be sold at $1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft. 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.
Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz., 10½ft., 14oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 68 cts.; 60yds., 78 cts.; 80yds., 88 cts.; 100yds., 98 cts. Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38cts., 60yds., 48cts. Sent by mail 5cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar Multiplying Reels, with click and drag and screen oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c.; 100yds., 88c.; 150yds., 98c. 10c. extra for postage.

Schoverling, Daly & Gales, New York.
Geo. Worthington Co., Cleveland, O.
W. Fred Quimby, Gen. Agent U. S. and Canada.

The growing popularity and success of the EMPIRE TARGET are causing our competitors to renew their efforts to malign its qualities by calling it a "cheap imitation and inferior substitute," but it would seem by the enormous sales and the large list of leading jobbers and dealers handling the EMPIRE that their efforts were not "panning out" as they would wish. We are informed by the largest dealers that the Empire is giving better satisfaction than any other target they ever handled. The reason for this is that the Empire is a strictly first-class article and sold on its merits. It is manufactured under the management of experts, who have been in the business from its beginning, and made by the most expensive and perfect automatic machinery, from the very best composition that is possible to put in a target, and so shaped and constructed as to make the surest breaker and flyer, and we challenge our competitors to prove otherwise.

**Empire targets cost no more—perhaps less—than any other, and can be thrown from all principal traps.**

## NEW EDITION.

## Lancaster's Famous Book,

# THE ART OF SHOOTING.

**By CHARLES LANCASTER.**

**AUTHOR'S PREFACE.**

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

LONDON, FOURTH EDITION, 1892. PRICE $3.00.

FOREST AND STREAM PUBLISHING CO.,

## BOOKS ON SHOOTING.

**New Editions.**

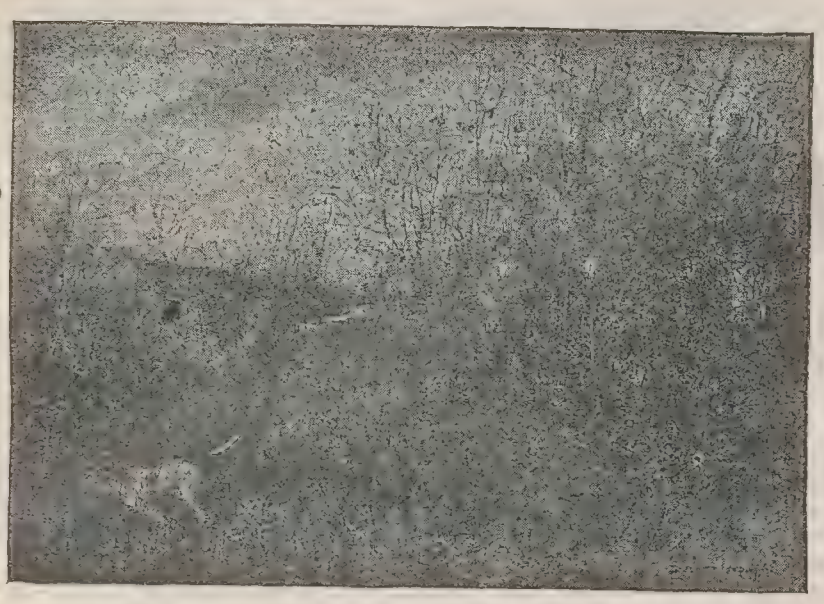
### The Modern Shotgun.

**By W. W. GREENER.**

PRICE, $1.00.

### The Gun and its Development.

**By W. W. GREENER.**



PRICE, $2.50.

These volumes have been for some time out of print, and new editions revised by the author have just been received. There is scarcely any one whose utterances with regard to shotguns and rifles are entitled to as much weight as Mr. Greener's, for he has been making these arms for many years. To his great knowledge of them he adds a pleasant and clear style in writing, which adds to the value of his books. Every American who uses a gun ought to read these books. Sent postpaid on receipt of price.

# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

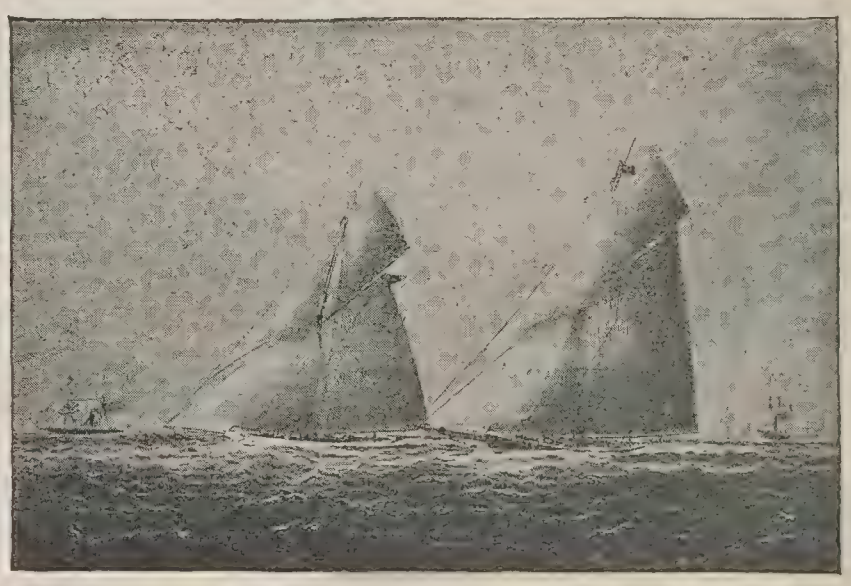
HE'S GOT THEM.

JACKSNIPE COMING IN.

## AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** *6 months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

VIGILANT AND VALKYRIE.

# The Complete Sportsman.

**BY HOWLAND GASPER.**

**Cloth, Royal Octavo, 277 pages, 17 Illustrations. Price $2.00.**

A manual of scientific and practical knowledge, designed for the instruction and information of all votaries of the gun. "The author has had in view only one object—so to familiarize the sportsman with the habits of the game he pursues, and the methods of hunting it, that his success in the fields and marshes may be practically assured."—*Introduction.*

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

## Mr. Grinnell's Indian Books.

## BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

**BLACKFOOT LODGE TALES;**
THE STORY OF A PRAIRIE PEOPLE.
By GEO. BIRD GRINNELL.
pp. 360. Cloth. Price, $1.75.

**Pawnee Hero Stories and Folk Tales,**
WITH NOTES ON THE ORIGIN, CUSTOMS AND CHARACTER OF THE PAWNEE PEOPLE.
By GEO. BIRD GRINNELL.
Illustrated, pp. 446. Cloth. Price, $1.75.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

## THE AMATEUR TRAINER.

**FORCE SYSTEM WITHOUT THE WHIP.**

BY ED. F. HABERLEIN (a practical trainer of thirty years' experience).

The 'Amateur Trainer" is a plain, practical and concise yet thorough guide in the art of training, handling and the correcting of faults of the bird dog subservient to the gun afield. The manual has been written especially for those who may possess a puppy but cannot afford the high charges of professional trainers to have the same broken for field work. By following the instructions plainly given in the book, every shooter possessed of a little common sense and patience can train his own dog to perfection.

If you have a broken dog who is faulty in some respects, you will find ample advice in the manual how to overcome any fault thoroughly. If your dog does not retrieve, or if hard mouthed, and unsteady to point and shot, chases rabbits, etc., etc., is whip-shy, water-shy, or gun-shy, etc., then don't fail to get this book and eradicate the annoyances.

It is not INTENDED NOR PROMISED to give a large volume of PASTIME READING MATTER, but the publisher guarantees the book to contain the most practical information on the subject, in a plain, concise form, for the price. It contains 81 pages and has paper cover. Price $1.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

# FISHERMEN, ATTENTION!

# $225 in Gold Given Away!

## THE NATCHAUG SILK CO.

**will give nine big cash prizes for the following catches of fish taken during the season 1894, viz.: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:**

| | |
|---|---|
| FIRST PRIZE— | $25 in Gold for the heaviest Muskallonge. |
| SECOND PRIZE— | $25 in Gold for the heaviest small-mouth Bass. |
| THIRD PRIZE— | $25 in Gold for the heaviest large-mouth Bass. |
| FOURTH PRIZE— | $25 in Gold for the heaviest Lake Trout. |
| FIFTH PRIZE— | $25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine. |
| SIXTH PRIZE— | $25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person. |
| SEVENTH PRIZE— | $25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person. |
| EIGHTH PRIZE— | $25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water. |
| NINTH PRIZE— (SPECIAL) | $25 in Gold for the heaviest Brook Trout caught in the State of Maine. |

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

## CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of successful competitors announced in the FOREST AND STREAM and the *American Field.*

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

**THE NATCHAUG SILK CO., Willimantic, Conn**
**Or 213--215 Fifth Avenue Chicago.**

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, OCTOBER 27, 1894.

VOL. XLIII.—No. 17 No. 318 BROADWAY, NEW YORK.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures.* **$5.**
**Forest and Stream** *6 months and any two of the pictures,* **$3.**

Remit by express money order, postal money order, or postal note. Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *WOLVES IN THE ADIRONDACKS.*

THAT is an interesting story which Mrs. P. B. Brandreth sends us of the capture of a wolf in the North Woods so recently as in November last. It is all the more worthy of record because it supplements a chapter of Adirondack wild life which has practically been closed for years.

In his report of the Adirondack survey of 1873-74, Verplanck Colvin speaks of some wolf trappers that he came upon near Lost Pond, just across the divide from the headwaters of Bog River. In a later report published in 1879, he mentions the track of a large wolf seen near the Eighth Lake of the Fulton Chain. These points are less than twenty-five miles apart as the crows flies, and Brandreth Lake, where Cary's wolf was killed last November, lies midway between.

This country in the vicinity of Brandreth Lake is one of the last strongholds of the wolf in the Eastern States, certainly the last in New York State, and it is interesting to note that probably a small remnant of the once proud race still lingers in this locality. Years ago the wolves had things pretty much their own way all through the Adirondacks. The first settlers could not keep sheep nor cattle, on account of their depredations, and the limit to their numbers seems to have been dependent on the deer supply. Deer were their natural prey, and when the wolves were plenty the deer were scarce and hard to find. The deer were filled with wild terror by the presence of wolves and were frequently driven out among the settlements, seeking in the proximity of man to secure safety from their more dreaded enemy.

Old hunters relate how marauding bands of wolves would drive the deer entirely out of a section of country where they were ordinarily numerous, and how when tracking in snow they would find all the deer tracks leading in one direction, showing that the entire deer population was leaving the country. De Kay writing in 1841, of "St. Lawrence and the adjacent counties" where wolves were then most numerous, says: "We have been assured by intelligent hunters that their ravages among deer are so great that they destroy five to one killed by man. * * * Toward spring there is scarcely a lake in the north of the State that has not numerous carcasses of deer on its frozen surface."

In 1869 wolves had practically been exterminated in the eastern Adirondacks, but W. C. Watson in his "History of Essex County," published that year, stated that solitary individuals still existed. In the western Adirondacks, particularly in the southern part of St. Lawrence county and northern part of Hamilton, they were still quite common. In his monograph on the mammals of the Adirondacks, Dr. C. Hart Merriam relates that in September, 1870, he saw a pack of wolves drive a deer into the head of Seventh Lake, Fulton Chain. In 1871, however, the State put a liberal bounty on wolf scalps, and immediately there was a rapid decrease in their number. Dr. Merriam intimates that the wolves were frightened out of the country, and migrated into Lower Canada, through Clinton county and across the Richelieu River; but this seems hardly possible in view of the amount of settled country through which they would have been obliged to pass. On the other hand, it is hard to believe that they were killed off, for since 1871 the bounty has been claimed on two or three score wolves, of which fourteen full grown and one pup were taken by one man, George Muir, of Fine, in St. Lawrence county. Wolves in the Adirondacks are now even a greater rarity than panthers, and we know of no record of one having been killed during the last decade, except this one caught at Brandreth Lake last November.

### *NEW JERSEY JUDGES.*

ON Monday of this week, Game Warden Charles A. Shriner, of Paterson, N. J., swore out warrants for the arrest of Judge Jonathan Dixon, who is a Judge of the Supreme Court of New Jersey, Judge of the Court of Appeals, and Presiding Judge in the Passaic and Bergen County courts; Judge James Inglis, of the Passaic County Court; Charles R. Fitch, general superintendent of the Erie Railroad; Reuben Wells, general superintendent of the Rogers Locomotive Works of Paterson, and William C. DeGraw, a hotel keeper of Greenwood Lake. The game warden's complaint set forth that the parties named had been guilty of shooting ducks from a steam launch on Greenwood Lake, a mode of hunting which is forbidden by the game law.

It is stated that Warden Shriner acted under instructions from Game and Fish Commissioner H. P. Frothingham, who directed that social, business and official standing were not to count for anything, when the laws had been violated. At the time of our going to press the cases had not been advanced beyond the issue of warrants, but whatever may be the outcome, we improve the occasion to indorse the stand taken by Secretary Frothingham and Warden Shriner. The statute is clear and explicit; it forbids shooting from boats, in language so plain that the unlearned may understand it, and a Supreme Court judge could not misconstrue it. No one, judge or layman, has any business to go duck shooting without acquainting himself with the law. If Judge Dixon and his companions actually did what they are charged with, there was not the slightest excuse for them. They probably would say as much themselves and would be the last to suggest that their position should give them exemption from the statute or immunity from the penalty of its infraction. It is not likely that these New Jersey judges will make any plea like that put forward not long since by a New York man arrested for this very offense of shooting ducks from a boat, that his position as a colonel on the Governor's staff should excuse him from paying his fine or going to jail.

If the game laws apply to anybody, they apply to judges and colonels. If not, they had better be abolished and done with.

### *DANVIS FOLKS.*

AN announcement pleasant to make, as it will be in its reception, is of the publication in book form of Mr. Rowland E. Robinson's "Danvis Folks." The volume has been awaited with much eager anticipation ever since the concluding chapters of the serial were published in these pages.

If it is true that the best work of the writers of the present day finds its way into the newspapers and magazines, it is also the fact that the best things in the periodicals eventually come forth again as books. The Danvis chronicles were from the outset destined for book covers. As faithful and entertaining pictures of life, character and sentiment in the Vermont hill country of forty years ago, they were well worthy of a more permanent setting than could be given them in the ephemeral columns of periodical literature. Readers who followed the fortunes of the "Folks" as told from week to week in FOREST AND STREAM will be glad to go over them once more in the more connected form in which they now appear.

The volume is a sequel to Mr. Robinson's two books, "Uncle Lisha's Shop" and "Sam Lovel's Camps." The three works constitute a series of character pictures which are marked by originality, strength of delineatian and an unusually powerful appeal to the interest and sympathy of those who follow the story. The "Danvis Folks" has in it convincing evidence of honest, conscientious literary performance, and that is something quite rare enough in these days. We trust that for his conscientious work Mr. Robinson may have the reward of hosts of readers and an appreciative reading.

### *THE YOGI MAN.*

MR. THOMAS STEVENS, recently returned from India, has been entertaining New York audiences with stories of the marvelous things he witnessed among the Yogi or wonder-workers of that far country. These conjurers, he relates, retire into the jungle, where they live apart, fasting and meditating and growing thin and lean in striving for power to arrest the laws of nature and to work miracles. The lecturer has some tall tales to tell of the Yogi men's tricks, and to prove his stories he produces photographs made by himself. Among the "miracles" witnessed, photographed and described were the development "in a few moments" of a small fish into a big one; and the calling from nowhere in the air a dove to alight on the Yogi's outstretched hand.

These are feats of magic which it might be worth while to journey to India to see; but there is no necessity of going so far to behold conjuring performances quite as wonderful. There are Yogis, multitudes of them, here in America, who can do the fish "miracle," without staying very long in the jungle, at that; and without undergoing a course of anti-fat to prepare for it. Indeed this transformation of a little fish into a big one has been performed so frequently that the achievement has practically ceased to excite astonishment and has come to be regarded almost with indifference. It cannot for a moment be allowed that the American fish trick is in any degree less startling than the Indian; almost any American expert with a fishing rod might safely be backed to out-Yogi all India in the art of making a little fish into a big one; yet the fisherman who should assume to claim miracle-working powers on the strength of his fish performances would be laughed back into the woods again. We are used to Yogi men in this country.

Not less gifted with supernatural powers are our American conjurers who bring birds out of the upper air in a manner quite wonderful to relate. They do it with a shotgun, but if it be objected that there is in this nothing of magic or of mystery, the answer is that a true shotgun Yogi, one who has the gift, will do with his arm what other folks find in their own practice with their own guns to be utterly impossible; he brings birds to hand from the most astonishing distances and bags them in numbers the common gunner would never dream of.

It has not yet been determined, and probably never will be, which should rank as the greater magician, the conjurer of the fishing rod or the wonder worker of the shotgun. They have performed independently and in emulation to admiring audiences about the camp-fire in summer and the warm stove in winter, and the honors are even.

Some of these fine days a Hindoo or a Parsee or a lean and hungry Yogi man himself may stray over to this country and by happy chance find himself in a circle of sportsmen. There, we may be certain, he will acquire material for telling the folks at home stories of American magic and mystery, beside which the miracle yarns of travelers in India shall appear as trivial and insignificant.

### *PEEKAMOOSE TROUBLES.*

THAT fellow fishermen are fraternal has come to be accepted as an axiom; that brothers of the angle, and sisters too for that matter, should dwell together in unity is a doctrine which has been preached and practiced ever since the day when Walton and Cotton built their little fishing house on the Dove in 1674 and consecrated it to the comradery of congenial spirits. So conventional has been this conception of the compatibility of fishing companions that we are always inclined at first to discredit and then to marvel at the discords which occasionally rend and disrupt a club of anglers.

Just now the Peekamoose Fishing Club, up in the Catskills, has got into print and put itself very much in evidence, to illustrate what angry wrangles and broils fishermen may indulge in once they abandon themselves to the delights of internecine warfare. Personal quarrels, applications for a receivership, mandamuses, injunctions, evictions and trials for contempt of court make up the hopelessly tangled snarl of Peekamoose litigation. Where the merits of the case may lie is impossible for an outsider to determine; it is enough to know and to regret that a club of fishermen should have fallen into such unhappy ways. When lawsuits take the place of trout fishing, it is high time to reel up and separate and go each his own way.

# The Sportsman Tourist.

## A QUEER PAIR.

THEY were a queer pair were Dr. Lloyd and his servant, Dawson. The Doctor was of that peculiar type of Englishman quite frequently met with in this country who can see little good in anything that bears the American trade mark. No matter how really meritorious were the things that were brought to his attention, he was always ready with some comparison which made them seem but poor sticks indeed when compared with similar things to be found in England. He had expended a good deal of money on his weapons, etc., and really possessed a very superior outfit, and he never wearied of comparing them with such American weapons as were owned in the camp, and, needless to say, much to the disparagement of the latter. Coupled with this was a most profound conviction that while there might possibly be found in England men similarly endowed with the most superior qualities, yet all Americans, even the brightest, were a very inferior lot compared with him. He was, I think, without exception the most offensively egotistical individual I ever encountered, and he disgusted even the other Englishmen in camp, several of whom were not without strong convictions concerning the superiority of everything English. He was quite a large stockholder in the mining company to which I made reference in my previous article, and he visited the camp not only for the purpose of looking after his investment, but also to take in some of the big-game shooting in the vicinity, of which he had heard very glowing accounts.

Like Cervantes in his travels, he took with him a faithful squire, Dawson by name, and if in the master's make-up there was lacking in any respect a full complement of disagreeable qualities, Dawson unquestionably supplied the deficiency. To the extent of his capacity he aped his master's manners in the fullest degree, and the supercilious contempt which he affected for everything American soon made him an exceedingly offensive personage in camp. To judge from his talk, he was the most fearless of mortals, and the number of physical conquests which he boasted of marked him as a man who could have done Tom Sayers and Jem Mace together without turning a hair. The men in camp, however, sized him up quite differently, and the number of pranks which they played upon the fellow afforded no end of amusement to every one except himself. There was one exception, however, for the Doctor, to whom he related his woes, seemed to consider them a slight upon himself, and he protested with a great show of wrath against the indignities which were visited upon his servant.

To see them start out upon a hunt was an occasion which never failed to bring out the whole camp, and while there was an evident effort to preserve a fitting degree of dignity in the presence of one who was such an important stockholder in the company, yet the spectacle was one which affected the risibles of the men in a manner at times quite uncontrollable. The Doctor, according to his own frequently related accounts, had a well established record as a mighty nimrod, yet to his own and Dawson's infinite disgust, his forays in the vicinity of the camp were invariably unsuccessful. As the Doctor explained it to me, it was the "blawsted" game that was at fault, and he bitterly inveighed against the perfidious blacktail and elk, which declined to permit such a well equipped and thorough sportsman to get a shot at them.

---

Some little time after his arrival I bagged one day a fine pair of mountain sheep, both being rams with superb horns, and it filled the Doctor with a most consuming envy and apparent wrath toward me, he seeming to consider my success in some way as a direct reflection upon his own skill as a sportsman. He made no end of fun of my gun, a homely but honest old Springfield, which had been restocked and resighted, and he wasted vast quantities of withering sarcasm upon the fate which should bring success to such a gun in the hands of a mere American boy. and yet permit such a combination as he and Dawson and their well-equipped arsenal to return after many attempts unsuccessful. His comments nettled me considerably at times, but I was an employe of the company and was in the possession of a fairly good salary, which I didn't care to throw up for the sake of explaining in detail to the Doctor my candid opinion of his personality, and besides I knew that in the opinion of others his talk only deepened the disgust generally felt for him, and rather benefitted me than otherwise. Suddenly, however, his manner toward me changed, and he ventured on several occasions to remark in a patronizing manner that with a good weapon and proper instruction I might eventually succeed in becoming a fair sportsman.

About this time the manager of the company approached me one day and asked me as a favor to him to take the Doctor out and try to give him a chance to bag a sheep. The Doctor was, he said, exceedingly anxious to get one, and as it might affect his feeling toward the company he was very anxious that I should do what I could to help him. Of course there was nothing left for me under the circumstances but to consent, and I informed him that I would gladly endeavor, to the extent of my humble ability to help the Doctor along.

---

And thus it came about that rather late one forenoon a few days after this the Doctor, Dawson and I started out. I endeavored to get an earlier start but the Doctor and his squire consumed so much time with their preparations, that it was nearly noon before we got away. I endeavored to induce the Doctor to leave Dawson behind, urging that our chances of success would be much better without him, but he would not hear to it, and intimated quite plainly that in his opinion his servant could give any one in camp cards and spades in the game of sport, and then win in a canter. I fancy, however, that I did not very well conceal my disgust at his presence, for he occasionally bent upon me very wrathful glances and several times compared the Doctor's handsome Westley Richards express with my plain old gun in terms which he evidently fancied would be very galling to me. I paid no attention to him, but as he kept up an incessant talking even after we were well on our way up the mountain side, I intimated quite forcibly to the Doctor that if he expected to get a shot at anything during the day, he would have to muzzle the chatterbox behind him. My! but didn't Dawson look daggers at me; but he subsided at the Doctor's suggestion that he had better reserve his talk until we got back to camp.

My objective point was a high, rocky, precipitous mountain several miles to the north of camp, which I knew by experience was the likeliest place to find the game we were in search of. The way led up over a high, steep and heavily wooded mountain, and just before we emerged from the timber at the top I detected several antelope in the open ground beyond and above us. The character of the ground and direction of the wind made stalking very difficult, if not impossible, a fact which I communicated to the Doctor, but he seemed to think that he could succeed in getting a shot, in which opinion of course Dawson agreed. He seemed so sanguine as to his ability in the matter that I told him to go ahead and try, and that I would stay behind and take care of the horses. So he and his squire started out, and the antics they went through during the next half-hour in affecting what they doubtless thought to be a truly scientific stalk, were enough to make a cat laugh. So absorbed was the Doctor with the idea of finding ground that would admit of his approaching the game, that he forgot all about the direction of the wind, and just when he was congratulating himself that he had found the way to certain success, the antelope got a whiff of the tainted air, and were off like a flash. Neither the Doctor nor his servant, however, discovered their flight, as they were following up a slight ravine which hid the antelope from their observation, and it must have been fully a quarter of an hour before the true facts dawned upon them. When they returned to where I had been waiting for them, they were filled with a measureless contempt for the American antelope, which the Doctor hotly declared to be the most beastly brute in existence.

Some little time afterward, while traversing the other slope of the hill, we jumped a couple of antelope which had evidently been lying behind a large rock. They were not to exceed 125yds. away when I first saw them, and I hurriedly called the Doctor's attention to them and told him to shoot. They were at least 200yds. away when he did shoot, and when I saw his ball throw up the dirt at least 50yds. this side of them I fired. It was a very uncertain and difficult shot, and I had very slight hope of being successful, but by a lucky chance I placed my ball just back of the fore shoulder of the rear antelope as neatly as though it had been a standing shot at 50yds. The antelope ran perhaps 50yds. or more when suddenly I detected a wavering of its hind quarters, and in another moment it pitched over. Its fall was greeted with a mighty shout from the Doctor and Dawson, and just as I was pluming myself upon the fact that I had furnished them incontrovertible evidence of the fact that my homely old American gun was of some account after all; the Doctor fairly took my breath away by declaring with the most delighted assurance: "I thought I couldn't have missed him for I held right on him when I shot."

"Hof course you didn't miss 'im," chimed in Dawson, "for hi saw the hair fly when you 'it 'im."

I then quite politely but positively insisted that the ball from the Doctor's rifle struck the ground at least 50yds. this side of the antelope, but the master and man laughed me to scorn, and ridiculed the idea that it was my shot which did the business. I was considerably nettled by their actions and felt quite disposed to say something rather harsh, but recollecting the character of my mission I restrained myself.

"We can undoubtedly tell who killed the antelope," I said a moment later, "by the character of the wound," for there is no mistaking generally the wound which the express bullet makes.

Investigation showed very clearly that it was my bullet which did the work, but the Doctor was not disposed to concede that he had been in the wrong, and contended quite vigorously that the character of the wound proved nothing. Had he shown the slightest conception of the ethics of true sportmanship, I would gladly have encouraged him in the belief that it was his bullet which laid the antelope low; but he was such an unmitigated, intolerable hog that I could not restrain the disposition to make him feel that in my opinion, at least, his claim was without the slightest foundation in fact.

---

After this nothing of any moment occurred for quite a long time. We were traversing the high tops above timber line, and from frequent points of vantage there were spread out before our vision scenes of incomparable grandeur and beauty. Peak after peak rose in lines of massive, picturesque ruggedness, and all infinitely mellowed and beautified by the hazy blue perspective of countless peaks stretching away as far as the eye could reach. On two or three occasions I called the Doctor's attention to some view which seemed to me particularly fine, but my only response was a grunt of constrained assent. I really think that all the time he was cudgeling his brains for some invidious comparison, for he finally blurted out in response to some particularly enthusiastic explanation on my part, "Ugh! I have seen lots of finer things in Wales."

It was about 3 o'clock, I should think, when we reached a lofty mountain from which we obtained an excellent view of the mountain on which I had hoped to find sheep. We dismounted from the horses and subjected the ground to a very thorough examination with our field glasses, but despite the keenest scrutiny we failed to discover anything which bore the slightest resemblance to a sheep. A half dozen times or more I swept the face of the hill to no purpose, when suddenly, attracted by what seemed to be a slight movement of a rock, I directed upon the spot the closest scrutiny, and to my joy made out in a moment the distinct outlines of a sheep. It proved to be a ram with massive horns, and while I was watching him there came within the range of my glass, seemingly from behind a great mass of rock, three other large rams. Then one after another appeared, until I had counted thirteen, all rams like the first, and as they slowly moved along the face of the mountain, now and then stopping to feed, they presented a most picturesque and inspiring sight.

I had thus far given the Doctor no intimation of my discovery, but now I told him to direct his glass toward a certain part of the mountain. In another moment there burst from his lips an exclamation of surprise and delight, and let it be recorded that for once, at least, his ever ready comparison was forgotten. He was, however, all eagerness for the fray, and it was with considerable difficulty that I restrained him until we had decided upon our plan of campaign. One condition I vigorously insisted upon, and that was that Dawson be left behind with our horses. The Doctor demurred somewhat, while Dawson was fairly beside himself at the suggestion, but I held to my demand stoutly, insisting that upon no other condition would I undertake to secure the Doctor a shot. Finally, after considerable parleying I carried my point, although it was only with the greatest reluctance that the Doctor acceded to my wishes in the matter. As to Dawson himself, it was very difficult for him to accept the situation, and he bent upon me a series of withering glances, which he evidently hoped would drive me to an untimely and tragic end.

The best point of approach was clearly from the eastern side, and it was probably not to exceed half an hour from the time we first sighted the game before the Doctor and I on foot emerged from the timber nearly due east and about half a mile from where the sheep were. We left our horses behind with Dawson, although I took the precaution to fasten mine, thinking that possibly the sulky servant out of petty spite toward me might turn mine loose with the pretext that it had jerked away from him.

Between us and the sheep was a sharp ridge, which made our approach up to that point comparatively easy, although the ground was in places exceedingly rough, and it became more so as we drew nearer to the ridge.

What an exciting moment is that when the stalking sportsman draws near to the point whence he realizes he is in all probability to catch the first close glimpse of his quarry. The uncertainty as to its position, the anticipation of the beautiful and stirring picture which is soon to be revealed to his gaze, coupled with the eager hope of success, serve to thrill and quicken the heart-beats as can few other situations in the world of sport. I thought from the direction in which the sheep seemed to be moving that we would probably find them but a short distance on the other slope of the ridge, an opinion which I communicated to the Doctor, and as we drew near to the spot which was to determine the correctness of my surmise, we were both laboring under the keenest excitement. Indeed the Doctor seemed to be on the point of a nervous chill, and thinking a moment's pause might enable him to regain a little needed composure, I directed him to remain where he was while I crawled forward to reconnoiter.

As I cautiously peered over the top there burst upon my view a scene to thrill the heart of a sportsman or any nature lover, for scarcely a hundred yards away and scattered over a comparatively small space of ground, I counted seventeen sheep, all rams and many with superb horns. A little to the north of them upon a commanding knoll there stood a patriarchal looking old ram evidently doing sentinel duty, for he never dropped his head but swept with wary, restless eyes every avenue of approach.

The memory of the first elk I ever saw—a superb old bull—late one beautiful October afternoon, clearly outlined on the crest of a timber burned hill, has always remained with me as one of the most beautiful game pictures which I ever saw, but I never could gaze upon a mountain sheep in the rugged fastnesses of his chosen haunts without stirring within me a feeling such as no other game ever aroused. There is something in his picturesque, commanding presence, and fearless grace of movement which seems in wonderful harmony with the rugged grandeur of his surroundings, and I have frequently watched him thus when the instincts of the sportsman seemed lost in the reverent admiration of a picture stamped with the impress of a nighter artist than man.

For several moments I drank in the beauty of the scene before me, and then sliding carefully back motioned for the Doctor to approach. As he took in the scene his delight and excitement apparently knew no bounds, and I could not refrain from whispering quietly in his ear: "Did you ever see anything finer in Wales?"

My remark was not lost upon him, for he grinned a sort of foolish grin, and admitted by a negative shake of the head, that even Wales was not in it just now. Then he commenced to slide his gun forward for a shot, and then I noticed that he was trembling all over like one in a chill. I readily saw that he was in no condition for an effective shot, and I urged him to wait for a moment, as there was no particular need of haste. He seemed, however, to have lost his head completely, for he raised himself suddenly to his knees and threw his rifle to his shoulder for a shot. His first upward movement was detected by the vigilant old ram on guard, who with a shrill whistle of alarm whirled about, bounded from his post and fled down the rocky slope. The others were not slow to follow his example, although for a moment the direst confusion and alarm prevailed among them. In a moment, however, they were in full flight, and considering the rough, broken character of the ground, they moved with surprising speed.

---

I was angry enough to have brained the blundering fool on the spot, for if ever a golden opportunity had been thrown away, this one had been. It was no time for regrets, however, and jumping to my feet I prepared for action. I had noticed before a large ram on the extreme northern edge of the band separated some little distance from the others, and as I rose to my feet I saw at a glance that he offered me a better shot than any of the others. He was running almost broadside to me, a little quartering, perhaps, and was hardly a hundred yards away. Dropping my rifle on him, I followed for several jumps, and just as he paused for a moment on a large rock I fired. I distinctly heard the thud of my bullet as it struck him, but he proceeded on his way as though nothing had happened. I slipped in a fresh shell, and was just in the act of giving him another shot when I noticed that there was a very perceptible slackening in his pace. Then he stopped, and a moment later laid down, and then I knew that he was mine all right enough. Then I remembered that I had heard no shot from the Doctor, and I turned to see what was the matter with him. It was a curious sight which greeted my eyes. He was still on his knees with his rifle at his shoulder, but he seemed like one in a trance, directing his rifle first at this fleeing sheep and then another, but with no seeming thought of firing.

"Why don't you shoot?" I shouted both surprised and provoked at the stupid spectacle which he presented. My words seemed to bring him to slightly, for in a moment he did commence to shoot, but I haven't the slightest idea that he came within 50 feet of a sheep. I then fired again, and again, and again, but with no seeming result, for they were long and difficult shots, and in

another moment the sheep disappeared in a small gulch leading to the right.

We had bagged one sheep when we should have had at least three or four, and provoked and disgusted beyond measure, I turned to the Doctor and asked: "What on earth made you jump up there as you did? You spoiled the whole thing."

For a moment he made no attempt to reply, and then to my unutterable astonishment he said in a trembling, querulous voice, "It was your talking that did it."

"My talking," I said, surprised almost out of the power of speech. "What did I say?"

"You shouldn't have asked me that question about Wales, it upset me," he replied, but his voice was scarcely audible, and he hung his head in a shame-faced way as though ashamed himself of the contemptible excuse which he offered.

"Well," I replied, almost choking with disgust, "I had no idea that you were so readily upset, although I don't know as it should have surprised me."

---

Then I started up toward the sheep which I had bagged. I had just stopped before it, and was admiring its massive horns and graceful proportions, when the Doctor joined me.

"You got one, did you?" he said in greatly mollified tones. "He's a beauty, isn't he?"

Then after a moment's pause he continued, "Pardon me for what I said about your upsetting me; there was no one to blame but myself. It was the sight of all those sheep which upset me."

It was the frankest admission I had ever heard him make, and withal he looked so thoroughly wobegone that I really felt sorry for him.

"That's all right," I replied, "only I should like to have seen you get a sheep. You will never get another such a chance."

He admitted the truth of my statement, and then after a moment's reflection said, "Would you mind selling me the sheep for $25?"

The question surprised me greatly, and for a moment I hardly knew what to say. After a moment's reflection, however, I replied, "I wouldn't care about selling it to you, but you are welcome to it if you want it."

"And would you mind saying that I shot it, too?" he then asked.

This was a little bit too much. I was willing to make a sacrifice for the manager's sake, but this seemed like rubbing it in.

"No," I replied, "I will not say that you shot it. You can if you want to, and I will not say anything about it unless some one asks me."

This was not as the Doctor would liked to have had it, but it was better than nothing; and he accepted my conditions with many expressions of thanks.

He went back after the horses, while I took care of the sheep, and when he returned with them, accompanied by Dawson, it was clear that the latter believed that it was his master who had killed the sheep. He began at once with some sarcastic reference to me and my gun, which, under the circumstances, I didn't propose to submit to, and I quietly intimated to the Doctor that it would be very much to his advantage to put a stop to his servant's comments, a hint which he thoroughly appreciated and acted upon with so much vigor as to thoroughly disconcert Dawson.

As the Doctor wished it, we packed the sheep on his horse, and owing to the latter's restiveness, the operation consumed a great deal of time. It was after 5 o'clock when we started upon our return. It had been the intention to pick up our antelope on our return, but the hour was so late that we decided to leave it until to-morrow when the Doctor said he would go and get it.

---

We moved with all possible haste, but long before we reached the slope of the mountain leading down to camp the shadows of approaching night began to gather about us, and when at length we struck the edge of the timber whence we had descried the first antelope, it was quite dark. Traveling became quite difficult, not only because of the sharp descent down which we were going, but also because of the steadily thickening timber, low sweeping boughs from which were apt at any moment to unseat and probably injure us. My horse was an experienced and very intelligent broncho, who on more than one occasion had helped me out of a bad spot. Soon after striking the heavy timber I dismounted, and taking my position just behind him with a firm grasp on his tail, I started him forward, trusting to his sagacity to find our way safely back to camp. The Doctor, who was riding Dawson's horse, at my suggestion dismounted and led his horse, while the servant brought up the rear leading the packed horse.

For some considerable time we thus pursued our way without anything of special moment occurring, although the Doctor kept calling to me for the purpose of ascertaining my exact position, and from the tones of his voice it was quite evident that he was not altogether easy concerning our position.

Suddenly there burst upon our ears from the timber at our right the cry of a mountain lion. The beast was evidently not far from us, and as his cry rang through the stillness of the gloomy, dark woods, the effect was anything but pleasant and assuring. I of course knew that there was no probable danger of an attack from him, but at the same time all the surroundings did not tend to make his immediate presence exactly desirable.

As his cry died away the Doctor asked in a low voice tremulous with fear: "For God's sake what is it?"

Then there came to mind a diabolical thought. I had a long series of pent up grievances against the two individuals behind me, and here was clearly a chance to even up matters a little.

Waiting a moment to give additional effect to my words I replied in a voice vibrating with simulated fear: "It would not be right to deceive you Doctor, it is a mountain lion."

For a moment a deathly silence followed my words, and then the Doctor asked in a voice almost inaudible from suppressed emotion: "What does he mean, do you think?"

Again did I delay a moment before replying, and then answered in a voice apparently deep in the throes of an awful fear: "I can think of but one thing, he means to attack us. It is their invariable method of attack. He is doubtless hungry, and the smell of fresh blood has infuriated him, and unless by some lucky chance we should be able to stop him, he will, I fear, be in our midst in a few moments."

Hollow groans of terror and despair came from the two men behind me, and then Dawson broke silence by asking in a low faltering voice: "Does 'e hever heat men?"

"It is his favorite food," I unblushingly replied.

After this nothing startling happened for several moments, and I was just thinking that the lion had abandoned us, when suddenly his cry rang out again, and evidently nearer than before. The Doctor and his servant too had begun to breathe easier, and this renewed evidence of the beast's presence threw them into a state of awful consternation. They both begged me to halt, and besought me to protect them, the Doctor promising me a munificent reward in case I conducted him safely back to camp. It was well for my scheme that the darkness hid my face from their view, for had they been able to catch one glimpse of it they would have quickly realized that anything but fear was the dominating emotion with me. Not that our situation was not an exceedingly uncomfortable one, for it was, and withal our horses were quite uneasy under the near presence of the lion, but I had little fear of his attacking us, and so taken up was I with the success of my scheme that I really quite enjoyed it.

---

I presume that I should not have carried my joke any further, but the humor of the situation possessed me to the exclusion of every other thought, and withal I had such a hearty contempt for the two men with me that I resolved upon a grand coup. I waited several minutes until we had got over an especially rough bit of ground, and then as a bit of precaution I moved up to my horse's head and slipped the bridle over his head, retaining it in a firm grasp so that he could not bolt under the excitement of my grand finale.

Then I suddenly shouted in tones of wild alarm, "Look out! Look out!" following it up quickly with a shot from my rifle, and then a wild frenzied yell.

The effect exceeded my wildest expectations. What followed I could not see, because of the intense darkness, but what really happened was this: Both the Doctor and Dawson hadn't the slighest doubt that the lion was right upon us; and thoroughly and completely panic-stricken they sought safety in flight. Dawson was in the lead and he had taken but a few steps when he stumbled over an old log and pitched headlong to the ground. The Doctor chanced to take the same direction, and just as Dawson started to pick himself up, the Doctor stumbled over the log and fell upon him.

Dawson hadn't the slightest doubt that the lion had him in his fell grasp at last, and the shrieks and yells of terror which escaped his lips for a moment it would be impossible to give any adequate conception of in words. Indeed, it quite alarmed me, for I could not conceive of the cause; and hastily dropping my bridle rein, as my horse did not seem particularly alarmed, I made my way as rapidly as I could in the direction of his cries.

Before I reached him I heard the Doctor say, "Shut up, you fool; shut up, you fool; it's only me; you'll bring the beast on us sure." From the direction of their voices I knew they were on the ground, and immediately surmised how it all happened. I was so convulsed with inward laughter that I dare not trust to my voice to speak to them.

Thinking, however, that I heard them crawling through the brush, I at length mastered my voice sufficiently to ask: "Did he hurt you any, Doctor?" having reference of course to the lion.

For an instant there was no answer, but in another moment I heard the Doctor reply in a low voice in which evident fear struggled with anger: "The blawsted idiot scratched me quite a bit, but I punched his beastly head good and hard." Then he asked, in an evidently surprised and frightened tone: "Didn't the lion get you?" "No," I answered, with the greatest difficulty, for it seemed as though I could no longer restrain the pent-up laughter within me, "I frightened him off, if I didn't kill him."

In a few moments they were both by my side, and while I longed to strike a match to see their condition, I did not dare put my power of composure to such a test. It was evident, however, that neither of them had the slightest suspicion of me, and the Doctor said in a tone of breathless terror that when I screamed he thought the lion had me sure.

---

The remainder of our journey was without any incident of moment, and about 9 o'clock we rode into camp, and a few minutes later drew up before the store, which was still open. As we did so several of the men crowded about us to learn the result of our hunt, and then by the aid of a lantern which one of them carried I noticed several savage scratches on the Doctor's face, while one of Dawson's eyes was discolored and swollen nearly shut. Several of the men noticed it also, and big Jack Shammel, the foreman of the whole mine, asked Dawson the cause of it.

"Hit was ha bloody Hamerican lion," he replied.

A broad smile appeared on the faces of the men, noticing which he added with evidences of considerable spirit, "You hask 'im," pointing to me; "the beast nearly heat 'im hup."

---

Of course I was pressed for an explanation, but certain ominous quiverings about my mouth, a feeling of tumultous hilarity within, warned me that the story was not one which I could venture to tell, certainly before the Doctor and Dawson, and I excused myself and went inside the store under the pretext of wanting some tobacco.

There must have been something telltale about my face, for Shamml and several of the men followed me inside, and with faces wreathed in broad smiles of expectancy they asked me the truth about the "bloody Hamerican lion."

I dared not tell them for fear that the story would get to the Doctor's ears and result in my losing my place, as I knew that he would insist upon the manager discharging me in such an event.

In the course of a week or so, however, he left for England, and then I told my story. No man I think ever had a more appreciative audience, and the keen delight which those rough men took in the discomfiture of the Doctor and Dawson illustrated better than anything else the extreme unpopularity of the two. Indeed for many a day to come the story was laughed over, and the phrase "A bloody Hamerican lion" got to be a standing one in the camp.

SANCHO.

## BLANTON.

I WAS watching on a stand in the Ozarks one day listening to the distant music of the hounds, when a man came along with an old Kentucky rifle, doubtless thinking to cover my stand, not knowing any one was there before him. He told me I was a little off the runway, placed me right, and then asked who I was with, seeing I was a stranger. I told him I was with my friend whose name adorns the head of this rambling tale.

"Did you ever see him ride through these hills?" he asked. I told him I had heard him doing it a few times and had tried to follow him the day or two before.

"Well," he said, "it is a sight! I have seen him try to head a deer and it is a wonder he don't get killed. He jabs the spurs in as hard as he can and goes through the woods, under branches and through brush and across logs and gulleys at top speed. I wouldn't ride after a deer the way that man does if I knew it had on diamond earrings."

The day before, I was sitting on a stump at the point of a ridge listening to the receding music of the pack back in the hills. It died out, and after a while I heard them coming into the flat woods down a draw a mile or so below me. I jumped on my horse and hurried down there to intercept the deer; but it had turned and I came back to my stand. After a while I heard them down there again and before I could make up my mind to go down again the dogs and Blanton after them burst into the flat. I could tell where the dogs were by their mellow voices, and could tell that he was close behind by the "yip" that now and then floated to me on the breeze, and it told me that they were going through those close trees on the dead run.

The story is not about the run but about the stop. Suddenly a shot rang out, and then the "yip" changed to a yell of victory and joy. I knew what had happened and as I blew a blast on my horn and yelled a yell or two on my yeller and, a moment after, as I held the screw-off top in my hand, said to an imaginary man in front of me, "Well Blanton, here's to you." And that night by the camp-fire he told about his quick stop.

"Well, sirs, I was just a-cuttin' it through the brush and the dogs went wild all at once about 200yds. ahead of me, and there came a big doe on the back track. We saw each other at the same time, and the doe stopped behind a white oak, and I says, 'Whoa, Billy,' and Billy stopped so quick I nearly went over his head. Thinks I, 'Old lady, you're goin' to catch it when you come out from behind that tree.' And I yelled, 'Come out of there and take your medicine,' and she just poked her head around at me and wouldn't come, and I fixed my gun on that side so I could get her the first jump. And then she jumped out on the other side, and it's a wonder I didn't miss."

But he had not missed, for as we sat there on our camp stools and toasted our shins, while our backs were away out in the cold, Madame C. Virginianus was perched aloft in a sapling beside the tent. Blanton chuckled and said:

"Why, she'd like to chase me back out of the flat woods. * * * But the only time my father ever whipped me was for turning back, and I don't believe I ever turned back from anywhere from that day to this."

We other fellows were ready to believe this, but we asked what he had turned back from, and he continued:

"One day when I was about twelve years old my father told me to take two jugs and go to a blind distillery about sixteen miles away and get them filled, and when I got half way there I got to feeling lonesome, and I don't know what made me do it, but I turned around and came back. When my father saw me come home and found out what I had done he whooped me good and told me never to turn back again when I set out to do anything or go any where, and started me off again, and you can just bet I went. When I got back it was nearly night and I was pretty tired, and I slid off the horse at the horse block and started to pull the sack off, and an old nigger we had, named Uncle Billy, said, 'I'll take 'em off for you; go and get your supper.' But I was stubborn and I pulled it off myself, and when the jug in one end of the sack came against the jug in the other end of the sack they both broke and all the whisky ran out on the road. When my father saw what I had done he spoke to me very kindly and quietly and told me to go in and get my supper, and I knew after that that he wanted to have a boy that would not turn back a heap more than he wanted the whisky. He never whooped me again, and I have never turned back again. When I got through that day I had ridden forty miles through the woods."

* * * * * *

The Colonel and I have just returned from a visit to him at his home. We brought back with us a deer each and a bunch of quail, and the skin of the biggest wolf we had any of us ever seen. It was killed by Charlie Peace as it ran, fully a quarter of an hour ahead of the hounds. Two buckshot went into its head and four through its body, yet it jumped to its feet and ran 200yds. before it finally dropped. I give the following dimensions: Tip of head to tip of tail, 59in.; nose to occiput, 11in.; ear to ear, 13½in.; height at shoulder, 30in.

It weighed 60lbs. even, and was a savage-looking specimen, and was the first one killed in that neighborhood for a long time. Charlie was very modest about it, and did not seem to realize that he had performed a great feat in stopping a streak of gray wolf with his old 12-gauge. The Colonel promptly paid the bounty to him and took the skin to have it tanned, and then Charlie Peace (and I never tire of repeating his name) did the finest thing of all. He divided up even with the other boys. We didn't care to affront a manly youth like he is by telling him what pleasure he gave us, but we may be allowed to say so here. No English duke who bathes the Rocky Mountains in blood ever will do a finer day's hunting than our Sir Charles Peace did that day—a prince of peacefulness, a wolf slayer and the conqueror of all avarice and selfishness. May all those dear boys grow up into good men.

GEORGE KENNEDY.

---

### A Quail's Nest in October.

*Editor Forest and Stream:*

On Oct. 10, near Wakefield, R. I., I killed two old birds on a point in front of my dogs. Then walking over the field, I found a quail's nest with ten eggs, which were warm.

E. O. SCHUYLER.

## THE MAY CYCLONE OF 1894.

RIGHT merrily our schooner bowled over the waters, with no suggestion of storm in the balmy air, no sign of trouble around the horizon, nothing to indicate the approach of disturbance, save an almost imperceptible increase in the heave of the long swinging seas, and the ominous fall of the glass.

All day we boomed along with the song of the wind in the canvas. All the night we hurried up the coast, till the morning broke and sunshine touched the wave crests with glistening spray. As the day wore on there seemed less joyousness in the tumbling waves. They rolled past sullenly, resistlessly, under the impulse of an unseen energy. Still the barometer fell, and gradually we became conscious of an uneasy feeling, as of impending danger in the thickening of the atmosphere, and a general haziness that gathered over the ocean.

The sunlight paled to a sickly yellow. Seabirds wheeled uneasily about, now high in air, now skimming over the water, their shrill wild cries suggesting alarm. Finally they vanished to south'ard, and the scene became doubly gloomy on their departure.

We were some fifteen miles south of the Delaware Breakwater at this time, and our anxious endeavor was to reach an anchorage there before the storm should burst upon us, this being the only harbor within fifty miles. Chincoteague lay to the south, Barnegat to the north, with the added danger of running the bars should we be so fortunate as to reach either inlet before nightfall.

The seas were rolling up with fearful velocity as we kept away. There was an increase in the stormy appearance of the sky to northward, the sunlight had disappeared entirely and a pall of dark scud was flying over head with suggestive swiftness.

What a wild rush we made for harbor, and as the anchor reached its resting place well within the sheltering break we felt the worst was over. There were twenty-seven sail nestled under the lee of that pile of stone that afternoon when we let the anchor go—pilot boats, fishermen, coasters, to say nothing of the tugs and steamers.

Darker grew the sky and presently an unearthly glare appeared close over the sea, under a mass of seething cloud that bore down with fearful rapidity toward us. Suddenly the breeze failed, we pitched uneasily on the waves while a deathly quiet held us in suspense as the whirl approached.

With a deafening roar the squall struck us. The last thing to impress me, as the blinding rain obliterated all from sight, was a glimpse of a huge coppery cloud that tore wildly overhead with a shriek, as of fiends at war. For hours the downpour continued. It was with difficulty we could distinguish the nearer craft as they tugged at their anchors in the swift run of sea that reached us even here.

The morning broke with the wind in the east. Outside the sea was foaming and tossing in wild confusion. Within it was smooth and swirled past the anchored vessels with an oily heave. The showers were now intermittent, the intervals being filled by heavy fog, that slid softly over and covered us with a mantle of silence. So still was the air that one might hear the "chirrup" of the rain drops that crinkled the surface of the water at each recurring downpour. Toward evening there was a lighting of the horizon seaward. An unwholesome glare that filled one with foreboding spread over the east, and the barometer which for some hours had remained stationary again commenced to fall.

Desirous of seeing the culmination of affairs to the best possible advantage, I donned my hip boots and oilers once more, and had the boys pull me off to the breakwater, where I asked and obtained permission from courteous Capt. Richards, of the Philadelphia Maritime Exchange, to stand watch all night with them in the station. The main room as I entered was filled with old sea dogs from the pilot boats, burly, deep-chested fellows, who spoke in low, resonant tones, saying much in few words, a volume of suggestion, as it were, in a sentence. I was sorry to see them enter their boats and pull away into the mist in the direction of their respective craft.

Just before night closed in a bedraggled fishhawk perched on a broken spar that stood upright among the stones, a short distance from the station, and proceeded to devour a small fish he had captured. It was amusing to see the struggle he made to retain his footing, using his wings to balance his body when the fierce gusts threatened to dash him away. As opportunity offered, he would make a jab at his prey, and tearing out a morsel gulp it quickly down. A rain squall hid him from view for a moment; when it passed he had gone.

And now the anchor lights began to blink among the shrouds of the little fleet behind us, and the flash from the lighthouse started on its monotonous round in the tower alongside.

Supper over, we returned to the watch room. The captain's wife, a sweet-voiced little lady, favored us with song, in which the captain joined with his rich baritone, while I sat in the shadow by the open door to leeward, listening, smoking, thinking.

Far away in the black of the night the swinging lights of the vessels danced like fireflies as the gale whistled by, while the boom of the sea on the breakwater thundered in strange contrast to the soft voices that filled the room. At half-past 10 the captain was relieved, and the second watch began. Still I sat by the door, listening, smoking, thinking.

"Clickety, click; clicketv, click," came a message from the Weather Bureau at Washington, "Continue signals for to-morrow."

So the storm was not yet over? How good it was amid the fierce rush of waters, to feel that we were still in touch with the seemingly far away world.

The steady tick-ticking of an energetic little clock on the corner shelf soon restored my meditations. How the time passed; what I thought about I do not remember; I was content, that was enough.

With the flood tide the gale increased in violence, and shortly after midnight its fury was almost beyond description. The station trembled under the pounding of the huge billows that dashed against the broken stone to windward, and rearing angrily, launched their roaring masses, at times clear over its roof.

Occasionally would come a lull in the fearful tumult, and leaning heavily against the blast I ventured out, keeping a firm grasp on the hand rail that ran around the station. As the squalls ceased for an instant, I could see that same weird light over the sea, while a moaning seemed to fill all space and lend its aid to heighten the effect of the gloomy scene. A drive of stinging rain lashed along in horizontal sheets by the storm fiends, almost blinds me as I seek the shelter of the watch room.

Through the early morning hours the fury of the storm knew no bounds, but with the daylight came a change. The wild frenzy of the night was gone. The ocean lay exhausted, panting under a dense fog that was slowly trailing away before a southerly breeze, to vanish later on when the sun should command. WILMOT TOWNSEND.

## THE CRY OF THE COON.

*Editor Forest and Stream:*

The contention over the cry of the raccoon is sure to arise when the coon season is on. One class of writers contend that the coon is a silent animal, and that it is the little owl's cry that fools the hunter. Another class blame it on the skunk. A third class stoutly assert that the cry is all right and is owned by his coonship.

I think I can throw some light on this vexed question. A life in the woods, sleeping in an open tent from April to Christmas, has enlarged my knowledge of the habits of many of the nocturnals.

The little owl with his cry is the plague of my life. He is quite numerous. Sometimes as many as five come around about dusk to see if I am at home. When I am snugly and comfortably in my hammock for the night, the little scamps glare into the tent and snap their bills at me, and follow it up with their monotonous wail. I stand their abuse for a while and then club them into the darkness of the forest. That ends it for the night. They come around the next night for an encore, and usually get it.

The raccoon has a cry something like that of the little owl, but louder, clearer and without the closing trill. I often hear both cries at the same time.

In the fall of '86 I had a male coon in my dooryard, chained beneath the trees. Nightly he answered the coons in the forest. When uttering the call, or cry, he sat on his haunches, threw up his head, so that one side of his mouth was upward, and blew the sound through the half-closed lips into the upper air.

My coon was a ventriloquist. The cry seemed to come from the treetops above him.

The raccoon sometimes repeats a loud cluck. This cry can be heard on still nights half a mile away. The cubs are warned when in danger by a cry of one note. A young coon, that I had caught in a steel trap, was carefully tended by an old male. The wound on his leg was frequently licked, and the old coon was always uneasy when the young fellow seemed to be in pain and would purr like a cat.

The skunk has a cry, but it does not resemble the cry of the coon. The call, so far as my knowledge goes, is heard only in the spring, and at daybreak or near that. It is something like this: "*Kloong-kloong, kloong-kloong.*"

I hear this cry every spring in my dooryard. The skunks are uninvited and unwelcome visitors to my cabin home, but I treat them with great respect for fear of consequences. HERMIT.

## A TEXAS BUFFALO RANCH.

[*From our Texas Correspon lent.*]

GOODNIGHT, a little station on the Fort Worth and Denver City Railroad in Armstrong county, in the Texas Panhandle, is the home of Chas. Goodnight, who is quietly but earnestly and persistently conducting a experiment in the crossing of the American buffalo with native cattle, so far without completely successful result, but certainly with very interesting ones.

Mr. Goodnight has a little home ranch of about 70,000 acres. This is his garden. His real ranch, where he does business, is the Quitaque, some distance away, where he has about 400,000 acres under fence. It is at his little garden or truck patch, that he has his buffalo experimental station.

Several years ago, when buffalo were more plentiful in Texas than they are now, the cowboys working for Mr. Goodnight would often "rope" a buffalo calf and bring it home. These were turned into an inclosure, and, though little attention was paid to them, they formed the nucleus of the herd now on the ranch. As the wild buffalo began to disappear these became of greater interest, and six or seven years ago Mr. Goodnight began in earnest the attempt to produce a new and distinct breed by crossing buffalo and neat cattle, and trying to perpetuate this type by inbreeding.

There are now on his ranch about twenty-five or thirty full-blood buffaloes, and as many more half-breeds. Most of these full-bloods—probably all of them—were calved on the ranch. Indeed, the herd are the product of the calves roped and brought in by the cowboys in the late 70s, which grew up and multiplied by the regular and natural process. They are fine looking animals. Old buffalo hunters say they never saw finer looking ones when these animals covered the Texas prairies by millions, which is conclusive evidence that civilization is not fatal to the propagation of the buffalo. He needs only to be protected and given a fair show, and in time there is no reason why there should not be as many buffaloes on the prairies of Texas as there were twenty years ago.

The crosses are, however, of the greatest interest. It was Mr. Goodnight's desire to establish a type of cattle with the valuable robe, the thrifty rustling qualities, the weight and general characteristics of the buffalo. He has bred "black mooleys" to the buffalo bulls—the cattle being chiefly polled angus—and the result is an animal with the light hindquarters and heavy shoulders of the buffalo, the shaggy head and the long, wooly hair so desirable in buffalo robes being reproduced almost as perfectly as in the parent bull. The tail is long and flat like a mule's tail. Horns are absent when bred to mooleys. In two or three cases where the mothers were Texas cows the horns were like buffalo horns, but some longer. One peculiar animal, which is out of place outside of a sideshow, is the offspring of a buffalo bull and a Texas cow, which has black and white stripes running around the body like a zebra's.

Mr. Goodnight finds his chief trouble in breeding the crosses. In fact, with a very few exceptions he has found it impossible to get offspring from the half-breeds. He is not discouraged, but will persevere in his efforts, and feels confident that he will at last establish a new race of cattle in Texas.

The half-breeds are heavier in weight than the average cattle, are better rustlers and keep fat through cold weather and hard rustling that thin the others and often result in heavy fatalities.

Mr. Goodnight also has on his home ranch about thirty or thirty-five elk that were brought from Colorado, which he has in a pasture of 400 or 500 acres, the fence around which is coyote-proof. These elk have not thriven well and do not appear to be at home. TEXAS FIELD.

## WOLVES IN THE ADIRONDACKS.

CAMP GOOD ENOUGH, Brandreth Lake, Sept. 27.—*Editor Forest and Stream:* You wrote a letter to Nelson Cary of Long Lake, making inquiries about a wolf which was caught by him in a trap. His brother, Reuben Cary, who is the gamekeeper of our park here, has handed the letter to me to answer. I have taken great pains to get the facts from him, just as they occurred, knowing that they would be of interest to you and many of your readers, and especially as you had shown interest enough to write for information on the subject.

The wolf was caught in a trap which was set in a large clearing about one and a quarter miles from Brandreth Lake on the Brandreth property. The cows and sheep are pastured in this clearing, and they were undoubtedly the bait which first attracted these hungry fellows.

On the 19th of April, 1893, one of the men at Brandreth Lake saw what he supposed was a deer walking on the ice about half way down the lake; he went into Cary's house and told his daughter that there was a deer walking on the ice, and if she wanted to see it she had better come out. She looked at it, and not quite understanding its shape got the field glass and discovered that it was not a deer; she ran down to the shop where Reuben Cary, her father, was working, and told him about it, and he immediately pronounced it a wolf. He got a gun and started to stalk it, but only succeeded in getting about 200yds. from it; he fired but missed it, as it was a long shot. In October of the same year he saw another wolf in the large clearing one and a quarter miles from our camp buildings; he stalked this fellow for about 300yds. and could not get any nearer than about 250yds.; he fired while the wolf was running and wounded it, as he found tracks of blood. When this wolf was first seen he was making a meal of a fine fat sheep he had just killed.

Reuben Cary immediately went to work to catch this thief, and brought up the bear trap we use for catching anything in the shape of an animal which will molest our live stock. He baited the trap with the sheep the wolf had not finished; the trap was set Monday night. Tuesday morning he went over to look at it, but no wolf as yet. He was obliged to go to Long Lake, and he left particular orders to the men here to watch that trap and to go every morning while he was away.

The first time they went up to the clearing they found an eagle in the trap; the wolf had been there, but having found the trap occupied and things probably rather lively, concluded not to investigate too closely. The next morning a pet spaniel belonging to Gen. Ralph Brandreth was found in the trap and was so badly hurt that the men were obliged to shoot him. The body of this dog was thrown aside in a pile of brush, and the next time the men went up most of the dog was missing. For some time after this the wolves deserted the trap and the foxes began to steal the bait away, but were wary enough never to be caught. At last Reuben Cary hit upon a clever plan. There was a stack of oats in this clearing, which was surrounded by a fence, and he suggested that they should take some of the lambs up from our barn and put them in this inclosure, and that their bleating would probably call the wolves around; the plan worked well, and it was not very long before they had the wolf.

Reuben was away at the time and Nelson Cary, Peter Tipador and Dar Parker went up to the clearing one Saturday afternoon with the wagon to bring down a load of oats; when they got there they saw the wolf lying as if dead, with his foot caught in the trap. One of the men, Parker, was lame and used a cane; he went toward the wolf and the men warned him that it might be ugly; but he poked it with his cane and it never moved; then he pushed its head around and still it never moved, yet it was alive. In making inquiries among the hunters I find this is a little trick the fox has and if struck ever so lightly with the slightest stick will immediately play dead and not move. The wolf and fox, I imagine, are near akin, as they are alike in build and hunt the same game. At last they shot him, and if they had been many hours later there would have been no wolf, for he had nearly succeeded in tearing his foot out of the trap.

His entire body was white excepting one dark gray patch of the original color left on his tail. All the hunters of this part of the country say that it is a sign of great age, especially as his teeth were very much worn away. They did not weigh him, but his height was 2½ft.

The body was sent to C. H. Downs, taxidermist at Blue Mountain Lake, to be mounted; it now stands in the large sitting room at Camp Comfort, belonging to Col. E. A. McAlpin, where his wolfship can gaze leisurely at probable the finest private collection of mounted heads in this country.

I inclose a photograph of the wolf taken by Benj. B. McAlpin, son of E. A. McAlpin.

If this story is doubted by any of your readers they can investigate the certificate at Albany, which was registered there when Nelson Cary received the State bounty of $30. P. B. BRANDRETH.

### Taming Chipping Sparrows.

I NOTICED in the last number of *The Auk* a reference to the taming of a chipping sparrow (*Spizella socialis*). My father has always had a great fondness for birds and has devoted a great deal of time to ornithology. Some four or five years ago, at my home in Nelson county, Va., there were several pairs of chipping sparrows building in the rose bushes around the porch along the front of the house. It was the custom of my father upon leaving the breakfast table every morning to put several pieces of

bread in his pockets with which he fed the dogs who always were waiting his appearance. He generally threw a few crumbs on the floor of the porch for the chipping sparrows, and they soon learned to expect his coming. Setting to work in a methodical way he soon had one of the little birds so tame that it would perch on his hand and pick crumbs from his palm, and in a short while it became so familiar as to go to any one of the household in the same way. (I send with this three photographs which show the bird perched on and feeding from the hand of different members of the family.)

In the fall the bird left with the other migrants, but, to our surprise, returned in the spring without any symptoms of shyness, evidently remembering us all. It returned for three successive years, and each time raised two broods of young. Last year it failed to appear, so I suppose has lived out its little life.—*Wirt Robinson in the October Auk.*

## NEW JERSEY SQUIRREL LAW.

ACCORDING to the *Game Laws in Brief* there is no close season for gray squirrels in New Jersey. And the *Brief* is correct. The New Jersey game law now in force makes no mention of gray squirrels. In view of this fact it is interesting to note that many well-meaning people in New Jersey are trying to make out that gray squirrels are protected by law. The Newark *Call* recently printed a table of New Jersey open game seasons, in which it named the period between Sept. 14 and Dec. 16 as the open time for gray squirrels. This was an error, as we pointed out to the *Call* at the time. Secretary H. P. Frothingham sends us this:

STATE OF NEW JERSEY, Commissioners of Fisheries, Mt. Arlington, Oct. 16.—*Editor Forest and Stream:* I take pleasure in sending you a copy of the fish and game laws of New Jersey. I have been annoyed by parties claiming to have information from you that there is no law on gray squirrels. I respectfully call your attention to the fact that it is unlawful to kill gray squirrels except from Sept. 14 to Dec. 16, and I hope that your valuable paper will correct this error.

H. P. FROTHINGHAM, Sec'y.

The copy of laws sent bears the seal of the State and the authority of the Commission. In it, under Sec. 2 of Chap. 271, Laws 1893, as amended in 1894, we find a paragraph reading:

Unlawful to kill gray squirrel except from September fourteenth to December sixteenth.

But this statement is not a part of the law; it was simply chucked in there by the compiler, has no business there, and gives the official sanction of the Commission to an incorrect statement of the game law. The statute prescribes no such season, and the Legislature has not delegated to the Commissioners authority to designate and promulgate a season not named by law.

A correspondent writes from South Jersey, to set us straight, thus:

*Editor Forest and Stream:*

Your recent statement in regard to the laws of New Jersey relating to gray squirrels is incorrect and misleading. The legislation is as follows:

Act of 1880 (Sup. Rev. § 12).—No gray, black or fox squirrel can be killed or had unlawfully in possession, between Jan. 1 and Sept. 1. Penalty $5 for each squirrel.

Act of 1886 (Sup. Rev. § 68).—No person shall kill or take any gray squirrel, except during the months of October, November and December. Penalty $15 for each squirrel. This law is in force.

Act of 1894 (Pamph. L., 471).—Unlawful to kill or take any black or fox squirrel, except only between Oct. 31 and Dec. 16. Penalty $20 for each squirrel.

F. S. J. C.

But our correspondent gives a very incomplete résumé of New Jersey squirrel legislation since 1880. As a matter of fact the law of 1886, which he says is now in force, lived only two years, and was repealed in 1888, when the Legislature divided the State into two game districts, and named as the open seasons for gray squirrel in the "northern game section," Nov. 1 to Dec. 15, and in the "southern game section," Nov. 15 to Dec. 25.

That law held three years, when it was repealed by Chap. 193, Laws 1891, which made the open season on gray or black squirrels between Sept. 14 and Dec. 16.

Two years afterward the law of 1891 was repealed by Chap. 27, Laws 1893, approved Feb. 28, which read as follows:

2. And be it enacted, that hereafter it shall not be lawful for any person or persons to capture, kill, or have unlawfully in possession after the same has been taken or killed, any gray, black or fox squirrel, except only between Sept. 14 and Dec. 16 in any year, under a penalty of $20 for each gray, black or fox squirrel so taken, killed or had unlawfully in possession.

This Chap. 74, of 1893, repealed the law of 1891 by specific mention, and also repealed all other laws conflicting with itself. This Sec. 2 then was in that year the only squirrel law on the New Jersey statute books. It was in force for little more than a year. On May 22, 1894, it was amended by Chap. 314 to read as follows:

CHAPTER CCCXIV.

Supplement to an act entitled "An act for the protection of certain kinds of birds, animals and fish, and to provide a procedure to recover penalties for the violation hereof," approved February twenty-eighth, one thousand eight hundred and ninety-three.

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, that the second section of the act to which this is a supplement be and the same is hereby amended so as to read as follows:

2. And be it enacted, That hereafter it shall not be lawful for any person or persons to capture, kill or have unlawfully in possession after the same has been taken or killed, any black or fox squirrel, except only between the thirty-first day of October and the sixteenth day of December in any year, under a penalty of twenty dollars for each black or fox squirrel so taken, killed or had unlawfully in possession.

Thus Sec. 2 of the act approved Feb. 28, 1893, as it was amended last May and now in force, makes no mention of gray squirrels. The only squirrel law in New Jersey is this Sec. 2 in its amended form; and the *Brief*, shearing off the verbiage, states it as follows:

SQUIRRELS.—SEC. 2. It shall not be lawful to kill any black or fox squirrel, except only between the 31st day of October and the 16th day of December.

"If the *Brief* says so you may depend on it."

However, there ought to be a law on gray squirrels in New Jersey, and we have no doubt that the next Legislature will provide one.

## UTAH GAME NOTES.

THE tourist who comes into Utah over the Rio Grande Western will notice on his right, just before he emerges from Spanish Fork Cañon upon the well-tilled valley of Utah Lake, a hotel-like structure bearing the title "Castilla Springs." In the cool of these autumn mornings and evenings the pools surrounding the hotel are covered with vapor and the sulphurous odor penetrates even the car windows. I enjoy a Sunday at Castilla Hot Springs at any season of the year—in the winter because two hours in the almost boiling water invariably relieves me of a threatened attack of inflammatory rheumatism, and in summer I can get what sport I want with rod, gun or rifle almost at the very doors of the hostelry. This particular mid-October day finds me awaiting the arrival of a party of Salt Lake friends who are partial to chicken shooting. On the hills within five miles in any direction deer may be started, and the hunter will be almost certain to find fresh signs of bear or mountain lions. Twenty yards in front of the platform flows Spanish Fork River, where trout do hide, but Diamond Fork, three miles up from the Springs, is the banner trout stream of this portion of Utah. I know of one party of six Salt Lakers that, in June, took 300 trout from Diamond Fork in one day. Twelve miles below, Spanish Fork River empties into Utah Lake, where duck shooting and bass fishing are unexcelled. So you see that my partiality for Castilla is very reasonable and I don't know but I shall hire a room where I can permanently store my firearms and tackle to be used as occasion may require.

But to be logical in demonstrating the necessity for a change of game wardens throughout the entire Territory, I shall have to go back four months to the opening of the trout season. I had long planned a trip to Fish Lake, an icy sheet, formed at the very summit of the Wasatch plateau by the terminal moraine of an ancient glacier, surrounded by snowbanks and almost as cold as Greenland. Fish Lake drains into Dirty Devil River and thence into the Colorado. Its trout are larger than any found in the Basin province, but it is said that in the lake they will take neither fly nor bait. However, in the Dirty Devil and its tributaries, notably in Seven Mile Creek, they are as gamy as can be desired.

Taking a buggy at Provo, we drove southward by easy stages through Utah, Sanpete and Sevier counties. At Elsinore and Monroe our party was completed, wagons and camp equipment were provided, and we were ready for an all-day climb. It was our intention to reach the lake early on the morning of the 15th. For a week before that time trout had been abundant in the settlements of Sevier Valley, and it was evident that no attempt was made to enforce the law. Indeed, those who were remonstrated with said that the local game commissioner was such a violator of the law and made so much out of the business, that he dare not make arrests for violation of the game statute. I afterward found that fish traps were in common use among fish peddlers as well as by the Indians, and that large trout were speared and pitchforked by the wagonload as they ascended the shallow creeks to spawn. But the easiest and most profitable way of catching fish was to go to the gate at the lower end of the lake, take out the top board and hold a seine or wool sack so as to catch the trout that go down stream. The water of the lake is reservoired for irrigating purposes and the removal of a 6in. plank makes a powerful current. It is no exaggeration to say that on some nights a ton of fish were caught in this nefarious way. Three times in one day I surprised different parties at the gate, each time with a seine, which they made no effort to conceal. They did not, however, make any hauls while I was present because my inquisitiveness made them suspicious. It was a common expression among them that Ben Carter (the Fish Commissioner) was as deep in the mud as they were in the mire. But again I am getting ahead of my story.

At noon of June 14 our party, three men, four ladies and three children, left Elsinore for Fish Lake. The route lay through Richfield and Glenwood to the foot of the Wasatch plateau, then a four hours' climb brought us to Oak Springs, our first camp. The next morning we crossed the head of Grass Valley and climbed Fish Lake Mountain, sighting the beautiful sheet of water at noon. Although there had been but six hours of daylight since the expiration of the law we met a wagon descending the hill, having the bed brim full of trout, and I saw three similarly loaded wagons leave the lake on the same day.

Our camp was made at the mouth of Twin Creek, and fish heads and roe that we passed showed that an indiscriminate slaughter had been going on for many days. My comrades had brought pitchforks instead of rods, and now watched the mouth of the creek as the ladies prepared dinner. The result was three large fish. After dinner we rode four miles further to the foot of the lake. Here, near one of the largest tributaries of the lake, we made a permanent camp. There were five other parties camped on the same creek, and a "run" was made on an average every two hours during the three days that we remained there. Against spears, pitchforks, traps and seines the trout had little chance of escaping. Walking down the creek on Sunday morning I found a place about a quarter of a mile below our camp, where a trap had been put in the night before, and over two bushels of roes showed the work that had been done. I found a similar deposit a short distance above our camp, but was told that this was the work of Indians.

Our next move was to the mouth of Seven Mile Creek. We had suffered from snow and ice froze half an inch thick every night, so the ladies were quite as ready to return home as was I. Seven Mile, too, was covered with campers. Here every opportunity was afforded for turning the creek, and the campers agreed to turn three times daily and divide *pro rata*. Thence we journeyed to the head of Seven Mile and I enjoyed one day of excellent fly-fishing; but by the moonlight the creek was turned and seined, so I gave my vote for a speedy return homeward, and the trip that had been planned for a month occupied just a week.

On my return home I had little time for sporting, an occasional run up Provo River and to Diamond Creek being all I could afford. Fortunately Utah Lake is enjoying for the first time a season of black bass fishing, and sportsmen have a new field for enjoyment. Carp have proved a nuisance, and the ease with which the bass take to their new habitat and the rapidity with which they increase is most encouraging. Those caught weight from 1 to 3lbs. The principal event of August I quote from a local paper:

The organization of the Provo Sportsman's Club was completed today with the following officers: R. A. Barney, President; M M Kellogg, Vice-President; Joseph E. Daniels, Secretary. Executive Board: A. W. McCurtain, George E. Howe, Samuel Jepperson, Dr. F. W. Taylor, S. K. King.

The object of the above association is to build a boat house at what is known as the Jepperson landing at the southwestern part of the city, on Spring Lake, for the accommodation of eighteen boats.

The society will strictly adhere to the enforcement of the fish and game laws. It is organized for mutual pleasure and recreation.

Since the above was printed a boat house has been erected and the membership has increased to twenty. I understand that if a member is caught violating the game law the club fines him $5. All others caught *in flagrante delicto*, are legally prosecuted.

The early part of September will be remembered for a feeble and ineffectual (I believe voluntarily ineffectual) effort to enforce the law regarding the seining of trout. I quote from an eveniug paper:

Deputy Sheriff Hall arrested Brig Madsen and Levi Carpenter this morning, on a complaint charging unlawfully taking fish. This case grows out of the arrest and conviction of Parley P. Hindmarsh for unlawfully having in his possession certain fish. Madsen and Carpenter were the seiners who took the trout out of their nets they claim, after the fish was dead, having been gilled by the meshes of the net. The boys hold that they had the commissioner's consent to take trout thus caught and killed. They appear before Justice Wedgwood for trial at 4 o'clock this afternoon.

A few days later appears the following:

The case against Brig. Madsen and Levi Carpenter, accused of unlawfully taking trout from Utah Lake, was tried by a jury before Commissioner Dudley this forenoon. The defence admitted having had on Aug. 20, about 20lbs. of trout in their possession, and that they took them out of Utah Lake with seine. They proved, however, that the seine they use is a licensed one and that they made their haul strictly in accordance with law and in the presence of Frank Newell, Deputy Fish and Game Commissioner for Utah county. They proved further that in making each haul that day (they made two), there were some 600lbs. of trout came into the seine with other fish. By the time that the trout were gotten some dozen or fifteen had unavoidably gotten their heads into the meshes of the seine, were gilled and completely dead. These are the fish they had in their possession and for which they were arrested. The commissioner at every haul when this occurred has consented that the seiners take these dead trout, deeming it better for them to take the fish than to throw the speckled beauties into the water only to rot. The prosecution held persistently that the law prohibits the taking of trout of the waters dead or alive in any way, except with a hook and line, and that persons who take them as these men had done, had violated the law. The jury held, however, that there had been no intent to violate the law proven and no harm done and so acquitted the boys.

Now that shows what kind of game commissioners we are afflicted with! I do not know how much of a percentage Mr. Newell gets for allowing these men, who for years have had an unenviable reputation for poaching, to seine trout and sell them, but the law is still violated and Carpenter and Madsen still swear their licensed seine kills the trout that accidentally get entangled in its meshes. There are other violators of the law about Utah Lake and it is a wonder to me that the lake is not entirely depopulated of game fishes.

Oct. 1 was the day of duck hunter's joy, and it was a day when the effect of the new game law was first felt by the legitimate sportsman as well as by the pot-hunter. It has been the custom on Utah Lake to hunt ducks at all hours of the day and night, and the best time has been between sunset and dark. Under the new law all duck shooting is prohibited from sunset until one hour before sunrise. By the constant booming of the guns, which wakes me every morning and which even disturbs my slumbers now that the moon is brightest, I judge that a few of our citizens have forgotten all about the last session of the Legislature. Again I find myself quoting from to-day's paper:

Fish and Game Commissioner Newell has sworn out complaints before Justice Wedgwood against Niels Hansen, John Doe Atherly and Walter Smith for shooting ducks between the hours of sunset and sunrise, and against Hyrum Jarman and Parley Swinson for shooting sea gulls.

I have spent some most enjoyable hours on the lake during the past week, rowing out a mile or two to the tule islands and catching the flocks that fly from the blinds along shore. To be successful, however, decoys must be used. The ducks as yet are those that have remained about the lake all summer—teal, redheads and a few mallards. The weather is mild and the autumnal flight has not yet commenced.

When I have poor luck with ducks I fix a spoon where I generally have a fly, and a few casts along the edge of the tules reward me with fine bass. The best bass fishing is found where the mountain streams force little channels among the thick growth of algæ, duck weed, etc., striving to reach the clear, deep water at the middle of the lake. As the boat moves along, the oars festooned with green streamers that make rowing almost an impossibility, great, lazy carp move sluggishly out of the way; but the bass jump at the glittering bait, and the fisher is out of luck if he once let the fighting beauties carry the line into the weed mat whence they darted.

This is an unusually good season for grouse. The pheasant (Western ruffed grouse) is common in the cañons, and in the stubble fields of southern Utah county Western sharptails (willow grouse) have never been as abundant as they are this year. Hark! The whistle of No. 2! The dogs are ready. So am I; and of the chicken hunt more hereafter.

SHOSHONE.

CASTILLA SPRINGS, Utah, Oct. 13.

### South Dakota Prairie Game.

FORT SULLY, S. D., Oct. 15.—The chicken shooting in this section is very poor this season. The birds were plentiful in the river bottoms this time last year, and they stayed there through the winter and up to March. Then they left and now there are none there. I have hunted a good deal lately, but have seen none at all.

I have seen large bags of geese and ducks and some sandhill crane brought in from the wheat fields.

Do you know of any reason why chickens should be so scarce? The summer was very dry, but it was dry and hot in places where they are now reported plentiful. There are lots of the "buffalo" berries, which seemed to be their chief food last year.

P. A. B.

[Will not market trapping account for the lack of game?]

### Prairie Chickens.

RECENT reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway 207 Clark street, Chicago.—*Adv.*

## VERMONT AS A WILD BEAST PRESERVE.

FERRISBURGH, Vt., Oct. 16.—*Editor Forest and Stream:* Perhaps it may interest some of your readers and surprise them almost as much as it did us natives to learn what a game preserve our State has become, as appears by a letter from a correspondent of the Boston *Journal*, which I inclose with this. We were led to believe from some newspaper accounts that there were abandoned farms enough to furnish grazing for all the deer without obliging them to invade the village gardens, but we also believed that Baron Munchausen was dead. We are devoutly thankful that the bears are so good natured, and our children so well-mannered that they never "sass" old people. The bears would be very good for young sportsmen to "learn on," but visiting sportsmen must remember that the law is not off on deer, and come loaded only for b'ar. AWAHSOOSE.

The letter reads:

As a natural paradise for animals and winged game Vermont promises to break all modern records. In fact, in some sections of the Mountain Commonwealth the farmers are actually suffering from the overabundance and unprecedented tameness of deer and partridges. They invade the fields, and, in some instances the gardens of the plantations, feeding on the grain and the vegetables until they have become a common nuisance, which the farmer is prohibited from ridding himself of because of the laws protecting all game. It is not uncommon to find deer feeding peacefully among the domestic animals in the pasture or stalking boldly along over the highways.

Here is a condition of affairs unknown since the days of the pioneer or since the days when the streams, the lakes and the mountains of Vermont were the favorite fishing and hunting grounds of the Iroquois. There were moose and deer and bears and foxes in plenty in those days, but they had been thinned out by the opening of the present century, or had emigrated across country into the then unknown Adirondack wilderness.

So numerous and troublesome have the deer now become that farmers near Rutland have complained because their grain, especially their wheat, buckweat and corn, and their vegetables are being devoured by the invaders. They say it is also an annoyance to have the deer herding with the domestic animals. This may strike the lovers of animals as a beautiful sight, but some of the farmers will seek redress from the game association.

A farmer living five miles from Rutland entered complaint last week that a herd of deer destroyed an acre and a half of buckwheat and devoured his vegetables. Mr. George H. Woodward of the mountainous community of Cuttingsville reports that the deer come into his fields seven or eight strong every afternoon at sundown and stay until he drives them away in the morning. They are so tame they do not leave their feeding grounds or the yards where cows are kept at night until some person approaches within three or four rods. Even then they sometimes refuse to move off, and actually have to be driven away. They have great fondness for herding with domestic animals, especially cows. Occasionally a bull shows fight, but they seem not to care for his angry, threatening movements. What the result would be in a fair field and fair fight none can predict.

Within two miles of Rutland the other day two deer were met trotting along the traveled road as docile as a house dog. Reports come of them in all sections of the mountainous regions, and the feeding with cows in the pastures is of frequent occurrence. One day two weeks ago a man crossing the mountain to Woodstock saw fifteen of the fleet-footed animals at close range. A fox hunter a fortnight ago ran into seven in the vicinity of Plymouth.

Farmers in the mountains also complain of the abundance of partridges, which overrun their gardens, making havoc with fruit and berries, flowers and growing vegetables.

Bears also are very numerous, and often with their young take a hand in destroying fruit and vegetables, and are almost as tame as the wild deer unless their cubs are molested. Their young are of varied sizes and weight, and are equally as destructive as their parents. These Vermont bears are not only getting plentiful in the woods, but they are learning how to avoid some of the annoyances that come with advanced civilization. Mr. Silas N. Wheeler has a hilly farm in Stamford. Mr. Wheeler recently went into a pasture and saw a good sized cub eating sweet apples. The animal was in a corner made by two barbed wire fences. He thought if he could entangle the young bear in the barbed wire fence he would have a good opportunity of killing him. He therefore drove him on the run for the fence, but the bear jumped over the top of the wire as nimbly as an athlete could do it and escaped in the woods.

Bears have often been seen roaming about the open country. One was seen the other day on what is known as Campbell Hill on the quarter-line road; in the vicinity of several residences another was roaming about with her cubs on an opening in the woods on a small mountain called Bald Mountain, both in plain sight of the city of Rutland and not far distant. On the eastern and southern outskirts of the city gardens have been invaded at night, both by deer and bears. A deer was seen running along Allen street within the city limits a few weeks ago, but soon taking fright at a locomotive whistle leaped the fence and made haste for the near-by woods

The protection the wild animals of Vermont have received from the State laws in the effort to allow the animals to breed unhindered by the sportsman is likely to be somewhat modified in the near future. The law affecting deer is and has been for years prohibitive, and has been rigidly observed. It was first extended to ten years, and then to fifteen years, and now is operative until 1900 unless repealed or modified by the next Legislature, which meets in October. By this law the killing or capturing of deer or the mere possession of its meat, is punishable by a fine of $50, and the informant of such deer killing gets half the fine. A dog found pursuing a deer is liable to be shot.

The increase in the number of noxious animals in Vermont is one of the unlooked for results of the restrictive laws, for the forests are little hunted nowadays, and the bay of the deerhounds has not been heard for years. There is thus a vast and beautiful country up there among the mountains where the animals of the chase have increased and multiplied until the hard-working Vermont farmers have found in them a constant menace to their crops, and are crying aloud for protection.

## FLORIDA BEARS AND COWBOYS.

SPENDING the winter in the wilderness of south Florida on the verge of the Everglades, I was impressed by the novel manner in which the cowboys hunt the black bear (*Ursus americanus*). These brutes are very numerous here and make sad havoc with the droves of hogs which rove through the piney woods, feeding themselves on mast and roots, and rarely seen by their owners except when "rounded up" for branding the increase, or for shipment alive to Jacksonville. Bears are also very destructive to the sheep, which are just being introduced.

When a family of bears get on to a "range," their presence at once becomes manifest, and the rough riders organize a hunt to destroy them. We had the pleasure of participating in a "bear drive," as they are called, one day in January. The meet was at a cracker store deep in the backwoods and the hour sunrise.

Eight cowboys suitably mounted and caparisoned had arrived before us, and with our party of two made up the drive. A word about these cowboys who although of as distinct a type as their western cousins have never been described. They are of mixed Spanish and cracker descent, born in the saddle one might say, certainly live and die in it. Their sole concern is to attend the great herds of cattle and hogs that wander over the prairies, see that they do not wander off the range, get mired in the "cut throats," or eaten by wild varmints. They are the most graceful and fearless of riders, sometimes in their all night rides sleeping in the saddle. Their dress is picturesque, a wide sombrero, gray woolen shirt with gay stripes red or blue, butternut-colored breeches of homespun, and heavy cowhide shoes armed with long spurs. Their horse furniture is a Mexican saddle with high pommel and elaborately embossed, a whip with a lash eight or ten feet long and handle of a deer's foreleg and hoof with which and their musical cry of *oooe, oe, oe,* they, control their herds, and a good rifle carried across the saddle bow. The eight had made chairs of their steeds by throwing one leg over the animal's neck, and crossing the other upon it, sitting as easily as though in a rocking chair.

The hounds, five in number, sat sedately on their haunches waiting for the party to set out. We were soon under way heading for a large bay head of several acres lying off to the westward, and a bay head is a small swamp in the high, dry piney woods covered with a dense growth of palmetto, gum, bay, cypress, water oak and tropical plants and vines, forming a jungle, leaving a broad trail in the dew-gemmed wire grass and saw palmetto of the forest.

Arrived at the bay head we circumnavigated it. "Old man Buster," our leader, narrowly scanned the ground for any signs of a bear trail leading into it; at last he saw something that caused him to drop from his saddle and examine the ground closely where a little brook flowed into the swamp. Sure enough, two broad trails were plainly perceivable there.

"Boys," said the old hunter, "the's two b'ar gone in ther' not an hour ago; put on the dawgs." The brutes took the trail at once, giving mouth and dashing into the thicket.

"Spread out, men," continued the old man, "form a line around the bay head with cocked rifles, and if one makes a break, see that you drop him." At this moment the dogs set up a clamor.

"I'll be doggoned," said Buster, "ef old Luce aint treed one of the varmints a'ready. Squire, you an' Budd lope in and fetch him down. Rest on ye watch out."

Squire and Budd, two keen-eyed young fellows with the reputation of crack shots, disappeared in the dense woods growth. The rest of us waited with rifles cocked, one at least in breathless suspense. Presently we heard a rifle shot, followed by the crashing, rending sound of a heavy body falling through branches, followed soon by a scratching sound, a warning cry from Squire and Budd, the rush of a heavy body through the thicket; the next moment a magnificent black bear broke cover midway between Buster and myself, followed by the hounds in full cry. My bullet caused him to turn and bite savagely at the wound, but Buster's behind the foreshoulder tumbled him over in a heap.

Some of the men gathered about us; others in obedience to a call from Squire plunged into the swamp and soon appeared, dragging out the heavy carcass of a second bear. Leaning on his rifle, Squire thus told the story of his adventure:

"I'm doggoned if them two b'ar weren't up the same tree. When we got in we found old Luce barkin' up a big cypress the top so kivered with moss you mought as well a looked intu a June fog. Howsomever, after five minnits I could make out a black outline in er branches and let drive. Well, gentlemen, a 400-pound b'ar fallin' 100ft. an landin' in er water not a yard from ye naterally makes a disturbance, and thets why Budd an' me didn't see er second b'ar come slippin' down er tree—not till he jumped—an our eyes bein' full of water an' mud we couldn't shoot, only yell; however, I'm glad you focht him."

We took two other bear that day beside a deer that the dogs started by a lakeside where it was feeding. We saw abundant signs of turkey but took none, the birds being exceedingly shy. The most successful method of hunting them is by discovering their roosts in the bay heads and lying in wait either at sunset when they go in from their feeding grounds or at daylight when they fly down. Panthers are occasionally shot, with catamount, foxes that climb trees, and alligators. Taken all in all the interior of the South Florida wilderness is fairly entitled to rank as a sportsman's paradise. CHARLES BURR TODD.

AVON PARK, DeSoto Co., Fla.

## AN OUTING IN WYOMING.

CHAMBERSBURG, Pa., Oct. 9.—I want to tell you how I secured my first deer. The story will not be particularly interesting to many of your readers; certainly not to those who have had such stupendous "luck" as many of the writers whose stories and experiences I have read in your columns, all of which were very entertaining to me, but got to be rather discouraging because my experiences from year to year seemed so tame in comparison. But just here is where I hope to be of some comfort to any of your readers who, somewhat like myself perhaps, didn't get "big game," or a "wagon load" of small game every time they went for it.

My attempts to shoot a deer began away back in the fall of '77 at Mountain Falls, Frederick county, Va. I was young then, and full of energy and perseverance, and what I lacked in experience and cunning was made up in hard work. I would start, after a very early breakfast, and keep at it hard all day, only stopping long enough at noon to eat a plain "snack," which had been carried in my pocket, and on coming in at night would have a pheasant or two, or perhaps only a rabbit or a squirrel.

Well, my many different hunting trips from then until September, 1894, at Camp Success on the Big Horn Mountain in Wyoming, on the headwaters of Powder River, were a succession of disappointments not altogether dissimilar to my first experience in Virginia. The different trips took me to Maine, Pennsylvania, Virginia, West Virginia, Maryland and Florida several times, and Michigan, Wisconsin and Nebraska, having hunted in nine different States, frequently seeing deer, and sometimes getting shots at them, but never successfully.

In the fall of '89 I went with a friend and others to a noted lake in Maine, thirty miles by private conveyance from Bangor, where this friend had been going every fall for ten years previously, and always getting deer, sometimes as many as seven. The truth of this I could not doubt, for this friend had photographs to show that displayed the game hung up. But when I appeared at the camp and cast my lot with the heretofore successful hunters, not a deer was even seen, much less shot. Indeed my reputation had become by this time so notorious that my friend dubbed me "Jonah," and has never since invited me to join him, declaring that my presence would be an omen of "no deer." I have on several occasions told this friend that such superstition was not becoming in a thoroughbred sportsman, but now looking back over those years of hardships, disappointments, and no deer, I dwell with increasing satisfaction, as the days and weeks go by, on the very pleasant and triumphant hunt in which I secured my first deer.

Aug. 31, 1894, Col. C., Vice-Pres. K., Dr. P., E. J. Mc, Esq. and your humble servant left the loveliest spot of the most beautiful valley of Pennsylvania, and reached Omaha about 10 Sunday morning. The further west we went the newer and wilder and more interesting became the country. Monday, Sept. 3, we were passing through the southwest corner of South Dakota and the northeastern part of Wyoming, arriving at Clearmont, the end of our railroad journey, at 4:40 P. M. During the afternoon we passed the Devil's Tower, about thirty miles to the northward, but which seemed, on account of the rare and pure atmosphere and also because of the size and stupendous height of the tower, to be not more than one-third of that distance. Then from the other side of the car could be seen the Three Pumpkin Buttes towering skyward and eighty-five miles away. The Devil's Tower was surmounted about a year ago by some venturesome fellow, and is said to be 800ft. high.

Upon coming into the valley of the Clearwater our eyes were rested by the grateful sight of the results of irrigation. Oats, alfalfa, corn, etc., were growing in most luxuriant profusion. This valley we followed from the railroad to Buffalo, a distance of thirty-six miles. Our host Tommy Gardner, and nis neighbor, Billy Brock, met us on the arrival of our train with two two-horse spring wagons, and by 5 o'clock (twenty minutes after the arrival of the train) we were all comfortably settled in the wagons and on the road for Buffalo.

Our ride to Buffalo was made in about six hours, was enjoyed by all, and was uneventful except for a little episode at ——— Ranch, which we reached about 10 o'clock P. M. Here Tommy treated us to our first taste of cowboy hospitality in true wild and woolly Western style. Being in the forward wagon, he stopped here and entered the unbarred ranch without much ceremony, and striking a light, he began to rustle around for coffee and something to eat. Whether he called for the cook to get up or not, I don't know; but as I entered the ranch Johnny, the cook, made his appearance only partly dressed, and rubbing his eyes to get better awake, wanted to know "Who the devil are you, anyhow? I don't know one of you. We don't keep a road ranch." This and much more that is better unwritten; Tommy all the time proceeding with his efforts to get the fire started and rummaging for coffee, tea, etc., etc. The Colonel, not being fully informed of the rights vested in Gardner by the owner of this ranch, nor of the old custom that prevailed in the halcyon days between cook and cowboy, protested against the incivility of abusing a man in his own house (thinking of course that Johnny was owner), and insisted that we move on to Buffalo. Some of us also thought that this would be the better thing to do; but, realizing now how cold and chilly we were, and the comfort of the fast reviving fire and prospects of something to eat and drink, concluded to see the fun through.

The V. P. being somewhat of a "rustler," too, understood the situation and put in some work through that part of the medicine chest marked "for snakes" by the Doctor, which mellowed down Johnny so completely that in about ten minutes we might have had everything in the ranch, with a hearty welcome to boot from Johnny. This was a very laughable and practical illustration of what a dry and sleepy man will do for a little "good medicine."

Being rested and refreshed, we returned to the wagons and quickly passed over the remaining ten miles of our journey to Buffalo.

Tuesday morning, Sept. 4, at 10 o'clock we started for Gardner's Ranch, on the Red Fork of the Powder River, a distance of 65 miles. About 2 o'clock we arrived at Carr's Ranch, and stopping here inquired whether we could get dinner. Mr. Carr came up from the field (where he had been cutting oats) and in a very friendly and hospitable manner declared we were welcome to the best he had, but that his larder was low, that he had no fresh meat, but we should have some bacon, potatoes, tea, etc., etc. One of our hunters, thinking that perhaps he might secure some game while dinner was being prepared, started out with his Winchester repeating shotgun, and in ten minutes returned to the ranch with six sage hens, one of these (the first one killed) being shot by Brock with his rifle and the other five with five consecutive shells from the shotgun on the first rise of the flock of 12 or 15, as they got up somewhat scattered and in the usual dilatory way of the young that have not before been shot at.

Within about half an hour after our alighting at this ranch we were eating as good a dinner as ever the writer sat down to, consisting of young sage hens, bacon, potatoes, tea and bread. I had frequently heard that these birds were not edible, owing to a very disagreeable "sage" flavor, but I must declare that they were as palatable to me as good game usually is, and all seemed to enjoy them except the Doctor. The water here was carried about five miles and was no little alkaline.

The greater part of the ride to-day was over tolerably good roads, fairly well bridged for as sparsely settled a country. About dusk as we descended from the Macy to the North Fork of Powder River, we struck an old Sioux trail, plainly marked by heaps or mounds of small stones, said to have been placed there by the noble red man's squaw years and years ago. I had frequently heard that "when you strike a well marked Sioux trail you are sure to be on the most direct road between two points." It ran in our direction and we had to take it, but I thought at the time if that was a fair sample of "Poor Lo's" engineering, no wonder the unappreciative whites have sent them to the happy hunting grounds. The Colonel, too, seemed to share my disgust at the steep gradients and sharp curves of this old highway.

At dark we reined up at Morgridge's ranch, somewhat tired, very hungry and altogether glad of the opporunity to give our horses a chance to rest. Very thoughtfully and considerately (as I supposed) I suggested to the old lady of the ranch that there was hung up quite a bunch of nice, fat, young sage hens and a jack-rabbit at the back of the ranch, but she, seemingly indignant said, "We don't consider sage hens and jacks game, indeed we get tired of antelope, venison and trout." Of course I was silenced, but my private opinion after further observation is that much of that sentiment was "pleasures of memory."

When the madam allotted the beds and the Doctor and I found that our "berth checks" called for a bed on the floor we naturally felt a little envious of those who drew "sure enough" beds, but when we found out later the true inwardness of the matter we congratulated ourselves that we had used our own bedding, even though the soft side of that floor did not conform strictly to the outlines of our sides and back.

Wednesday morning we got our first sight of antelope. Three appeared on the top of a hill about two hundred yards to our left as we passed and then disappeared

behind the ridge, and before we could get to the top of this ridge the antelope were nearly a half-mile off. Several shots from our Winchesters only made them run faster, the balls in each case knocked up the dust several hundred feet behind them. The ride this morning down the bed of a dried up stream was truly grand and picturesque. Words cannot describe the scenery, nor can it be compared to any other than Rocky Mountain country. Whatever nature undertook here was carried on in a bold, startling manner and man seemed to be awed into silence The sun shone forth brightly, and when we were able to ride under the shade of the high and almost perpendicular walls of the mighty cañons, we were reminded of Isaiah's beautiful sentiment: "The shadows of a great rock in a weary land." About noon we drew up our teams at Gardner's ranch, the end of our 101 miles wagon journey from the railroad, made in about eighteen hours of driving. The remainder of the day was spent in resting, getting our guns in order, and in a reconnoissance of the nearby country. Nothing much was done on Thursday and Friday, because of the threatening weather, except to secure a guide and make further preparations for a hunt to the Big Horn.

On Saturday five of us got a bright and early start for a hunt for antelope and deer, going to Arch Creek and the Park, a distance of perhaps eight or ten miles from our ranch. Our party soon got separated, and when we returned in the evening no man could display any game but the writer, who, not wanting to own to a "skunk" shot a cottontail. But we had some tales to tell, the one of how Billy Fraker did not get his buck was told best by the writer, his companion in the disappointment. Billy feared the Colonel would cashier him, and could only be persuaded to go back to the ranch by sundry promises and entreaties too numerous to mention.

The writer was very thirsty about noon, and to get some water, said to be a "little way down the cañon," entered a pocket of one of the gulches leading into a long and deep cañon, and going down this gulch a short distance we were suddenly surprised to see a fine large buck, having five or six prongs to each antler, jump up out of some grass on the north side of the gulch and lope slowly and gracefully ahead of us. Billy dismounted and bringing his rifle to his shoulder waited for the deer to jump out of the gulch at a point ahead of us where the upper wall showed a slight depression, and to which the deer seemed to be directing his course. He did go out there, and after making a long and high leap, stood on the edge and turned his full side to us, presenting a full silhouette against a clear sky background, which made a picture that will not be effaced from memory as long as life shall last. Billy drew such a deliberate bead on him that it made me impatient, but finally snap went his gun and off jumped the deer from our view in one or two bounds. "What in thunder is the matter with your cartridge?" said I. Billy meekly replied, "I forgot to pump my gun and there was no cartridge in the barrel."

Circling around to the northward we tried to get another chance at our escaped buck, but saw nothing more of him, and after a while gave up the search and proceeded on our way for water. We rode for about three hours and then had to drink out of a water hole in a rock from which, after we had quenched our thirst, the horses refused to drink.

We were now at an elevation about of 7,000ft., and it required an open mouth and the greatest effort at inhalation to get sufficient breath to supply the lungs of one not acclimated.

The next day being the Sabbath was generally observed about as well as at home, except that none of us went to church, owing chiefly to the fact that the nearest house of worship was sixty-five miles away. The hospitality of those Wyoming ranchmen and their wives was unsurpassed in any experience we had ever had before. Our hostess and her friend Miss Smith were most estimable ladies, and were such horse-women as our grandmothers were in the East in the days when there were no carriages. Either of these ladies would saddle and bridle the horse kept picketed near the ranch and galloping out of sight over the ridge to the "range" would soon re-appear driving a bunch of from twenty to thirty horses, and inclosing them in the "corrall" would select such as would seem safe and pleasant for a "tenderfoot" to ride. In the evening, Mac, the writer and guide rode over to the latter's ranch, a distance of about five miles, preparatory to a long talked of hunt on the mountain.

Monday morning we got up at 2 o'clock, and after getting breakfast, baking biscuits, etc., etc., and catching horses, we got started for a hunt twelve miles away on the Big Horn Mountain. We reached our proposed camping place at 7 o'clock. Mac, myself and our guide (Fraker) each rode a horse, and the guide led one as pack horse, on which was our bed, frying-pan, three tin cups, bread, salt and pepper, tea, and pot for steeping same.

This is a full and complete list of all we had, no meat, flour, or anything more, and for our dinner we would have only tea and dry bread unless we could kill some game. We unpacked our horses and picketed the pack horse so he might get grass, and then commenced our hunt in earnest, each one still riding, and as I had ridden very little for the past fifteen years, I soon began to feel the truth of the old saying, "Seldom rides," etc. We had not gone a quarter of a mile until we saw a bunch of seven mountain grouse, but we all had rifles only, and fearing we might scare away larger game refrained from shooting at the grouse. We, however, rode close to where they were feeding and got within 25 or 30ft. of them without making them rise or seemingly to disturb them.

I think it would have been an easy matter for us to have killed at least five of them, and you may depend that we regretted not doing it afterward.

We pushed on, and just at 9 o'clock, as we came to the top of a divide, saw to our left a bunch of eighteen antelope quietly feeding. We got back out of sight quickly without their having seen us and without disturbing them, and dismounting, crawled up along the side hill behind the timber and rocks to within about 1,200yds., where we were securely hidden and yet could see the antelope plainly. It was a beautiful sight and we watched them a good while, but they seemed to be feeding away from us, and getting impatient, we planned to drive them so that two of us might get a reasonably fair shot at them as they ran by.

They were, however, too sharp for us, and although we shot at them several times, it was too great a distance to do them any harm. We followed them up for two or three miles, made a circle and came up within 50yds. of the leader as we were crossing another divide. But the meeting was a surprise to both parties, and before we could gallop up to the top of the hill the antelope had turned and were out of reasonable gun-shot. All we saw of the leaders, an old doe, was her big ears as she looked at us over the top of the hill. We did not follow them further, but after seeing a badger, coyote and some ground hogs, came to some water about a mile from camp at 11 o'clock and concluded that we were hungry and that we would have to make our dinner on dry biscuits and tea. But as we came a little nearer to camp we came into a large bunch of sage-hens and shot three of them in the heads with our rifles. These Mac very quickly and neatly prepared for cooking by skinning and cutting out the breast from each side of the bone and the legs off, and being very hungry we ate as though it was as good a meal as we ever enjoyed anywhere.

Mac got a headache in the afternoon, and I was very tired; so we concluded that Fraker should go out for meat alone. He, somewhat superstitious, changed horses and started southward, saying that he would not be back until after dark unless he got meat sooner, that we should stay about camp and keep up the fire and not wander off far lest we should get lost, for the country thereabouts looked all alike to one not accustomed to it.

I gave Mac some sugar pills; he felt better in about an hour, and we concluded to strike out on a short expedition on our own account. We crossed over the first divide to the southeast and got into a pocket that seemed to promise favorable for grouse. I took one side and Mac the other and we soon got interested.

Mac shot a large rattlesnake and I got on to a fresh deer trail. Soon the pocket closed into a gulch and then to a canyon, and as we traveled on down the sides grew so deep that we could not get out. After riding an hour and a half down this canyon and not striking the running stream of water on which our camp was located, and which we had expected to find long before, we concluded that we would have to go back as it was half-past five, and allowing the same time for returning that was required coming down, it would be almost dark by the time we would get to camp, not allowing anything for mishaps which are very likely to occur under such circumstances.

After returning up the canyon quite a distance, after much effort we climbed out by leading our horses up a slope steeper than the roof of a house. Indeed it was so steep and rough that one could scarcely crawl up. But getting fairly out of the canyon we came on to a "park," where we found fairly good riding. And just as the sun was going down there crossed our path a beautiful, big, six-pronged buck. He was, however, too far off for us to shoot, and so dismounting from my horse I made for him as best I could. He did not see us, and as the wind was favorable, could not scent us, but as the light was too strong for us he got away without my getting a shot.

We soon mounted our horses and made as fast as we could in the direction we thought our camp was. In a few minnutes we saw the buck again about 800yds. off across a "pocket." We got down off our horses and each saluted him, both firing about the same time and cutting the dust so close under him as to make him strike a gait that carried him out of our sight before you could say "Jack Robinson."

We started again for camp, no little alarmed, fearing we were in for a stay out all night without our bed to keep us warm. In a few minutes we saw a large buck antelope, and again dismounting we gave him a volley that made the mountain ring and the antelope "get up and dust," but with all his bones whole and no lead in his skin.

The excitement of seeing game made us forget our fears of being lost, and after some more observations of our compass and a hard ride of about quarter of an hour, we came to the pocket that we had first entered three or four hours before. From this point we had no difficulty in locating camp. When we came to our pasture we saw "Old Ned," the pack-horse, and thus knew that Mr. Fraker was in camp, and said one to the other that Fraker must have gotten some meat or he would not be in yet. When we got down to the stream near the camp we met Fraker, who told us that he had not gotten any deer or antelope.

But upon our getting close to him we remarked about the blood on his hands, when he said that if we would come up to the camp he would show us a sight we had never seen before. At the camp we saw a doe Rocky Mountain sheep and her buck kid lying side by side. Well, you may suppose that we were rejoiced at his success, and particularly pleased when we smelled the savory sirloin frying in the pan. I ate a big supper, but Mac's ride had been too much for him and he went to bed at once without any supper. After smoking and swapping yarns with the guide for an hour I turned into our bed, with the beautiful, starry, moonlit canopy of heaven covering us, and soon fell asleep hoping for such a stroke of good luck for myself on the morrow.

In the morning we were off for another hunt. When we got near the place where we had seen the antelope the day before, it was arranged that I should go around to the right and Mac and the guide should go to the left, and, after covering certain ridges and valleys, should meet at an agreed point. I felt pretty sure of being able to find the way, and so started off hopefully. After riding and walking about for perhaps two hours, I saw Mac and his companion about half a mile off, and, attracting their attention, I rode rapidly to meet them. They had seen a small bunch of mountain grouse and had gotten one. I had not seen anything.

After riding for a half hour more, and visiting the place where Fraker had shot his two sheep the evening before, I began to be somewhat tired and discouraged, and thought that this hunt was likely to end as all my others had, and I should go home saying I had hunted deer in nine different States and not shot one yet.

The guide proposed that we should strike off to the north three or four miles to points we had not been before to try our luck again for antelope. We had not gone 200yds. before he said, "See that deer there lying down in the timber?" It was but the work of a moment for us to dismount, and it was agreed that as Mac was the oldest he should have first shot. The deer was about 125yds. from us and lying among the timber behind a log, and we could only see his head. His ears stood up straight and I saw his small antlers close to his head. Mac walked cautiously up to a pine tree obliquely toward the deer, but instead of stopping at the tree went on toward another nearer to the deer and further up the hill (he afterward explained that when he got to the first tree the deer was entirely hid from him), and just as he got up to his second tree and had rested his rifle against it the deer got up and shook himself, presenting a full side view. Mac cracked away, and behold four other deer rose up all around where the first one had lain. The guide and I were standing by our horses, and after Mac shot we each fired, but I am of opinion that none of these shots took effect.

The deer seemed to be rattled and did not run more than 150yds. or so, then stopped at the top of a little rise. Two of them were standing pretty close together, with their buttocks toward us; one was a nice buck and the other I thought to be a doe. I took quick aim at the rear end of the back and pulled; the buck made a plunge toward us, and I knew that I had hit him hard, and took off my hat and threw it up, shouting, "Hurrah for my first deer!" The guide said, "Shoot him again; he'll get away!" but I said, "No, don't you do it, for I don't want to have his head spoiled." But as he still plunged heavily, but all the time getting nearer us, and seeing Fraker aiming at him, I said, "Let her go," and we each shot at him again. By this time the buck had got caught in an old pine treetop and lay quietly, and another was plunging around as if wounded. Mac pulled on this one and hit him above the eye, knocking off one antler. The guide and I ran on down alongside of the hill, and seeing another large buck fired at him. Fraker followed this fellow and got another shot. We were now sure of two fine deer, and you may know that I "cut up high." The whole affair did not last over three minutes. Mac shot three times, Fraker four, and I got off eight, so you may imagine that there was a lively time.

When we came to examine the deer my buck had in him but one shot, fair in the rear between the hams, and the second one was shot almost similarly, but with the additional hole above the eye, and one antler gone.

We packed them to camp, and after a hearty dinner of choice sirloin of venison, tea and biscuit, started for home with three horses packed down heavy with game and camp equipage and one horse for the three to ride. My feet got sore, some nails in the soles of my boots making trouble by working through, and by the time I had walked eight miles and we were back to Fraker's place, you may suppose that I was tired. After supper we started for our ranch, five miles away, each riding a horse and leading one packed with about as much game, etc., as he could carry. Our party gave us a warm reception when we pulled up at the ranch.

The next day we started homeward, stopping at North Fork to fish for trout. In this we met our only disappointment, not seeing nor catching a single trout, nor even getting a bite. Thursday, the 13th, we pulled up stakes and started for home. T. M. N.

## TEXAS AND THE SOUTHWEST.

AGAIN the buffalo herd; once more Val Verde county. This time it is Dr. J. B. Taylor, of San Angelo, who swears to the existence of a herd of buffalo in the West Texas cañons. Dr. Taylor is a sportsman who is well known throughout the West and Southwest. Hearing of the existence of the bisons in Val Verde county, he immediately organized an expedition to find, and if within the range of possibilities, capture the animals. The herd was trailed to and across the Rio Grande and into the mountains of the Mexican frontier, where the search was abandoned. Application will immediately be made to Gov. Diaz, who is an ardent sportsman himself, for permission to invade the Mexican territory on the part of the searching party, and there is no doubt that the Mexican government will readily grant the permission.

### A New Duck Fake.

My friend A. B. Critzer, the proud possessor of the only 24-gauge gun in the State, of whose shooting much has been written both in prose and verse, is also an inveterate duck killer. As a committee of one to stimulate the shooting of waterfowl on the great San Antonio preserve he has immortalized himself, and his name will go down kerslap on the pages of history that is usually set aside for men that reach the high perch of distinction on which my friend is at present reposing.

As soon as the generous J. Pluvius had poured his tubfuls of wet water on the favorite bottom known as Mitchell's Lake, the tule, fly and water lilies began to do business as of yore. The senna beans (a fine duck cover) opened up shop, and when the next rain came along the entire system of vegetation joined hands and with a skyward bound covered the bottom of the lake until the eager tips parted the waters and shot away into the air. On the vegetation grew until it now hides the water. Here is where Mr. Critzer fully developed.

In consultation with Charley Hummell one day, Mr. Critzer evolved the idea that the reason there were not more ducks feeding on the lake was because the traveling webfeet could not see the water through the weeds, and both he and Charley have been advocating the adoption of such a system as would call the attention of the birds to the dampness that placidly awaited the feverish paddlers. Accordingly, an army of Mexicans was hired to cut away a few hundred acres of cover, and the ducks will now have a chance to see "where they are at." Some of the most wicked duck hunting members of the club advocated the purchase of 500 little balloons. They could be anchored to Mother Earth by means of 200yds. of chalk line each, and turned loose with pungent legends attached, such as the following:

Mallards! Water below. Plenty feed. Keep off the grass.
Blue and greenwing teal! Good puddling. For further particulars apply to Spoonbill & Co.
Ducks!! Get a move on you or Scolopax will clean out the worms.
Look out for mud hens!

But then Messrs. Critzer & Hummel don't like the sign idea, and say that the balloon suggestion is nothing but an airy windy.

### Plenty of Snipe.

I took an evening and morning hunt at Mitchell's Lake last week, and found excellent shooting. We could have killed much more game than we did, but then a few of us down here have come to adopt the beautiful idea handed out by FOREST AND STREAM and Mr. Hough of "Chicago and the West," that one can have just as much fun in killing 10 birds as if one killed 100, so we contented ourselves with a half-dozen teal per man and a dozen snipe to the gun for the day. The snipe are plentiful and fat

and juicy. The Texas pigeon shooting is something nice, and I guarantee rare sport to any visiting sportsman who is fortunate enough to come within our radius.

### Plenty of Ducks in the City.

The above head line will sound rather fishy to some readers of FOREST AND STREAM, and outside of San Antonio it will be hard to find a corporal's guard of sportsmen who will believe that I saw this morning (Oct. 10) five large flocks of bluewings, two of gadwalls, three of sprigs and about 25 canvasbacks within the city limits of a city of 60,000 souls, on a body of water which is skirted by an electric street car line that yanks passengers downtown in 15 minutes. Such is a fact, however, and a visit to the West End Lake will not only demonstrate the truth of the above lines, but will disclose the prettiest body of water on earth, picturesque surroundings and more fish to the square inch than any other lake in the country.

Drop in and see us, you of the North. You will find the latch-string dangling on the outside. If you doubt it ask Hough, of "Chicago and the West."

### Sam Allen of Houston.

I don't like to be personal, but I can't help noticing a good man when I meet him. The above named gentleman is a citizen of Houston, gentleman by birth and inclination, a sportsman by nature (can't help himself) and one of those keen blades in camp that Nimrod dreamt about when he wasn't hunting. Col. Allen owns a yacht and a few million acres of swamp lands on the Galveston Bay coast, and your humble servant has been his guest on several occassions. I have now before me a cordial invitation to join him in Galveston the last week of this month. The threat is made to take in the entire East Bay, and the ducks, geese, snipe, curlews that we will see will undoubtedly make good reading for our Northern brethren. That is, saying nothing about catching the red fish and trout in Oyster bayou and an occasional alligator. The Colonel says we are to have the same yellow cook we have had for years. But say, I forgot to mention the oysters we will fish up every morning.

We won't do a thing to 'em.

Mr. Howell Rice, a devoted disciple of the rod and gun, captured a large garfish off Rockport last week that measured 7ft. 8in. from nose to tail and weighed 132lbs.

Three hundred sportsmen in San Antonio are anxiously awaiting a norther, which has been predicted by the weather sage of St. Joseph. The first flight of bluewinged teal and jacksnipe have come and gone, and the swamps of Bexar county are left in possession of the bitterns, blue herons and the howling coyotes. TEXAS FIELD.

## IN THE WHITE RIVER JUNGLE.

I VISITED the other day a place that was to me very interesting. It has been my custom for the last six or seven years, to spend a few weeks each summer on a farm about fifteen miles north of Indianapolis. Here I could lounge about, fish, either in the creek near by or in White River, which is little over a mile away, or (that which I probably followed with keenest relish) while away the time in the great wood, lying in wait for young fox squirrels.

I have always looked upon the arrangement of this wood as particularly happy. It is, perhaps, a mile wide and two and a half miles long. The central portion is very dense and thickly covered with underbrush. Through a part flows a creek, and I have spent most pleasantly whole days dividing my time between the creek and squirrel hunting. There is nothing exciting about such sport, in the sense that it is hazardous. The fishing is very ordinary and the hunting consists in lying in wait for the wily fox squirrel or catching his gray brother as he leaps from tree to tree. In fact, if one is not in search of lively sport but simply wishes to spend the time doing nothing, this little spot seems to me to offer peculiar advantages.

It was on the occasion of my last summer's visit that the incident which I am about to relate, occurred. On the evening of what had been a hot day, I took my gun and started for a particular place in the wood. That place was the border line between the thickly under-grown and the open woods. It was here that I hoped, at or about sunset, to get some good shots at an especially lively lot of little gray squirrels that I knew frequented the place, and could only be gotten within range either early in the morning or late at evening. "About half an hour by sun," to use the vernacular, I arrived at the place and the fun soon began. Now this is the one exception to the ordinary squirrel hunting. To me, under just such circumstances as I now found myself, it is the most exciting sport with a shotgun, a few kinds of bird shooting excepted. I chased them from tree to tree, catching them as they flew up or down the large tree trunks, or leaped from one limb to another.

Presently there came a lull in the excitement, and I suddenly realized that it was sundown and that I had gotten a considerable distance out into the thick, undergrown woods. I started homeward. Just as I was about to emerge into the open, however, I saw a squirrel whip around a limb in the top of a tree. The temptation was too great. I must, I thought, get this one, if possible, and then I would go home. It would make an even dozen. Walking around the tree to where I could get the light fairly on the top—for although it was almost dark in the dense woods, the tops of the tallest trees were still lighted up—I sat down. I sat there some time, my feet under me, my back against a huge oak, my gaze fixed upon the spot where I next expected to see the squirrel. I heard, or thought I heard, a slight noise in the underbrush in front of me. Straining my eyes in the change from the light of the treetop to the semi-darkness of the woods, I looked long and earnestly in the direction of the disturbance, but could neither see nor hear anything. Turning again to the tree, I saw the squirrel, acting at first as if some one were driving him around, and then apparently watching something almost beneath him in a way in which I could not account for. Moving up the safety on my gun, I was about to turn so that I would be in an easier position to shoot, when an unmistakable cracking in the bushes, slightly to the left and in front of me, arrested my attention. Straining my eyes again in the same direction, I saw, partly behind a clump of bushes, an object of some kind. I noted first that the object had a pair of very villainous-looking eyes, and my first thought was that it was a catamount; for I believed the dense jungle part of that woods capable of producing any kind of a wild animal, and report had it that a catamount had for some months dwelt there. He had, I thought, unexpectedly come upon me, and would, if I urged the matter, give me a fight. I had not the slightest notion of urging the matter.

However, in much less time than it takes to tell it my eyes had become accustomed to the dusk and I saw, not a catamount, or any ordinaay American beast, but a real, *bona fide*, full-sized, shaggy-maned lion. I at once knew how to account for his presence there, and mentally reproached myself for my own incredulity. It was reported throughout the country that a lion had escaped, two days before, from a show at Hobbsville, and was running about, no one knew where. However, as we at uncle's had not yet received the weekly papers, and had no authentic information concerning it, we did not believe it. Some of our neighbors believed it so implicitly that they were almost afraid to venture out of their houses. When we were discussing it at my uncle's and mentioned the fact that the man-eater had not been heard of in miles of us, and was not even reported to have taken that direction, I could have found it in my heart to "guy" some of our good country folk. Now, I confess, as I recalled it all, a feeling of profonnd respect for them came over me.

There he stood, not in the noble, defiant-looking attitude in which I had always seen him pictured, and had often beheld him in menageries, but half crouching, his ponderous head lowered almost to the ground, his tail nervously switching, he reminded me of a cat about to spring upon a bird. It was pleasant to think that I was the bird.

My first active impulse after I had gotten through with these reflections, which had scarcely taken the fraction of a second—for a man's mind, in cases of great danger, as in dreams, is capable of the most wonderful activity—my first impulse was, I say, to flee. I confess I never had so good an opinion of my legs as I had then. I felt easily able to out-sprint Mr. Leo or whatever his name was, and leave him out there all alone in the dark. But that would have been cowardly. Besides, despite my unusual and unwarranted opinion of my legs, my better judgment told me it would be an injudicious move. That lion, I reasoned, wanted me as badly as I didn't want him, and to get me he would have to cross an open place almost 10yds. wide. I did not think he could leap at one bound, and if he tried it I hoped to be able to give him his quietus. I also believed that the first one of us who made a move would make a mistake. My gun, a 12-gauge, was a fairly close shooter, and at 10yds. I believed I could end Mr. Leo's identification with the show business. I felt that if I did not he would end my identification with any kind of business.

Meanwhile he still stood there in that half crouching position, his tail continuing that same nervous, cat-like switching. I have often heard the tail of a lion lightly spoken of, but I must say that this one was the most peculiarly exasperating thing I have ever seen.

As we crouched there I tried to think of all I had ever read in books about the habits and traits of lions, but it was a sorry lot of information I recalled. About all I could remember was one of the first things I had ever read about them, and that was that a lion always killed its own prey. At the same time I remembered to have lately read that that was not so, and that they often preferred to eat the game killed by some one or something else. I sincerely hoped—and felt that it was hoping against hope—that this one would turn my execution over to some animal or something, I did not care what it was, just so it would not glare at me so and switch its tail in such an indescribably uncomfortable manner.

Then, in the event of me coming out second in the approaching encounter—which did not seem at all improbable—I began to think of matters I would like to have arranged. There was this or that favor I would like to have done a friend, and I remember there was one pet scheme or theory I had long cherished that I would then have given a great deal to have communicated to some one. But there was no one to tell it to but Mr. Leo, and I was not, at that time, upon sufficiently confidential terms to warrant me in broaching the subject to him.

All these and many more things passed through my mind in an incredibly short time. I began to feel bad, and the more I thought about my chances the worse I felt. All the evil things I had ever done—there were no good ones, I believe—stalked before me, and I felt still worse. A remorseful conscience was about to shatter what little nerve I had, up to that time, retained. I fully realized that I was getting in a bad way, and with whatever feelings of the ludicrous I can now look back upon my plight at that moment, I cannot forget the fact that it was a matter of extreme seriousness with me at the time and, withal, a painful experience.

It was, perhaps, fortunate for me that the enemy decided to move at this juncture. All this time I sat there in a position ready to spring, as I fully intended to do, without moving a muscle, and, aside from the beating of my heart, I believe, making no noise. Short as was the suspense, it was so harrowing that I do not think I could have endured it much longer. Watching him closely as I was, his movement was so quick that he almost took me by surprise. I can not now tell, with a satisfactory degree of certainty to my own mind, how he did it, but, since from his position he could not leap directly toward me, I believe he meant to reach me by two leaps, a sort of a flank movement and an attack direct. On account, as I said, of the extreme rapidity of the movements, the semi-darkness which had begun to envelop the woods, and my wrought up state of mind, I can not tell exactly how it happened, but I think I fired as he struck the ground the first time. As I did so I leaped to one side. He came on and landed almost where I had been sitting, but a few feet short. As he came to the ground he let forth a roar which almost deprived me of my wits, and came near causing me to drop my gun. I was now thoroughly desperate, however, and as he turned crouching toward me the second time, I covered him square and gave it him full in the forehead. Again I leaped to one side, this time fully resolved to try the sprinting tactics; but in a bound or two I landed fairly in the kindly embrace of a huge spicewood bush. I have often thought of that amusing—though at the time painful—predicament, and wondered that I did not die right there. In my frantic efforts to extricate myself I almost tore my clothes off and scratched myself in a frightful manner. As soon as I had gotten out I saw that I was only making a fight against a spice bush, and picking up my gun I reloaded it and advanced toward the enemy. He lay almost where I had given him the second shot, apparently lifeless. Unwilling to take any risk, and determined to make assurance doubly sure, I shot him again in the forehead. He did not move, and I decided he was dead. Then I sat down to recover my wind and my wits. Presently I began thinking of the peculiar manner in which the beast had acted after his second leap. I went and examined him and found that my first shot had torn away a portion of his under jaw and disabled a foreleg. That accounted for his slow motion, and was the reason I was able to shoot before he could spring the third time.

I then started for my uncle's. I did not want to tell him what I had really done, so I told him I had killed a hog. He gave it as his opinion, and in no very uncertain terms, that a man who had as good a pair of legs as I had and in a place where so many clubs were to be found as were there, who would then deliberately shoot a hog was a fool. He declared he would not help me haul it in, and hoped it would cost me a good round sum for my "foolishness." When I explained my tattered and scratched condition by saying that I did it running through the brush trying to keep out of the porker's way he made so much fun of me that I almost lost my temper. I prevailed upon one of his hired men to go with me, and when we were almost there I explained to him that I had not really killed a hog, but another kind of animal which he should see when we got there. I believe he thought I had killed a man, for the way in which he turned toward me seemed to indicate that he was disinclined to credit either of my stories. Finally we got to the spot, satisfactory explanations were offered, and after a good deal of tugging, we got Mr. Leo aboard and hauled him home in state. The next day his keeper and another man came for the carcass and I kept one claw.

The other day I stood on the very spot where it had all occurred. I took the claw (now mounted and arranged for a watch-charm, though I never use it as such) from my pocket and thought of the encounter. Then I walked over and stood by that huge spicewood bush which had apparently recovered from my furious attack; and as I thought of the way in which I had done battle there and had assailed that perfectly respectable and well-meaning bush I said half aloud, "After all, old man, there's where you made your best fight."

Then I walked meekly back to my uncle's.

C. E. WILKINS.

## BOSTON GUNS.

BOSTON, Oct. 20.—Coot shooting along the Massachusetts shore has been excellent of late. The recent gales and stormy weather has sent forward large flights of these birds, and the gunners have been on the ground, making some very good bags. Mr. Geo. T. Freeman and his friend, Mr. O. W. Whittemore, have been making a good week's shooting at Anisquam. They were on the shooting grounds at that celebrated cooting point during one of the recent gales, and report an unusually large number of coot flying. They got as high as thirty in a day on the best days. They did not get the usual number of old squaws, eider, black and other ducks. The same report comes from the cape. A gunner told me he had taken a few black duck this year at points where he got twice as many last year. "There are millions of coot," he remarked. From the leather trade there are a number of noted gunners out this week.

There is a scarcity of partridges, or ruffed grouse, complained of in the Boston market. Noted salesmen, who have been in the business for years, say that the trade started off well, with a good many birds to offer, but later they have stopped coming. One thing is curious, the number of partridges that have flown into the towns, and alighted on houses and fences. Windows have also been broken by these birds. Two or three have been seen on fences and buildings in the cities of Auburn and Lewiston, and one or two have been shot. One has been shot in a graveyard at Bangor, and one or two within the city limits. At Machias one is reported to have flown into the office of a noted lawyer, smashing the glass and falling exhausted on the floor.

The accounts of deer shooting in Maine are still of the most glowing character. Many Boston gunners are returning with the full quota of the law—three deer. Moose, too, are being taken in numerous instances. One or two big Maine moose have already been cut up and sold in the Boston market. Lynn has a big moose on exhibition, the good luck of a local gunner. Bangor butchers have cut up several moose, and nearly every other city in the State has had its moose on exhibition. But the moose lies are the most exciting. A Maine girl has been treed by a moose, some portions of her dress being caught on the animal's horns. A moose has walked deliberately up the streets of Machias, and out of love for the Maine game laws, which have so well protected his kind, he started to walk up the court hourse steps, but was frightened away. This was before the beginning of the open season. A big bull moose was found in a Newport farmer's pasture, with his horses. The farmer went out on a dark night to "catch the old mare," when what was his surprise, as he put the halter over her head, to find that she had horns spreading 6 or 8ft.

Mr. S. B. Woodman is on a hunting trip with his friends, P. J. Bessee and Capt. Elliot Rogers, who met the party at Machias, having sailed in his four-masted schooner from Boston to that point. From Machias they went to Princeton. There they have taken Indian guides and gone up the river. They have been absent a week at the time of this writing. A big bear has reached the market here to-day, and it has doubtless come from one of these hunters, though full reports have not yet been received.

Mr. S. C. Dizer, so well known as a lover of trout fishing, is absent in the Maine woods. There are reports that he has already taken two deer, but not being satisfied with their heads, he is trying for his third one, with the hope of getting a better head and antlers. Mr. Dizer has taken his big trout, aad now it is an antlered buck that he is after. Mr. L. Dana Chapman is absent at the Megantic preserve. He has gone this time with several thousand landlocked salmon of one year old, the quota allowed him for the Megantic Preserve by the Maine Fish Commissioners. He will try for a deer on this trip, and his chances of success are good.

Mr. and Mrs. Westley Jones are back from another annual hunting trip to the Adirondacks, and from their hunting lodge, Camp Kickapuck. Mr. J. Rolin Stuart

Jr., their guest, killed two deer. Mr. Jones also got several deer to his score. But Mrs. Jones has again borne away the honor of the hunting trip. She was alone in the woods, when the hounds drove a fine buck past her. The animal was coming with the speed of a flying bird, but with a couple of shots from Mrs. Jones's rifle he fell dead in his tracks.

Dogging deer is being again practiced in Main this year. A gentleman who visits Bangor very frequently on business trips, and who is a good deal interested in fish and game matters, was on the train the other day on his way home to Boston. On the train was a party of three sportsmen who had been having "great luck with deer," as they expressed it. They invited the gentleman into the baggage car to see their game. They had seven deer. The gentleman asked them where they had obtained them, but they were not willing to answer. He suggested that they probably used dogs in obtaining their game. One of them looked out of the car window and remarked, "We are out of Maine now. Yes, we did dog them. Everybody who gets any deer uses dogs. We have found that out. You don't suppose that we are chumps, do you? With dogs we get deer. Without them we get none. The game law, oh yes. We are out of that State."

SPECIAL.

## CHICAGO AND THE WEST.

[*From our Staff Correspondent.*]

### Horicon Marsh O. K.

CHICAGO, Ill., Oct. 19.—All this fall the members of the Horicon and Diana clubs, which control the famous Horicon Marsh of Wisconsin, have been annoyed by a series of petty legal troubles instituted by local lawyers ostensibly working for the interests of the Lombard Investment Co., holders of the chief equity in the title of the lands. There have been permits and poachers, arrests and rearrests, injunctions and counter injunctions, enough to keep the managers in activity and some of the club members in doubt. It is a pleasure to be able to say that these temporary troubles are now well ended and that the club has won its legal battle. This whole thing has been so well taken up in the issue of the Chicago *Tribune* of today that I take the liberty of reproducing the reference in full. It reads:

Chicago sportsmen who for years have shot ducks on the famous Horicon Marsh, Dodge county, Wis., are delighted with Judge Sloan's decision delivered Wednesday at Juneau, Wis. The decision dissolves an injunction granted by the same court Oct. 6 and establishes the right of the Horicon Shooting Club and the Diana Shooting Club to control absolutely the famous 18,000-acre duck preserve for the next fourteen years. After Receiver Sandford B. Ladd of the Lombard Investment Company, a Kansas City concern, bought the property known as the Horicon Marsh at public sale from United States Marshall Pratt, June 28, the company gave a lease of the game preserve to W. R. Grady of Chicago, notwithstanding the fact that the Horicon and Diana Shooting clubs held a twenty-five-year lease of the same privileges as were conceded to Mr. Grady. The two clubs, for each of which Percy F. Stone of this city is secretary and general manager, remained in possession. "Standing pat" with nine points of the law in their favor, the clubs, through Mr. Stone, proceeded to combat any attempts of interlopers to hunt ducks in the marshes of the Horicon tract. Soon after Mr. Grady secured the lease from the Lombard Investment Company he proceeded to do a wholesale business in permits. He announced through the press of Milwaukee and Chicago that he would issue permits to hunt at "$3 each for the season ending Dec. 1."

Mr. Grady added the information that "the Horicon marsh was sold by the United States Marshal June 23, 1894, at Juneau, and bought in by the Lombard Investment Company. The sale canceled all leases issued to that date."

Agencies for the sale of these permits were established at various points, and when the duck season opened their holders swarmed upon the marsh to get their $3 worth of sport. In a short time deputy sheriffs and deputy marshals were given all the work they could do in arresting the permit holders for trespass, and the Dodge County Court dockets are said to be filled with names of the men who bought these privileges from Mr. Grady and his agents. The duck hunting season opened Sept. 1, and after the permit holders had been harassed by the minions of the law carrying the warrants sworn out by Manager Stone, Mr. Grady decided upon an attempt to establish the priority of claims to the ownership of the Horicon mallards by due process of law. Oct. 6 he went before Judge Sloan and prayed for an injunction directed to the Diana Shooting Club, and ordering the clubs, "their agents, servants, employes, patrolmen and watchmen absolutely to desist and refrain from arresting or prosecuting any persons hunting upon the Horicon marshes." The injunction was issued and yesterday was dissolved.

Mr. Robert Rone, of Milwaukee, writes me that he bagged 108 ducks on the upper Horicon marsh in two days of last week. There was something of a flight on, and several guns had good success. To-day Mr. R. B. Organ, of Chicago, and Mr. R. Merrill, of Milwaukee, are going up to take their first visit to the Upper Club, and if the weather there is as cold and rough as it is here to-day they ought to get some shooting.

Your uncle John Watson continues to weekly swat the jacksnipe down on the Kankakee, and hardly a Saturday passes that he does not come in with a calm smile and three dozen snipe.

### In the Far North.

In letters to Mr. Waters, of this office, Mr. Thos. Johnson, of Winnipeg, has the following about the fowl in the far North:

"Before I went West," says Mr. Johnson, "I wrote to an old shooting companion, John Ayre, of the Lake View House, Toronto, the man who went with me on a forty days' shoot some years ago. I had made all arrangements with the Messrs. Galt, who were camping at Whitewater Lake, to leave the camp intact so we could take possession. I received a letter to-day from his son, informing me of the sad news that he died just after receipt of my letter. This has broken me up. I have put guns and everything appertaining away for this year. Mr. John Galt returned to-day, and he tells me one of their party, Mr. R. A. Ruttan, killed exactly 100 canvasbacks to his own gun one day, and that geese were there in tens of thousands, swans in thousands, white, blue and brown crane in immense numbers, and ducks thicker than they have been for years. This is all, as you know, very tempting, but when I remember my dear old friend, John Ayre, with his great big heart, if I went I could not hit a balloon. I couldn't see one at 30yds. if I thought of John. So farewell to ducks for this year."

In regard to the same party of shooting friends who were located on Whitewater Lake, the same writer in another letter says, under date of Oct. 9:

"Our duck shooting is yet good. Mr. G. F. Galt and two friends on Saturday, Sept. 29 (at Whitewater Lake, southwest of Winnepeg a short distance), killed 227 canvasback ducks before noon; in fact, in about three hours.

"I returned on the cars to-day with the party who had been sent out by the Canadian Government, jointly with a party sent by the American Government, to define the boundary in Alaska between Canada and the United States. One of the party is a personal friend of my own, and has promised to give me particulars of the game in that country, which he says is in millions. I will get this for FOREST AND STREAM some time when I have leisure. One thing he told me which I was surprised to hear, that geese and ducks breed and live the year round in Alaska; that is, in some portions of it."

### Some Violators.

Some weeks ago I mentioned the fact that a special-car party of Chicago chicken shooters had been searched at St. Paul and 250 illegal chickens found in their possession. I now learn further facts. The party was made up of Marvin Hughitt, Jr., son of one of the most prominent officials of the Chicago & Northwestern road, and Mr. D. Mark Cummings of Chicago, and I believe they were accompanied by Mr. W. R. Linn of Chicago. I understand that nothing was done to them in St. Paul further than confiscating the game. The party shot in North Dakota, this year at Carrington. They were told that they were not wanted at Dawson, and were also invited to go away from Eldridge for their hunt. A Chicago party that arrived at Dawson a few days before the opening of the season this year were promptly waited on by the local warden. "Oh, I thought you were the Cummings party," said he, apologetically. "We don't want them in here any more." The charge was that this special car of shooters had killed every bird they could and apparently were satisfied with no reasonable limit of slaughter.

It is rather a hard duty to be obliged to make public facts like these in regard to Chicago shooters who should certainly know better and do better. The special-car butcher is no better than the market-butcher; indeed I do not think he is as good. The preserve-butcher is no better than the butcher who shoots over open country. They are all alike, with the benefit in favor of the poorer and more ignorant butcher. These big-bag men are not great sportsmen. They are only great butchers. Now, that isn't so nice a trade. I believe Mr. Linn was not with this party last year, and I hope that next year every member of the party will go content to observe the letter and the spirit of the statute law and the sportsmen's unwritten law of right. If they will not do so, I hope the residents of Dakota will give them the limit. It is time for the Dakota shooters to realize that they are being robbed of their game by unscrupulous shooters from the East. For these shooters, whatever be their station, there should be in Dakota and in Chicago, in private and in the pages of the public press, but one course of conduct. They should be given justice, nothing more.

Mr. Trude, this is Mr. Hughitt. I hope you all and Dr. Thomas will be very good friends.

### Cincinnati, This Time.

Dr. R. R. Braxtan, of Loogootee, Ind., writes me as below in regard to a bit of violation of the game law in his neighborhood:

"I have just learned of the most flagrant violation of the game law that it has ever been my fortune to notice. A drummer from Cincinnati who claims to be a sportsman came out to our town this week and killed and took back to his home with him 27 quail. If the gentleman in question notices this in FOREST AND STREAM, I sincerely hope he will communicate with me and undertake to prove this item false. Quail are plenty, and are good, strong flyers now, but that is no excuse for such unprincipled rascals as he."

And so it goes. The game has rather a hard time of it. I suppose it must be exterminated before we learn its value.

## Camp-Fire Flickerings.

"That reminds me."

## THE SNAKES THAT SAVED THE TOWN.

"ETS dead contrairy ter common sense en nater," exclaimed "Quill" Baldwin after a deliberate and expectoratorial shot at the open stove-door, "thet er critter born en bred ez en enermy ter man should ever dew him er sarvice 'less 'twas by some accident-like. Ef Parson Train wuz ter stan' here this minit en declar' thet he'd know'd er case whar er snake pupposely saved er huming life, I'd think he wuz gone crazy er wuz a-lyin', I would, by ginger!"

"P'raps yer think my wife's great-uncle Steve wuz silly er else lyin' when his house tuk fire in the middle er the night, an' him ersleepin' thar alone en er blacksnake thet hed been er pet fur years en hed er den under their kitchen, cum up stairs en bit him tell he wuk up? Mebbe the ole man wuz dreamin', too, an' p'raps the dead body er ther snake warn't foun' in the ruins ther next day? How wuz that, 'Quill'?" and Zeke Slater leaned back with the satisfied air of one who has put a poser to his adversary.

"That duz seem er bit cur'us," commented Gregory, who was dusting off his stock of candies, "'pears ter me like Divine Providence actin' through the agency of er snake, as 'twere," this last with a solemn sniff or two.

"Ennybody 'cept er complete nat'ral-born idjit 'd know mor'n ter claim thet er snake bit er man ter save his life," muttered Quill, whose pipe refused to light and whose temper was fast failing. "Mos' proberbly ther reptile war out er grub en Zeke's wife's ole gret-uncle wuz better'n nothin' to chaw on. Snakes kin stan' purty poor livin'!" he added after a moment's moody reflection.

"Yew boys all talk like yer warn't weaned yit," interposed Lighthouse Charley, who had just come in out of the storm and was shaking out his great coat. "Turrible night, this, Mr. Gregory; mus' be tuff on ther coastin' schooners, sich weather!" The old man had had a taste of life before the mast when a lad and had not forgotten its disagreeable side. Then as he drew the broken armchair nearer the stove and lighted his short-stemmed pipe he followed up his timely and peace-preserving interruption:

"What duz ail yew, Quill Baldwin, ter utter sech truck ez thet 'bout snakes bein' man's nat'ral enemy?"

"I wuz jes' wishin' you'd come in, Mr. Baldwin," said Gregory, for I knew 't ef enny one could tell us ther fac's 'bout snakes yew wuz ther man. And 'fore we all git settled down le's have some cider; 't's my treat ternight!"

This unparalleled liberality started up six volunteers to go down cellar with the jug, but Gregory, perhaps feeling that one who offers a gift should himself set it before his friends, and perhaps for other reasons, insisted on going down himself, lantern in hand.

After every one had been properly moistened and the collector of snake lore had sufficiently lubricated his vocal organs for present needs and placed a mug on the stove by his side for future emergencies, Lighthouse Charlie began:

"In ther fust place ther cases whar er snake hez saved ther life uv er single bein' air tew many fur me ter think er speakin' erbout. I mout mention ther grass snakes, common little ev'ry-day grass snakes thet save young Ted Somers las' Augus' w'en his skiff wuz driftin' daown ter ther very edge er ther big dam et Derby, en no one could git out ter him. Never heard 'bout thet? Wal, wal, yew folks here ter ther village air the dumbedest set! Why, them snakes hed er nest en ther bow er his ole boat. He never used it hardly 'tall, en w'en they come er-squirmin' out scared by the noise er this dam so near, et didn' tek 'em er minit ter see haow ther lan' lay, er rather haow ther water lay. Jes' tuk hold one 'nother heads ter tails so 's they made er rope eighteen foot long. Fus' one he dived, draggin' t'others with him. Then Ted see ther snake rope tauten up en git straight, en his plague boat cum to er stop. The las' leetle squirmer hed tied hisself ter ther ringbolt en es purty a bowline hitch ez ever sailor made. Wal, thar he wuz, jes' three feet from ther edge er thet roarin' plungin' torrint, an' thar thet leetle rope er snakes held him te'l help cum. They never knowed what thet lowest one hed grasped holt on, but he knew his biz, en I'll bet 'twant no straw ner stick.

"But pshaw!" the old man ejaculated, not deigning to notice the looks of mingled doubt and wonder with which his narrative was received; "thar wuz my ole neighbor, Jedge Fowler, allus bin ez scared uv dogs ez yew er I'd be uv polar b'ars, en nat'rally ev'ry cur goes fur him. Las' month thet spiteful, mean pup er Dave Oviatt's went fur him, en ther ole man was so startled he fell en ther rascal jumped fur his throat. Jes az he jumped a spunky young adder reached out from under er fence post whar he hed his tail wrapped roun' en grabbed ther dog's hine foot. Held him, tew, tell young Oviatt cum en clubbed ther dog off, en ther 'tarnal fool went en killed ther snake, tew. Why—"

"Proper thing ter do ter snakes!" snapped Quill savagely. He met with no approval at this, and Lighthouse Charley frowned him into subjection, and continued:

"Why ther' are er thousan' cases, but ther real one I wanter give yer is whar er fam'ly er water moccasins saved this taown. Yes, sir, saved three thousan' people them squirmin' heroes did, en never er word er thanks neither. Yew all 'member thet turrible freshet en ther spring er '74 when ther Housatonic overflowed ets banks en raised perticaler Ned? Swep' off some ten er 'leven houses en barns up t'wards Shelton way? Wal, ther big new dam up ter Derby wasn't built them days, en ther ole dam were er mouty shaky pile er stone en logs en earth. Ther swash were weakenin' her ev'ry blessed day. En one night when the river wuz et ther highest ther cum on er turrific rain storm, en I sez ter ole Sam Eeles, sez I, 'Sam, this yer storm settles this dam, en this town 's er goin' ter be drowneded out sure 's beeswax!'

"He 'greed 'twere, en jes then er couple er fellers cum by en sung out thet word hed cum ther dam wuz goin' en no one wuz up thar ter help fight back ther river; they wuz goin' up, they said, en axed us ter go too. So course we went, young en ready ter go entu enythin' them days, I wuz, en all ther way up we roused up the folks en tole 'em ter be ready ter swim fer ther lives. Us four got up ter ther dam 'long 'bout 'leven o'clock. Ther river were one howlin', foamin' rush er suds en thar war ten chaps tuggin' erway ter hol' in ther weak spot which war ther east corner. Here en thar we could see leetle dribblin' streams er water tricklin' down ther bank whar er new leak hed sprung, en we fell tew en plugged them holes ez fas' ez we could with cobble stuns. Turnin' over one big flat rock en er marshy spot ter get at some small uns, Sam unkivered er nes' er water moccasins. He wuz crazy ter kill 'em but I fin'ly persuaded him ter leave 'em be en ten' ter hez wuk. I allers b'lieve er snake 'll dew more good 'n harm ef he's treated decent. Skurcely five minutes arter that Sam yelled ter me, 'Look thar!' sez he, 'see thet moccasin!'

"I looked en sure nuff thar one er ther snakes he'd gone en crawled enter er leak en he'd bunged et up tight. Before I could say er word ev'ry one er them pesky smart moccasins wuz et work, en ther mus' er bin forty. Not er drop er water cum out er enny hole them chaps struck; ef ther body got small fer it, they ran ther tail back en wedged er double thickness en. All night long them snakes held ther fort en me'n ther rest see thet we'd never er mounted to nothin' 'thout ther help. The bigges' snake wuz near whar I was wuk-kin' en he did the smartis' thing er all. When ther wash hed made ther hole too big en the leak begun ergin he ran his tail back en forward tell he hed four thickness en ther hole, then he b'gun ter eat sticks en dirt en gravel, things er snake would never choose fur his own pleasure en so he swelled out hez stomach en jammed thet cavity so all-fired tight thet when they fixed ther dam tew days later four men with picks en bars hed a mortal tuff job ter drag him out. No, sirree! since thet night I don' wanter hear no idle talk 'bout snakes bein' enemies fur they saved ev'ry mother's son uv us then. What er snake can't do has yit ter be diskivered!" And the old man, finding that the rain had slacked and that the depleted jug of cider was not going to be replenished, donned his old gum coat, bade his late listeners a grim good-night and disappeared into the night.

## A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

# Sea and River Fishing.

## DAYS AT CAMP BLAIR.

Camp Blair, North Wakefield Trout Fishing Club, P. Q., Sept. 30.—*Editor Forest and Stream:* Leaving New York on the 6 P. M. train of the New York Central R. R. on Sept. 14, our party of seven, members and guests of the North Wakefield Trout Fishing Club, found ourselves in Ottawa at 11 o'clock the next A. M., and also found that all of our checked luggage had gone to Montreal without our consent; but by the kindness of Mr. Meyers of Rouse's Point, where our belongings started on their wayward course, everything was returned to us in good order at Ottawa by the time we had made a few needed purchases and partaken of an excellent lunch at the Russell House, a very comfortable and pleasant hotel. I can also state with considerable pride that the Customs officer intimated that we did not look like a party who would be likely to defraud Her Majesty's just revenue, hence he sent us our luggage unopened, and we broke the seals after getting into camp.

Instead of waiting for the P. M. train for North Wakefield we chartered two comfortable teams and enjoyed a delightful ride, most of the way along the banks of the Gattineau River, surrounded by grand and beautiful scenery, with forests outrivalling New England's autumnal hues. Within about six miles of camp we crossed the Gattineau River in a scow propelled by a "white ash breeze" which we furnished without extra charge, and of course we found the old scow on the wrong side of the river and had to go over in a skiff and pull it to the right side, leaving it again on the wrong side to accommodate the next customer. About three miles of the remaing six miles of our road to camp is what Pat described as "sandy" to one who had never been over it; and when being called up on the subject after getting into camp, Pat shielded his veracity by saying, "The sand was a little coarse to be sure."

Arriving at camp about 7 P. M. we found Tom and Le Roque ready to greet us, and a good warm supper at our disposal. Of course, next in order after supper was getting out our fishing toggery, adjusting rods, trying lines and selecting flies which we were sure would lure the big ones to our end of the boat the next day. But in this we counted without consulting Old Probabilities or the other parties in interest, viz., the trout we expected to try the elasticity of our rod and the strength of our lines.

The day dawned as warm and mild as a June morning—the lakes were like liquid glass, making a perfect mirror for the bordering landscape except for the splendid colors of the foliage—the gentle zephyrs that toyed tenderly with the leaves high up on the surrounding mountains seemed loth to descend and mar the perfect tranquillity below; but alas! all this quiet beauty was only withering our cherished hopes of capturing those beautiful fish; for do what we would they would not rise to the fly, and some of the party tried to tempt them with minnows and earth worms with no better success. Occasionally a small half-pound trout would so far forget his surroundings as to toy with the artificial lure, and was generally deposited in the tank for his indiscretion. And such was nearly the whole week; we would frequently see a score or more of the big fellows gliding quietly about, but with all our allurements they seemed to say to us: "We are boarding ourselves during this kind of weather, and care nothing for your new-fangled arrangements." Still we thrashed the quiet waters with our flies as relentlessly as the farmer uses his flail on the grain-covered floor of his barn, only to give us, not sport, but barely enough fish for our breakfast.

Now, why were these miserable results? Who can tell? I only know the facts and gave up the conundrum after a week's study and fisherman's patience. Some of our club members and their guests were forced to leave camp at the end of the week on account of pressing business requirements, but I fear there was some disgust and disappointment at our ill luck mingled with the pressure. And here I would not fail to mention the kindness again of our friend Meyers of Rouse's Point. He wired us on Tuesday, inviting any who wished to join him in a day's fishing for black bass in a lake about ten miles distant from our camp, and one of our party spent a day with him, bringing back about a dozen fair-sized trout which they had caught while fishing with minnows for bass. Now, why should trout take minnows in that lake and not in ours? You tell—I gave it up without a struggle, but such were the facts.

On Friday we were reinforced by three who could not join the first party that came in, and on Sunday five others took their departure, and thereby missed the glorious sport of the remaining five. On Sunday, the 23d, it began raining, with a strong wind, clearing up cold and frosty, and during the whole week we had splendid sport, taking about 150 trout ranging in weight from 1 to 3lbs.; twice doubles were taken at one cast. The change in temperature had done the business for us, and enabled us to do the business for the trout. It needs cool, frosty nights, and a breeze by day that will bring a ripple upon the water to make the trout in these lakes rise well to the fly.

One of the Canadian members of the club visited camp about the 1st of September, and in parts of two days took over seventy-five trout, fishing one evening and one morning; so it is not the time in the month, but the condition of the temperature and wind, that insure the best results. These trout are natives, the lakes never having been stocked, and from present indications will never require it.

The lakes controlled by the club are six in number, named respectively Clear, Angelus, Long, Round, Forked and Wright's. The waters of all except Wright's flow from one to the other, and have but one outlet. Lake Angelus is about 50ft. higher than the four others with which it connects, and Wright's is from 75 to 100ft. lower than any of the others. The combined shore line of the six lakes is by estimation about twenty miles. They are situated in a wild rocky region between the Gattineau and the Lievres rivers, presenting some grand and striking scenery, with granite cliffs, the ragged and almost perpendicular sides of which tower 200ft. above the surface of the lakes. The portages between four of the lakes are neither long nor difficult, and boats can be floated in two of them most of the distance. The subject of stocking one of the lakes with black bass is being considered by the club; Wright's Lake will probably be chosen for this purpose, as it has no connection with the other lakes. The Canadian authorities furnish small fish for such purposes the same as is done in most of the States. These lakes can never be polluted by manufacturing, as there are no large streams running into them, but are fed by springs so that the waters are always pure, very clear, and delightfully cool.

These considerations with many others that might be named make the property of the North Wakefield Trout Fishing Club an exceptionally desirable one, and its value will increase as the chances for a few days' good fishing become less and less in the poor worn-out streams and lakes of the States. This is our last night in camp for the season; the wood fire has burned low in the broad fireplace and my companions have sought the sleep which these cool nights make sound and refreshing, leaving me alone with my thoughts and the few remaing bits of wood I have raked together in the center of the fireplace. Those who have enjoyed thus the last flickering embers of a camp-fire, know how soft and gentle are the reveries that come hovering o'er mind and soul; and know that whatever is good and true in us will come welling up from the spring-like depths of our natures almost unbidden, and I am sure makes us better men, and these reveries die not with the embers on the hearth. Our time is up to-morrow, Oct. 1 closes the season for trout fishing in these waters. Our company of members and guests has been larger than any previous year and our enjoyment has increased with the numbers.

After such a glorious good time it may not be in good taste to express a single regret, but "murder will out." My heart was set on feeling at the end of my line just one more of those big beauties; I knew where to find him in the early morning, and asked the cook to have me a cup of coffee soon after daybreak. I got the coffee but not the trout. As I arrived in sight of the foot of Long Lake, the first sunbeams were just struggling through the foliage on the hills beyond. I could see the locality on which my hopes were based nearly a mile distant. I could see neither man nor boat, but at intervals of a few seconds I could see the spray as it flashed from the swift line and glittered in the sunlight, and I knew it meant death to my hopes and the big trout. Remembering the old proverb, that to err is human, but to forgive divine, I am constrained to forgive him this time; but if it were just as divine to err as to forgive, I fear I should "go out on an error" regardless of the umpire. And now, Mr. Editor, having fulfilled my promise to you, I bid you and Camp Blair a good night. A.

## THE RAINBOW TROUT.

I have caught our beloved *Salmo fontinalis* in the Adirondacks, in the small brooks of Massachusetts, New Hampshire and Vermont, and along the shores of Lake Superior, and feel myself tolerably well acquainted with him; but his cousin of the Rocky Mountains was a stranger to me until this season. My fishing was then limited to the month of September, and to a small portion of the waters of northwestern Colorado, and, in other times and waters the fish may and doubtless does, show himself after a different fashion; but I found the experience interesting and novel, and hope some of the readers of Forest and Stream may be glad to hear of it.

The first fishing was done at Wolcott, Colorado, in the cañon of the Eagle River. The stream is very rapid, but not broken by falls at that point. The water was remarkably clear and the day extremely bright. I put on my leader for tail fly a Reuben-Wood and the Abbey and brown-hackle for droppers, all on No. 10 hooks. The stream was full of attractive rapids, but fishing industriously over these for nearly an hour did not bring a single rise. The first fish was taken from an eddy at the foot of a ripple, where the water was 6 or 7ft. deep and comparatively sluggish. He rose quite lazily, not showing above the water but taking the fly much as a chub does, only the nose passing above the surface, but, when hooked, showed an astonishing amount of energy, and, though only weighing about 4oz., gave me fully as much trouble as many a ½lb. Eastern trout has done. He seemed to me when landed to be of precisely the same shape as an Eastern trout, differing only in having a forked tail and in the color. The sides and belly were silvery white, the spots black, beginning about the dorsal fin and thickly covering the rear of the back and sides, and the tail fin, and about the size of No. 10 shot. After the first one I took five or six more, but always from similar places in the stream, getting none at all upon the ripples. The flesh of these fish when cooked for dinner was decidedly white, with a very slight yellow tinge and a small streak of pinkish along the spine. They were firm and well flavored, but it seemed to me less succulent than *Salmo fontinalis*.

On Sept. 16, we camped in the canyon of the Bear River, which at that place is the perfection of a trout stream, having a succession of deep pools and rapids, none of the latter being too deep to wade across if care were used. The water was very cold and clear. I began fishing just after sunrise and wasted an hour or more on a most attractive rapid, without a rise. Going then to a deep pool and casting my fly over an eddy, just to one side of the rapid current which flowed into its head, I got my first rise, and, before it was eight o'clock had a dozen fine fish ranging from ½lb. to 2lbs. My first cast of this day consisted of a small black-gnat as tail-fly, a large black-ant as first drop and a brown-hackle as the second drop, and nearly all the fish took the black-ant. By noon the fish ceased to rise well and I shifted flies until nearly everything had been tried, but found the black-ant the only fly which was at all successful.

The trout in this river had the same general markings as those of the Eagle, but showed considerably more red upon them, the belly in many cases being scarlet and red lines marking the edge of the gill covers. They showed the same habits as those of the Eagle, being found not in the swift water but in still pools and eddies. Generally speaking, they were very sluggish in the rise, though one or two fish struck my flies with a rush, throwing themselves completely from the water, very much in the manner of the Eastern trout. After being hooked they showed extraordinary vigor, especially those under a pound in weight, and I did not succeed in landing any until it was completely exhausted.

The trout seemed much less timid than its Eastern brother. I frequently saw a trout come up and take my fly, from the bottom of a still pool, while I was perfectly within his vi w. He would rise very leisurely, examine the fly carefully and usually take it when it was a few inches under water. When the sun was high I found the most successful way to fish was to allow the flies to run down a rapid and swing off into the eddy, when the trout would take them well beneath the surface.

Our guides said that we were too late in the year to get the best fishing, and that in July or August our catch would be much larger and the fish much more eager. Certainly the stream abounded in trout, and in looking down into any still pool one could see hundreds of them. At this time of year it froze sharply every night and there was but little insect life visible at any time. In addition to this the stream abounded in small fish of all kinds, so that the trout must have been very well fed. My own catch for the first day was about forty and would weigh perhaps 25lbs., and I left with a high respect for the rainbow trout.

So far as my experience goes *Salmo irideus* is distinctly inferior to *Salmo fontinalis*, both in the energy of his rise and in merits as a table fish, but when his spirit is aroused by being hooked he is at least equal if not superior in vigor, and in no particular is he to be despised.

A. S. Newberry.

Cleveland, O., Oct. 15.

## FISHING THE WOLF.

The thermometer was hovering around the 90° mark in Chicago on July 12 last when we rushed into the Chicago & Northwestern R.R. depot for the train north. After a thirty-six hours' visit with a sportsman brother in Oshkosh, during which we lived over again many a happy hunting experience enjoyed together on the marshes of Illinois, and on the prairies and shallow lakes of South Dakota, I started north alone for Clintonville, Wis., which was my place of rendezvous at my physician friend's home, and that same afternoon a party of us went for a drive to Pine Lake, taking along our rods and spoons, and after trolling a short time returned with five nice spring-water pickerel.

Here after resting for three days and then, accompanied by Mr. Wm. H. Tinney, the doctor's son, we took the C. & N. W. train for Aniwa, and at the latter place changed cars for Mattoon, Wis., on the Mattoon Manufacturing Co.'s train, and traveled over their private forest railroad a distance of about twelve miles. Our destination was four miles from here, and Dr. Wm. A. Cottle kindly volunteered to drive us over with his own team after dinner. He landed us at Mr. Dave Mattison's in Phlox during the afternoon. Phlox is on the Red River branch of the Wolf River, and the stream is said to contain many large trout, but owing to the ample feed, minnows, etc., they are rarely known to bite a lure, and we were dissuaded from attempting their capture. Next morning we had an early breakfast and, accompanied by Mr. John Mattison, who wanted a day's fishing, we were driven half way toward the west branch of the Wolf River, two miles through the virgin woods to an Indian sugar camp, on the Menominee reservation. This camp consisted of several log shanties built in the midst of a group of sugar maples which the Indians tapped each year. The smoky odor of the log house kept the flies away, and here was a safe and quiet place for our patient horses.

Now we had to walk a mere trail for about two miles further to the river, and before starting in the sultry atmosphere we carefully covered the exposed skins of hands, forehead and neck with a mixture of pennyroyal, ʒii.; menthol, ʒi., and olive oil, ʒvi., whose odor was not to the liking of the myriads of mosquitoes we would disturb and attract as we passed along the path.

On we went; and very soon noticed an appraching Indian. As soon as he reached us he exclaimed, "Going fish?" and before catching his breath, "Got bottle?" But we had no bottle, save the mosquito mixture, and when so informed his head dropped and silently he passed on. He had neither pennyroal nor mosquitoes about him, but the paleface-vice was uppermost in his desire, and we were told that these children of the forest, void of all sense of money values, would rapidly dispose of the immense timbered woods through which we were then passing for the corked contents of a few demijohns of firewater.

We soon heard and later reached the babbling stream, and it looked very trouty, and we were delighted at last to reach the goal for which we had traveled so many hundred miles—through heat and resultant fatigue. Trout were the only inhabitants of this brook, and had been planted here by the State authorities six years ago. It is a stream of probably 15ft. across, and here of an average depth of 2ft. We had been advised, per letter, that there was no trouble in filling a 10lbs. creel with trout in a half day's fishing; and our enthusiasm was resuscitated on reaching the water's edge. I started to fix a 6ft. salmon-gut leader on the end of my line, and Mr. M. noticing this said, "Oh, pshaw! you can't use that in this part of the stream. Just tie a gut hook on the end of your line, put a split buckshot about six inches away from it and a worm on the hook and fish that way." I did as advised, and with a sudden falling away of 50 per cent. of my enthusiasm for that day's sport, and into the cold, clear water my rubber boots and I went. I dropped my wormed hook immediately in front of a crossing, submerged log and allowed the rapid current to carry it beneath the latter's shade and immediately I felt passing along my right arm muscles that electrical thrill which a first connection at the terminal end of the line can alone produce. I felt that feel whose pleasure in its height and breadth no words of mine can fully describe, but which must be experienced to be understood, and felt, forsooth, by one who fully loves the feel. In its production the salmon family are the best operators, and for its full effects the true, born-in-the-flesh fisherman its best subject.

I had a bite, feeble, it is true, but nevertheless a bite. The result was *nil*, but on the second cast he came again, and I raised into the air a yearling trout, which I rapidly returned into his native element. The brook was full of these small fish. Our view in front and behind was impeded by the heavy growth of timber of this virgin forest, and across the stream windfall-trees, at all heights, were plentifully cast in perfect abandon, and the spreading branches of those yet standing often covered the water, so that the sun's direct rays did not reach it. Here a log beneath the shallow water, under which the rapid current

had washed a deepened sand hole where the vicious beauties awaited their prey; and the deeper and darker the water the larger its inhabitants. Sometimes the log was a tree with existent stubby branches, to which your hook appeared to have a special affinity, or some agile fish took delight in whipping a few rounds of your line around, so that wrigglingly he had ample opportunity to break away from the hook before you could disengage your tackle. Again your line would become so snarled up after a good bite that you had to spoil a second chance by boldly walking up to the spot and diving your arm shoulder deep to free once more the branch and line mixture. The small trout were very annoying, for they were continually stripping a hook too large for them to swallow, and the larger fish were few and far between. We never had over 10ft. of line in use, and when crawling stoop-shouldered through the maze of fallen trees and branches, which ever obstructed our path, we had only the gutted hook dangling from the end of our rod held in front of us. Between these frequent basketworks of fallen trees we had short, clear pools, but the latter were usually void of trout, and, prosperingly and swearingly we had to keep traveling through brushy heaps to get the fish. The native advice of a simple hook and line was fully demonstrated before the day was done.

At last we arrived at the limit of the river's reach for that day's fishing, and, finding a suitable place where we could leave the stream, we waded out and commenced our journey back to our starting point of the morning through the unchopped woods. Before doing so, however, a fresh inunction of exposed face, neck and hands with our mosquito cream was an essential. The unevenness of the wooded ground, together with the stifling heat of the atmosphere, rendered our walk very toilsome.

We had seen the little red squirrels chatteringly do the tree-trunk act across the brook several times during the day, but we dreamed not that we should have to follow their plan before sundown. We reached a beautiful and level moss-covered depression that betokened a solid foundation and smooth withal. It looked a relief from our previously troubled walking, and into this we stepped and went thigh deep, into the muddiest mud we had ever tried to bottom, and looking up for help, we saw our companion tripping across the bog-hole on a fallen tree trunk. After escaping the deception we did likewise with fear and trembling, lest we slid into the center of the same familiar morass in our Blondin act.

As we hastily worried along to keep up with our native woodsman-friend, brushing the tangled branches from across our path with our advanced and elevated arm, perspiring, tired and surrounded by hundred of blood-sucking mosquitoes, we philosophized silently on the foolhardiness of the trout fisher, who rushes beyond the borders of civilization to catch the supposedly bigger and more numerous fish, usually to find when he reaches the desired waters, that dozens of his kind have had the same idea as himself an t ahead of him have cleaned out all the big fish. This we learned had occurred here. A camping party the week before had carried away it was said, 1,500 trout, caught where we had that day fished.

At last we reached the cherished quiet of the Indian's log house where our patient horses awaited us. Here we waited and counted our fish, finding that in the three creeks we had 47, 25 and 23 respectively, or a total of 95 trout, just beyond the legal limit in size. We had only one trout that would weigh half a pound, and this and the larger catch belonged to the man who knew every inch of the best ground. Oh trouting! Oh boarding place! To the latter we turned our thoughts, tired, weary, disappointed, and hitching up, we finally traveled beyond the last stump and reached our supper table, which then was more harmonious to us than the rippling waters, and more electrical than the trout's bite. A good meal of fresh trout, potatoes and coffee, with good bread, butter and excellent spring water, formed a most refreshing repast before which our ruffled temper smoothed out to a pacific state—proving that heart and stomach must be very near together.

We had fished for the iris-hued tiger of the purling brook. We had got caught in the branchy mesh. We had felt the thrill of the trout-bite, and the piercing delight of the mosquito's trunk with its subsequent mound of cutaneous tenderness. We had tried to fathom the bottomless moss-covered bog, and tripped the overhanging tree trunk; and after all this delightful conquest we had reached the quiet of our clean boudoir and our sleep-inspiring bed. The weather alone in its torrid heat tormented us.

The turn of our fishing tide had come, however, for at the supper table we had been told that to-morrow we would try a better, deeper part of the same stream, lower down where the fish were larger, the stream less accessible, but less fished; and thus musing we fell into a troubled sleep nursing our weakening hope for better things of the morrow.

The sun rose in a hot and clear sky the next morning, and after an early breakfast we mounted our saddle horses at six o'clock and started for a spot two miles lower down the stream of yesterday's exploits and four miles from home. Following the lumber road past clearings with present stumps, and where the settlers had or were using spring-harrows to scratch in the scattered grain and with luxuriant results in those places earlier treated—thus reducing the richly vegetable soil—we rode along our heavy steeds for a mile to the forest's edge, and here struck the main Indian trail of the northern end of the reservation. This was a narrow well beaten path, deeply trodden by the shoeless hoofs of the cat-like Indian ponies, and interrupted frequently by large stones, and curving sinuously around the end of frequent windfall giant trees. At the end of the second mile we reached a spring bog-hole over which a dilapidated corduroy road still remained and over which our civilized horses were unsafe travelers. Here we had to part company with our horses—for which we were thankful because of their heavily jolting gait—and send them back by a boy who had accompanied us.

Just beyond the bridge we noticed a young squaw astride a pony's back approaching. The horse was loaded besides with full sacks. Behind was a second pony likewise loaded with blankets and bundles, and still further behind was seen a young Indian buck a-foot. The ponies tripped aross the logged bridge without a falter. The squaw looked neither at my companion nor myself and we felt a little aggrieved at the slight—he said it was my fault; I declared that it was because of his presence—but it still remains a mystery. She passed on and we quizzed the man. He talked English and we ascertained that the Indian woman was his squaw, and that they were going to town to sell a load of slippery elm bark and barter it off for groceries.

For a moment I may be permitted to digress in order to refer to the Indians' method of trading. He is said to find out the value of his wares, and after receiving the money he moves around the country store, asks the price of some selected article and pays for this, waiting for his change. After this is given to him he or she looks for another article and pays for this likewise, and so they continue until the pile of money is gone. Now gathering up the articles purchased they are loaded upon the ponies and the latter are led to the outskirts of the hamlet where the squaws mount crosswise, and ride off. I noticed one young squaw come to town in a purple woolen skirt, a thin shirt waist and moccasin-covered feet, and her buck was gallant enough to assist her to the ground in front of our house. Beware, girls, of your cherished monopoly of correct dress; and you young men that the manners of the Indian do not outshine you!

Resuming our story, we parted with the Indian who seemed loath to leave us, and my companions hinted that he was trying to get to leeward of some firewater, but this we did not have, and briskly walking off to catch up with his squaw, he disappeared. After a drink from a hat brim of the clear, cold spring water, we started on the two miles' tramp further along the trail. After traveling half this distance we struck off northward on "a blind" or little used trail, and traveling this obliquely toward the river, up hill and down, over and around many tree trunks and bog holes, we at last heard the running water, and descending a bank we saw the rippling water only a few feet away. We were considerably heated by the walk, and tried to rest and cool off, but the mosquito pests again surrounded us, necessitating another application of the oily mixture to the now raised or swollen and tender areas of yesterday's bites, for we were now more than able to mitigate their ferocious attacks. My forehead, neck and back of head were as if attacked with nettlewash, and painfully tender to the touch, the menthol-pennyroyal kept off the majority, however. When riding in the woods and wading in the brook the flies bothered us the least, and while walking the forest the foremost man got the lion's share of them.

We had with us to-day as companion, guide and fellow fisherman, a Mr. Kauffman, and after getting our rods together and the line drawn out, he took out a gut leader and began to tie this to a gutted hook with a sinker attached. I had been watching him for a pointer, and dared not to audibly express myself as to the requisite tackle for the new neighborhood. I rejoiced, however, when he told me that we would find clearer water, *i. e.*, wider and longer pond holes, and that I could use a 6ft. gut leader with a wormed hook and split shot sinker on the end, and a dropper fly further up if I wished. I so rigged up my line, using a royal-coachman for the fly and with the others started into that stream with greater hope for a better day. My two companions crossed the stream and walked further up the other side to some falls to start in there. I was told to fish down until the water got too deep for my thigh boots, then to get out and walk in the woods half a mile further down and start in again. We found the water deeper, fewer tree trunks to meander among, and though the stream was full of small trout, we occasionally basketed a better fish, but yet too small. Our lines again were too limited in length for much use of the fly, yet occasionally, under the shadow of a bush, a trout would snatch at it, and I landed a few fair fish this way. My own fishing for this day was, however, largely spoiled because of my manner of wading, and the best reaches of the river were too deep for me, and when night arrived and we three had met at the crossing of the main Indian trail, I had fully determined that on the morrow I would leave my boots at home and follow the stream in old clothes only, from start to finish, as they had done.

The day's catch consisted of 64, 49 and 46 fish, or a total of 159. The fish averaged larger, but still the largest weighed only half a pound, and this and the largest score was again caught by the one who showed us the way. With decreasing sunlight we trudged the trail homeward to the spring hole where we had parted with our horses, and expected to find them awaiting us, but they were not yet there, so after a drink of the pure water we dressed our trout, finding a few so decomposed from the heat that we had to throw them away. When this was ended our boy arrived with the horses, and we walked them home. This evening we were very tired but not hopeless, for we had had a better river, better results, and with better plans for the next day, we felt that alone—my companion und myself—we could have a still much more enjoyable time. With such expectations, and after a good supper, of trout again, and another bath, we sought our beds.

CHICAGO, Ill. DR. ALFRED HINDE.

[TO BE CONCLUDED.]

## Who Was "Iadahel?"

*Editor Forest and Stream:*

Reading lately Thoreau's "Concord and Merrimac," I encountered therein the following quotation from the poet Gower, a contemporary and friend of Chaucer:

"And Iadahel, as saith the boke,
First made nette and fyshes toke;
Of hunting eke he found the chace,
Which now is knowe in many place,
A tente of clothe, with cords and stake,
He sette up first and did it make."

Now, why wasn't Mr. Gower, while he was about it, a little more explicit? What is the title of the "boke" which records the deeds of Iadahel, and who was Iadahel anyway? I have painfully searched the Scriptures and a concordance and encyclopedia, but failed to get on his track. It is too late by several hundred years to question Mr. G., so I appeal to FOREST AND STREAM, whose other readers will doubtless be as glad as I to learn something more of the gentleman who is claimed to have been the first fisherman, hunter and camper-out. In the meantime why would not "Iadahel Club" be an appropriate name for any new association of anglers?

The only objection that occurs to me is the possibility of a profane reply from some unregenerate visitor when asked "what kind of a time he had" at the club.

TRUTHFUL JAMES.

## ANGLING NOTES.

### Loch Leven Trout.

IT is generally known, I think, that the U. S. Fish Commission is erecting a hatchery in the State of Vermont, and of this establishment Commissioner McDonald writes: "The development of the Vermont station will be exclusively with reference to work with the *Salmonidæ*, the species handled being the landlocked salmon, the Eastern brook trout, the European brook trout, the rainbow trout and the Loch Leven trout. To this series we will probably add the black-spotted trout."

The common brook trout of Europe is called in Great Britain brown or yellow trout, and in this country it is known as brown trout, or Von Behr trout, the name given to it by the U. S. Fish Commission in honor of the donor of the first eggs sent to the Commission; and it is further known, inappropriately, as German brout trout. The Loch Leven trout is found in a lake of the same name in Scotland, and is highly esteemed as a game fish.

Some years ago I examined some Loch Leven and some brown trout in ponds side by side at the Cold Spring Harbor station of the New York Fish Commission, and could discover no difference between them, and from that time to this I have been trying to find out if any difference really existed. Dr. John D. Quackenbos, of New York city, who has fished Loch Leven and who was the first individual to purchase Loch Leven trout eggs to stock American waters, wrote me:

### American Testimony.*

"My comment on the Loch Leven matter is that there are two distinct trout in Loch Leven; the handsome native charr known to tradition have become extinct. One species of trout is the common *fario* or brown trout of Europe; the other is a silvery, black-spotted landlocked sea trout. No angler cares for the brown trout in the Loch, all are eager for the silvery beauty. It is the presence of this fish that enables Sir Graham Montgomery to lease the water to the Loch Leven Angling Association for £1,000 annually, and the company to pay a dividend of 10 per cent. to its share holders. For centuries the *Salmo levenensis* has ranked far above all other trout in Britain, and it is now regarded as the descendant of an anadromous fish whose means of communication with the ocean was suddenly cut off by some convulsion of nature and whose acclimatization in Loch Leven was thus rendered compulsory. The Loch Leven trout attains a weight of 10lbs.; the ordinary brown trout of the Loch rarely reaches 2lbs. When I hear people talking of buying Loch Leven eyed ova at Howietoun Fishery, and bringing them to America and hatching them, and having them turn out nothing but common brown trout, I simply remark, 'You did not get Loch Leven ova.' There is as much difference between *fario* and *levenensis* as exists between a Kentucky thoroughbred and a mule. He who has caught both will appreciate the comparison."

Doubtless it was such testimony as this, for Dr. Quackenbos stands not alone regarding the superiority of one trout over the other as they are found in the loch, that has encourged our National and State Fish Commissions to propagate and distribute the Loch Leven trout in the waters of this country. I procured some Loch Leven fry on several occasions, planted them and they turned out to be brown trout, exactly as they did at the Long Island hatchery, and this was further incentive, if any was needed, to find if possible just what we are planting under the name of Loch Leven trout.

I applied to Mr. Marston in London to aid me, and he sent me a letter from an English fish breeder who rears the Loch Leven and brown trout in his ponds and who said he could discover no difference between them, either in coloring or markings. Later Mr. Marston wrote me again on the subject as follows:

### English Te stimony.

"At Loch Leven I have seen the silvery trout (delicious eating) and the ordinary spotted trout like other *S. fario*. The only trout sold as Loch Leven are like *S. fario* more than sea trout, and Sir James Maitland has stocked Loch Leven for many years now with these so-called Loch Levens which I think must be a cross between the descendant of the sea or white trout which became landlocked early in this century, or comparatively early. The present Loch Levens have a peculiar green shade on the back when you look down on them in the water in a can. I have never seen any of the silvery Loch Leven fish in any lots I have bought from Sir James or from Mr. Andrews. I will ask Mr. Mallock of Perth; he is the champion Loch Leven angler, and something of a naturalist, and may help us."

It will be observed that Dr. Quackenbos and Mr. Marston both refer to a silvery trout as being the type of the Loch Leven trout in its natural habitat. In this country I have been able to learn of but one instance where the Loch Leven trout retain this silvery appearance beyond the fry stage of their existence. This is in the famous Castalia Creek in Ohio. Mr. H. C. Bowman, a member of the Castalia Club, has told me that the Loch Leven trout planted in that stream "have a blue silvery sheen without any black spots." Brown trout in the same stream are in color and general appearance identically as they are found in other waters, here and abroad. Whether the Loch Leven trout retain this silvery appearance and lack the red spots beyond a certain age, even in Castalia Creek, I do not know, and in what follows it is well to remember that at the time Mr. Bowman wrote me the Loch Leven trout had not been long established in Castalia. The following is what Mr. Mallock reported to Mr. Marston:

### Scotch Testimony.

"In answer to your query as to whether there are two sorts of trout in Loch Leven, the ordinary brown trout and the silvery fellow like the sea trout, so far as my observation goes, which extends over twenty years, there is no difference in the appearance of the trout that are taken. The young from an ounce up to nearly a pound are all silvery, thickly covered with dark spots, and greenish on the back. After these trout have been up stream, spawned, and returned to the loch, they have lost their silvery appearance, and have become more yellow. They also change their habits in rising to the

* As I have explained, I have been gathering information about this trout for some time, searching in every possible direction. The letter from which I quote is not dated with the year, but I believe it was written early in 1894, and possibly Dr. Quackenbos may wish to revise it in the light of more recent information on the subject.

angler's fly, the silvery ones seldom rising on the same day as the yellow ones." (It will be noted that Mr. Mallock speaks of the "yellow ones," and I have observed that in England the common is called brown trout, and in Scotland it is generally called yellow trout.)

"Both the food and water they are reared in have a great effect in changing their color and appearance. As to your fancying the trout now being a cross between the original inhabitants and the trout which have been put in since the lake became landlocked, I cannot think it can be correct. None have been introduced to my knowledge since 1874, and if there had been I would have heard of it."

Mr. Malloch then quotes from Dr. Day's "British and Irish *Salmonidæ*:" "Mr. David Marshall, of Kinross, remarks that the date of the connection of the late Mr. Campbell Marshall, his father and himself as tacksmen of Loch Leven begins with Sept. 1, 1839, and ends with Sept. 1, 1874, and that no such piece of work, *i.e.*, restocking Loch Leven from other waters, was done during those years, and if any thing had been done previously, they were sure to have known it."

Mr. Malloch continues: "What is a pure Loch Leven? I think this requires yet to be proved. I have never believed Loch Leven trout to be a distinct species. No two lochs in Scotland hold trout alike in appearance, and Loch Leven is no exception to the others. I am perfectly certain that if Loch Leven and its tributaries were depleted of their trout to-morrow and others introduced from wherever you like, in a short time you would have the same class of trout as are now in it. It is the rich feeding and the shallowness of the loch that alter the appearance both internally and externally. Whenever the lochs are shallow, have clear water and rich feeding, the trout assumes the appearance of Loch Leven trout. In several lochs in Sutherland where this is the case, we find trout one could scarcely distinguish from those of Loch Leven. Take, for instance, Loch Slatel, Loch Leer, Loch Coorach and Loch Crospuill, where the trout are even better shaped than Loch Leven fish. Also in Loch Stennis, in Orkney, and in many of the tidal rivers they take on the same markings as those of Loch Leven. Then again, in Loch Mulach-Corrie, the trout look more like a distinct species than Loch Leven trout, and yet they are nothing else than ordinary trout altered in shape and color by the nature of the feeding found there.

"Many thousands of Loch Leven trout have been distributed over the lochs of Sutherland during the past few years. Many of the lochs into which they have been introduced I have fished year after year, and I have never yet been able to tell the one from the other, nor have I met any other angler that has, which shows that they have adapted themselves to their environment, and have become the same as their neighbors."

Thus far the testimony that I have presented upon this subject has been that of anglers, except as Mr. Mallock speaks as a naturalist. The very conditions mentioned by Mr. Malloch as necessary to produce the coloring of Loch Leven trout doubtless exist in Castalia Creek, which is noted for its rich food. Elsewhere, so far as I can find, the Loch Leven trout develop the red spots and the general color and appearance of the brown trout.

### Testimony of a Scientist.

Dr. Francis Day, who carefully examined the Loch Leven trout, and had every facility for a thorough comparison of this fish and the brown trout placed at his disposal by Sir James Maitland, was one of the greatest of English ichthyologists, and his opinion upon the question of species should be conclusive. Dr. Day says in his *Salmonidæ*, page 224: "Having thus seen that in its (the Loch Leven trout) external form either the differences which have been stated to exist between this fish and the brook trout (*fario*) are erroneous, or else they are liable to alteration when the fish is removed to another locality, I think all must admit that such unstable differences are insufficient for the purpose of constituting species."

Dr. Parnell has said: "The Loch Leven trout has never any red spots." Dr. Day in commenting upon this says: "That these fish are generally without red spots up to a certain age is of very common occurrence. * * * As the fish becomes older three main types of color are observable, a slaty or greenish gray, becoming lighter beneath, and the upper two-thirds of the body and the dorsal fin spotted with black, and the fins are generally grayish black. This form of color is prevalent up to the end of the fourth season, and may be looked upon as equivalent to the silvery stage of the salmon smolt, or grilse, but I have never seen one over four years of age continuing this livery. The second is that of an older form, and a general purplish golden, densely covered with black spots, among which some red ones are usually to be seen. * * The third form * * * which consists of under sized fish * * * have the colors of the brook (brown) trout with orange tipped adapose dorsal fins." Dr. Day relates that a lot of yearling Loch Leven trout taken from the same hatching were placed in two prepared ponds, each furnishing different food in the main, although some kinds of food were common to both. In two and a half years' time the fish were removed and "very great differences were perceptible both in size and color among these two sets of fishes—those in the upper pond being silvery with a few black spots, whereas those in the lower pond were of much larger size, covered with spots, and having purple and golden reflections." It now seems to me plain that the Loch Leven trout are nothing more than the brown trout with color and characteristics due to environment and food, and this being so there is just as much necessity for the exercise of care and judgment in planting Loch Leven trout with our native trout as there is in planting the brown trout.

The necessity of furnishing food for fish, if they are to be at their best, is becoming better understood by our anglers (fishculturists have long realized the importance of it), and in some instances they are acting upon this knowledge. Dr. Day mentions the food in the two prepared ponds already referred to. Both ponds contained small crustaceans, but the pond containing the larger trout contained the larva of *Ephemeridæ* and the American weed *Anacharis* (water thynes), and stonewort, with water crowfoot on the surface, which were not found in the pond with the smaller trout. Apparently the English fish breeders appreciate the value of food for fish more than we do. I have a price list before me of a Scotch fishculturist, in which over fifty different aquatic plants are offered for sale for stocking fish ponds.

A. N. CHENEY.

## A PARADISE FOR POACHERS.

NOT a great ways from Henry's Lake Bottom, Idaho, there gushes from under the hillside one of the finest streams of clear, cold water that it has ever been my good fortune to see. This stream, the North or Henry's Lake Fork of Snake River, is as clear as crystal and a river in size, teeming with cut-throat trout.

Here, although it is against the laws of Idaho, you can, with other boon companions you will find there, wield the spear and draw the seine with grand results; sometimes in a night with the murderous spear your catch, depending on your skill, may run 500 to 1,000lbs. of Rocky Mountain or cut-throat trout. If tired of this ennobled way of taking your fish, you can draw the stream-destroying seine through some of its magnificent pools, and, lo! you have indeed a catch that fills your wagon, without the exhaustive, tiresome mode of transfixing them one by one.

Are there no laws in Idaho forbidding the taking of these trout in such a manner? Oh, yes, indeed, a good and stringent law; but you must not be afraid, it is virtually a dead letter. You can, with the others, openly seine or spear without molestation. If you should by any mistake be arrested, the judge will let you off, as he has heard that these fish are salmon trout. See?

The authorities of Idaho do not think enough of this magnificent trout stream and its fish to see the laws executed. Why should you? It will be necessary for you to get in your work soon, however, or it will not pay you to go out there and seine and spear. The other fellows are working hard night and day, and there won't be anything to spear or seine in another year. I should advise going to Henry's Lake this winter and spear them through the ice; there are only thirty or forty others going to do it, and with their help you can readily make a clean sweep, a grand round-up, as it were, of what is left over the 70 tons taken last winter in this place and in the same legitimate way. To be sure, the mangled fish don't bring a very high price in market, not quite so much on the average as bullheads or pickerel. It costs the tourist and visiting sportsmen from $2 to $5 per pound for all they catch with rod and reel, but the State don't care to encourage the visiting sportsman to come to their borders and leave their money, and they won't be bothered with them long.

Do not hesitate to go on account of the laws; with the other fisherman you can stand off any one who dares to meddle with your vocation. The State authorities are too busy to enforce the law, and in a year or so it won't matter about the law, anyway, as there will be no fish and you will be seeking pastures new.

It may be when the State wakes up and finds her fish all gone, she may appoint game wardens and spend some thousands of dollars in restocking her depleted streams, but the thing is to get your work in now; spear, net, shoot, any way, only get them, and be very expeditious about it, too, for they won't last long, as you can readily imagine.

SALT LAKE.

### A Minnesota Bass Water.

WEST DULUTH, Minn., Oct. 12.—I inclose letter from my friend, Mr. Lott, which explains itself. The bass was a big-mouth, and the largest I have ever seen. Mr. Lott and I fished the same ground the week following his big catch, and I was fortunate enough to secure one of 5lbs. 8oz. Have not done much fishing this season. E. L.

AITKIN, Minn., Aug. 6.—*Friend L.:* I send to your address by this train per the N. P. Express Co. nicely packed in ice and salt, a very fine specimen of the bass that are striking flies nowadays down here. This fellow tipped the beam live weight at 7½lbs.; he measured 22in. long, girth 16in., head 7in. He was caught in Lilly Lake with a Seth Green big 4 fly and he fought hard for his life. I was about ten minutes getting him to my landing net and then I nearly lost him after getting him in the boat. I was induced by some of the boys who saw him to have him photographed. I did so, but I am afraid I have not got a good picture. You know art can't do justice to such a living beauty as he was. However, you can have him baked, and when you sit down to enjoy the dish, with its delicious flavor, just try and imagine how once he amused me while my line was cutting the water with that peculiarly musical swish—and my reel sang that sweet old song to me, I wish you could have had him on your hook; I know how you would enjoy it, and then he would have had a fitting obituary; but the words fail—enough; eat him and let me hear from you. Lilly Lake, you may know, is back of Woodrow, and it's almost virgin to the sportsman. If you come down we'll go out

GEORGE W. LOTT.

### New Jersey Bass Fishing.

BERGEN POINT, N. J., Oct. 21—*Editor Forest and Stream:* In your number of Aug. 25 I noticed an article, "Skittering for Bass in Swartswood Lake, New Jersey." I have just returned from a week's vacation spent at Swartswood, and can report the fishing as being very good at present.

I had the best luck trolling with live bait, which can be gotten at Emmans's, where I was staying, and the best place for sportsmen to go. Bass, both small and large-mouth, I took in good numbers, and some very large pickerel and yellow perch, and persons who have any knowledge of fishing should have good luck in these waters. James Emmans, a farmer, lives less than a quarter of a mile from the lake. He has good boats (with wells in them), and his son will row or show any one the best places to fish. The table is good and board reasonable, and shooting can be had nearby in season. Swartswood Lake can be reached by the Delaware, Lack. & Western Railroad to Newton, where Emmans will met parties wishing to stay at his house, and will drive them the six miles free of charge, or by the New York, Susquehanna & Western Railroad to Swartswood Station, which is about three miles from the lake.

P. M.

"POULTRY FOR PROFIT" is the name of a little manual published by Frederick Warne & Co., which gives advice of an eminently practical kind. It treats entertainingly of the laying breeds of fowl, of breeds of fowl for meat, etc., and has chapters on ducks, geese and turkeys. There are also very good descriptions of portable chicken houses, coops, etc., and a comprehensive chapter on poultry in confinement. Price 50 cents.

THE hunting and fishing privileges over fifty square miles of Canadian caribou grounds and a great number of lakes and streams abounding in trout, are advertised to let this week. The situation of the tract makes it easy to protect. Its waters are well adapted to canoeing and very prolific of trout. There is also good duck shooting in season. The advertiser desires to open correspondence with private individuals, and will not consider renting to clubs.—*Adv.*

# The Kennel.

## FIXTURES.

### DOG SHOWS.

Oct. 30 to Nov. 2.—Terrier Show, by New England Kennel Club, at Country Club, Brookline, Mass. D. E. Loveland, Sec'y, 128 Tremont street, Boston.

### FIELD TRIALS.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells. Sec'y.

Nov. 13.—New England Field Trial Club, Members' Sweepstake. A. R. Sharp, Sec'y, Taunton, Mass.

Nov. 16.—Eastern Field Trials Club, at Newton, N. C. All-Aged, Eastern Subscription and Selling Stakes. Entries close Oct. 1. W. A. Coster, Saratoga Springs, N. Y., Sec'y.

Dec. 17.—Southern Field Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.

## POINTS AND FLUSHES.

[*By a Staff Correspondent.*]

THE legal status of the dog is steadily gaining for the better. There is a vast difference between his legal status now and that under the old common law when he had no legal standing at all. The details of legal progress may be unsatisfactory and slow, yet they are beneficent to the dog's best interest as they advance his legal protection to that granted other property rights.

Mention by Mr. Hough was made last week of a replevin suit brought by Mr. O. Nilsson, of Chicago, against Dr. E. Otto, to recover possession of a pointer dog stolen by the latter a week ago near Nilsson's premises. Otto took a continuance last Saturday, and on Wednesday of this week, Oct. 17, when the case came up for trial, Otto failed to appear and defend. "So now I am allowed to own my own dog," said Mr. Nilsson. Mr. Nilsson says he has witnesses to show that Otto coaxed the dog up to him, picked him up in his arms and carried him to the buggy, where he covered the dog up closely under the lap robe and drove off rapidly. The thing looks bad for Otto, and it is claimed that his large kennel will be searched. The justice awarded Mr. Nilsson the remarkable sum of $1 damages and costs. An arrest for larceny may be made later.

I mentioned, some time since, the excellent condition of Mr. Thos. Johnson's dogs. I never saw a kennel which was so perfect in that respect. The manner of doing it will no doubt be of interest to all dog owners. Mr. Johnson is truly generous in imparting valuable information for the use of brother sportsmen. He seems to take a genuine pleasure in doing so. I am indebted to him for the information hereinafter given in respect to a good dog food; and those who may use it will appreciate that he has conferred a benefit. First, however, let me say that Mr. Johnson does not trust to dog food alone to keep his dogs in good health and condition. His kennel yards and the dogs' sleeping quarters are so neat and sweet as daily scrubbing can make them. Whitewash is freely used. His kennel man is required to keep the quarters in a perfect state of sanitation. There is no deeply mystic formula in it. It is simple and in harmony with nature's laws. Cleanliness, good food and exercise are the true requirements for the dog's best development and existence.

The matter of a good and cheap food is always important to the dog owner, for without good food all other effect is ineffectual or imperfect.

I quote the information in Mr. Johnson's own words:

"*Re* biscuits for the dogs, there is no patent on their manufacture, as even if there was, it would be an open secret for a brother sportsman.

"I get one hundred pounds of flour and the same weight of 'shorts.' To the flour and shorts I add fifteen pounds of beef, first chipping it in a sausage machine. Also four big cabbages. The cabbages and beef are boiled together, and the flour, shorts, beef, cabbage and broth are mixed into a dough which is rolled and cut into proper size for cakes and then baked.

"They cost me, made as above, four cents per pound. When I am not working my dogs, I have a biscuit made from the flour and shorts, which costs only about two cents per pound. I sometimes in winter when fish are cheap get a biscuit made with fish instead of beef. The dogs eat them with great relish. One thing is certain, the dogs keep perfectly healthy and the biscuits act very nicely on the bowels. There is neither purging nor costiveness from them, effects which I have noted from other biscuits. They seem to have the same effect on a dog whether he is worked or kept in a kennel—in what kennel writers term 'innocuous desuetude.' I have kept them for a year and they seemed as good and had equally good results as when fresh."

### Concerning Field Trials.

The following are the opinions of a gentleman who is eminent as a breeder of fine dogs, as a succussful competitor at field trials, a member of a prominent field trial club and a gentleman who has the respect and esteem of every one. It is part of a letter written to Mr. Thos. Johnson, and it is valuable as an expression of opinion which is rarely obtainable by the public. He says:

"I am afraid our field trials are in a bad shape; but though thoroughly in sympathy with field trials, and I believe officially connected with the —— ——, I am waiting for different methods and different judgments. To whom the prizes go, is nothing. Anbody can see what horse is ahead at the post; by the same method of judging a dog's performance would be easily misjudged. Among intelligent men that is now seen. The ignoring of that made you so honestly and rightly leave us when you were judge at the Eastern field trials. I have always said it and now they see it. What is the consequence? In whose hands are our trials? You have retired. You ought not to have done so. We require you. But your reasons are largely connected with matters somewhat local with you, in which my friendly prejudice for you tells me that you must be right.

"Forward or back, I continue to keep my interest in field trials. I hope to show it in all the encouragement I can give. I have seen with regret what you saw with us, and I have seen since a decided improvement.

"I think that with Derby trials, which must be considered trials, should be for high quality. High quality seems to be the term used, and of that you know as well as anybody. It is not shown by a puppy 'that didn't make a mistake,' but by one which may have shown many, but still showed that he had it in him and was not going back next year. Many a dog goes through a heat without a mistake, which is relegated afterward to a back seat. From the judgments of past years, where runaways were a permission (and I am by no means sure those days are past), I have always protested. I early protested any judgments made on points, one, two, three, etc. I now protest in my heart against the result of the judgment of past years and the phrase that we hear 'of being in for a piece of the money,' and of 'getting there,' instead of winning by merit, and of breeding and training so as to have the winning rather than the last dog. Those phrases show natures of gain, not improvement.

"I speak now generally of the judgment of gamy dogs. In all, of course, the judgment should be the same in the essentials of natural qualities, with the additional requirements of education, as note the development of a child to manhood."

The Derbies should be for puppies, but they have ceased

long since to be a puppy stake. They are aged stakes. A dog running as a puppy in his third year is something of a farce. At two years a dog is matured.

The foregoing excerpts show that the gentlemen who put up the money which sustains field trials are doing some hard thinking—quite as hard as the ones who do the winning.

B. WATERS.

909 SECURITY BUILDING, Chicago.

### The Size of Fox-Terriers.

*Editor Forest and Stream:*

A good many English fox-terrier breeders think that the fox-terrier of the day is too large, and controversies on "The Size of Fox-Terriers" have been going on for weeks in English kennel papers. Unfortunately for the proper settlement of such a point the evidence seems to revolve on a question of weight, as if this was the sole evidence of size in fox-terriers.

The fox-terrier is a dog that is supposed to go to earth after a fox, not to draw the fox as many erroneously suppose, but merely to worry him into bolting and so affording another run for the hounds and an opportunity for them to kill in the open. If the fox will not bolt, the noise made by the terrier in the scuffle directs the man with the spade where to dig, if practicable to do so. Here comes the question of size which is not so much one of weight as length of leg and structural formation that allows of a dog being able to go to any earth or drain in which a fox has passed; and a fox will never attempt a hole that is too small for him to turn in. The question should therefore rest upon height and comparative length of body. A fox-terrier, and there are lots of them shown, may be distinctly leggy and consequently too tall to bring himself down to his work, but still come well within the weight allowed by the standard, and this is where the mere weight of a dog forms no criterion as to its size. Instead of giving the weights of the crack dogs of the day the breeder and novice exhibitor would find a true guide if the height at shoulder and length of back were given, then the measurements would convey an impression to those who are not able to see the dogs, as to how the dog is built. A terrier may be so thoroughly well put together, every part in unison and showing requisite bone and substance that like a well-built—neat—man he will not show his size nor his weight to the casual glance until put on the scales or under the measure. Such an animal, to my mind, is what a fox-terrier should be—such a dog as Bacchanal was, for instance, or what Brittle might have been in his best days. A careful perusal of the standard of the Fox-Terrier Club will better illustrate my meaning:

"The dog must present a generally gay, lively and active appearance; *bone and strength in a small compass are essentials;* but this must not be taken to mean that a fox-terrier should be cloggy, or in any way coarse—speed and endurance must be looked to as well as power, and the symmetry of the foxhound taken as a model. The terrier, like the hound, must on no account be *leggy*, nor must he be too short in the leg. He should stand like a cleverly made hunter, covering a lot of ground, yet with a short back, as before stated. He will then attain the highest degree of propelling power, together with the greatest length of stride that is compatible with the length of his body. *Weight* is not a certain criterion of a terrier's fitness for his work—general shape, size and contour are the main points, and if a dog can gallop and stay, and follow his fox up a drain, it matters little what his weight is to a pound or so. *Though roughly speaking, it may be said he should not scale over 20lbs. in show condition.*" (The italics are mine.)

I have seen a good many terriers belonging to different packs in England, and compared to some of the winners of to-day they appeared decidedly low-set, and it must always be borne in mind that from these hunt terriers sprang most of the best strains of the modern fox-terriers.

In the *Fox-Terrier Chronicle* for September appears a list of weights of the principal fox-terriers in England and I mention here the weights of some of the best known on this side: Dominie 16lbs., Hunton Billy 16, Charlton Victor 17, 17, High Spirits 17, Cleek 18, Devereux 17, Charlton Vincit 18, D'Orsay 17½, Venio 19, Vice Regal 19, Valteline 16, Meiford Molly 15½, Beacon Tartress 16½, Dame D'Orsay 15½, Perseverance 17½, Vesuvienne 17½, Hunton Baron 19, Dudley Saunter 15, Starden's Thrift 17. In the same interesting article are given the weights of a number of the old terriers that are recognized as pillars of their particular breeds: Brockenhurst Joe 19lbs., Buffer 17½, Tyrant 18, Bustle 16½, Old Dainty 17½, Pickle II., 16, Old Jock 18, Old Tartar 18, Old Tyke 17½, Trimmer 14, Buffett 18, Rattler 19, Venetian 18, Dickon 16, Brockenhurst Rally 17, Regent 18, Tackler 19½, Old Jester (wire) 18, Carlisle Tack (wire) 17. Now the question which I would like to ask is why is there this outcry about size when the above weights are so similar? I never saw the old dogs, but there are, no doubt, some of your readers who had that pleasure, and if so, can they tell us where the difference really lay. Does not the difference in size lie in height from the ground rather than in weight?

TACKLE TYRO.

NEW YORK, Oct. 20.

### Tick Boy in the Manitoba Field Trials.

*Editor Forest and Stream:*

Will you allow me a little space to answer the communication of Mr. W. B. Wells, of Chatham, Ont., *re* the pointer Tick Boy, who ran so well in the Manitoba trials last September?

Mr. Wells says Tick Boy would have been placed higher only that he made a rank flush and chase in his first heat.

I contend that the flush was excusable and that he did not chase. Tick Boy is a dog who keeps his eyes open, and if there is a chance to mark birds he does it without fail and goes directly to them. It was an exhibition of this most desirable quality which brought upon him the imputation of chasing from Mr. Wells.

I will recall the circumstances, which may refresh the memory of Mr. Wells. In going rapidly across wind, Tick Boy flushed a bird and stopped to wing. The bird was close and Tick Boy did not come into the belt of air affected by the scent of the bird until after it had flown. He then stood and watched the bird until it disappeared below the brow of a small hill. Then, thinking he had the bird marked down, he went toward it with the intention of pointing it. He did not walk nor take a roundabout course, but went rapidly in a direct line, as is his custom.

Your reporter, Mr. Waters, from his long experience as a judge and reporter of field work, at once recognized the situation, and gave Tick Boy proper credit.

The subsequent work of Tick Boy, I think, conclusively proved that he was not a chaser. In fact, he never did chase a chicken in Manitoba. He did some flushing when first worked on them, but never chased them longer than to get the birds well up into the air.

Topsy's Rod, it will be remembered by those who followed the Manitoba trials, started after a covey that he thought he had marked down, in the same way that Tick Boy did, and was called back by Mr. Avent.

This communication must not be called a kick, as I have said nothing as to the justice of Mr. Wells's decisions, it being my custom to accept the decisions of a judge with the best possible grace. Having officiated in that capacity, I know the difficulties under which a judge labors in placing dogs in a field trial to suit everybody.

J. B. STODDARD.

Mr. R. B. Morgan has settled once more in his old training quarters at Humboldt, Tenn. He reports that the birds have done well in Tennessee, that vegetation is very rank and the weather dry and dusty. He will remain at Humboldt until next April.

### Boston Terriers.

IN spite of obstacles that would have discouraged less ardent lovers of the dog they represent, the Boston Terrier Club seems determined to leave no stone unturned to bring their breed to a better position in the popular fancy. And their efforts are worthy of emulation by the clubs devoted to more pretentious breeds.

Notwithstanding derision and more or less misrepresentation, they have succeeded in obtaining recognition for the breed by the A. K. C., and with true Yankee push have placed their Boston terrier among the recognized classes at some of our best shows. One cannot, therefore, but concede all praise, even if one does not concede the claims advanced on behalf of these dogs, for the energy of these men in behalf of a dog that the majority do not recognize as a true breed. Another instance of the club's enterprise lies before us in the form of a brochure, just issued, devoted to a short history of the origin of these dogs, the standard and scale of points, the constitution and by-laws, and a list of members. The most important feature, however, because it is a new and useful one in specialty club procedure, is a list of prize winners at shows from the time separate classes were first made for Boston terriers. This, we are sure, will be found a very useful guide and reference for the breeder, and is worthy of imitation, from year to year, by other specialty clubs. While we admire the spirit the Boston terrier men have displayed in the past, we are not alone in saying that in future the club's efforts to produce a more even type would be better served if they would elect all-round terrier judges to pass upon their exhibits. Although there is a more even type of dogs shown now than prevailed a couple of years ago, still there is room for greater improvement in this respect. The idiosyncrasies of specialty judges, who often represent and "go for" a type or strain at times at variance with the proper requirements of the standard, are not always the surest guide to the breeder and novice and especially when, as this club admits, their breed springs from a variety of types or strains which the club is now endeavoring to merge into one harmonious whole. This, the all-round judge with some general idea of the breed and an intelligent conception of standard requirements, could be depended upon to determine.

Another phase of the subject we should like to draw the attention of the club to is the nondescript breeding of some of the winners. It was openly stated at Boston last spring that one of the first prize winners was the result of the mating of a fox-terrier and a bull bitch. Should not winners be compelled, before being recorded as such by the club, to show their breeding for three generations back at least? and in the present state of the breed it should not be difficult to verify the breeding by a carefully kept stud book. Such reports as we have alluded to necessarily hurt the Boston terrier in the estimation of the general fancier, and every effort should be made to show that winning dogs are the result of, as the club's claims the breed to be, systematic breeding and a reproduction of self.

### Barring All-Age Winners.

*Editor Forest and Stream:*

Mr. Waters in his article on "Barring All-Age Winners" takes exception to the new rule of the Manitoba Club allowing a dog two first prizes previous to barring from competition.

Among other names he mentions mine as being in favor of the new rule, and in this he is quite correct. I am and have been for years in favor of allowing a dog two wins before being disqualified, and I think I am safe in saying that three-fourths of our members who attend and take part in the trials are in favor of it.

Why bar a dog from further competition after winning one first prize? If he can repeat his performance under another judge and with the same and other dogs in competition, we are fully assured of his quality, and it gives us a chance to know more about him before breeding to him. Many times there is little or no choice between the first and second dog in a stake. If you bar one, why not the other? Mr. Waters thinks it will affect one stake in that it will deter some from entering the competition. In this I do not agree with him. He seems to forget that for the two years—1891-2—our All-Age Stake was open to the world without any restrictions, yet Mr. J. M. Avent, with two champion dogs entered—Orlando and Novelist—only secured third place with the latter, Mr. Ellis's Duke of Manitoba getting first and Betty S. second. There is no reason because a dog has won one year under one judge to suppose that he is bound to win again or even be placed under a different judge and in different competition. If he does, that satisfies us that he is just the dog to breed to and so improve our stock.

Take, for instance, the rule of perhaps the greatest dog event in the word—the Waterloo coursing cup. It that stake no dog is penalized for previous wins, neither is he barred from competition; and yet the nominations continue to fill every year, each one has hopes of beating the last winner and by so doing adding interest to the event and prestige to the winner.

I do not think Mr. Waters's comparison good in referring to trotting or pacing races, as that is simply a test of speed, and an owner knows or should know to a very close margin how fast his horse is and what his chances are in the race.

Our trials are steadily growing both in the number and quality of the entries, and the interest taken in them is far greater than it was a few years ago. Why? Because there are more good dogs to compete and we are gradually getting a class of dogs in Manitoba that would be a credit to any field trial. This, I claim, is largely the result of opening our trials to the world and the part American kennels have taken in them.

Should we find the new rule to work injuriously it will be quite easy to change it another year; but I for one doubt it, and make bold the prediction that our All-Age Stake the coming year will have the largest number of entries and the most interesting trials ever held in the history of the club.

JOHN WOOTON, Sec.-Treas, M. F. T. C.

MANITOU, Manitoba, Oct. 16.

### Dog Show at Richmond, Va., Oct. 9 to 14.

A SUCCESSFUL little show was held here on the above dates. The dogs were benched and fed by Spratts Co. in a building well adapted to the purpose. Mr. T. Farrer Rackham judged all classes and gave general satisfaction. The society was pledged much support for its next show. Mr. Wm. T. Owens of Manchester, Va., acted as the secretary and did all in his power to make the show a success, and made many warm friends. The list of awards is as follows:

ST. BERNARDS.—*Dogs:* 1st, W. B. Isaacs's Duke of Richmond. *Bitches:* 1st, W. H. Sands's Acme; 2d, O. Fuller's Lady.

MASTIFFS.—*Dogs:* 1st, F. K. Ellis's Leo. *Bitches:* 1st, G. T. King's Belle of Richmond.

GREYHOUNDS.—*Dogs:* 1st and 2d, W. E. Grant's George IV. and Good Enough. *Bitches:* 1st, W. Grant's Fannie.

POINTERS.—*Dogs:* 1st, J. M. Macon's Romeo; 2d, G. Lanzarone's Spot. *Bitches:* 1st, W. T. Cavedos's Lou.

SETTERS.—*Dogs:* 1st, W. P. Jones's Sport. *Bitches:* 1st, W. E. Grant's Flora.

COLLIES.—*Dogs:* 1st, L. A. Carey's Scott.

FOX-TERRIERS.—*Dogs:* 1st, M. Brauer's Trap. *Bitches:* 1st, M. Brauer's Vic; 2d, T. Page's Flora.

DACHSHUNDS.—*Dogs:* 1st, Miss A. Kahnwiter's Karl.

BULL-TERRIERS.—*Dogs:* 1st, T. Page's Floss.

PUGS.—*Dogs:* 1st, W. E. Grant's Jack. *Bitches:* 1st, Miss M. Bannister's Peggy.

T.

### Death of Paul Bo.

LOVERS of a good setter, and especially English setters, will be pained to hear of the sudden death of a dog that to all appearances when last seen in public seemed to have many years of useful life before him. Paul Bo was one of those *rara avis* that is at once a good field dog, a big stake winner, and a good winner on the bench. He was no chance dog, either, for he came rightly by his field intelligence and beauty of form, and the loss of such animal is a matter for regret. The cause of his death, however, affords a warning that should be heeded by kennel owners, though we would it had been a less valuable animal that afforded it. Every one who owns a field trial or bench show English setter knew this dog, and the following letter from his late owner, Mr. R. Merrill, will be read with interest:

It is with profound sorrow I write you of the sudden and unexpected death of my English setter Paul Bo. He died Friday (Oct. 19), morning in my kennel here in Milwaukee. His death, which is of course a great blow to me, was caused by a severe attack of pleurisy brought on by a cold and a low condition of his system. I had just returned from a shooting trip in Dakota, where I had been working Paul and a setter bitch on chickens. While out there my dogs both got covered with fleas and when I arrived home—not wishing to get the pests among the rest of my dogs—I thought it best to give them each a dip in a sulphur bath and rid them of the vermin. So on Wednesday last, a delightful warm October day, I gave all of my dogs a dip in the bath. Paul was the first dog to go into it as he had often done before, and he always seemed to enjoy its refreshing sensation. He remained in it almost four or five minutes until he became thoroughly wet through with the liquid, and then taking him out I rubbed him dry in the warm sun, after which he ran around the yard for a while and then I put him into the kennel, which had been thoroughly cleaned and disinfected in the morning of the same day. When the dogs were fed about 5:30 the same evening, I took Paul and several others out for a run. When they had been out some twenty minutes, I noticed a slight hoarseness in Paul's bark, which he always did when out for a run. I then put him in the kennel and after supper I gave him a dose of quinine and rubbed some liniment on his glands, also giving him a sore throat remedy I had often used myself. After seeing that he was made comfortable for the night I left him expecting to find him much improved in the morning.

On entering the kennel the next morning I found he had a bad sore throat and that his lungs were affected. His breathing was rapid and by putting my ear down on his chest I could plainly hear the huskiness of each respiration and knew at once the cold was settling on his lungs. I sent my man down at once for a veterinarian and he brought him up with him. The doctor said he was a very sick dog and left a number of prescriptions to be given him, which we did, and there never was a person who received better attention than Paul during his short illness. We stayed with him all day Thursday and towards evening he seemed a little improved, as his breathing was easier and he seemed to have less fever. At almost nine o'clock he had a sort of spasm and after that his breathing was more rapid and there was more huskiness with each respiration. Towards midnight he seemed to quiet down and we gave him a dose of medicine. At one-thirty we noticed that he was very weak and would not last much longer and waited patiently around him until one-forty-five when the end came without a struggle or a quiver. And then one of the best sons of the Gladstone stock and as good a dog as ever drew breath, ran his last race. His death is one of the severest blows which has ever befallen me and is very discouraging as I had been looking forward to the time when I should have had some good youngster of his to do credit to his name and keep up the reputation of the Gladstone and Count Noble strain. I have fortunately a Druid bitch in whelp to Paul and sincerely hope that some of her pups will be a credit in the field to their late sire. My intention will now be to get another dog as good as Paul Bo was, but this I never expect to do as he was one out of thousands. I shall now take renewed interest in breeding dogs and trust I shall be able to produce another Paul Bo.

Paul Bo was by champion Paul Gladstone out of Bohemian Girl, by Count Noble out of Mollie Belton; Paul Gladstone by Gladstone out of Lavalette, so it will thus be seen his breeding was of the deepest "purple." He was born June 5, 1889, and bred by Mr. J. Shelly Hudson. In 1891 Paul Bo, when owned by Mr. T. M. Brumby, of Marietta, Ga., won the Southern Field Trials Club's Derby at New Albany, Miss., and was handled by W. W. Titus; the same year he came on to the Central trials at Lexington, N. C., and, under Frank Richards's handling, won the All-Aged Setter Stake and Absolute. Since then he has not run in public but has won a number of firsts at Chicago, Detroit, etc, and qualified for the challenge class last month at Toronto. Mr. Merrill, who is a thorough sportsman, will, we are sure, have the sympathy of his fellow breeders.

### The International Field Trials.

A MEETING of the International Field Trials Club was held Oct. 13 at the Garner House, Chatham, Ont., to discuss the preliminaries for the coming trials. The judges selected are Messrs. John Davidson, Monroe, Mich.; T. Guttridge, Chatham, Ont., and W. D. Tristem of Detroit. As intimated in our last issue, the trials will again be held at Mitchell's Bay, about 14 miles from Chatham. The trials promise to be more than interesting this year. The handsome Gzowski-Robinson trophy, that was won last year by Mr. Wells's Cleopatra, will be competed for again by the all-aged dogs, and Cleopatra, fast and clever little bitch though she is, will have to put her nose and best foot foremost and keep it there to win, as Brighton Tobe, fresh from his good work on the Manitoba chickens, will no doubt be a prominent factor in the result, not to mention Rock, Dash Antonio, Toledo Bee and others that will probably be in the draw.

Sixteen puppies have paid second forfeit in the Derby. They are:

ENGLISH SETTERS.—Dr. Totten's Hannah, W. B. Wells's Manitoba May; T. C. Stagman's Judy, S. T. Miller's Rosebud, R. Baughan's Dash Antonio, M. Smith's Date.

POINTERS.—Leamington Pointer Kennels' Count Graphic, T. G. Davey's Faustina, Lucy and Forest Quail, A. Harrington's Plain Sam, Fred. Mole's Mole's Louise, R. G. Gardiner's Engarita and C. Hicklin's Buttons.

IRISH SETTERS.—J. B. McKay's Killane and River Roe.

The All-Age entries close Nov. 1, with Mr. W. B. Wells, Chatham, Ont., and no doubt there will be a satisfactory entry.

### Schell—Huber.

*Editor Forest and Stream:*

In your issue of the 6th inst. you have a small article regarding the trouble between Henry Huber and myself. I did beat Mr. Huber, as stated, but I entered his house on his invitation; on my entering his door he struck at me with a curtain pole. I took it from him and gave him what I considered his just deserts. There was no pistol used, nor did I have one in my possession, nor did the charges preferred against me by him have anything to do in the matter. On the examination in the court the case against me was dismissed on the testimony of Huber and his witnesses.

E. P. SCHELL.

### United States Field Trials Club.

INDIANAPOLIS, Ind., Oct. 21.—*Editor Forest and Stream:* The following named dogs are dropped from Derby B on account of non-payment of second forfeit:

English Setters—P. Lorillard's Eugenia, F. R. Hitchcock's Tory Diomed, Jackson & Denmark Kennels' Jack King and Mary Jane C., Capt. Patrick Henry's Nellie Brent and Mildred Lee, Geo. D. Fisher's Naptholeum.

Pointers—Charlottesville Field Trial Kennels' Sepoy, D. G. Rowland's Jilt's Lad, N. T. Harris's Lad's Nellie, J. L. Adams's Gilt Edge and Lad's Bess.

P. T. MADISON, Sec.-Treas.

If any one has whippets to sell, now is the time to advertise them, judging by the number of inquiries we have received lately, so many of the dogmen want to have a shy at the New England Kennel Club's whippet handicap.

# DOG CHAT.

## Produce Stakes.

It is a recognized fact among breeders of dogs that the Produce Stake is the most popular competition that can be instituted, whether by a specialty club or a private kennel. Mr. J. E. Thayer was among the first to institute such a stake by giving yearly $100 at Boston show for the best fox-terrier pup sired by one of his noted terriers. Mr. H. H. Hunnewell, Jr., has elaborated this idea and is now offering a series of annual produce stakes that will carry the competition into 1897. Instead of giving a lump sum to the winner, he has made an appreciable change by dividing the stake into several prizes and by sex, a very commendable and much fairer arrangement. The 1895 stake will be for the progeny of his stud dogs sired between Sept. 1, 1894, and April 1, 1895, and this is to be competed for at the N. E. K. C. fall terrier show, and in case the club does not repeat its terrier show next year, the competition will be postponed until the Boston show of 1896. The prizes will be $25 and $15 each for dogs and bitches. The 1896 Produce Stakes will be for the progeny of his stud dogs sired between Sept. 1, 1894, and April 1, 1895, and will be decided at the N. E. K. C. fall terrier show in 1896, or failing such a show, at some show to be decided upon later. This stake is divided into $30 and $20 for dogs and the same for bitches. The 1897 stake will be worth $150, divided into $35, $25, $10 and $5 for dogs and the same for the frailer sex, and is to be competed for by terriers sired in 1895 subsequent to April 1 of that year, at either the N. E. K. C. fall terrier show or the regular Boston show of 1897.

Mr. Hunnewell is looking still further ahead and announces that after 1897 will come the Annual Grand Produce Stakes value $150; prizes to be distributed as in 1897. In 1898 the competition will be for those sired in 1896; in 1899 for 1897 dogs and so on. Thus it will be noticed that the progeny sired up to April 1, 1896, will be eligible for two valuable stakes. The only conditions are that the entries shall also be entered in the regular classes at the different shows and they be sired by the Hill Hurst stud dogs. To compete for these stakes, breeders are not asked to breed to inferior stud dogs, but on the contrary to stud terriers that are recognized as some of the choicest in the country both in brown poodles and wire-haired fox-terriers.

Outside of the question of advertising, these produce stakes conducted on such lines as indicated above will serve to improve the breed of fox-terriers or other dogs in America, as with moderate stud fees and the chance of winning them back, small breeders will be induced to seek better blood and not be so apt to use the dog that comes the handiest, which latter failing is in great part the cause of many breeds not showing that all-round improvement the presence of good stud dogs would lead one to expect. We have always advocated that greater attention should be paid by breeders to blood lines and not so much to winnings, still at the same time breeders should pay even more attention to good producers and the nicking of the strains.

---

"Sandy" in the English *Field* gives his opinion of what the Skye terrier should be and holds the modern show terrier as totally unlike what the old-time terrier is or was. He calls the former Lothian terriers. In describing a strain of the old stock he says: "They were small dogs, ranging between 12lbs. and 16lbs. in weight; bitches, say, about 2lbs. less; almost invariably drop-eared, the ears small and pointed and clothed with soft hair; no long locks hanging down like a weeping ash, as seen on the ears of the Clydesdale and Lothian dogs; coat of moderate length, say, from 4in. to 5in. on the body, wiry in texture; eyes dark hazel, bright and expressive; head not large, muzzle rather short and strong, to hold the grip tenaciously; legs strong and short in proportion to length of body; tail short and bushy, carried low. Usual colors, reddish-yellow and dark or light gray; the muzzle, tips of ears and end of tail should be of a darker hue than the body color." The modern show dog is thus raked over and not without some truth: "On the other hand, these Lothian terriers we see on the show benches are large and heavy looking dogs, say from 12lbs. to 25lbs. in weight—some I could name appear even heavier—their heads are large for the size of the body; ears (unlike the Skye) are almost always pricked, and donkey like in size and shape, with long hair hanging down like a weeping ash; coat altogether out of keeping with terrier character, say from 8in. to 10in. in length, probably derived from a cross with the Russian poodle; tail rather long and badly carried, often seen curled over the dog's back, poodle-like." In answering his own question "What constitutes a Skye terrier?" his reply is briefly, "A wee rough-coated, long-backed, short-legged, quaint-looking doggie, Highland bred or of Highland descent, being a *sine qua non*."

---

Dogmen are seldom surprised at anything their dogs may do, but the following is certainly unique: "The following account of the 'vagaries of a dachshund' may be worthy of record in the columns of your paper. He has been in the habit of disappearing for lengthened periods, extending at times to hours, and was at last discovered by the gardener lying in front of, with nose and forepaws close to, the nest of some wild bees in the ground, to which he had evidently tracked the insects; he kills and eats the bees as they arrive, presumably laden with honey. After he has destroyed them all he proceeds to dig up the combs, which he likewise devours; it is almost needless to say that the old dog has become extremely fat, and his coat is exceedingly sleek, doubtless owing to his meliphagnic diet.—*W. Henderson, Major (Thurso, N. B.), in the Field.*

---

Lieut. Peary, who is now in the artcic regions, in a letter to Gen. I. J. Wistar, President of the Academy of Natural Sciences, says that owing to the intense cold and wind experienced on the inland ice in his attempt to cross to Independence Bay, his pack of Eskimo dogs were practically destroyed, some of them freezing to death, and others were rendered helpless and finally inducing in his pack the piblocto or dog madness of that region. His experience has taught him that the human animal can be so clothed and fed as to be unaffected by any degree of cold. What he needs now is an exhaustive study of the Eskimo dog and his needs under the most trying circumstances. Here is a case where cornmeal cakes might be used to advantage; they are heating enough, anyhow.

---

We sympathize with the owner of the foxhound Daisy, winner of first at the Rhode Island show this year. Dr. Thurber, in telling of the shocking death of this bitch, says: "It is the same old story of the tired dog returning home and run down by the diabolical motorman of an electric car. The mangled animal dragged herself into a vacant lot at the side of the track, where she lay from 10 A. M. until 4 P. M., with both hindlegs torn off. The car passed and repassed all this time, and neither the motorman nor conductor notified the owner or anybody else, although the bitch's collar had the owner's name thereon. A lady who happened to be attracted by the actions of her own dog, took the pains to follow it, and there found the injured one. Daisy was ordered to be shot by her owner, Mr. Thatcher, of East Providence. The end is not yet."

---

When the average motorman of a trolley car holds the life of a human being in such light regard that scarcely a day passes but that either the death of or severe injury to someone is not related, it seems hopeless to expect these men to keep an eye open for a mere dog. Owners of valuable dogs, valuable either intrinsically or from associations, as we have repeatedly pointed out, should, in cities especially, exercise better surveillance over their dogs. Probably more valuable dogs have been lost during the past three years through being run over by almost noiseless moving electric and cable cars than by any other cause. Owners are as a rule careless about their dogs unless they own a large kennel and until their duty is brought home to them in some such sudden manner as the above case indicates they will continue to let dogs wander whither they will. An ounce of prevention is better than a pound of cure and that is why we again draw attention to the duty which a dog owner owes to himself, his dog and the community at large.

---

New York has its McLin in the form of a man by the name of Hurley, who has just been sent to the Island for one month for starving a lot of dogs that were either owned by him or in his charge. The man lived in a cellar basement and kept his dogs in noisome cellar vaults. Complaints were made by the neighbors, and finally President Haines's (of the S. P. C. A.) attention was called to the affair, about the middle of July. An officer who was sent to the place found a dozen dogs in various stages of starvation and disease. The man tried to bluff the officer in several ways, and the latter becoming exasperated, forced his way into the man's rooms; no dogs were found there, but in another cellar beyond an emaciated bull-terrier was found; then in some vaults further hidden from the light, the officer found a Skye terrier and a fox-terrier. Determined to seek further, he came across a subcellar, but before he could get into this "hole of Calcutta," Hurley grappled with him and a rough and tumble scrimmage ensued; a bystander interfering, the officer was enabled to open the door, when a terrible sight met his eye. Eight dogs, chiefly terriers and spaniels, were found in a wretched condition. The officer seized an emaciated greyhound that, according to a portrait in the New York *Sun*, must have been a most pathetic object. It was nothing but skin and bone. The dog was photographed and sent to a "vet.," and on the strength of the photo and the "vet.'s" evidence a warrant was issued for Hurley's arrest. The dogs were taken in charge by the S. P. C. A. and are now on a fair road to recovery. There is no clue to their ownership nor is Hurley's object known for keeping the dogs in such a terrible condition. In the photograph of the greyhound, the dog was shown so thin that he appeared little more than a skeleton partly covered with skin. Flesh there was apparently none, and the bones in places were bare; the neck was covered with mange. One photo taken by the society suggests a mounted mummy in a museum, the ridges of the vertebræ showing as though connected only by wires, for the skin was so shrunken it does not appear in the picture. One month seems little enough time to give this man for reflection.

---

## Reckless Disinfecting.

Mrs. Williams, who owned the late champion, Old Burgundy, the Skye terrier, raises an interesting question in accounting for the death of her dog and the sickness of her other dogs since Toronto show. She thinks they were poisoned by the Phenyle powder used at the show, which was indiscriminately and too generously thrown into every dog's stall. As this stuff contains a good deal of carbolic, the idea is that the dogs were made sick or poisoned by absorption and through breathing the fine powder. She adds: "My other dogs since their return from the show have not been in right health at all, and before none of them ever ailed a day. After a lot of trouble I managed to get Buccaneer and Fanbar into their usual health, but at present my fine old fashioned bitch Phumps lies very weakly. I feel certain they have suffered from blood-poisoning, as the symptoms of all have been the same. I have attended many shows in England and never before had a sick dog after a show. I saw several dogs at Toronto show looking very sickly and I knew one gentleman whose dog turned sick quite suddenly, and the careless way in which the disinfecting powder was used, I quite believe did all the damage." There is such a thing as being killed with kindness, and we have had occasion several times to draw attention to the haphazard manner in which disinfecting powders and liquids are thrown around at some of our shows. Too often this necessary part of a dog show's detail is left to the tender mercies of one of the attendants, who probably knows as much about cause and effect in disinfectants as the nearest post. Those who have occasion to stay long in dog show buildings know the irritating effect some of these disinfectants have on the throat and nasal passages, and the poor dogs who are compelled to breathe this atmosphere for four days and nights must surely suffer.

---

In the Chicago *Tribune* we find that Justice Bradwell took a step in the right direction in the case of the Illinois Humane Society against two women who were accused of gross cruelty to an Esquimaux dog owned by a Mrs. Mack. According to the owner's story the dog was not only a pet but on account of the breed was valued at $500. The defendants, July 6, decoyed her dog into their house, swathed its tail in cotton cloth, saturated it with kerosene oil, and set it on fire, having in the meantime removed it to the street and pointed its head to the south. The poor tortured animal ran in the direction of Washington street, where the firemen in the engine house near the corner turned out and extinguished the flames. The dog was fatally injured and had to be killed a day or two ago, but it was taken to the Justice's office last week for him to see before continuing the case. The outrage was proved by many witnesses, and, there being no defense, the Justice inflicted a fine of $100 on each of the defendants. There have been several cases of gross cruelty to dogs in Chicago during the past summer, but we believe this is the first conviction. A sojourn in Joliet prison would have been a more fitting punishment.

---

The following yarn has penetrated even to the Emerald Isle and the *Irish Sportsman:* "A New York girl, who found herself a penniless orphan, after having lived in luxury, obtained the means of making a good livelihood by combing, brushing and exercising the dogs of her acquaintances for a dollar a week each. Others followed her example, and it is now said that there are over a hundred young women in New York who make a very snug income in this way. They wash the faces and paws of the pet dogs, brush and comb them, give them their breakfast, and then take them for an hour's constitutional." How nice.

---

Bloodhounds, or so-called bloodhounds, are being used to good purpose in these days of train robberies and bank hold-ups. At a place near Indianapolis, Ind., last week, a bank was rifled and the robbers decamped to the hills. Dogs were used in their pursuit. One of the robbers was badly wounded and tried to hide, but the hounds nosed him out and he is now a prisoner. We should say that it would be one of the first duties of the new Bloodhound Club to communicate with some of these western and southern sheriffs and place the real bloodhounds in their charge to be used for man trailing. The hounds' old functions would be kept up and if their superiority to the native hound is proved, as many claim, a great incentive would be given to a grand old breed that is scarcely appreciated as it should be.

---

On the controversy over the correct carriage of collie ears Hugh Dalziel has this to say in a letter to the *British Fancier:* "Whatever 'the consensus of expert opinion' may be, nature does not place the collie's ears right on the top of the head, as shown in so many of the otherwise admirable portraits you have published. How modern expert opinion justifies the forward drop of the tips of the ears, with their base apparently growing out of the occiput, I have yet to learn. Of course 'fanciers' may cultivate whatever abnormalities they please. So full of shapes is fancy that it alone is highly fantastical, but some of the prize winners of late years are a libel on the Scottish collie." And *Segusian* this week bears out our remarks in last week's FOREST AND STREAM when he says: "How many noted prize winners can be named who were at one time prick-eared? The carriage of ear 'drop forward' is as artificial as the 'modern notions' that we see promulgated in some English papers, and it is about time Scotsmen were speaking up and stopping this *blether.*"

---

This is only what we might expect from our esteemed and just contemporary:

When we recently drew our American contemporaries' attention to their awkward habit of naming journals in Roman letters instead of italics, we omitted to except FOREST AND STREAM, which invariably follows the English custom.—*Stock-Keeper (Eng.)*

---

Mr. J. L. Winchell, the mastiff and bloodhound breeder, has been staying in New York for a few days, and of course dropped in to have a dog chat. He told us that the bloodhound fancy is making great strides in popularity, and that he cannot raise puppies to fill the demand. The Southern and Western sheriffs are beginning to take more interest in the breed as man trailers, and recently Mr. Winchell sold two pairs that will be trained for this purpose in Kentucky. We had a talk about small ears and other funny points in mastiffs, but this will keep for another time, when we tackle that question as to whether a mastiff's ears can be too small. Mr. Winchell recently sent us a picture of Burgundy, the bloodhound, that Mr. Brough said was the best he ever saw or expected to see again. From the picture he must have been a beautiful and noble animal. The popular idea is that bloodhound puppies are difficult to raise, delicate, and so on. Mr. Winchell in telling his experience said that they require constant care and attention and good food, but that, like turkeys, when once well started they were hardy dogs. He has raised ten out of a litter of eleven born last March, and they promise to be very good ones. As to the bloodhound's reported viciousness, he treats that as all moonshine, the only time he ever saw any bloodhound cross was when some one blew into old Victor's face and he resented it—and we don't blame him.

---

Those who read Mr. Stoddard's letter in another column, wherein he takes exception to Mr. Wells's statement that Tick Boy chased in the Manitoba field trials, will recognize the sportsmanlike tone in which it is written. The change from the usual blustering know-all-better-than-the-judge style of those letters that come to us after the field trials, is so welcome that we cannot refrain from calling attention to it. The tyro in field trial work will also derive instruction from its perusal, as it shows how carefully each movement of the dogs should be weighed and the deductions from their actions be made, not forgetting a point which is so often lost sight of in field work—the point from which the wind comes.

---

Mr. Edward Booth writes us from his home in Hull, England, that the dog world over there seems very quiet, but there are as many good dogs as ever, especially in St. Bernards. After a trip to Hamburg and Berlin, Germany, he expects to visit the Kennel Club show at the Crystal Palace, London, and promises FOREST AND STREAM a few impressions of the show that are sure to be interesting. He closes his letter with the news of the death on Oct. 2 of Mr. Mark Gretton, the veteran Skye terrier fancier of Hull. He at one time owned the famous drop-eared Skye champion Sam.

---

The terrier show, with an entry of 244, must have exceeded the most sanguine anticipations of its promoters and we trust that the enterprise of the N. E. K. C. will meet with its reward in a "gate" of large dimensions, and that the clerk of the weather will be in his best mood. The number of entries in each breed is as follows: Bull-terriers 14, Boston terriers 22, fox-terriers 123, Dandie Dinmont terriers 10, Bedlington terriers 2, Scottish terriers 43, Irish terriers 23, black and tan terriers 4, Skye terriers 2, Yorkshire terriers 1; total 244. Fox-terriers naturally are the strongest classes, and it is safe to say that competition will be very strong. Classes 22A and 22C have been divided both by sex and coat, and class 22B by sex, owing to the liberal support in these classes.

---

Mr. T. Farrer Rackham, of East Orange, N. J., is doing the Southern circuit of poultry shows, several of which have added a dog department to their attractions. There is to be a show at Macon, Ga., Nov. 6 to 18, and Mr. Rackham will judge all classes, as he did at Richmond (Va.) show, which took place Oct. 9 to 14.

---

Albany is becoming quite a busy center of dogdom, and Mr. T. S. Bellin has been particularly active lately. He has just sold to Mr. Frank F. Dole the lately imported bull-terrier dog Greenhill Nunthorpe, E. K. C. S. B. (37112), winner of eight first prizes during the past two years at the principal shows in England. To Mr. T. S. Craig, Albany, N. Y., Mr. Bellin has sold another bull-terrier recently imported This is Amazement, winner second Birmingham, first St. Helens, third Liverpool and other prizes. Mr. A. A. Macdonald, of Toronto, Ont., also purchased from Mr. Bellin the wire-haired fox-terrier bitch Carlisle Jess, of Cribbage, Tack and Pickering Nailer blood. Mr. Bellin also intends to stir up the Irish terrier fancy a bit, for he has imported the young Irish terrier Marton Shamrock by Ballyfolly, by Ben IV. (late Bumptious Ben) dam Brighteye, litter sister to champion Brickbat. Marton Shamrock has won thirteen prizes and specials at seven shows in England, beating the well-known Firefly, Heywood Conn, Tornada, Red Enamel, Baron Dunluce, etc.

---

The Scottish Kennel Club show has just taken place at Edinburgh. There were about 1,500 entries, and the quality is said to have been excellent.

---

Another bulldog match is on the tapis. This one is expected to be between Mr. Geo. Raper's much-criticised and much-belauded Rustic Phenomenon and another heavy, Mr. Oliver's Save Monarch. This dog is 3lbs. under the stipulated 55lbs. and this constitutes the difference between the owners at present.

---

Dr. Lougest's son-in-law has been over in England some time picking up some new bloodhounds for the Doctor. He will also bring back a bloodhound bitch that has been in training for a year and of whom great things are expected as a man trailer.

---

Mr. "Dick" Merrill, the noted trap shot of Milwaukee, has just returned from a two weeks' hunt in North Dakota. He had good sport in finding chickens and grouse in good numbers, but the duck shooting was not up to the mark, owing to the extreme dryness of the season. He writes: "I wish you could have been out with me and I would have given you some sport with the grouse over Paul Bo." (Paul Bo, it must be remembered won his spurs at the Central Trials in '91, when he beat Maid of Kent for the absolute winner's race in the All-Age Stake.) "I have some very promising youngsters sired by him out of a Count Noble bitch, and they are to go for next year's Derby. I also have a fine Strideaway—Hope II. pup, and will soon send him away to be prepared

for the same stakes." Mr. Merrill has secured the services of Thos. Richards, of Wheatland, N. D., to take charge of his kennel, and he will prepare and run his dogs at the trials next year. While at Wheatland he purchased a young pointer by Rip Rap ex Lady Peg from Mr. W. F. Hunter. After a few days at the United States Trials next month, Mr. Merrill will go down to "Dixie Land," where he and Mr. Hough had such fun last winter. He will locate among the canvasbacks and redheads, and later will hustle the quail about around San Antonio, as reports from that section this year are very favorable.

The cable car juggernaut has claimed another victim, Mr. J. B. Martin's (of San Francisco) noted fox-terrier champion Blemton Brilliant having been run over near her home. This bitch, who earned her title before being sent out to California, under the colors of the Blemton Kennels was by Moonstone out of Media, and at the time of her death was over seven years old, as she was whelped April 8, 1887. Besides her bench show honors she could look back with pride upon her career as a matron, having produced such dogs as Blemton Shiner, Blemton Stormer, Regent Risk and others. The bitch had reached a ripe age, but her sudden taking off will insure Mr. Martin the sympathy of his fellow fanciers.

A new kennel club was formed last week at Sherbrooke, Quebec, Can., with Mr. L. A. Klein, the well known Canadian dachshund breeder, as president, and another well known exhibitor, F. S. Wetherall, as secretary. The club has already twenty-two members. Constitution and by-laws have been adopted and the annual meetings are set for the third Thursday in October. The secretary's address is Compton, Quebec.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

*Stridemore.* By R. Merrill, Milwaukee, Wis., for liver and white pointer dog, whelped Jan. 11, 1894, by Strideaway (King of Kent—Pearl's Dot) out of Hops II. (King of Kent—Hops).

*Rudge Bo, Nellie Bo and Pauline Bo.* By R. Merrill, Milwaukee, Wis., for black, white and tan English setters, one dog and two bitches, whelped April 17, 1894, by Paul Bo (Paul Gladstone—Bohemian Girl) out of Tube Rose (Count Noble—Lit).

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Breeze.* F. Pidgeon's (Saugerties, N. Y.) beagle bitch Breeze (Stormy—Myrtle the Mouse), June 30, one bitch, by Hornell-Harmony Kennels' champion Sherry (Little Prince—champion Elf).

*Bell B.* C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Bell B. (Gordon Tyrus—Nellie), Sept. 27, sixteen (eleven dogs), by his Murkland Ranger (imported Murkland Ranger—Beaulah).

*Blossom.* C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Blossom (Sam B.—Nellie P.), Sept. 29, six (one dog), by his Murkland Ranger (Murkland Ranger—Beaulah).

*Brittle Broom.* H. T. Foote's (New Rochelle, N. Y.) wire fox-terrier bitch Brittle Broom (Brittle—Vic Broom), Aug. 31, four (two dogs), by his Brittle Brant (Brittle—Whittle).

*Meersbrook Maiden.* H. T. Foote's (New Rochelle, N. Y.) black and tan terrier bitch champion Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress), Aug. 17, five (three dogs), by his champion Broomfield Sultan (Broomfield Turk—Broomfield Belle).

*Whittle.* H. T. Foote's (New Rochelle, N. Y.) fox-terrier bitch Whittle (Warren Rattler—Warren Drytime), Sept. 1, seven (two dogs), by H. W. Smith's Brittle (Brick—Vamp).

*Fannie Noble III.* Jacob Schroth's (Philadelphia, Pa.) English setter bitch Fannie Noble III., Sept. 13, eight (four dogs), by F. G. Taylor's Breeze Gladstone.

*Mabel E.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mabel E. (champion Kash—Lady Thurman, Oct. 5, four (two dogs), by their Happy Toby (Spokane—Nelly T).

*Lady Verne.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Verne (Joe II.—Maudie), Oct. 9, seven (five dogs), by their Bradford Ruby II. (champion Bradford Ruby—Puss B.).

SALES.

☞ **Prepared Blanks sent free on application.**

*White Lady.* English setter bitch, whelped July 9, 1893, by Sig. Gladstone out of Nellie H., by Eberhart Pug Kennels, Cincinnati, O., to A. E. Davis, Worcester, Mass.

*Daisy Rip Rap.* Black and white pointer bitch, whelped May 17, 1893, by Rip Rap out of Lady Peg, by W. T. Hunter, Wheatland, N. D., to R. Merrill, Milwaukee, Wis.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

W. N. I., New York city.—The dog has not sired any winners that we know of, but his breeding is good.

W. R. B., Orange, N. J.—Yes, the great Dane is also known as the German mastiff, but the term boarhound, we believe, is erroneous.

T. C. T., Durand, Wis.—If you will peruse our business columns you will find a number of reliable fox-terrier kennels advertised. We cannot tell you which is the best.

# Hunting and Coursing.

## FIXTURES.

FIELD TRIALS.

Oct. 29.—National Beagle Club, Hempsteat, L I. Geo. Laick, Tarrytown, N.Y., Sec'y.

Nov. 5—Brunswick Fur Club, North Acton, Mass. Bradford S. Turpin, Dorchester, Mass., Sec'y.

Nov. 7.—Northwestern Beagle Club, at Columbus, Wis. Louis Steffen, Milwaukee, Wis., Sec'y.

COURSING.

Oct. 30.—Cheyenne Coursing Club, at Great Bend, Kan. Ira D. Brougher, Sec'y.

Oct. 30.—Altcar Coursing Club's autumn meeting at Holyoke, Col. S. W. Vidler, secretary. Basil Hayman, judge. R. Taylor, slipper.

Nov. 14.—California State meeting at Merced, Cal. J. R. Dickson, Secretary.

### The Dixie Red Fox Club's Hunt.

*Editor Forest and Stream:*

The hunters who assembled in Limestone county, Alabama, Sept. 8, to participate in the fourth annual camp hunt in that county were: W. I. Spears, Ingram Mills, Miss.; Capt. Wm. Bankhead and Hon. M. J. Gilchrist, Courtland, Ala.; Capt. John A. Turner, Athens, Ala.; Dr. I. F. De Long and C. W. Spears, Rowland, Ala.; John H. Wallace, Jr., Tower Creek, Ala.; Hon. I. L. Hennigan, Leighton, Ala.; J. Iverton Ewen, Florence, Ala.; Capt. Wm. Richardson, Quidnunc, Ala.; Frank Clay and Peter Fletcher, Greenbriar, Ala.

Our camp was beautifully situated in a large grove of spreading oaks. A glade near by furnished splendid pasturage for our horses, and best of all was a spring a hundred yards to the north, from which flowed delightful, cool, freestone water. The hunting grounds were only a mile away, and have almost a national reputation for the abundance of long-winded red foxes

Mr. Spears had eight hounds in camp—six half Avent black and tans, Willis the July hound and a Whitlock-Walker Haggy. Wallace & Hennigan had seven hounds—four Albemarle county, Virginia, foxhounds, two Goodman bitches and a Goodman—Virginia cross Mr. C. W. Spears had a very fast son of Mack and Prompter and four natives. The other gentlemen also had hounds, making altogether twenty couple in camp. We hunted six days, caught three red foxes and holed three.

Two runs were had which severely tested the speed and stamina of the hounds. In those races a hound lacking in speed was easily dropped, so rapid was the pace set by W. I. Spears's Dexter, Hennigan's unbeaten Mack and C. W. Spears's Prompter.

Limestone county abounds in large plantations and few fences, and all the hunters unanimously agreed that it was the best place to hunt that they had ever seen.

The people are hospitable and cordial, and when a hound gets lost some one always brings it to camp. Mr. W. J. Spears's July hound was mistaken several times for a shepherd and a coon dog.

Willis, in my estimation, is as good as Julys get to be, but he cannot hold his own long with a pack that will lead him from the jump.

I am confident that the Virginia hounds were superior in every way to any hounds in camp. I have never seen so many hounds of equal speed at one time in a race in my life.

Our amicable contest ended very pleasantly, as there was no prejudice shown in favor of or against any hunter's hounds or any particular strain of foxhounds. So elated were the hunters with the great success which met them on every side, they decided to organize a club for the purpose of holding annual meets and by careful judging ascertain what qualities constitute the typical American foxhound.

The officers of the club are: Dr. J. F. DeLong, Rowland, Ala., President; W. I. Spears, Ingram Mills, Miss., First Vice-President; J. Overton Ewin, Florence, Ala., Second Vice-President; John A. Turner, Athens, Ala., Master of Hounds; John H. Wallace, Jr., Tower Creek, Ala., Secretary and Treasurer.

This club has twenty charter members, and not desiring to confine its membership to Alabama or the South, respectfully request all hunters who have the best interest of the foxhound at heart to send their names to the secretary and they will be sent a copy of the constitution and programme.

The club proposes to hold its first annual meeting in Limestone county in October, 1895. Two stakes are offered—an All-Age pack stake and a puppy stake for hounds under 20mos.

We would be glad to hear from all hunters in the United States and Canada. J. H. WALLACE, JR., Sec.-Treas.

TOWER CREEK, Ala., Oct. 18.

### Possum and Fox Hunting in Tennessee.

*Editor Forest and Stream:*

On the night of Sept. 20 Mr. J. E. Mask came over to accompany me in my first oppossum hunt for this season. As I am not much of a possum hunter, I proposed starting with my dogs and hunting five miles from home, where we often camp when fox hunting, and have my kennel man bring the fox pack out next morning. This was satisfactory, and as soon as we had supper we mounted. We took a lunch along and a sack a corn for our horses, and the latter looked rather "bundlesum" to get through the woods with. I was mounted on my thoroughbred racer Roderigo, and as he has had but little training, except on the track, he did not like the sack of corn, and for a half mile kicked and pranced, affording great amusement to Mr. Mask and Tom Powell. We took four hounds that are all first-class possum and coon dogs (not fox dogs). We reached the woods, about one mile from home, and before we hardly thought the dogs had time to get out of the road they had a hot trail, and in a few minutes had "Mr. Possum" up a tree and every dog talking to him. He was up a small bush, and we soon had him in a sack.

The horn was sounded, another start was made and away the hounds went scattering in different directions. Before going a quarter of a mile they had the second trail and this also proved a hot one and they soon had the possum up a small tree and Tom had him on the ground and into the sack in a very few minutes We had scarcely mounted our horses when Drive found the third trail which gave us quite a good race before taking a tree, and this possum proved to be quite a large one that made a terrible fight in the sack with his two smaller companions.

We then changed our course and while crossing an old field we heard two of the dogs strike a quarter of a mile away, and before the other two could get to them they were talking to "Mr. Possum" up a small grape vine tree. He was soon caught and sacked, which caused quite a lot of trouble in there, and a severe fight was anticipated and caused Mr. Mask's quiet mount to get very unruly in the thick woods. After a short hunt of fifteen minutes we had another trail that proved to be a very cold track. After about fifteen minutes hard work on an old fence, the hounds decided that the possum was up a grape vine that went to a large oak, but we decided not to cut it. We then rode nearly a mile across a farm to a piece of woods, when we soon had the sixth possum up a small tree and caught him. We had to get another sack for this one.

We then hunted near a small creek bottom, and two of our dogs left us and went to the bottom for a coon chase. I blew the horn and tried to get them back, but they were bent on a coon before leaving the bottom, and soon had one going in full cry, making the mud and water slash. The race was soon ended, but they were well in the swamp, and as I am not much of a coon hunter I soon blew two of them out, and they had hardly reached us when they struck a trail that led almost straight away for a mile across fields and a small piece of wood. We had just decided that our possum dogs had gone back on us and had struck a fox, but about the time we were going to stop them they commenced giving tongue freely, up a tree, and at the same time the two dogs that did not come out of the creek bottom were trailing another coon nearly a mile below us, and before we had cut this tree they had treed their coon. This possum proved to be a large one, but rather poor for good eating. However, she gave us one of the longest races that I ever saw for a possum. The two dogs that had the coon treed were across a thick, swampy bottom, and so far away that we made no attempt to get to them, and blew for nearly a half-hour before we could persuade them to leave the game.

We then rode about a mile and a half down a lane between two farms near the place where we expected to camp. As it was hardly midnight I told Mr. Mask and Tom if they would get over in the field and go to a piece of woods about 100yds. from the road that I would take the horses on to camp and build a fire while they were catching another possum. As Mr. Mask and Tom are thoroughbred possum hunters, they were soon over the fence and in the wood. They had scarcely reached the cover before the hounds had a good trail, and in a very few minutes they had him up a tree. I could not stand the temptation, and, hitching the horses, was over the fence with one sack of the possums. By the time I reached the tree, Tom, a first-class hand with an axe, especially at a possum tree, had the small sapling ready to fall, and I was just in time to help sack the game. The two possum hunters were still unsatisfied and made a round of the woods while I returned with the sack of possums to the road, and soon reached the place where we were to camp. By the time I had hitched the horse and started a fire they had another possum up a tree about a half mile away, and the sound of the axe told me that they had this time treed up a large tree. I did not care to go to them, as I am not fond of cutting when I can get around it. I soon had a good fire by the side of a large log, the horses unsaddled, the possums hung up in a tree and our quilts spread for a nap before my most welcome camp fire. I waited some time to hear the tree fall, and finally it came down with a crash like a tree that had fallen from some timberman's axe. Then there seemed to be quite a lively run for about 75yds. and the dogs treed again, and the axe was soon started on what sounded like a still larger tree. I went to sleep before Mr. Mask and Tom cut this one down. After a good nap I was aroused by Mr. Mask yelling at me to get up and see the largest possum that we had caught. This ended our first possum hunt, with eight in the sacks, one treed that we did not go after, and two coons that we did not want to catch. By this time it was nearly one o'clock and we were all ready for a few hours' rest to get ready for my part of the sport—a fox chase.

About 4 o'clock I heard my kennelman coming with twelve and a half couple of my best red foxhounds. It was hard to get Mr. Mask and Tom up, but before any of the hounds reached camp I succeeded in getting them out and our four possum hounds only stopped and barked around us a few moments, and before we could get our horses saddled old Hunt could be heard trailing half a mile away, and the pack all soon joined in. This trail proved to be on a cunning old red fox that has been run many hard races, and when he heard our possum pack about midnight, he left his range and we had a good trail through woods, fields and creek bottoms for eighteen miles; the trail was just good enough for every dog we had to give tongue freely on, and a better one could not be asked for.

It took good, hard riding to stay with the hounds; in fact, Mr. Mask and myself were the only ones that kept in hearing, and Mr. Mask would not have ridden fast enough to stay with me, but I had him in a strange country and it was keep up or get lost. Finally the fox was jumped, and a sharp, hard run of about one and a half hours was had when the old fox decided the pace was too great for him to stand, and he went to earth. By the time the race was over several hunters joined.

As I had to go through a fox range before getting home I decided to give them the second race. After crossing the creek the hounds soon had a trail. It was now about 10 o'clock and rather hot for good work, but the pack was soon hard at it and after trailing about one mile the second fox was jumped. He made for the creek bottom and crossed; we were bothered some time before crossing and did not hear the pack for nearly an hour, when we met them coming back in full cry. Their tongues were out and they were apparently suffering from heat and fatigue but they never checked a moment. They were well packed and going at a good speed for the time they had been at work and considering the heat. The excitement was now more intense than the possum hunt and away I went with them to stay to the finish. They made one more good circle and when the fox (a red) crossed the road about one hundred yards ahead of the pack with his tail down and tongue out it was seen that they would soon make short work of him, in fact in a few minutes they had him holed.

We returned by the camp to get our sack of possums, and when we reached home we could hardly wait for dinner before going to bed. To-day we had three of the largest possums for dinner. They were nicely baked, with potatoes, and none but Southerners and colored people know how we enjoyed our first possum dinner.

Next week I am to take a three days' camp hunt after a lot of large timber gray wolves that are in a large river bottom about twenty miles from here. I am a little afraid of getting some of my hounds hurt; but as we will have about sixty good hounds in the pack, they should hold their own with the wolves if they don't get scattered. J. M. AVENT.

HICKORY VALLEY, Tenn., Sept. 20.

### An Unexpected Catamount Hunt.

ONE morning together with our hounds and other hunting accoutrements, we boarded a Y. & M. V. train for Sauvé, a small station five and one-half miles from New Orleans, bent on a Southern rabbit drive. After alighting from the train and walking up the track for about a mile we arrived at the spot to start in. We, means four others besides your humble servant.

Leaving one man to drive the pack, the rest kept a sharp lookout. Suddenly one of the dogs gave tongue and the rest followed. As the well trained pack settled down to work a shot rang out in the crisp morning air. "Did you get him?" "Nein, vas make monkey business and he vas go too fast already," answered the shootist, who was a Teuton. The hounds were put on the trail and once more music reigned supreme. The quarry, which was a cottontail, took a course the shape of a long S and was lost in a ditch. The dogs broke off and separated, each one going a different way, and trying to work up the lost trail, when a second shot was heard; this time the huntsman nailed the rabbit sneaking back to his nest, in fact, but ten feet from it.

After this it seemed as if the rabbit was an alien to that part of the country—the Big Cane—for not a trail was found, not a dog opened. This monotonous state of affairs went on for about two hours and a half. Just as we were sitting down to partake of lunch; Boy, a half hound and half pointer, let out a "sight yell," that caused everybody to drop his half opened lunch and snatch gun in an instant. Away they went, round and round, up and down, now on the bank of the bayou, now in the cane, in fact, everywhere except where a shot could be gotten. It is said that if a pursued "cat" happens to come to a road or path it cautiously looks up and down before crossing. One of the party was advised by the driver to go down to a dry ditch where the "cat" had been circling, and take a stand there. He had hardly reached there when coming straight towards him, he beheld something big and spotted. At first glance he took it for a stray dog, but he soon found out his mistake. The minute the "cat" caught sight of the huntsman, whose hair now stood perpendicular, it stopped still and began to snarl and lash its tail, as if ready for a spring. At this juncture the huntsman fired. The shot took effect in its front and broke one of its forelegs. By this time "Boy," the same dog who started it, was close at hand and went in to finish "puss," but the task was not so easy. In the spasmodic movement of an optic, the dog was lying on his back, with the "cat" on top. But the balance of the pack coming up by this time, they made short work of poor "Tom." As we desired the skin as a trophy, we beat the exulting pack off, which, with the exception of Boy, whose right ear was torn in strips, were safe and sound. Although having lost considerable blood, Boy persisted in hunting the balance of the day, the same as if he had never engaged in a paw to claw conflict with a bobcat in his life.

In gutting the cat, we found the remains of three young rabbits. Since killing the cat, rabbits are beginning to be fairly plentiful around Sauvé once more, and the huntsmen are anticipating with pleasure the coming season's hunt.

ONE OF THEM.

### A. C. C.'s Waterloo Cup.

THE action of the American Coursing Club at its recent meeting, in establishing an American Waterloo cup, may justly be considered the most important event of the season, so far as it relates to the progress, value and permanency of the sport.

The *American Field* Cup Stake this year had but twelve starters, a serious dwindling away from its narrrow importance of previous years. It is true that hard times and the misfortune of kennel sickness undoubtedly contributed to the number of absentees, still, under the most favorable conditions of a larger number of entries, it is not at all probable that the stake would have had any greater importance aside from the greater revenue to the club, which would come from a larger number of entries. The old stake was too narrow in its scope.

The title, the *American Field* Cup, had no national significance, nor was its significance that of sport above that of advertisement. It did not appeal to the patriotism and enthusiasm of the coursing men. Indeed, it could not. While the club itself was national in its aspirations it was cramped in its ideas and it was not national in working out sundry details of the stake for aged dogs. It held the stake to artificial limits. A cup was given each year and in return the stake was in a manner made to do the service of the advertising bill board. This year no cup was given. The club, now controlled by more progressive and independent men, at one step removed the stake from its narrow channel of advertising to the broader and legitimate one of a national coursing event.

Conducted as an advertising appendage, the club never could attain national importance and club independence. With men now in power who are fearless and able, and who seek to do their duty instead of profoundly studying the art of whitewashing, the future of the American Coursing Club is brighter, is national in its scope, and is in the realm of true sport. Its title is not clouded by any mortgage. The prizes are now for the individual benefit of the winners, not for the business advancement of a donor. In its infant days the club may have needed contributions. With its present strength, dignity and prestige, it is able to stand alone.

### Brunswick Fur Club Trials.

*Editor Forest and Stream:*

The following gentlemen have accepted invitations to judge at the field trials of the Brunswick Fur Club, which begin at North Acton, Mass., on Nov. 6: Messrs. H. O. Stanley, Dixfield, Me.; Stephen Decatur, Portsmouth, N. H.; H. A. P. Smith, Digby, Nova Scotia; S. B. Mills, Needham, Mass., G. W. Pierce, Brattleboro, Vt.; A. M. Gerry, South Paris, Me.; T. H. Gledhill, Lewiston, Me.; J. N. Goss, Newmarket, N. H.; J. F. Randall, Portland Me., and W. S. Clark, Linden, Mass.

BRADFORD S. TURPIN, Sec'y.

## HUNTING AND COURSING NOTES.

The Genessee Valley Hunt had the run of the season so far on Oct. 13. The meet was at Bleak House, which is situated on a hill about two miles from the village of Geneseo. The field was a large one, as there were about fifty riders out. Among the well known fox hunters were W. A. Wadsworth, the M. F. H., who rode Rochester; Captain Martin, first horse October; second, H. Hamlin's Gladstone; W. Littauer on Headlight, a noted jumper; J. S. Wadsworth on Graceful. Trumbull Carp rode a good 'un, and Dr. C. Cary on Nicoline was placed well to the front in the first run; H. W. Smith, the well know wire fox-terrier owner, was also there and rode his new purchase, Tester. A start was made at 1 P. M., and passing through the Cushing woods to the Sugar Bush, a favorite cover, first whip Maloney viewed the stealaway on the river bank. Reynard set the pace at the start and carried the pack across the Aiken Farm over the Erie tracks, doubled through the Cushing woods, through Wheeler Gully and on to the Hogback, where he succeeded in going to earth, where he was left for another day. Several covers were then drawn blank in the search for another fox. It then began to rain, and soon rendered the ground very soft, which served to thin out the field, leaving the master and a dozen trusty followers to draw the Cushing woods and the Wheeler gully, where the hounds found again. This one took us across the Hogback, through the Gulley, over the Erie tracks and on to the Aiken Farm; but here a check came and the hounds unable to pick up the line again, they were drawn off for the day. On Monday last there was another meet, this time at Murray Hill, Mr. Austin's country place. About thirty horsemen and women followed the hounds in their ineffectual efforts to find. Among the well known riders were the master, W. A Wadsworth; J. R. Townsend, Louis Onativia, William Littauer, J. S. Wadsworth, Capt. J. W. Martin, J. S. Watson, Capt. Adams, Miss Fitzhugh, F. J. Mackay, William Smith, Harry Cole, George Austin and George Servis. A lot of good riding was enjoyed, five hours of it, and so the day must not be counted altogether lost.

L.

• • • •

The Brunswick Fur Club headquarters will be at the Nagog House, which is one mile from the North Acton station of the Framingham & Lowell division of the N. Y., N. H. & H. Railway. Entries for the Derby will close at 10 P. M., Nov. 5, and for the All-Age Stake at 10 P. M. Nov. 6. The Derby will be run Nov. 6, and the All-Age on Nov. 7, 8 and 9. A business meeting will be held before the entries for the Derby close, and the following motion will be made: That beginning with the field trials of 1894 the Derby shall be open to all foxhounds whelped on or after Jan. 1 of the preceding year. These trials are open to the world, and all fox hunters will be heartily welcomed, and are invited to enter their hounds.

• • • •

The Worcester Fur Company will hold their annual meet on Oct. 26, at the Heyward Farm on Burncoat. The head quarters of the club will be at the Lincoln House, Worcester, Oct. 25. At the conclusion of the day's hunt the annual dinner will take place at the Lincoln House, at 6 15 P. M. The hounds will be cast off at 7 A. M. on Bond's Hill, Sewell's Hill and East Ridge.

• • • •

Up to press time we have had no word from Goodlands, Kans. A full report will be in next week.

# Yachting.

THE city of New London, which is becoming more and more a yachting center, is now discussing a proposal for a series of yacht races, following the college rowing races. The attendance of yachts at New London about the end of June has been increasing for some years, and it should be possible to arrange some good races. Various suggestions have been made for organized racing off Newport, in connection with or in addition to the New York Y. C. cruise. The constant growth of yacht racing throughout the whole length of Long Island Sound suggests the pressing need of some general body to arrange details and dates, and of some such circuit as was recently proposed by one of our correspondents. Many details of the plan require further study and discussing, but two of the main features would be the opening of the racing season by a series of club regattas on New York Bay, the circuit of the Sound, which would follow in June and July, being completed by a week or more of racing at Newport, for all classes, large and small. In accordance with this plan, the fleet would rendezvous at Newport, and the yachts would strip, in preparation for a series of races, instead of sailing in cruising trim, as many now do. The smaller craft could be easily shipped by rail or boat from New York and Boston. Each of the large clubs, the New York, Eastern, Atlantic, Larchmont and Seawanhaka, would give a day's racing, or more, if desirable; while prizes would be offered by the city, and by summer residents or citizens.

Between the June races at New York and the August races at Newport, there is plenty of time for the run to New London, and several days' racing there.

The possibilities of Long Island Sound as the home of an organized system of racing throughout the season under the auspices of the leading New York and Eastern clubs, have as yet hardly been appreciated by yachtsmen; but the time has come when the haphazard and desultory racing of the past must give way to something more systematic and organized.

---

THOUGH nothing has been heard from Lord Dunraven in the nature of a challenge, there is now little doubt that work has been begun on a new challenger, or that she will be fully up to the limit of 90ft. l.w.l. The *Field* says: "Lord Dunraven has now practically decided that the new challenger for the America Cup shall be a cutter of about the Britannia size, and may be a bit longer. This perhaps, under the circumstances, was the best decision to arrive at, as we have no yachts that a 70-footer could be fairly tried against. We understand that no communication has been sent by Lord Dunraven to the New York Y. C. yet; but the conditions which ruled the matches for the Cup last year will probably prevail."

---

THIS brings up the very important question of what these conditions were; it will be remembered that when the New York Y. C. finally voted to accept the challenge of Lord Dunraven, there was a very wide difference of opinion between the club on the one hand and the Royal Yacht Squadron and Lord Dunraven on the other, as to the exact terms of the so-called "mutual agreement" in that part relating to the conditions under which the Cup, if won by the challenger, should be held. This point was never definitely settled, though, as Valkyrie was not successful, no dispute arose over it. When talking of the "conditions which ruled the last match," it is first necessary to consider what these conditions really were.

---

THE question of size has to all appearances been practically settled by the action of the challengers in taking the maximum length allowed by the new deed, 90ft. l.w.l. In addition to this, it is more than likely that Mr. Watson will build a relatively large and powerful boat on this length, so large as to prevent the possibility of being overpowered by the defending boat. One of the arguments used against a reduction of size to 70ft. is that this would throw out the four existing 87-footers; but it now appears that the same result must follow from the selection of the larger length. In these days a two-year old yacht may be considered outbuilt, even in the classes with a maximum limit, and this is much more the case when the length has been increased by a full three feet, with even more power in proportion. The existing 87-footers, Colonia, Navahoe and Jubilee, with steel bottoms and their present sail plans, are likely to make no better showing against the new boats, assuming that several will be built, than Puritan could with Volunteer; and the Cup defenders of 1893 may be considered as out of the racing to all practical purposes. Whatever changes, including lengthening, might be made in them, they would still be far from what may fairly be expected from designers to-day.

---

THUS far nothing has been done toward a new fleet of defenders, and probably nothing will be done until some formal notification is received from the challengers, although valuable time is being wasted which can never be made up by hurry and bustle in the spring.

---

### Yacht Racing in Great Britain.

ONE result of Vigilant's racing this year has been that the attention of American yachtsmen has been for the first time closely directed to the racing in British waters, the greatest and most perfect system of yacht racing that has ever existed; and which, in many respects, might well serve as a model in the much-needed work of regulating and systematizing yacht racing in America. Thus far the criticisms of Americans on the various features which have become prominent in the Vigilant-Britannia races have been mainly hostile; but a good many hasty verdicts of this kind will be reconsidered when, as we believe many will, yachtsmen take the trouble to study more closely the methods and results abroad. The number and quality of the yachts composing the racing fleet, the vast number of races sailed, the general support which yacht racing, together with designing and building receives from yachtsmen; the great distances sailed, and the work done to win a creditable record for the season, stand out strongly in contrast with the limited building, the comparatively few and inconclusive races, and the small entry lists on this side of the ocean.

We are indebted to a correspondent for the following table, which includes the records of the principal yachts which have raced in British waters this season. In the classes of 5-rating and under the racing is local, mainly about the Solent; and the 10-raters do not as a rule go far from home, though the old 10-tonners often made the complete racing circuit. In the classes above 10-rating, however, the yachts start in the Thames about the third week in May, many having already made the passage from the Clyde or the Solent; and the racing continues, down the Channel, around Land's End and through the Irish Channel to the Mersey and the Clyde, across and along the Irish coast, and back Cowes, finally ending about Sept. 1 in the Solent again.

The table deals only with the larger yachts and a few of the leaders in the smaller classes, and thus gives no idea of the full extent of British yacht racing, which includes hundreds of other small boats about the Solent and its immediate vicinity, to say nothing of such localities as the Thames, the Norfolk Broads, the Clyde and the Irish ports, each with a large racing fleet of small craft. The table is interesting in showing not only the relative performances of the principal yachts, but the great number of races sailed and the considerable sums given by clubs and individuals in the form of prizes for the encouragement of yacht racing. The figures are not quite exact in some of the smaller classes, but they show the amount of racing done and the reward winning:

| | Designer. | Rating. | Starts. | Prizes. 1st | 2d | 3d | Value £ |
|---|---|---|---|---|---|---|---|
| Britannia | Watson | 153 | 42 | 32 | 2 | 0 | 2070 |
| (also Muir challenge cup and £900 in the Mediterranean.) | | | | | | | |
| Vigilant | Herreshoff | 169 | 18 | 6 | 3 | 0 | 560 |
| Satanita | Soper | 162 | 18 | 6 | 0 | 0 | 455 |
| Namara | Watson | 62 | 21 | 4 | 4 | 2 | 197 |
| Carina[1] | Watson | 40 | 35 | 19 | 4 | 1 | 740 |
| Creole | Watson | 40 | 25 | 9 | 7 | 1 | 425 |
| Luna[2] | Fife | 20 | 49 | 18 | 8 | 1 | 412 |
| Dierdrè[3] | Watson | 20 | 47 | 12 | 7 | 6 | 287 |
| Zinita[4] | Fife | 20 | 37 | 13 | 9 | 2 | 214 |
| Thelma | Fife | 20 | 42 | 8 | 7 | 2 | 220 |
| Dragon | Fife | 20 | 34 | 9 | 8 | 2 | 200 |
| Asphodel | Watson | 20 | 40 | 5 | 6 | 6 | 130 |
| Inyoni[5] | Nicholson | 20 | 46 | 12 | 6 | 0 | 206 |
| Doreen | Fife | 14 | 16 | 6 | 0 | 0 | 70 |

---

### Royal St. Lawrence Y. C.

THE present season in the St. Lawrence Y. C. of Montreal has been a prosperous one, though with less racing than usual. The improvements to the club property at Dorval, including a new pier and alterations to the club house will add greatly to the comfort and convenience of the members in the future. The club has now suitable facilities for hauling up and wintering its fleet, and has secured a builder who will establish a shop and attend to the repairs and storage as well as new building. The important event of the year was the receipt by the club, through the kindly offices of Sir Charles Hibbard Tupper, Minister of Marine and Fisheries for Canada, of an admiralty warrant, granting the use of the prefix, Royal, and the privilege of flying the blue ensign on the yachts of the club fleet. The warrant reads as follows:

[COPY]

By the Commissioners for executing the Office of Lord High Admiral of the United Kingdom of Great Britain, Ireland, etc.

*Whereas*, We deem it expedient that the members of the Royal St. Lawrence Yacht Club, being natural born or naturalized British subjects, should be permitted to wear on board their respective vessels the blue ensign of Her Majesty's Fleet on the following conditions:

We do therefore by virtue of the power and authority vested in us under the provision of the 105th section of the Merchants Shipping Act, 1854, hereby warrant and authorize the blue ensign of Her Majesty's Fleet to be worn on board the respective vessels belonging to the Royal St. Lawrence Yacht Club and to the members of such yacht club being natural born or naturalized British subjects, accordingly subject to the following conditions:

1. Every vessel belonging to the Royal St. Lawrence Yacht Club in order to be eligible to wear the ensign authorized by this warrant shall have been registered as a British vessel in accordance with the Merchants Shipping Act, 1854.

2. The ensign shall not without our authority in writing be worn on board any vessel belonging to the Royal St. Lawrence Yacht Club while such vessel is lent, on hire, or otherwise, to any person not being a member of the club, or who being a member of the club is not a natural born or naturalized British subject.

Given under our hands and the Seal of the Office of Admiralty this 25th day of June, 1894.

(Sd.) WALTER T. KERR.
(Sd.) G. H. NOEL.

By command of their Lordships.
(Sd.) Evan MacGregor.

In Class A Messrs. Clouston's Chaperone has again been victorious, though the competition has been less keen than usual. Xania, Mr. Duggan's new flyer, designed by himself, has proved a credit to him, having won all races in which she started, beating all her competitors in the race for the Sir Donald A. Smith challenge cup and easily winning the 30ft. class series. The once successful Burgess boat Molly Bawn had to succumb to the more modern form of the newer craft.

The 25ft. class, a very convenient size, has six good boats, but none started this year; and the 21ft. and 18ft. classes have really been the life of the racing in 1894. The latter class includes two Clapham boats, Lassie and Tombola, each new this spring, and intended to contest the claim for the championship of the famous Bug, owned by Mr. Duggan, a boat of very similar form, but with a square stern. Another new 18ft. boat, Jubilant, is a centerboard bulb-fin; while of the heavier type is Pirate, Lassie failed to hold Bug, but Tombola gave her some close racing. The nature of the waters which constitute the club's anchorage and sailing ground is a serious bar to the introduction of a deeper class of boat; but the club has made very great progress in the past few years in the production of faster, safer, and in every way superior yachts on the same draft of water, less than 3ft., which characterized the old fleet. The club has now a good station, excellent sailing rules and a good racing fleet in the several classes; and in starting afresh under its new name, it has every prospect of a continuance of the success which has attended it in the past.

---

### Changes of Rating Rule.

IN all of the English yachting journals a warm controversy is now waging over the merits and demerits of the existing Y. R. A. rule and of various new ones. While the controversy is interesting, it has thus far been void of any result, the only point settled being that nothing will be done for the coming year. We learn from the *Field* that a meeting of the council of the Yacht Racing Association was held on Oct. 10 at the Royal London Y. C., London. There were present Mr. G. B. Thompson (in the chair), Mr. Philip Percival, Jr., Mr. G. C. Colville, Mr. A. Manning, Mr. W. Baden-Powell, Mr. Herbert Crossley, Baron Von Knoop, Major P. H. Hewitt, Mr. C. Newton-Robinson, Capt. C. Nottage and Col. Fitzroy Clayton. The following report of the rating rule committee was presented to the council:

*To the Council of the Yacht Racing Association:*

GENTLEMEN—In accordance with your resolution of Aug. 18, 1894, appointing a committee to consider and obtain the opinions of the leading yacht designers on the working of the rating rule, the members of the committee who signed this report met on Sept. 8, and they have now to report as follows:

1. That in the smaller classes the rating rule is producing a type of vessel undesirably shallow and useless except for racing; your committee, however, do not consider it would be wise to attempt an alteration of the rule this year. They are of opinion that the time which would necessarily be consumed in discussing, drafting and passing a new rule would render all designing and building for next season practically impossible.

2. In view of the fact of the more frequent occurrence of international contests, and of the fact that at present the English and American rating rules are practically identical, the committee recommend that the council should take steps to ascertain if a common rating could not be adopted by the countries interested in yacht racing. Should the council be unwilling to or fail to bring about the international rating rule, the committee recommend that a revision of the existing rule be made next spring, to come into operation in 1896.

3. The committee have not attempted to formulate any proposal for altering the rule; but they are of opinion that immersed depth at the quarter beam might be introduced into the formula in such a manner as to insure a greater bulk of under-water body, but your committee do not put this forward with a view of prejudging the case in any proposal which the council may decide to make to bring about an international rating rule.

4. The committee further report that at their meeting they had to confer with them the following naval architects: Mr G. L. Watson, Mr. W. Fife, Jr., Mr. A. E. Payne, and Mr. Dixon Kemp, and the views of these gentlemen are embodied in our report.

5. Your committee, as well as the naval architects, were of opinion that it was most important that the recommendations of the committee should be made public at once, before it was possible to present their report to the council; the committee therefore decided that the sanction of the senior vice-president, the Marquis of Exeter, should be obtained for immediate publication; this was accordingly done, and the recommendations made known to the public.

(Signed) AUGUSTUS MANNING,
PETER DONALDSON,
G. F. FLEMMICH.

SEPT. 24, 1894.

A lengthy discussion ensued, but no decision was arrived at. Ultimately the consideration of the subject was adjourned to Wednesday, Oct. 24, when the council will meet at the Langham Hotel at 12 o'clock noon.

A sub-committee was appointed to report upon the term "recognized yacht club," in the rule, and also to define, if the committee considered it expedient, an amateur in connection with the term "member of a recognized yacht club" in the rules.

---

### A Fast Skimming Dish.

ONE of the remarkable boats of the year in English waters has been the saucer-shaped Sorceress, a 1-rater designed and built by Mr. Linton Hope, her dimensions being: Over all, 29ft.; l.w.l., 18ft. 10in.; beam, 8ft.; draft, 6½in.; displacement, 1,470lbs.; sail area, 319sq. ft. She has a steel centerplate but 2ft. wide and 6ft. deep, of ¼in. thickness, thus permitting a certain amount of flexibility. She has not only proved a winner, but has done some very fast sailing in rough water, and has raced at times in a very heavy sea for so small a boat and such extreme proportions. We were aware that a similar boat had been sent out by Mr. Hope to British Columbia, but no particulars have reached us beyond the fact of her filling entirely in a race, as Sorceress once did. A correspondent sends us the following clipping from the *Daily Colonist*, of Victoria, B. C., and also some particulars of the boat:

"The last race of the season under the auspices of the Victoria Y. C. was sailed yesterday afternoon, the starting yachts being Daisy Bell, Victoria and Star. The start was made at 2:39 P. M. in a breeze just stiff enough to make everything draw well. The Daisy Bell took the lead and held it throughout, finishing at 4:25. The time, 1:46, is the fastest ever made over the 11-mile course by any Victoria yacht, and furnishes a record which will be found difficult to lower. The Victoria finished at 5:05 P. M., giving the Daisy Bell a winning of 35 minutes of actual time. The Star did not finish. By the victory yesterday, the Daisy Bell wins the club pennant for the season. This was offered for the yacht winning the greatest number of races during the season. Five races have been run by the club and the Daisy has made five winnings, a record of which her owners feel justly proud."

Daisy Bell was designed by Mr. Hope to sail against yachts of the usual American type of shoal craft, her dimensions being: Over all, 28ft.; l.w.l., 21ft.; beam, 8ft. 9in.; draft, 6in.; with board, 5ft.; sail area, 450sq. ft., rigged much like Scarecrow. Her first race was on May 26, at Victoria, in a S.E. gale; in the first three miles, dead to windward, she had gained 27 minutes, but in turning, to go free, she ran into the crest of a wave and filled flush with the deck. In this condition she was sailed four miles into Esquimault Harbor before being bailed out. On July 4 she sailed at Whatcom., Wash., in a good stiff blow, and led her class at least a mile up to the last turn, where she could not find the buoy, which had been set adrift by a larger yacht in another class. Garland, of Bellingham Bay, managed to find the buoy and started for home with a very long lead, but Daisy Bell finished within 2½m. of her. Daisy Bell was built by the Thomas Yacht Building Co., of which Mr. Hope is manager.

### Dacotah's Record.

*From the Yachting World.*

In the spring high hopes were entertained of good sport in the 10-rating class. These hopes were only partly realized, as the Dacotah from the first showed herself so undoubtedly superior to the others that the destination of the second prize was, on most days, the only point of interest in the race. Herreshoff's creation in the skillful hands of her owner, Mr. Henry Allan, has shown herself little short of a marvel. Blow high, blow low, in running, reaching or going to windward, she was easily the best of the fleet, and one wonders if her designer himself could turn out a better boat. A racing "machine," certainly, but a machine of graceful appearance, perfect balance, and well-considered design even to the smallest details of construction and outfit. Her seaworthiness and speed in a strong wind and heavy sea, and her perfect steering and handiness in all conditions of wind and weather, showed what a really good racing boat can be produced of the much-derided bulb-fin type. Of the others, the Fife designed Lilith was her most serious opponent, notably so when her designer was at the tiller. Lilith is a keel boat of as graceful a form as ever came from Fairlie, and she was very fast in light winds, especially reaching. The Watson representative Sula was a first attempt on the part of that designer at producing a boat of this size of the bulb-fin type, and she cannot be written down as a success. She underwent many alterations in the course of the season which certainly improved both her speed and her steering qualities. Latterly she was doing better against Lilith as long as the strength of wind was such that she was not much inclined from even keel. But she was very tender in a breeze, and her bronze fin was not an unfamiliar sight to the crews of the boats on her weather. Of Rosetta, designed by Nicholson, it is impossible to say anything complimentary. In spite of frequent and extensive alterations she remained at the bottom of the class, and her owner gave up racing her before the season was over.

The older tens Ptarmigan and Dora were brought out in fine fettle to tackle the newcomers. Ptarmigan during the winter had been converted from centerboard to keel, and seemed to go faster in consequence. Both had new suits of sails, and were pluckily sailed for a few races in the first class. Soon, however, it was seen that they had little chance of prize winning in such company, and they retired to the handicap class, where they found plenty of sport. Ptarmigan stopped racing about the middle of the season, but Almida joined in, and with the 5-raters Tess and Fenella keen for racing, a good entry was assured up to the last rainy day. The three-year-old Tess (née Eileen), proved an unexpectedly good match for the new Fenella. Tess generally won in light weather, but Fenella had the heels of her in strong breezes. Undernoted are the results of the racing of these two classes:

| Yacht. | Designer. | Rating. | Starts. | First prizes. | Other prizes. | Value. |
|---|---|---|---|---|---|---|
| Dacotah | Herreshoff | 10 | 33 | 25 | 1 | £274 |
| Lilith | Fife | 10 | 32 | 11 | 10 | 137 |
| Sula | Watson | 10 | 26 | 2 | 6 | 35 |
| Rosetta | Nicholson | 10 | 15 | 0 | 2 | 6 |
| Dora | Watson | 11 | 30 | 8 | 5 | 102 |
| Ptarmigan | Fife | 10 | 17 | 1 | 2 | 16 |
| Almida | Fife | 11 | 15 | 5 | 2 | 50 |
| Fenella | Fife | 5 | 32 | 10 | 4 | 73 |
| Tess | Fife | 5 | 20 | 6 | 5 | 50 |

Dacotah also holds the No. 1 and No. 5 challenge cups of the Royal Alfred Y. C., Kingstown. Almida won the West challenge cup, and Dora the Atchison cup of the Royal Forth Y. C.

### Sailing Dories.

The sailing dory of Massachusetts Bay has found a patron in the Nahant Dory Club, which is working to encourage racing in these serviceable and inexpensive craft. Under the direction of a committee Com. M. W. Hammond, Vice-Com. F. S. Parker, Sec. Eben Wright, H. M. Sears, H. F. Otis and T. S. Bradlee, the following definitions have been framed for both racing and fishing dories for the season of 1895:

A dory shall consist of a flat-bottomed, centerboard, clinker-built boat, with rudder on stern board, without outside ballast, and the centerboard must house completely.

In all dory races sailed off Nahant (unless otherwise specified) a racing dory shall not exceed 18ft. 6in. in length on the waterline, or 25ft. over all, or be under 12in. in width on the bottom board, or exceed 7ft. beam. The number of men carried shall be limited to five, and all dories shall be measured without crew on board. No sails shall be carried beyond mainsail and working jib.

In all dory races sailed off Nahant, a fishing dory shall not exceed 15ft. in length on the bottom boards. Sail shall be restricted to two leg-of-mutton sails, a jib and flying jib. No hoisting sails (except jibs), stays, standing rigging, or weighted centerboards allowed. Half washboards not exceeding 6in. shall be allowed.

### Restricted Classes.

Some of the Clyde sailormen who are apparently looking for a type with more than one season of racing life, have lately started to establish a new restricted class, after the plan of the Dublin Bay "Mermaids." The limitations adopted are: Length over all, 18ft.; beam, 7ft.; depth, 2ft. 6in.; sail area, 200 sq. ft.; clinker build, square stern, with fore deck and waterways. All the boats will be built from one standard design, and six have been promised, to start with. The class should provide plenty of sailing and good racing at a moderate cost, and as outbuilding is practically impossible, it should last for some years.

Other Clyde yachtsmen of different ideas have united to establish an unrestricted one-rating class, under the Y. R. A. rule.

## YACHT NEWS NOTES.

On Oct. 18 a new yacht club was started in New Rochelle at a meeting held at the residence of Mr. C. M. Connolly; the name being the Neptune Yacht Club. The organization is in the hands of a committee, C. M. Connolly, chairman, R. T. Badgely, No. 6. Neptune Place, New Rochelle, sec'y; Arthur Townsend, treas., and L. C. Ketchum, chairman of site committee. The club will have a house and anchorage on New Rochelle harbor, and will provide fully for the safety of the members' craft. The sub-committees on constitution and by-laws, and on site, are now at work and will report at a meeting for formal organization which will be held shortly at the residence of Arthur Townsend, No. 6 Neptune Place. Applications for membership should be sent to the secretary.

Com. Morgan has returned to Southampton from Havre in his steam yacht May, and the yacht will lay up there. Com. Morgan has leased a place in Leicestershire and will remain in England next year.

Many inquiries have been made by passengers on incoming Old Colony trains as to the handsome white steam yacht lying in Neponset river She is the Mindora, and is owned by Mr. Chas. H. Merrill of Exeter, N. H. She is commanded by Capt. F. L. Moulton, and has been thoroughly overhauled and refitted under his supervision. Her owner may take her for a southern trip later in the year. The Mindora is 170ft. long, is handsomely finished in solid mahogany, has ample accommodations, and is fast and seaworthy. She has a dining saloon and chart room in her deck house forward and steers from the bridge above. Capt. Moulton is very proud of his charge.—*Boston Globe.* This yacht was once well known as the Norma, built for the late N. L. Munro. Her new owner has put in all new machinery and refitted her thoroughly.

Capt. Chas. Barr, who was recently hurt by a fall from the bowsprit of Gloriana, has recovered sufficiently to leave the Presbyterian Hospital, and is now at Marblehead.

Mr. W. G. Brokaw, of the schooner Viator, has presented to Mr. S. G. Roach, owner of the steam yacht Emeline, a handsome silver cup in recognition of the services rendered by the steam yacht in the recent storm at Larchmont.

Captain James N. Peirce, a veteran pilot of the Atlantic Coast, who holds licenses in various ports, arrived in Baltimore from Norfolk in his whaleback fishing smack Capalca, a curious craft that was built upside down, inside out, wrong end first, and finally rolled down a hill, turning seven times in its descent, into the mud, fished out the next day and floated. The last named process constituted her launching. The novel craft is 27ft. over all, 7ft. 4in. beam, 4ft. 6in. depth aft, and 18in. forward. She was built of white oak ribs, with cedar planking, with house and siding of North Carolina pine. She is in three watertight compartments. Her building was begun in Norfolk, Va., two years ago, and she was partly finished in Camden, N. J. When the last touches are put upon her there is no telling where she will be. On her forward deck is a comfortable house in which the captain has his spring bed, cooking utensils and other useful articles. Just aft is a cockpit 5ft. long, semi-circular forward, with room for 4 men to fish. Aft of that is what constitutes the amidships water-tight compartment, which Captain Peirce uses as a well for live fish, and it averages 28in. in depth. Aft of that and on the overhang will be, when completed, a storeroom for fish or anything else. Beneath this and the house forward are water-tight compartments. The rig is of the old "bum ketch" pattern, with two masts, and she carries three sails, a jib, a mainsail and a jigger. Her hull has a regular rocker built bottom, and stands the sea admirably. If capsized she will almost right herself. Captain Peirce says he sailed his craft over 800 miles without a rudder. She is named after the famous bark Capalca, which rescued the unfortunate Fenians from Van Dieman's Land years ago, and when Captain Peirce was mate of her. Captain Peirce is on a cruise in the bay, and is accompanied only by his Newfoundland dog Rover. He claims Baltimore as his home, but lives aboard his strange craft. He is 55 years old.—*Chicago Herald.*

Murray & Tregurtha, South Boston, Mass., have not found their business at all restricted by the hard times. The year thus far has been a very busy one with them. The sale of the Tregurtha water tube boilers is now more than twice as great as in 1893, and the prospects for future orders are encouraging. They have recently shipped a 5×6ft. Tregurtha boiler to the Georgetown Rice Milling Co., Georgetown, S. C., and are now building a 35in. Tregurtha boiler for Mr. Joseph S. Williams, Taunton, Mass. They have also shipped 25ft. launches to G. S. Wright, South Andover, Mass.; T. F. Cassens, Deer Island, Mass.; G. F. Hunt, Boston, Mass., and are building a high speed 30ft. launch for Boston parties.

At the annual meeting of the Jamaica Bay Y. C. the following officers were elected for 1895: Com., H. F. Hewlett; Vice-Com., Louis Bossert; Rear Com., William Scheer; Treas., L. M. Pearsall; Fin.-Sec., L. D. Burnham; Rec.-Sec., Louis Pflug; Meas., J. Van Alen; Fleet Surgeon, Dr. J. Mayer; Board of Trustees, H. F. Hewlett, Louis Bossert, William Scheer, O. L. Schwencke, Phillip Leibinger, C. E. Pearsall, J. C. Lefferts, Charles Engert and John Landman.

The Minneapolis Model Yacht Racing Association brought off another race in the 40in. class on Oct. 14, Minerva, J. Hadden, being again the winner. D. H. E., Mr. English, was the only other competitor. The course was half a mile to windward in a stiff breeze, the yachts carrying lower sails and jackyarders. After a fairly even start Minerva climbed out to the front and by the time they came about had a good lead. This she gradually increased to the finish, winning by about a quarter of a mile. Toward the finish the wind lightened and the models set their flying jibs. The new boat does nos seem to be in perfect trim yet and better things are expected of her. Wasp is expected to take part in the next race.

Hanniel, steam yacht, Mr. C. H. W. Foster, is out at Lawley's yard for a new boiler. Her deck will also be raised.

Frank Taff, of Whitestone, L. I., is the last of the inventors who have sought to imitate the motion of a fish's tail in the propulsion of vessels. His model is 5ft. 3in. long, 8in. wide and draws 5in. of water. She was fitted with a small vertical engine of 1½in. stroke, whose boiler carried 20lbs. of steam to develop about $\frac{1}{30}$ of a horse power. Along the side of the hull are four little black fins, fastened to shafts in pairs, two on a side. These fins are patterned after the tail of a fish, and the main surface, which is called the web, is thinned down toward the edges and strengthened by ribs of pliable metal. When the engine is started the shafts work athwartships, and by their motion the fins are set wiggling after the manner of a fish's tail. In a recent trial at the Battery, New York, Mr. Taff lighted the small gasoline lamp under the boiler and steam was up in a short time. Then he launched his model and headed her for the open river, following in a rowboat. The model began to glide away, slowly at first, but soon her speed accumulated, and she cut through the waves like a torpedo. There was no churning astern of her such as is seen in the case of screw propellers, but the little craft spun along as if on invisible wings. As the rough water of the river was reached, Mr. Taff found that the choppy waves were too much for his model. Not wishing to have her sink, he rowed up and extinguished the light. While such devices have never been of much value, the demands of naval architecture are constantly changing, and there may be points in the inventor's assertion that the idea is particularly adaptable to submarine boats, as the latter, when worked by screw propellers, have a tendency to lower their bows. The fin propeller can be canted to any angle to counteract this.—*American Shipbuilder.*

Adelaide, sloop, Mr. R. W. Inman, has been recently fitted with a gasoline engine by L. J. Wing & Co. The engine occupies but little room and has driven the yacht at an average speed of 7 miles per hour. Adelaide is a deep centerboard sloop, designed and built by Wood Bros. in 1885. 51ft. 3in. over all, 45ft. 5in. l.w.l., 15ft. beam and 7ft. draft, with 27,000lbs. of lead on her keel. From the experiments made on her and other boats, the new motor promises to make a most practical and convenient auxiliary for small sailing yachts.

The 21ft. cutter Amalia, designed and built by her owners, the Schirck Bros., of Rochester, crossed the Lake last week from Presque Isle to Charlotte, coming safely through a very severe gale. Her cockpit was flooded and all hands well drenched, but the boat sustained no damage.

Eleanor, steam yacht, will sail shortly from New London on a trip of two years around the world, her party including her owner, W. A. Slater, of Norwich, Conn., and family, private secretary L. C. Harrison, Mr. J. M. Johnson, Dr. W. K. Tingley and Miss Traver and John W. Slater, Mr. Slater's cousin, of Providence. The yacht will sail directly to Cannes, France, and thence to Egypt, through the Suez Canal to Australia and on to Japan and China, where the summer will be spent. The winter of 1895 will be passed among the Southern Pacific Islands. The summer of 1896 will be passed in Alaska, returning by way of Cape Horn to New York.

The San Francisco *Examiner* tells of a party of four young working boys who have been busily engaged at night and on holidays for some time in the construction of a 30ft. l.w.l. cutter, of 18ft. beam. Nearly all of the work has been done by the boys, and they expect to launch their craft by March next.

Marguerite (Semiramis) arrived in the Itchen River on Oct. 6, from New York, and will winter there. Fay & Co. will do some work on her, and she will be fitted out for a cruise around the world.

Mr. A. Cary Smith is at work on a design for a 70ft. schooner, to be built of wood. He has also under way the design of a pilot schooner for Fernandina, Fla. His last steamer, the City of Lowell, is even a greater success than the Richard Peck.

## Canoeing.

Though formed on nominally the same lines as the American Canoe Association, the British C. A. has had no supervision of racing or racing rules, and there has been no uniform system of canoe racing rules in Great Britain, though those of the Royal C. C. have exerted considerable influence outside of the club. For some time past a movement has been on foot for the establishment of a canoe racing council, independent of the B. C. A. for the purpose of formulating rules. This new organization, unlike the A. C. A., will be composed of clubs and not individual members; but as there are only about ten canoe clubs which are interested, the difficulties which have arisen here in connection with an association of clubs may be avoided. At the same time it is hard to understand why the work of making and enforcing rules should not be done, as with us, by the existing national association.

The fate of the canoe yawl in England is now a matter of doubt, as it is quite possible that the class may be practically absorbed by the small yachts, with fin-keels and long ends, of the ½-rating class. The light, handleable canoe yawl with movable ballast is an excellent type, well suited to both American and English waters, and it will be a pity if it is allowed to disappear for want of suitable class restrictions. Though little known in this country, it has much to recommend it to those who have tired of the 30in. canoe, and there is a prospect of the type becoming quite popular here next year.

### A. C. A. Executive Committee.

The date and place of the annual meeting of the A. C. A. executive committee have not yet been announced by Com. Witherbee, but the probability is that the meeting will be held in Albany, early next month. Under the constitution all proposed amendments must be published in the Forest and Stream for at least fourteen days prior to the meeting, and those having amendments to offer must give early notice. The following explains itself, the amendment is a good one, tending to remove a cause of some confusion:

*Editor Forest and Stream:*

I beg to offer the following amendment to the Constitution of the American Canoe Association:

Art. V., Sec. 2, par. 8, line 4, after word "begin" strike out all the rest of that paragraph and substitute "the first day of October and end the first day of October the year following, or until their successors qualify."

My reasons for this change are as follows: At present there is no specific date for the Division pursers to close their accounts except as would naturally be done with the expiration of their term of office with the executive committee meeting in October or November. It is absolutely necessary for them to close these accounts some time before, to enable the Secretary-Treasurer to incorporate the necessary portions of their reports in his accounts and before his accounts are audited. All this takes time, and now there is more or less confusion and uncertainty as to when the pursers shall close their accounts, and then they are only done as a matter of courtesy to a certain extent. In the way I have suggested there is a specified date, the same as for the Association officers, and being the same time, all reports would bear even date and it would give plenty of time to have all reports ready for the executive committee meeting.

As it is at present, too, the Association officers have two sets of Division officers to deal with, the old Division officers for a month or more and then the new ones, and the Division officers *vice versa*, consequently there is considerable confusion that I think can be easily and properly avoided by this change suggested. Geo. P. Douglass.

## CANOE NEWS NOTES.

The Detroit Boat Club has elected the following officers: W. C. Jupp, re-elected Pres.; F. S. Werneken, Vice-Pres.; G. B. Sheehy, Sec'y, and C. F. Hammond, Treas. Directors: J. L. Dexter, S. D. McGraw, E. W. Clark, L. H. Paddock and W. R. Gridley.

Central Division—Associate membership: Mrs. Henry V. Backus, Rochester, N. Y.

## Rifle Range and Gallery.

### The Krag—Jorgensen Rifle.

*Editor Forest and Stream:*

I have been asked to give my opinion on the Krag-Jorgensen gun, recently adopted by the United States Army. I have used it with as much care as possible, to bring out its merits, and must say that from my experience it is one of the most wonderful weapons both for power and accuracy I have ever seen.

As is well known among sportsmen, the military gun has not been useful for work in the field. The desire always has been with the military, to acquire power at the expense, somewhat, of accuracy, and in the experiments attending the introduction of the Krag-Jorgensen gun into the army, I notice that the highest point of accuracy had not been attained.

My experience as to accuracy has been very commendatory of the gun. The caliber I used was the .30, which has been adopted by the United States Army. The charge was 34grs. Peyton powder and the weight of the bullet 230grs.

The experiments I made were limited as to distance I had noticed from the reports that the steel-cased ball was not a success, by reason of its danger in exploding the outside shell of the ball. I have not found this to be the case.

It would be natural that the heavier the weight of the leaden inside of the shell upon impact would burst the outer coat, thus virtually making an explosive ball, the use of which is contrary to military usages.

This would be natural because of the tremendous velocity, but the rifling grooves are very sharp, the rifles running clear around the barrels two and a half times.

The ordinary leaden bullet without the hardened nickel-steel coat, driven with the great velocity required by the new arm, would only be a shapeless slug; but with the hard case it takes the grooves properly and is accurate as well as powerful.

I did not have the opportunity of firing the gun at a body other than wood or iron, but the bullet, when it could be found, in every instance was unbroken and straight on end. Of course it was flattened, but the particles adhered together.

The power of the gun is tremendous and in my opinion it would be a wonderful deer and bear gun.

At a distance of 50yds. the ball crushed its way through 22in. of tough, half-dry locust. At the same distance it pounded its way through 30in. of solid oak. At the same distance the ball went clear and clean through three pieces of well dried poplar, each piece being separate from its fellow by about 4in.; the whole penetration being about 56in. At 50yds. it made a clean penetration of ¼in. of tough and hard plow-point steel, and buried itself out of sight in a heavy, dried sycamore target.

The steel plate was penetrated with as much ease as if it had been paper. The tremendous revolution of the ball is shown by the fact that the hole through which it went is ½in. in diameter, while the bullet is only 30-100in. in diameter.

At this same distance it broke through a ½in. plate of tough plow-point steel It did not make a clean penetration, but made a clean, clear, round bore of two-thirds of the thickness of the steel plate and broke or rather split the remaining part of the plate. The ball, however, did not penetrate clean through beyond the above distance, but split open the remainder of the plate not penetrated for about an inch and a quarter.

This record is seemingly incredible, but it was done repeatedly. I was frequently struck with its vast supremacy in power over other fine standard rifles. I tested it with a .45cal. Springfield and with a .45cal. Hotchkiss, guns of the best class. The Springfield, a very fine officer's model, with long cartridge, having velocity at 53ft. of 1,283ft. per second, penetrated the ¼in. plate, making a rough, jagged, oblong break clean through; but on the ½in. plate it made very small penetration.

Several shots with the Springfield made only a small perceptible impression.

The Hotchkiss made only a small dent in the ¼in. plate. It made no penetration. I will say, however, in behalf of the Hotchkiss that the missiles used were lead, while the Krag-Jorgensen had the steel-coated missile, giving it more penetration through metal.

As to its accuracy at 100yds. and at 400yds., which last was the furthest point we were able to test, I find it a very accurate gun.

My friend, Dr. Mahan, of Charleston, killed a mountain hawk at 400yds., and at 50yds. separated the head of a gar from its body.

I noticed in reference to the gar, which was 2¼in. in diameter, that the ball had severed the head with the exception of a small piece of skin which remained. This was peculiarly noticeable from the fact that shooting the ball into a piece of wood or target, the bullet hole was almost imperceptible, but the cut on the gar's head was as clean and clear as if it had been done with a knife, and the cut was wider than the length of the bullet, thus doing away with the idea that the hole cut could have come from the ball striking sidewise.

The accuracy of the gun cannot be questioned, and I believe that the report was that it had no kick or rebound. That is true as long as the gun is perfectly clean, but after the tenth or twelfth shot without cleaning, the rebound is more vigorous and it loses somewhat in accuracy, and, what is strange to say, somewhat in power, and with fairly continuous shooting the barrel becomes so hot that without a shield it is not manageable.

The mechanism of the gun is fairly simple but will suit the intelligent hunter much better than the common soldier. The loading apparatus is very simple; there is only one trouble—the last cartridge in the magazine always jams. This may not be the case with all of the guns, but it is so with mine. The old objection to this style of gun, among which is the Hotchkiss, is the projection of the lever directly out from the outside, making a projection which is always in the way in the woods. This has been obviated by the mechanism of this gun, which allows the lever to fall along the side of the stock, so that it is very little in the way. The up motion is an admirably simple one, the expulsion of the cartridge, the placing of another one in, the cocking of the piece is all done with one stroke of the lever, and in an infinitely short space of time, and all with one compound motion.

Wm. A. MacCorkle.

### San Francisco Target Work.

San Francisco, Oct. 14.—*Editor Forest and Stream:* The weather to-day was well nigh perfect for target work, and in consequence some good scoring was done at Shell Mound by the members of the Columbia Pistol and Rifle Club.

The members' rifle medals, no re-entry, were first shot for. H. R. Brown led the champion rifle class with 89, D. W. McLaughlin 86, Dr. Rodgers 85, F. O. Young 82. First class, A. H. Pape 80, A. Gehret 77. Second class, Perry 78, Lieut. Davis 60, A. Fetz 50.

Members' pistol medals, no re-entry: Champion class, E. Hovey 91, S. Carr 89, Col. Kellogg 88, F. O. Young 83, C. M. Daiss 81. First class, Pape 90, Baumgartner 88, Dr. Rodgers 86, Lieut. Davis 80, Bohr 67. Second class, C. Perry 80, A. Fetz 80, Kennedy 79, A. Gehret 71, Zimmermann 66.

A sharp struggle for the all-comers' jeweled gold medal with rifle then took place, 200yds., re-entry, one score to count. Dr. W. McLaughlin carried off the honors by making the following splendid score:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| McLaughlin | 8 | 10 | 8 | 9 | 9 | 10 | 10 | 10 | 10 | 10—94 |
| F O Young | 9 | 10 | 10 | 9 | 10 | 8 | 10 | 7 | 10 | 8—91 |
| Dr L O Rodgers | 9 | 8 | 8 | 10 | 8 | 10 | 10 | 9 | 8 | 10—90 |

A. Gehret 83, Baumgartner 80, Brown 80, Daiss 79.

McLaughlin's score is the best official score made by any competitor since the organization of the club, and is likely to take the medal finally, as the best 10-shot score of the year takes it.

The all-comers' pistol medal, as usual, developed a hot fight for high score. The honors fell to Smith Carr, who shot in his usual form, viz., 94, 93, 92, 91: Pape 93, 91, 89; Young 92, 90, 89; Kellogg 92, 86; Hovey 90, 89; Daiss 90, 86; Podgers 87, 82; Baumgartner 87; Davis 79, 76.

F. O. Young made top score in rest match, viz.: 11 10 12 12 10 11 11 11 11—109.

Roell.

### Zettler Rifle Club.

The season shoot of the Zettler Rifle Club for the year 1894 was brought to a close on the Cypress Hills Park range Oct. 21, with the following scores. A summary of the season's work will be given in our next issue:

| | | |
|---|---|---|
| Fred Ross | 25 23 23 21 21 25 25 25 22 23 | —233 |
| | 22 23 25 24 24 22 22 23 22 23 | —230 |

### Schlicht Rifle Club.

The Schlicht Rifle Club held its class medal shooting on Monday Oct. 15, '94. Following scores were made:

| | | |
|---|---|---|
| Charley Meyer.....235 | Geo Schlicht.....243 | Geo Dorr.....229 |
| Fred Lambrix.....236 | Jacob Schlicht.....215 | Aug Tribout....200 |
| Wm Schlicht.....223 | Henry Aufderheide 222 | Conr'd Schlicht.207 |
| Geo Reichert.....225 | Jacob Diehl.....230 | Lautenberger...225 |
| Lue Dorr.....214 | Gustaf Schulz.....200 | |

Medal winners: Geo. Schlicht championship medal 243, Jacob Diehl first class medal 230, Fred Lambrix second class medal 226, Charley Meyer, third class medal 235.

### Greenville Rifle Club.

Greenville, N. J., Oct. 19.—Weekly shoot for class prizes. Scores:

First class—C. Boag 234, Dorrler 237, Scheeline 234, Plaisted 231, J. Boag 240, H. Purkess 237, Collins 237.

Second class—Agneau 234, Gotthardt 232, Chavant 227, Charlock 237, Spahn 242.

Third class—Graef 218, J. Hill 214, E. Wuestner 222, Holzapfel 223, Renker 218.

## Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

Oct. 27.—Holmesburg Junction, Pa., P. R. R.—Keystone Shooting League's monthly shoot. For programmes address John C. Shallcross, Sec'y, 328 Walnut street, Philadelphia, Pa.

Oct. 30-31.—Marion, N. J.—Tournament at Marion, N. J., complimentary benefit to Mr. C. H. Townsend; promoters, M. F. Lindsley, W. F. Quimby, Al. Heritage and T. H. Keller; targets.

Nov. 6.—Rye, N. Y.—Rye Gun Club's all-day shoot, commencing at 9 A. M.; live birds and targets. E. J. Pope, Sec'y.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

Jan. 1.—Newark, N. J.—Fifteenth annual New Year's Day tournament of the South Side Gun Club. W. R. Hobart, Sec'y.

Jan. 17-19.—Hamilton, Canada.—Hamilton Gun Club's annual tournament; $1,000 added money. J. W. Bowman, Sec'y.

April 3-5.—Willard Park, Paterson, N. J.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York; $1,000 guaranteed, all surplus added.

May 14 16.—Dayton, O.—Ohio Trap-Shooters' League annual meeting and tournament under the auspices of the Buckeye Gun Club, of Dayton, O. Ed. Taylor, Sec'y, 8 West Third street, Cincinnati.

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

June 4 7.—Memphis, Mo.—Memphis Gun Club's annual tournament; $200 added money.

June 19-21.—Cleveland, O.—Chamberlain Cartridge and Target Company's second annual tournament; $1,200 in cash added.

Aug. 29-31.—Hot Springs, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 3-6.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankford, Pa.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The Memphis, Tenn., Gun Club, one of the most influential organizations of a like character in the South, has determined to put its foot firmly down on dropping for place and similar tactics. The following letter speaks for itself: Memphis, Tenn., Oct. 15, 1894.—Confirming our telegram of this date, we claim June 4 5, 6 and 7, 1895, for our annual tournament, to be held at our grounds in this city. At an enthusiastic meeting of the Gun Club, held on Friday night, the 12th inst, the club indorsed the management of our last tournament, and pledged itself to the committee who will control the next tournament. The club guarantees $2,000 to be added to purses. We hope to devise a system of handicap which will be satisfactory to all classes of shooters. The committee appointed, who will manage the tournament, consists of T. A. Divine, chairman, W. F. Allen, Irby Bennett (who managed the last tournament), Frank Poston and Fred. Schmidt. We earnestly ask your support in an effort to give a tournament, to be run on a high grade. It is the intention of the Memphis Gun Club and the committee in charge to make it a gentlemanly shoot or give up the whole business. T. A. Divine, Chairman. The Memphis Gun Club is assured that Forest and Stream will do all in its power to aid in eliminating the unpleasant features which mar many a tournament.

While a few members of the Boiling Springs Gun Club of Rutherford, N. J. were having a little practice at targets on Saturday a curious and amusing episode occurred. An English snipe was seen flying over the reeds, finally alighting at the edge of the swamp within 200yds. of the trap. Paul, Rice and Grieff seized their guns and ran splashing through the wet meadow to where the bird had dropped. Up it rose, only to fall again at the simultaneous report of Paul's and Grieff's guns. Who shot it is a question that has not been decided; anyway Gus "wet" the bird, if that goes as proof.

Miss Annie Oakley, who will star in "Miss Rora" in England during the coming winter, sails from New York on Nov. 3. After that date the address of Miss Oakley and of Mr. Frank E. Butler, her manager, will be care of Mr. Chas. Lancaster, 151 New Bond street, London, England. Miss Oakley has recently bought a horse which she will use in the play, and is now engaged in schooling him to his part.

W. T. Irwin, known as "Tramp" Irwin, a good shot and well-known dog trainer, has located at Peoria, Ill. Mr. Irwin has assumed the management of the Peoria Target Company, one of the oldest composition target companies in the country. Mr. Irwin's characteristic hustling qualities and great popularity should make him a valuable acquisition to the company.

The complimentary benefit tournament to Mr. C. H. Townsend, late trap editor of this paper, is an assured success. The efforts of the promoters, M. F. Lindsley, W. Fred Quimby, Al Heritage and Tom Keller, have so far met with entirely satisfactory results. The cause is a popular one and the attendance will of course be correepondingly large.

The second contest for the American E. C. Powder cup will take place on Saturday, Oct. 27, at the grounds of the New Utrecht Gun Club at Woodlawn, L. I. The first contest was held on Sept. 29, and resulted in a victory for T. W. Morfey after a close finish with Conny Furgueson, the 11-year-old champion of the club.

Willard Park, near Paterson, N. J., has been fixed upon by the executive committee of the Interstate Manufacturers' and Dealers' Association as the scene of the grand American handicap for 1895.

The Lancaster, Pa., Gun Club intends to hold another tournament in the near future. The scores made in its recent effort are given elsewhere.

The list of fixtures for '94 is growing very small, while that for '95 is correspondingly increasing. Added money figures largely in the list of fixtures for next year.

Quail and grouse, ducks and snipe, are now claiming the attention of shooters who a few weeks ago were content to smash targets.

Eddie Hill and Frank Class are down to shoot their second race at Yardville, N. J., on Thursday of this week.

Dropping for place must go.

### Carver Beats Budd—Budd Beats Carver.

Des Moines, Ia., Oct. 15.—*Editor Forest and Stream:* The first of a series of three matches between Dr. W. F. Carver and C. W. Budd was shot to-day on the grounds of the Highland Gun Club, of this city, Dr. Carver winning. The birds were a fair lot, but the weather was warm, with but a light wind blowing. Dr. Carver was in elegant form and killed his birds in fine shape. He was also in luck drawing quite a number of easy birds. Butt was not up to his form, shooting quite slow, but had the most difficult birds. About 200 people witnessed the match, among which were quite a number of ladies.

*Trap score type—Copyright 1894, by Forest and Stream Publishing Co.*

C W Budd.....2 1 0 2 1 1 2 1 2 1 1 2 1 1 2 2 2 1 0 2 2 1 1 2 2—23

*Oct. 16.*—The second match Dr. W. F. Carver vs. C. W. Budd, was shot to-day on the same grounds as the one yesterday. The birds were a fine lot and with the help of a wind blowing from left to right across the traps were hard to score inside of a 50yds. boundary, many falling dead outside. Budd shot in good form, killing his birds clean and close to the traps. About 200 people were on hand to witness the match. Dr. Carver left for Dallas, Texas, to-night and will give exhibitions of rifle shooting at Dallas during the fair. The third match will be shot in Chicago during the month of November, where Carver will meet Brewer, Elliott and others who may be anxious to beat him at pigeons. Both matches passed off very pleasantly; not a hitch of any kind occurred and the Doctor went home well pleased with his treatment at DesMoines; he also made many friends during his stay. Mr. Hadly and Mr. Pond, of Kansas City, accompanied the Doctor, and were on the grounds during the matches and made many friends among the shooters and spectators.

In both matches Dr. Carver used Winchester leader shells loaded with 4drs American wood powder and No. 7 shot and a Cashmore gun weighing 8lbs. Budd used Winchester leader shells, 3½drs. American E. C. powder, No. 7 chilled shot and an L. C. Smith gun weighing 7lbs. 12oz.

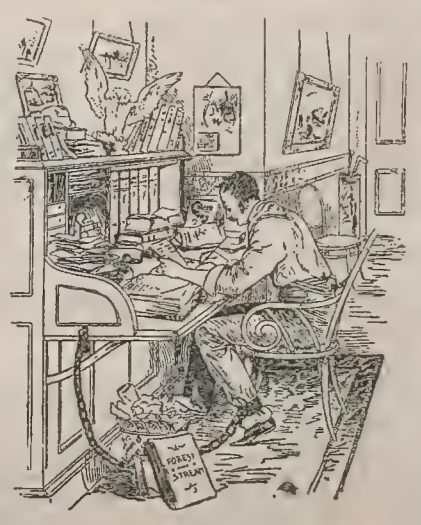
C. W. Budd.

### The Way Brewer Looks at It.

Elliott's challenge to Brewer, and the question as to how Brewer will take it, have been the subject of much discussion during the past week. The way Capt. Brewer looks at it is this:



"Elliott has written me a personal letter," said he, "inclosing a copy of his letter published in the sporting papers. I have answered it by writing him that I will name dates for a series of five matches, 100 birds per man each match, for the world's championship. In my letter I said that I wanted one match to be shot at Pittsburgh, another at Philadelphia, and the other three in the vicinity of New York. It is surely my right to name the places and dates, as my title to the championship of the world at live birds has not been disputed since 1888, the year in which I won the magnificent cup donated by the *Sportsman*, the leading sporting daily newspaper published in London. That cup, which carried with it the title of champion live bird shot of the world, I won three times in succession, so that it became my own property. In 1889 I went to Australia and defeated Lewis Clark on the grounds of the Melbourne Gun Club, in a match at 100 live birds for the championship of the colonies. Clark was at that time the acknowledged champion of Australia.

"Since 1888 I have never been challenged for the championship until Elliott's letter put him in line. Surely I'm champion then until I'm defeated in a match for that title? It is for me then to say where we shall shoot. My letter to Elliott and Carver, published in Forest and Stream two weeks ago, was merely a reminder to them of promises made to shoot me some races. At the Memphis shoot Elliott told me that, in the event of his defeating Carver, he would shoot me a series of races for the championship. He had defeated Carver three straight shoots and yet he made no sign of challenging me, so I thought I'd jog his memory.

"I am anxious to shoot, and am glad he has challenged me at last. It'll be a shooting match and will be the last I'll ever shoot for the championship of the world. When 1895 comes, I'm going to retire on my honors and let the other fellows have a go for the championship, because I'll beat Elliott as sure as can be. If he or his backer will lay me odds, I'll bet that I'll beat the average he made in his last three matches with Carver, that is 97 per cent. My forfeit is up to show that I am willing to defend my title. Now, let them come on.

"There is one thing more I want to say, and that is about Carver; he doesn't want to shoot me a race and he knows it, or else why didn't he cover my $150 posted long ago to bind a match with him?

"You can also say this for me: that I am willing to shoot any man in the world a race at 500 targets per man, known traps, unknown angles, for any moderate sum of money."

If you have a friend who is so attached to business that he cannot go shooting, but might at least like to read about it in "Forest and Stream," tell us his name and address and we'll send him one of the

"FOREST AND STREAM'S" SILVER BULLSEYES.

### The Emeralds' Tournament.

The three days' tournament of the Emerald Gun Club of New York was opened at Dexter Park, L. I., on Monday of this week. Notwithstanding the unpropitious outlook, so far as the weather is concerned, the number of entries, especially in the after-dinner events, ought to be considered as highly flattering. Among those from a distance were J. T. Mascroft, V. D. Kenerson and Fred. Bucklen, of Worcester, Mass; H. G. Wheeler, Marlboro, Mass.; B "Leroy" Woodward, Brockton, Mass.; W. "White" Bennett and his brother, Fred. "Jones" Bennett, Boston, Mass.; "U. M. C." Thomas, Bridgeport, Conn.; Harry Thurman and H. "Landis" David, of Philadelphia. The above, together with Brewer, Van Dyke, "Tee Kay" Hoffman, "Shorty," Breintnall, Lindsley and Fred. Quimby, made the pace hot enough for anybody.

The opening of a tournament on a Monday morning is always against a large attendance early in the day; this fact, together with the bad weather, undoubtedly kept the attendance of shooters down to a great extent. Only one set of traps was used and it was really too dark to see the flying targets before the programme was shot out.

All the arrangements made by the Emeralds for the comfort of their guests were capital; while Messrs. John Woelfel and Chas. C. Hebbard in the cashier's box office kept things moving and the winners smiling by the promptness with which all demands upon their services were attended to. As for "Tee Kay"—he was the life of the shoot. Scores:

*First Day.*

No. 1, 10 empire targets, known angles: Wheeler 8, Mascroft 7, Jones 9, Hobart 7, Bucklin 9, Leroy 10, Thurman 7, W. H. 9, Bennett 7, Schort 8, Landis 9, Short 8, Richmond 8, Thomas 9, Kenerson 8, Brewer 8, Rice 5, Thompson 8, Floyd 8, Hudson 8, Oberg 7, Keller 7, Ferris 8, Wood 9.

No. 2, 10 empire targets, known traps and angles: Bucklin 10, Jones 9, F. H. Keller 8, Mascroft 8, Leroy 10, Wheeler 10, Stillingworth 4, F. A. Thompson 8, Wood 9, Ferris 8, Hudson 6, Thurman 8, Kenerson 7, Hobart 8, Brewer 9, Rice 4, Richmond 8, Thomas 7, Oberg 5, Landis 8, Schort 9, W. H. Thompson 9, Smith 7, Bennett 9.

No. 3, 15 empires, known traps, unknown angles:

### The Class-Hill Match.

Morristown, N. J. Oct. 18.—Eddie Hill, of Trenton, N. J. and Frank Class, proprieter of the Park Hotel of this place, shot a match to-day at 50 live birds per man for a stake of $50 a side. This match was the first of two which were arranged at the Hill-Kuser match which was shot on October 11 at Charlie Zwirlein's grounds at Yardville. The second takes place on Thursday, Oct. 25, at Yardville. The shooting in to-day's match was a surprise, the scores made being very poor, although the birds were certainly good ones. During the day three five-bird sweeps were shot. Scores in both sweeps and match follow:

| | No. 1. | No. 2. | No. 3. |
|---|---|---|---|
| Timmons | 11111—5 | 11021—4 | 10111—4 |
| Class | 11•1•—3 | 1111•—4 | 120•2—3 |
| Hinch | 01•11—3 | 21012—4 | 21001—3 |
| Hill | 1112•—4 | 11110—4 | 21121—5 |
| Zwirlein | 12112—5 | 02102—3 | 12110—4 |

Match: 50 live birds per man, Hurlingham rules, $50 a side:

### Brantingham vs. Sisty.

Dunellen, N. J., Oct. 17.—This afternoon T. H. Brantingham, of Plainfield, shot a race at 25 targets, unknown angles, with Walter Sisty, the score at the close standing Brantingham 22, Sisty 10. The target races at 5 targets per man, expert rules, one man up, were shot with the following results:

No. 1: Brantingham 4, Nelson 3, Sisty 2, W. Carman 1.

No. 2: Brantingham 5, Nelson and W. Carman 3, Sisty 2.

No. 3: Brantingham 5, Nelson and W. Carman 3.

In No. 3 Carman shot at 5 straightaways. Dr. Nelson and W. Carman next shot a match at 10 live birds per man, loser to pay for the birds. Score: Nelson 7, Carman 6.

*The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## Shooting for Medals at Detroit.

DETROIT, Mich. Oct. 13.—The second shoot for the Louis Getschlag diamond medals, open for competition to teams of three of recognized clubs of Detroit, Windsor and vicinity, took place Oct. 9, at the Busch House grounds, Grosse Pointe.

The medals were first competed for at the John Parker tournament and were won at that time by Parker, Rennick and Klein. On Tuesday these three gentlemen lost possession of them in a six team contest by three points. It must be said, though, that the first winners were handicapped by unknown traps and angles The winners were the Pontiac Gun Club's representatives. In addition to the medal shoot there were several sweeps. The scores in full are as follows:

Louis Getschlag diamond medals, second contest, three man team, 25 blue rocks each:

Detroit Gun Club.

## Lancaster Gun Club.

LANCASTER, Pa., Oct. 17.—Below are given the scores made at the tournament held by the Lancaster Gun Club. The weather was all that could be desired, except after 11 A. M., a strong wind was blowing across the traps from left to right. The exhibition given by Capt. Brewer and event No. 11 were the most interesting features of the day. Mr. Wiley, of the local club, is to be congratulated for the nervy uphill race at 100 targets against the veteran Brewer. Scores:

No. 1, 10 targets: Rogers 9, Franklin 6, Ferguson 5, Hobart 8, Jaybird 5, Anderson 3, Landis 10, Krueger 7, Bush 8.

No. 2, 15 targets:

Landis.....111101111111001—12
Rogers.....111101110111110—12
Bush.....111110111111111—14
Franklin.....111001001011011— 9
Hobart.....111111111101101—13
Krueger.....111111111111111—15
Ferguson.....001001w

No. 3, 10 targets: Landis 7, Rogers 9, Hobart 9, Krueger 8, Bush 9, Franklin 4.

No. 4, 15 targets:

Rogers.....111101111011110—12
Wiley.....110110010111111—11
Landis.....110111111111111—14
Hobart.....111111011110111—13
Clark.....111111111111110—14
Krueger.....101101111111110—12

No. 5, 10 targets: Wiley 9, Landis 10, Bush 6, Krueger 8, Rogers 9, Franklin 5, Ferguson 6, Hobart 8.

No. 6, 15 targets:

Brewer.....1110111110111101110110101—19
Domme.....10011111w

The next event was at live birds, each man shooting at 7. Brewer and Brewster divided first money. The following is the score:

Anderson.....1011100—4
Wellington.....1111101—6
Franklin.....1111001—5
Grube.....1110100—4
Myers.....1011000—3
Dommel.....1100011—4
Brewster.....1111111—7
Snyder.....1101100—4
Brewer.....1111111—7
Wiley.....1111110—6
Kendig.....1011111—6
Jaybird.....1100111—5
Cummings.....1101110—5

The last match of the tournament was a miss-and-out at live birds. Fist money was divided between Brewster, Taylor and Brewer. During the afternoon Messrs. Brewer and Wiley shot at 25 live birds, Capt. Brewer winning the match by a score of 22 to 21.

Among the prominent gunners from out of town on the grounds on Saturday were W. R. Hobart, of New York, representing the Winchester Repeating Arms Co.; A. C. Krueger, Wrightsville, Pa.; David Landis, Philadelphia; G. W. Hepler and H. Brewster, Harrisburg; W. F. Rogers, from this county, and Dr. Taylor, of Columbia. TARGET.

## Elizabeth Gun Club's Tournament.

THURSDAY and Friday, Oct 18 and 19, were the dates chosen by the Elizabeth Gun Club for a kind of house-warming event at their new shooting grounds at Elizabeth, N. J. The grounds are very conveniently located, being less than a ten minutes' walk from either the Pennsylvania or New Jersey depots. There are always plenty of hacks apparently willing to carry the shooter to the ground for a quarter. These facts, together with the excellent train service between New York and Elizabeth, should make the Elizabeth Gun Club's grounds a very popular resort for New York shooters.

The background for target shooting, while not exactly perfect, is a good one, as the scores made on Thursday will prove. The club has erected a high circular fence around their grounds with a radius of 80yds. boundary. Back of the score is located a capital little club house with all the facilities necessary for serving hot and cold lunches to the members and their guests. Taken altogether the Elizabeth Gun Club is to be congratulated upon the enterprising spirit it has shown in expending so much money and forethought on the fitting up of its grounds.

Thursday was "target day," the programme containing 10 events. Besides the above three extra 10 target races were shot-off, the scores showing that 2,895 were thrown during the day. A special extra was a sweep, $1, the targets being donated by the club. This event was intended as a complimentary benefit to Mr. C H. Townsend, 50 per cent. of the purse being donated to him, the balance being divided among the winners in four moneys. As a matter of fact, all the winners added their shares of the purse to the other 50 per cent., the purse being thus handed over to Mr. Townsend as a whole. Empire targets were used in every event.

Friday was devoted to live birds. Shooting did not commence until late, it being after the noon before the first regular event was commenced. Prior to this "Uncle Al" Heritage shot a couple of short races at live birds. Both, of course, were friendly races. In one, Chief Astfalk was his opponent; in the other, J. L. Brewer; Heritage losing both races by the narrow magin of one bird. Although the shooting was so late in commencing, 498 birds were trapped in the programme events. Scores:

*First Day.*

No. 1, 10 targets, known angles. $1 entrance:

J W Smith.....0110011011— 6
Brantingham.....1011110011— 7

There are a great many birds this season, and hunting will be very good as soon as there has been frost enough to kill the weeds. The season opened on the 15th inst, but shooting of game birds is forbidden in this (Campbell) county for two years, by an act of Assembly passed last winter. F. M. D.

## Michigan Team Championship.

BATTLE CREEK, Mich., Oct. 17.—Below are the scores made on Oct. 12, in a team contest between the Battle Creek and Valley City Gun Clubs for the *Shooting and Fishing* cup, emblematic of the team championship of Michigan. The scores of both teams, with the exception of Mr. Carpenter, of the Battle Creek team, were very poor. This was owing to the dark and rainy weather with a high wind, which prevailed throughout the contest. The following are the scores of both teams.

| Valley City G. C. of Grand Rapids. | S. | D. | Battle Creek Gun Club. | S. | D. |
|---|---|---|---|---|---|
| Gilmore | 23 | 13—36 | Howes | 21 | 13—34 |
| Coleman | 19 | 8—27 | Halladay | 23 | 16—39 |
| Walton | 21 | 12—33 | Hubbard | 18 | 11—29 |
| Widdicomb | 20 | 13—33 | Beckman | 23 | 14—37 |
| Wharton | 18 | 14—32—161 | Carpenter | 28 | 16—44—183 |

The following sweepstakes were also shot: No. 1, 10 singles, unknown angles: Gilmore 8, Carpenter 7, Hubbard 7, Willard 6, Walton 7, Howes 7, L. Bechman 6, Widdicomb 8, Coleman 5, Halladay 9, Wharton 7.

No 2, 5 pairs: Walton 5, Gilmore 7, Coleman 6, Wharton 7, Widdicomb 8, Halladay 8, Bechman 9, Carpenter 7, Widdicomb 4

No. 3, 10 singles, unknown angles: Wharton 6, Walton 7, Widdicomb 8, Gilmore 6, Bechman 8, Carpenter 8, Coleman 7, Halladay 8, Hubbard 7.

No. 4, 15 singles, unknown angles: Hubbard 13, Gilmore 8, Carpenter 14, Widdicomb 7, Walton 9, Bechman 7, Halladay 10, Wharton 12.

No. 5, 15 singles, unknown angles: Halladay 13, Walton 10, Hubbard 13, Willard 11, Widdicomb 12, Wharton 11, L. Bechman 10, H. Bechman 6, Gilmore 8, Carpenter 13.

The Grand Rapids team were very much disappointed in not carrying away the cup, but say they will challenge our team again next spring. N. E. HOWARD.

## Emerald Gun Club.

THE Emerald Gun Club's point handicap was shot at Dexter Park, L. I., on Tuesday, Oct. 16. No less than 28 entries were booked for this event. Somehow or another the Emerald's club shoots are among the most popular events around New York city. Out of the 28 but two, Short and Thau, killed all, the birds being excellent flyers. Billy Mills, as good a trapper and retriever as there is in this neck of the woods, did his work in his usual style. Scores, club point handicap, 10 live birds:

## WESTERN TRAPS.

[*From a Staff Correspondent.*]

A BUSINESS, NOT A SPORT.

CHICAGO, Ill., Oct. 18.—A large sensation was last week sprung on that portion of the sporting world which has to do with racehorses. The Washington Park Club of Chicago, one of the foremost and most famous organizations of the country in turf matters, publicly announced its intention of abandoning permanently the racing feature, and of never offering another purse or holding another race meeting. To all interested in turf matters this comes like a thunderbolt. When we shall have considered the reasons advanced by the club for this action, I think it will be agreed that the readers of FOREST AND STREAM also are interested in the news. Not less are interested manufacturers and dealers whose joint capital invested in another American sport foots up an enormous total.

In short, the Washington Park Club quit racing because racing had become a crooked sport. In its published statement of the reasons offered for the course the Chicago *Tribune* says:

"This action of the directors was unanimous and furnishes a sensation in the sporting world without a parallel.

"The reasons for abandoning that feature which has made the club famous all over the world are based upon the popular clamor against pool selling and the degeneration of racing from a harmless and high-class sport to a species of gambling. Organized as a gentleman's jockey club, and for the avowed purpose of encouraging the improvement, breeding, training and exhibition of horses, the Washington Park Club has consistently maintained its high standard and gained a more than national celebrity.

"The feeling has spread rapidly among the directors, however, that the club could not retain its idea character and uphold its own standard. In all parts of the country were racing clubs, conducted as gambling ventures, with which the Washington Park was obliged to affiliate under the rules. Horses were being raced, winter as well as summer, at various points, and the circuit was being enlarged by the admission of clubs of doubtful standing. Under such conditions the directors agreed that the Washington Park Club owed a duty to the members and to the public that could be best performed by discontinuing racing."

All honor and credit to the gentlemen of this club, who sacrificed great sums of money to go on record as opposed to crookedness in sport. There has been no example like this in the history of American sport. It shows a revolution against certain methods To show that the action of this club was based on widespreading reasons, I will quote further, from New York papers this time. After that I wish to draw a parallel, and to ask a question. New York dispatches say:

"Racing is dead in New Jersey. It is in the throes of a death struggle in New York. The officials of Washington Park have decided not to race this season. There is opposition to racing as now conducted. The race track is no longer a sport; it is a business. Guttenberg, Gloucester, Clifton, Elizabeth and Monmouth parks are closed."

It is no longer a sport, but a business. It is no longer a business, but a crooked and dishonorable practice in business Now let us go further.

I submit that the sport of shooting at the trap, as practiced in the great American tournaments to-day is more dishonorable, more corrupt, rottener than ever horse racing was. I submit that the rounder at the trap tournament who sails under false names and false records is as disreputable and should be as odious among gentlemen as the ringer at a horse race I submit that the men who pool, combine and drop for place in the class shooting of our trap tournaments are as dishonest and as unworthy of the recognition and the society of gentlemen as the men who arrange in advance the results of a racing competition. FOREST AND STREAM is the leading trap paper of America and of the world, and in its columns I openly and publicly lay down these propositions, and I defy any man of the shooting public of America or of the world to say that they are not right and true. There is no shooter who does not know their truth, and who will not admit it.

It is a poor policy of every newspaper which has genuinely at heart the welfare of the worthy and popular sport of shooting at the trap to wink at or try to cover up the crooked and disreputable practices which have long been gradually bringing the sport into disrepute and which will eventually soon work its ruin. All shooters have known the facts. All shooters have seen the custom of open crookedness at the trap grow and become more flagrantly and more carelessly and openly practiced. It is nothing at a tournament to see a man hang back and look over an entry and not go into a shoot till the last moment, when he has already seen what other men ahead of him have done. It is nothing to see a man step back out of line and motion or call out to another man to drop or "stand in" with him. It is nothing to see shooters settling up with each other at the close of a day's shoot; after figuring out the *pro rata* profits of their dishonorable combine. It is all open and acknowledged. There is not one tournament at which it is not practiced publicly and where it can not be detected by a tyro who really wants to find it. It comes to view not in detached instances, but in general and universal practice.

This trickery and crookedness has fattened the purses of a few, but it has driven thousands away from the trap. The sport has grown, but it has not grown to the proportions it should reach. Our game is disappearing and men will shoot at the trap. Firms will manufacture guns and ammunition and targets for these shooters. But they will manufacture double the amount when the sport has become such that the general public can practice it as pleasant, honest, gentlemanly sport, where one can find a square game, and pass an hour in pleasure without being robbed by a shady character.

Trickery at the trap is as ungentlemanly as trickery at cards, and should as readily brand the practice as one intolerable to the society of gentlemen. Trickery in the saddle, even under the corrupt regime of racing, has now and again been detected and punished. In the rough code of the earlier West the punishment was death at the hands of those wronged. That was when sport was not a business, but remained a pastime for full-blooded but honorable men.

The future of the trap will be that of another sport which becomes a business and which is as a business conducted dishonestly. It will fall to pieces. The money invested in it will cease to earn interest. There will be depression, loss, failure connected with such a future, these being either absolute or relative, the principle being the same in both cases.

In the application of the remedy for this remarkable state of affairs, it will be of no use to appeal to the honor of the shooters who have been guilty in the past, for they have not any honor to stimulate. The reform must begin first with the tournament managers, private or public. The crookedness can be detected without trouble. One single tournament conducted on rigid and inflexible rules of honesty will create a howl, a rebellion, a war of words and bluster which will include threats of suits at law for injustice, defamation of character, etc., etc. (which suits will never materialize). The second tournament of the same kind will produce a less howl, and the dishonest shooters will go to thinking. At the third shoot they will stay at home, and the tournament will be a "failure." And then the young and less skillful shooters will begin to come out, and the tournaments will begin to be very far from failures.

It is the most selfish duty of the Chamberlin Cartridge and Target Co. to put up and enforce actually at its next shoot the rule that dropping for place will disqualify a shooter—not only to hang up the rule as a scarecrow, but to go after and find and punish the violators of it. That is a more important duty than the hanging up of big purses and of breaking a lot of targets. The Empire Target people can do themselves no greater financial benefit than to hold a big shoot publicly, to publicly send home half its shooters for crookednes, and to publicly close the doors of its tournament for lack of shooters. These two concerns can break up the evil of dropping for place, that is to say, the evil of cheating and robbing at the trap, in just thirty days. They can make money doing it. There are other men who will break these targets. There are more than fifty shooters in America. There are thousands of men who want to buy guns, and take these guns out of their cases and go to shoots, as soon as they know they can get fair treatment and an honest reward for what their skill has earned them. The firms who make up the great associations, like the Interstate, the American, etc., want to bring out these unknown amateur shooters. The association shoots are full of the same dropping and combining, the same waiting and figuring and scheming. If the firms interested wish to make money out of their enterprise of advancing the sport of the traps, they can best do so by holding one shoot that shall not be a success but a "failure"—one at which the dishonest shooters shall be sorted out and sent home, with a good, swift parting salute in the rear. After a few failures of that kind they will very early be able to give an exhibition which has not for years been seen in America, of a great trap tournament really open to all, and not open only to a few.

So clearly am I convinced of the logic, the justice and right of my position herein that it it seems to me a matter of the utmost surprise that the same position has not been taken long ago, not by one, but by every member of the sporting press. Never a word has ever been printed against this current dishonesty at the trap by any paper but FOREST AND STREAM. The other papers are afraid to say a word. Their fear is based on a business policy alike too timid and too short-sighted. In years to come they may be afraid to keep silent. It is the bold and honest paper which is the best protector of its customers, and time will indicate the truth of this assertion.

The lesson of the action of the Washington Park Club is obvious. One need revert to it no further. All honor to the men who refused to have a hand in crookedness. All honor to the first tournament management to inaugurate a similar rebellion against a similar evil, and that before the evil has had time to work a result similarly wide-reaching and disastrous. Every sweepstakes is a wager. Americans will make wagers. Let them do so in a gentlemanly way, recognizing the ethics of the hazard, the principles of fair play, which have obtained among gentlemen the world over and time out of mind. Americans will shoot. Arrange it so they can all shoot. Arrange it so that a few dishonest ones can not bar out the great body of honest shooters, who will not go to the traps while the present indecent and dishonest practices at our tournaments continue.

NEWS FROM THE "EVIL SPIRIT."

At last accounts from the scenes of conflict, the Evil Spirit of the Plains appears not to have found it all easy work in defeating the shooters who have answered his challenges. Jimmie Elliott has shaken out an unsuspected reef of speed which nobody, even himself, believed possible, and has defeated Carver six times out of nine. Carver has won the series with Crosby, and has beaten Collenberger, the Jerseyville giant, and has beaten Budd once and been beaten once by Budd, making an odd score in the second race, compared with that of the day before. And now the scene will shift soon to Chicago, where Carver and Budd will shoot off their tie. This event is awaited with much interest here. We have had no pigeon races of consequence for a long time, and the boys will all turn out to see Carver and Budd. The Chicago boys also hope to see a lot more matches made up, and if all goes well we may yet see something of an old-fashioned winter here.

PARKER—MUSSEY.

Tom Parker is an innocent boy, who hasn't shot targets much, but he wanted to try. He went to Billy Mussey and trod on his coat, allowing that he could break a few targets, and that he would shoot a race at 100 targers, if he could get a little handicap.

"Why, you poor, deluded boy," said Billy, "what are you talking of, Tommy! Away, slight man! I would eat you up."

"Well, how much?" asked Tommy.

"I'll shoot you for the suppers," said Billy, "and add 10 birds to your score."

"Oh, hadn't you better make it 20 added?" asked Tom. "You know I never shot but a few times."

"Yes, I'll make it 20," said Billy, "just to even things up."

So this week they went down to Watson's and shot, and Tommy only beat Billy 33 birds, that was all. The score was Parker 77, Mussey 64, handicap added, made Parker 97.

"Well, now, what do you think of that?" said Billy. "That blame boy skun me. I'm going to try to get on a return race with him, but the handicap is going to be just the other way. He'll have to add 20 to my score. I misplaced my confidence in that fellow."

FROM THE EAST.

Mr. W. Fred Quimby and Mr. Thos. Keller were both in town this week, from New York, on business for their respective houses, and I believe both report good business here. The general impression in the trade is, however, that there is little solidity in the market, dealers buying now because they were all sold out and not because they predict a good trade for the near future. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## The Battle of the Giants.

ALTHOUGH a good deal has been said lately about the "wing shot championship of the world," chiefly in regard to the three Elliott-Carver series of matches so recently decided in favor of the Kansas City shooter, it is hardly likely that any claim to such title was ever advanced by either of the contestants. Elliott's right to the *American Field* championship is unquestioned by everybody, by Capt. Brewer among the rest. The championship of the world, however, seems properly to belong to Capt. Brewer by reason of his great victories in the world's championship cup contests held in England in 1888. By winning that cup three times consecutively it became his property.

At the time the contests were in progress it was generally understood that the title of "champion pigeon shot of the world" should belong to the winner of the cup. The right to that title, which was conceded to Capt. Brewer, was not questioned at the time. Has it really ever been questioned since? And that title Capt. Brewer, in an interview given elsewhere, states he is, and always has been, ready to defend at the traps. He has, since the date above mentioned (1888), met defeat, it is true, notably at the hands of E. D. Fulford, a shooter who sprang suddenly into prominence and who has done some great work with his gun. But that series of matches, shot in 1890, was for only $200 a side, and not for the championship of the world. The championship of the world has not been shot for since 1888.

Mr. Elliott, under date of Oct. 15, writes from Kansas City: "I will shoot Mr. Brewer a series of five races, the same to take place within the next thirty days, under the following conditions: Two races to take place in Kansas City, one at an intermediate point, east or south of Kansas City, to be mutually agreed upon, and the remaining two at any point in the East, to be designated by Mr. Brewer; these matches to be for $100 each, with an additional $250 and the world's championship to go to the one making the highest aggregate score, each race to be at 100 live birds, Hurlingham Gun Club or American Shooting Association rules, 30yds. rise and 50yds. boundary (the American Shooting Association's boundary). Or I will enter into a contract with Mr. Brewer and Dr. Carver, or any other championship aspirants, under the same conditions as agreed upon between Dr. Carver and Mr. Brewer for their proposed matches which are to take place in Chicago, viz.: Three races, 100 birds to the man, each race $100 a corner, and $500 each to go to the man making the highest aggregate score in the three events. I am willing to enter this contest with any number of entries, the winner of each day's shoot to take the stake of that day, and the man making the highest aggregate score in the three contests to take the additional money bet on the general result, and all honors of champion wing shot of the world." In support of his above propositions Mr. Elliott has deposited $100 with the *American Field*.

Capt. Brewer has accepted Elliott's challenge in so far as it relates to a series of matches for the world's championship, and has deposited $50 at this office as a forfeit. Brewer, however, objects to Elliott naming the places where the matches shall take place, and also objects to his limiting the time to "the next thirty days," from Oct. 15. As holder of the world's championship, or as the challenged party, Capt. Brewer claims the right to name dates and places, assuring Elliot that dates in the near future will be chosen. As for going West to shoot the matches, Brewer states that the challenger must come to him.

As Elliott is unquestionably in earnest, and as Brewer is also extremely anxious for a meeting, there seems no reason to doubt that a *bona fide* world's championship series of matches at live birds will take place before 1894 is much older. Both men are shooting in good form, and the races will be worth talking about after they're over. Elliott's average of 97 per cent. for the three matches last shot is a big one, worthy of world's championship honors. Capt. Brewer, however, is not dismayed in the slightest, but makes an offer that, if Elliott or his backer will lay him satisfactory odds, he (Brewer) will bet that he beats that average in the proposed series of three matches for the world's championship.

At present nothing definite has been decided upon. Both men have forfeits up to bind a series of matches for world's championship honors So far as naming dates and places goes, if Brewer has never forfeited the title of champion of the world, won by him in England in 1888, by failing to defend the same against any *bona fide* and properly made challenge (and it does not appear that he has failed in this respect), then it is only right and proper that he should have the say both in this respect and in that of the dates. It would be unreasonable to expect that any champion should be at the beck and call of any challenger and should be compelled to go to defend his title wherever that challenger might demand or else lose it by default. In that case championship titles could be comparatively easily won by naming a locality difficult of access as the scene for the contest Regarding dates, too, a generous allowance should be made for obvious reasons.

## The Grand American Handicap in 1895.

THE Grand American Handicap of 1895, given under the auspices of the Interstate Manufacturers' and Dealers' Association, will be held at Willard Park, Paterson, N. J., on April 3, 4 and 5. Manager Shaner, of the Association, recently spent several days in this city looking at the grounds of the various gun clubs which were located within easy reach of New York. Room for two sets of traps was an essential point, as it is the intention of the Association to run two sets next April. On one set they will run off the main event, while the other will be kept going with sweepstake events. This will do away with the long, tedious waits between shots which characterize all popular events. Mr. Shaner found that Willard Park answered every requirement. It is handy to New York, the trip from the Astor House being less than fifty minutes all told; it has ample room for two sets of traps; the field is perfectly level, and the accommodation for shooters and spectators could hardly be better. In addition to this there are admirable facilities for handling the crowd which may be expected to attend such an important event.

Mr. Shaner made his report to the executive committee of the Association, consisting of Messrs. J. A. H. Dressel, of the U. M. C. Co.; Justus von Lengerke, of the firm of Von Lengerke & Detmold, and Tatham, of Tatham Bros., on Wednesday morning. This committee decided to act in accordance with Mr. Shaner's report, and authorized him to enter into a contract for the use of the grounds, etc., on the dates set for the handicap. This contract was signed on Thursday, Mr. Shaner leaving the same evening for his home in Pittsburgh.

The success of this year's Grand American Handicap warrants the supposition that that of 1895 will be at least as well patronized as its predecessor. That the Association thinks so is proved by its offer of "$1,000 guaranteed, all surplus added."

## Eastern New York League Tournament.

ALBANY, N. Y., Oct. 20.—The one event of interest to the trap-shooters of this part of the State during the present week was the fourth tournament of the Eastern New York Trap-Shooters' League of the series of 1894. This was held at Johnstown, N. Y., Tuesday, Oct. 16, The manager, Mr. Fred W. Partiss, is regarded as one of the most capable men on the League circuit, and the events hitherto held under his direction have been marked by an abundance of advance notice, good management and a fine attendance of shooters, both residents and visitors, who showed their appreciation of Fred's good work by keeping in the swim throughout the programme. The late tournament was an exception to the successful events of the past seasons, the attendance being the lightest ever seen on the Johnstown shooting grounds. This is accounted for by the fact that the affair was floated with only a week's notice, the writer (league secretary) receiving such brief warning of its coming that he was unable to give it the advantage of a notice in the trap fixtures of FOREST AND STREAM. This, combined with the depressed condition of the times that makes even the most happy-go-lucky shooter feel poor, and also the fact that the League towns are pretty widely scattered, making early rising and a longish journey the essentials to reach the field, had the effect of developing the affair into about as blue a meet as I ever attended. I have not mentioned the worst feature of the falling off in the attendance, and that was the lack of support given the tournament by the Johnstown shooters themselves, only one member of the Gun Club shooting through the programme.

And then the weather! Ugh! Cold and raw, with gray clouds of mist in the morning, that later thickened into masses of blue vapor which, in turn, precipitated showers of driving rain, the discomfort of everybody being doubled by these dreary squalls. These depressing conditions were first observed by the Albany boys as they sped up the Mohawk Valley on an early morning New York Central train. As we tried to get a glimpse of the lovely scenery through the rain-beaten windows, the looks of discouragement on the faces of Sanders, Arnold and St. Charles were reflected from the boyish features of Harry Levengston, of Saratoga, who had arrived at Albany that morning and was our companion on the journey northward.

Changing at Fonda we took another road for Johnstown, the conductor of the train obligingly stopping to let us off at the crossing that leads to the shooting ground. The dismal walk through the drizzle finally brought us to the old familiar green meadow on quite an elevation of land. Here we found Partiss, Potter, Yost and Chapman, of the Johnstown Gun Club, busily preparing traps, pulls, etc., for the expected shooting. Dr. S. A. Wessels and T. C. Pegnim, of Canajoharie, were also present, and, later on, Joe Fulton, the keeper of a sportsmen's resort at West Canada Creek, showed up for the purpose of seeing the boys and smashing a few targets, at which he is quite an adept for a deer hunter.

Everything about the grounds wore a cheerless aspect, which was not at all mitigated by the absence of a fire in the shooting lodge, and the cold and inhospitable character of the shed was shown in the fate of a litter of three kittens that some vagrant tabby had dropped during the previous night, and who had frantically skedaddled when the gunners took possession of her domicile, leaving her poor little waifs to die in a few hours of cold and the lack of nourishment, warmth and comfort that their wild and half savage dam could have provided.

"Well, it's going to be a poor show, anyway," said Levengston, "so we might as well shoot out the programme and get through with that part of it;" and in compliance with the suggestion Wallace Yost and the FOREST AND STREAM correspondent got into the shelter of the shed, and, muffled to the ears in top coats, prepared to do the scoring and the clerical work. Will Potter took charge of the trap pulls; a gang of noisy and incompetent hoodlums mismanaged the traps; a squad of forlorn shooters lined up at the firing points in the pelting rain; the practical work of the tournament was on, and here are the scores in detail.

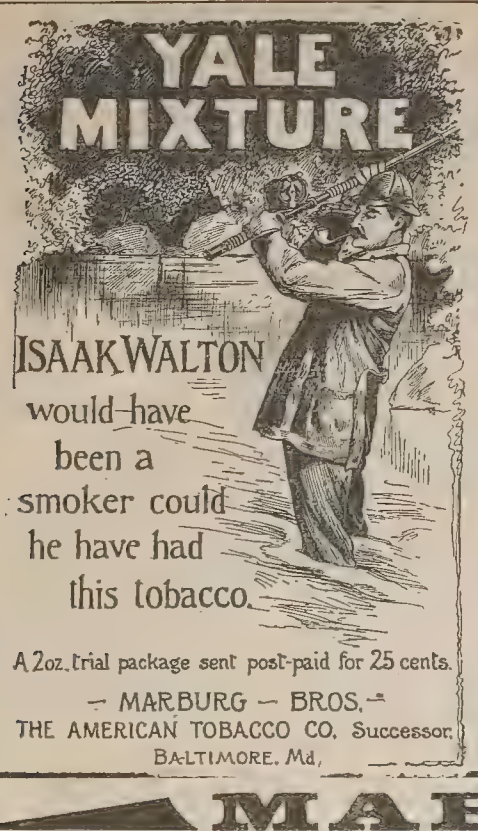
AWARDS FOR HIGHEST AGGREGATES.

A purse of $15, divided $5, $4, $3, $2, $1, was awarded the shooter making the highest aggregate score in contests Nos. 2 to 11 inclusive. A contestant shooting through the events to qualify for the purse had to shoot at 140 bluerocks. The names of the winners, their scores and percentages follow:

Levengston, Saratoga, 127, 90.7 per cent., won first money; Sanders, Albany, 122, 87,1 per cent., won second; St Charles, Albany, 115, 82.1 per cent., won third; Arnold, Albany, 113, 80.7 per cent., won fourth; Chapman, Johnstown, 103, 73 5 per cent., won fifth.

The next Eastern League tournament, and probably the final one of the series of 1894, will be held at Saratoga on Nov. 12.

HORACE B. DERBY.



## Paterson Gun Club.

PATERSON, N. J., Oct. 17.—The following scores were made at the club shoot at targets held at Willard Park yesterday afternoon. The conditions of the shoot are 25 targets, handicap allowance. Wright and Morfey are conceded 1 target, Boyle and Hopper 3 each, while Morgan receives 8. In this shoot Morfey came out ahead. Capt. J. L. Brewer, who is not a member of the club, shot along with the boys for practice. Score:

| | |
|---|---|
| Brewer | 1111111110101111111101111—23 |

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

# That Soap Story

told in our issue of Oct. 6, as an extract from Dr. Peirce's "A Man from Corpus Christi," was only one of the funny episodes told of in the book. There are scores of laughs and hundreds of chuckles between the covers. We would not dare to go into camp with that man who could read the chapters and not chuckle over the scrapes and escapes of the original citizen of Corpus.

Illustrated by no special artist; 257 pages; price a dollar and a half.

**FOREST AND STREAM PUBLISHING CO.**

# Wildfowl Shooting

is one of the branches of shooting treated fully and well in Howland Gasper's "Complete Sportsman." The beginner will find Mr Gasper's instructions clear, readily understood, and helpful. The oldest gunner in the land will find them pretty close to what he would say himself. The "Complete Sportsman" is a book for wild duck and wild goose shooters. 227 pages, 17 illustrations, $2.00.

## NEW EDITION.

## Lancaster's Famous Book,

# THE ART OF SHOOTING.

**By CHARLES LANCASTER.**

**AUTHOR'S PREFACE.**

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

**FOREST AND STREAM PUBLISHING COMPANY,**
**318 Broadway, New York.**

# BOOKS ON SHOOTING.

**New Editions.**

## The Modern Shotgun.

**By W. W. GREENER.**

PRICE, $1.00.

## The Gun and its Development.

**By W. W. GREENER.**

PRICE, $2.50.

These volumes have been for some time out of print, and new editions revised by the author have just been received. There is scarcely any one whose utterances with regard to shotguns and rifles are entitled to as much weight as Mr. Greener's, for he has been making these arms for many years. To his great knowledge of them he adds a pleasant and clear style in writing, which adds to the value of his books. Every American who uses a gun ought to read these books. Sent postpaid on receipt of price.

**FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.**

# FOREST AND STREAM BOOK LIST.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, NOVEMBER 3, 1894.

VOL XLIII.—No. 18 No. 318 BROADWAY, NEW YORK.

*For Prospectus and Advertising Rates see Page* iii.

**The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.**

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
**Price of the pictures alone, $1.50 each; $5 for the set.**

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *AN IMPERILLED PALLADIUM.*

A PALLADIUM is something often heard of, but seldom seen, and most folks have a hazy notion of what it looks like; but just now the campaign orators are exhorting us to preserve the palladium of our liberties; and everybody understands that the protection of this useful article is quite as important at least as the protection of game. This being so, we are doing a public service in warning those citizens of New Jersey who are inclined to field sports that their palladium is in great peril and that they had better look to defending it.

Fish and Game Commissioner Frothingham wrote the other day that he had been annoyed by folks who claimed to have had advice from this office that there was no law on gray squirrels in New Jersey. As authority for his notion that there is such a law, he sends us a letter, which is in the nature of a legal opinion given by the counsel to the Commission, to the effect that while the law does not mention gray squirrels, nevertheless in the opinion of counsel it was clearly the intention of the author of the statute to protect them.

Under ordinary circumstances it would probably be quite sufficient to point out that the law itself must be accepted as it is, not as it might have been if its author had put his unexpressed intention into effect. But the New Jersey Commissioners—and this is what has caused the palladium to rock on its foundation—have as much as declared their acceptance of this view of counsel, and have given out that gray squirrels, not named in the law but assumed by counsel to have been in the mind of the author of the statute, may not be killed between certain dates not designated in the statute but likewise conjectured by counsel to have been in the author's mind.

This surely is to bind new burdens and grievous to be borne upon the honest and long-suffering Jersey gunner. His task has been as exacting as could be required of the average sportsman, to keep posted on the ever-changing game laws and to conform to them, as enacted at Trenton. Now the Commissioners propose to require of him compliance not only with a law as actually adopted by the Legislature, engrossed and published, but with it as it might have been if it had been enacted, engrossed and published in some different shape. The well-meaning citizen must know both the letter of law and the original but unfulfilled intent of its author. Moreover, as this original intent is now known only to the author himself, if indeed he has not forgotten it, to arrive at it correctly is purely a triumph of guesswork, and in this the average individual, unversed in the tortuous ways of legal logic, is at a distinct disadvantage. The chances are as ten to one that he will conjure up an intention which will prove to be wholly at variance with the intention guessed by official counsel to the Commission. For instance, if the statute protects only "black or fox squirrels," the gunner may assume that the author intended to protect gray squirrels as well, while the counsel to the Commission may exclude the gray squirrel and include the chipmunk. When mind readers differ, the official guesser will have the support of Commissioners and wardens; and for acting on his honest but mistaken guess the gunner will go to jail.

With such a substitution of game law conjecture for game law text, the sportsman who ventures to do any shooting at all will be in constant peril of landing himself in the lock-up or of being required to give bonds for having obeyed the letter of the statute, but violated the unexpressed intent of some last year's legislator, as conjectured and communicated in opinion of counsel to the Commission. Under these circumstances a palladium is hardly worth having as an appurtenance of field sports in New Jersey. Those who care to go shooting and to keep their palladiums too, might do well to convey them to the sure protection of the ægis of Greater New York. For on the confines of that city of the future—in particular on the borders of Brooklyn—one may bang away at everything that wears fur or feathers, season or no season, law or no law, with never a thought of interference from the worthless Long Island game protector.

### *SNAP SHOTS.*

Dr. A. Chalmette, of Paris, is experimenting with venomous serpents, to discover an antidote for the poison; and although his work is by no means completed, he has gone so far as to announce favorable results with the hypochlorites of sodium and lime, and choride of gold and chloride of lime, for neutralizing the poison by chemical action. In an interview in *McClure's Magazine* he expresses a conviction that in the chloride of lime we have an adequate remedy for rattlesnake poison. He gives these directions for its use: "The chloride should be free from absorbed water, and, when used, should in all cases be freshly taken from a hermetically sealed bottle. One part of it by weight should be dissolved in eleven parts of boiling water, and the solution should never be made until it is about to be used, as I have found that the therapeutic power diminishes by keeping. This should be injected subcutaneously with a trephine all about the wound, and also under the skin of the abdomen, that it may enter the circulation as quickly as possible. No ligature about the part bitten is necessary. I have not yet determined the amount necessary to be used upon a human being, because I have had no opportunity of making tests. I estimate, from all the conditions, that from twenty to thirty cubic centimeters of the solution will suffice to save the life of a man bitten, it being administered in doses of five cubic centimeters each." Naturally Dr. Chalmette has not found volunteers to test his theory; and we shall not be certain that the chloride of lime will effect a cure until it shall have been demonstrated. If an opportunity to make trial on a snake-bitten victim shall come to any reader of this paragraph we trust that the remedy may be tested and reported to us.

By the way, speaking of rattlesnakes, how large do they grow? We have in this office a skin or part of a skin, which measures in length 7ft. 6in.; and Mr. L. F. Meyers, of Texas, who sends it to us, avers that at least 2ft. more of the skin is missing. It is a beauty.

By the death of John N. Babcock, of Syracuse, N. Y., those who are engaged in the cause of fish protection in central New York have lost one of their most active workers and most valued and trusted counselors. Mr. Babcock's was a high type of citizenship. He was a successful and honored business man, and he always made the time and improved the occasion to do public service in the protection of the fishing waters. He was one of the founders of the Anglers' Association of Onondaga; was its vice-president from the first, and always one of its most active members. Resolutions adopted by the Association last week on the occasion of Mr. Babcock's death give expression to the fact that much of the success of the organization in its great work has been due to his unremitting zeal, wise counsel and generous financial support. The death of such a member of such a society is a public calamity.

Judges Dixon and Inglis and the rest of the party charged with having unlawfully pursued ducks with a steam launch on Greenwood Lake, N. J., have appeared before a Paterson magistrate to plead not guilty; and a hearing was set for yesterday. We see it reported that Judge Dixon, who is a Supreme Court Justice, may determine to carry the case to a higher court, with a view to showing the unconstitutionality of the game law; but we do not mind saying that we discredit the report, for if anything in law is well established it is the constitutionality of the game statutes. If Judge Dixon and his companions shall be shown to have been guilty of the acts charged they will pay their fines in due time and the constitutionality of the game laws will remain unshaken just the same.

There is less complaint now than formerly of the English sparrow nuisance; but no one can visit Washington without having the subject emphatically and offensively brought to his attention. That city is overrun by the noisy, dirty birds. The approaches to the Capitol are kept in a positively filthy condition by them. The impudent little pests appear to have picked out the seat of the National Government as a fitting place to put in evidence their bad breeding and indecent ways. If ever there shall be in this country an anti-sparrow crusade it might well enough take its start in Washington.

We hear much of sportsman's luck, good, bad and indifferent; but rarely does there come to the FOREST AND STREAM such a story of misadventure as befel a Boston correspondent who started for the Maine woods recently, on the way sprained a knee, and was crippled for the whole time of his vacation, although he did hobble on crutches into the woods and stayed in camp eight days, seeing the parties of hunters come and go and the antlers brought in. That was bad luck, but pluck too; and after all there is something in pluck.

We had something to say the other day about a catch of 238 bass in one day in the Trout Lake waters of Wisconsin, reported to have been made by Rev. Dr. J. Mc Cluskey Blayney, of Frankfort, Ky. Dr. Blayney tells u that he did make such a catch, but that of the 238 fish all but a half-dozen were returned in good condition to the water. This, we are bound to say, relieves the feat from the suspicion, usually attaching to such an extraordinary catch, that the fish were killed to waste; and we trust that no one who read our remarks will fail to turn to the Doctor's good-natured note in our angling columns.

From a report in the San Antonio *Express*, which we reprint, it is learned that a Texas ranchman is bent on corralling the Val Verde buffalo. But the herd is said now to have crossed over into Mexico; and if the Mexicans were Yankees they would not hear to Dr. Taylor's proposition to drive the animals back into this country. Buffalo are worth money nowadays. This reminds us to say that Capt. Geo. S. Anderson has for sale, by order of the Secretary of the Interior, some of the buffalo heads taken by Howell in the Yellowstone Park last winter.

"Jacobstaff" writes of his old shooting grounds in the Pocono Mountains of Pennsylvania, where he has had so much sport in past years, that this season the grouse have disappeared; and as a possible explanation to account for this condition of affairs, he cites a report that in the nesting season egg hunters collected and carried away from that region 10,000 ruffed grouse eggs. The story of 10,000 eggs is too well rounded out to be believed, but if there was any egg hunting at all it would have gone far toward accounting for the dearth of birds in the autumn. The Pennsylvania law forbids taking the eggs of game birds; if there are organized gangs of nest robbers, the State Sportsmen's Association would do well to give the subject attention.

The Maine correspondent, who has devised an ingenious scheme of a game exchange in Bangor for the convenience of visiting sportsmen, has made no provision for the supply of appropiate stories to go with the game bought there. No one cares to bring home a handsome deer or a mighty moose without a story to match. But this is an oversight easily remedied. No Maine hunter ever lived who could not supply hunting yarns to go with the biggest buck or moose ever brought down in those woods.

If the Maine Legislature shall make no other changes of the game law next winter, it should at least prohibit the killing of cow moose. Is there one single reasonable thing to be said in support of the present law on the subject?

There is more poetry in "partridge" than in "ruffed grouse," and the fun of partridge shooting goes ahead of ruffed grouse shooting every time.

# The Sportsman Tourist.

## A WEEK IN MONTANA MOUNTAINS.

It was a perfect morning. There had been a light shower at daybreak, just enough "to lay" the dust, but all was clear again when the sun peeped over the Old Jumbo Mountain and glistened through the branches of the Canadian poplars, the earliest rays seeking out here and there a raindrop still clinging to an upturned leaf, gifting it betimes with the varied tints of the "blended heaven's bow" or perchance catching it unawares as it described a swift descent from the momentary resting place whence it had been disturbed by the gentle ripples of a newborn breeze, bestowing on it for a fleeting second the wealth of a flashing diamond, ere its identity passed for aye as it kissed the absorbant lips of a thirsting Mother Earth.

As the sun shone clear of the mountain, Charlie and I loaded our camping outfit into the light dray, and answering my wife's last "When will you be back?" (asked for about the twentieth time), "Oh, in about a week," whistled for Ponto and were off to the station. A quarter of an hour later we had the luggage with Ponto chained on top on the rear platform of the caboose of the Cœur D'Alene "mixed" train. This was during the panicky times of '93, and on that train were between forty and fifty others like ourselves, bound "anywhere, anywhere out of the world."

"Which way?" asked one.

"Off at Lothrop and up Pattee Creek," answered Charlie.

"Pattee Creek? No use going there."

"What's the reason?"

"Fished to death and no birds."

"Who says this?"

"Just came from there myself, and I know."

"Were you up to the meadows?"

"No, only about half-way, but there's no sport up there. I'm going with the gang to the St. Regis, and you had better join us."

"Well, Will," said Charlie, turning to me, "what do you think?"

"Don't know. Whatever you say, goes."

"All right then; we've started for Pattee Creek and we'll stick to first principles."

At Lothrop, thirty miles from Missoula, we alighted from the train and in a few minutes had secured the services of Perry Corn, who lives a hundred yards from the station, to take us to the meadows, eight miles distant.

Corn had to go out several miles for his horses, and we were obliged to wait until afternoon. This we did with a rather poor grace, being anxious to get into camp, but as we did not appreciate the idea of an eight mile tramp with a couple of hundred pounds of baggage each, strapped to our backs, we waited. By one o'clock we were on our way in a rickety lumber wagon, over, into, through or along (I'm at a loss for a comprehensive expression) one of the roughest and toughest mountain roads ever cut in a rough mountain country. However, to the sportsman the inequalities of the road, the logs and stumps, the roots and ruts, the steep pitches and the chuck-holes, the overhanging branches above, the assorted sized boulders beneath and other trifling peculiarities in a great measure pass unheeded, as he gazes in ecstacy on either side at the walls terraced with rocky cliffs and points which are inter-grown with a scattering wild profusion of pine, fir, tamarack trees, and bush and vine of varieties beyond enumerate.

Here and there the road crosses or approaches the sparkling stream which swiftly flows along the cañon's bed, and forms at every turn a pool or riffle toward which he glances with feverish impatience, knowing well by his sportsman's intuition that these are the lurking places of those whose unsuspecting part perforce is lent to enhance the zest experienced by successful lovers of the rod and reel.

Four miles we kept to the wagon, then the horses were unhitched and the camp duffle packed on their backs over the trail which led to the meadows. Charlie took the lead with gun under arm. I followed with my rifle and leading one packed horse, and Corn brought up the rear with the other.

Shortly after leaving the wagon Ponto started a covey of ruffed grouse, and Charlie soon had all seven snugly tucked away in his hunting coat pockets. (Had there been more in the covey there would probably have been more in the pockets.)

When we had covered about half the remaining distance, we discovered fresh deer signs, and with my characteristic self-denial I graciously allowed Charlie to lead the horse the rest of the way, and to guide him along the sinuous trail in a manner to insure his not becoming untimely and unceremoniously disconnected with his belongings as he dodged in and out of each half-hitch that occurred here and yonder in the path, also the pleasure of now and then designating to him the softest spots from which to pick himself up after stumbling over some unusually conspicuous stump, log or quartz ledge.

These and kindred pleasures I must forego and worry along ahead with a weather eye cocked and primed for sight of the buck who had evidently determined to intentionally and with malice aforethought ignore a one-sided appointment, and had hurried away to keep a methink more congenial one on some neighboring mountain top.

The meadows were reached in good season, and a location for our camp was just fixed upon when Charlie and Corn came up with the horses.

"It was real nice of you to keep ahead and out of sight, so that I might enjoy the exceptional privilege of playing engineer, fireman, conductor, brakeman and switchman all at the same time." (Charlie has an idea that he is somewhat learned in railroad lore.) "Be assured, I'll not forget your extreme kindness; it will be my only earnest desire to return it at the earliest opportunity, and with interest. I—"

"Don't mention it, Charlie; don't mention it. I am perfectly satisfied that you fully appreciate the interest I have displayed in your behalf, and now if you will unpack the horses, set up the tent, make the beds, cut up a nice pile of wood, build a fire, put the potatoes on to boil, likewise the coffee, fry two or three of those grouse, and as we are supplied with baker's bread, I will endeavor to assist with the getting of the rest of the supper, and we will be all O. K. in a jiffy."

"Will, eh? Pleasant programme you have figured out, I don't think. And now, Mr. Man, if you don't get in and do a little hustling on your own account, there'll be a first-class funeral in the camp in short order."

"Well, Charlie, I am deeply wounded at your raising objections to a so skillfully arranged order of business, but having no particular heartfelt desire to attend your immediate obsequies, I suppose my disappointment will have to be choked down, and——"

An hour after we had the tent pitched and the camp in shape for rain or shine.

The meadows are in reality not meadows, but the whole is a grassy valley some four or five miles in length, and whose surroundings are very different from those of the cañon below. The mountains, instead of being steep and rocky, slope back gently; the sides facing the south are grassy and more or less open, the north sides are heavily timbered, making an ideal range for deer, though in midsummer these animals are for the most part higher up in the mountains and scattered. At the approach of winter, when game of all kinds is driven by the first snows from the high ranges, this is a veritable deer hunter's paradise.

Supper over Corn returned home, Charlie put his fishing tackle in order, started for the creek, and I with the rifle ventured out on a little exploring trip, it being new country to both of us. We walked until dark, saw an elk track and some deer sign, also found where a deer had been killed a few days earlier, but no live game was seen. Returned to camp and found Charlie with twenty trout ready for the frying-pan, which he had caught in a half hour's fishing.

We were out with the sun in the morning, and away with shotgun and rifle ready for business. Our camp was on a small branch of the main creek, and this branch came down out of a long cañon or gulch. Up this gulch we went some three miles without seeing hair or feather. Charlie complained of a severe headache, and turned back, taking Ponto with him. I concluded to leave the gulch and go a little way up the mountain, on the side facing the sun. While the mountain was steep, the climbing was quite easy, and being in good trim, it was not long till I found myself on top of a high ridge, sitting in a huckleberry patch and enjoying a few handfuls of the berries. Having gained this ridge I was now in hopes of jumping a buck, and while resting in the berry patch was on the alert for any indications of game. Ten minutes thus, and when about renewing the hunt, I heard something like the foot-fall of an animal; but after a few moments' quiet watching and no developments, concluded it a false alarm and moved a few steps along the ridge, when of a sudden just beyond a rise I saw a patch of brown fur disappearing behind some little tamarack trees. Springing forward several paces the .40 82 came up with a thump as a bear running full speed appeared long enough for my finger to touch the trigger, then it was again lost to sight in a large body of these little tamaracks that covered the north side of the mountain. At the sound of the shot a cub ran up a large pine about 30yds. ahead. It was up perhaps 15ft. when seeing its enemy it "let go all holds" and dropped to the ground like a flying squirrel. It ran out through an open, but owing to the unevenness of the ground I could not see it till it was nearly 75yds. away, when for a second the ivory bead stood out in relief before a little brown object and the rifle trigger was pressed again. At the report I could imagine some one giving the lash to a six months old pup from the racket raised by the yelpings of one little bear cub. Making sure that *mater familias* would be back in defense of the youngster, and thinking a fight was at hand, I hastily slipped half a dozen cartridges into the Winchester's magazine. That done the yelping had ceased, and no old bear had returned. Stepping along cautiously I soon came upon the cub so dead that it had apparently never kicked after the ball struck home.

But here was a mystery. What had done all the yelping and what had become of the old one? I had not particularly lost any bear in the thicket, and went at the further hunt with considerable caution; but after a time, finding no more signs of bear, waxed exceedingly brave and tramped up, down and around until tired, all to no purpose, nothing more was found. The mystery remained uncleared. There were two solutions to the problem. If there was only one cub it had done the yelping with its final efforts; my first shot gave the old bear her death wound, and she was down the mountains into the brush, where to trace her without a dog was out of the question; otherwise she would have returned to the call of the cub. If there were two cubs, one which I did not see set up its cries at the sound of the second shot and brought the old one to it, they together making off without my getting sight of them. The latter theory is the more likely correct, as the cries seemed as if the little fellows were running here and there through the thicket.

At length, concluding that further search was useless, the 40lbs. cub was lifted to my shoulder and we followed around the ridge which led to camp by a four-mile route. At first the weight of the cub was but a trifle, but before camp was sighted it was on both shoulders, around my neck, and in fact seemed to be about all over me. This was real pleasant; it was in August, with not a cloud in the sky. Over the last quarter of a mile to camp the cinnamon cub had assumed the proportions of a full-grown grizzly, and weighed 976lbs. by my Waterbury watch and buck skin chain.

"If I couldn't kill a bigger bear than that, I wouldn't kill any," was Charlie's gentle greeting as my load was wearily deposited at his feet. I sought to wither him with a fierce glare of contempt, but instead had to do the withering act myself, and tumbled into the tent, from which I crawled some time later in response to Charlie's welcome "Get up; supper is ready." When the hunting appetite was satisfied and the frame somewhat refreshed in consequence I ventured to take a look at my grizzly; and lo and behold! it was only the little cinnamon cub again.

The next morning we took another course, came in at noon with eight ruffed grouse (all of the one covey found) in the capacious depths of Charlie's ever irresistible hunting coat pockets.

Without waiting to prepare dinner we proceeded to a trial of our fortune at angling down along the main creek, in order to while away a little time until Charlie's brother Tom and our mutual friend Nick, who were booked to join us that day, should put in an appearance. We had landed something like a dozen trout each when a halloo was head, and by that same token dinner was in short meter ready for four, and the four were on hand with no uncertain appetites to enjoy it.

By 3 o'clock the quartette could have been seen distributing themselves along the stream preparatory to the evening's fishing which followed, and such fishing as it was. The Pattee Creek trout are not large, running from 6 to 10in. in length, but are free and gamy, and the evening was spent pleasantly, for we had some 200 by supper time, after which they were packed away in wet grass under an overhanging bank by the creek, where they would keep cool and fresh; and right willing were we then to hide ourselves away among the welcome robes and blankets.

The boys had heard the bear story, and in the morning all were eager to hazard a trip to the huckleberry patch. None of them were in good form for heavy tramping, especially under an August sun, and when about halfway up the ridge down which I had brought the cub, were ready to turn back, and it was only by dint of much urging, and insisting that each next point would be the last, that at length near noon we were all eating huckleberries to our content, but our ursine friends were evidently dining in some other patch. After satisfying ourselves with some quantities of this delicious fruit the boys turned campward, but still aching for a shot at a buck took the opposite course, tramped over some fine appearing game country, scared up a few deer tracks, flushed several coveys of blue grouse, killed one (one grouse, not one covey) and reached camp at 4 o'clock.

Six o'clock, a supper cooked by Nick and fit for the gods, and the rifle was again in demand. "Where do you think you are going now?" from Tom.

"Just up the creek a mile or two"

"Don't you ever know when you are tired?"

"Yes, but somehow I feel it in my bones that there is venison waiting for us up there."

"If that's the case," put in Nick, "I guess I'll go too."

It was nearly dusk, while we were sauntering along the foot of a mountain, upon the side of which we were watching, when came from Nick a startled "Look there!" "Look where?" Intuitively that exclamation was interpreted, and while executing an "about face" the Winchester was brought to play on an animal that came from a jump to a full stop at that moment, and a streak of flame shot through the settling gloom in its direction all at the same time. The shot was fired so quickly that we feared the deer had been overshot as it sped away through the thick timber and tall grass. Another cartridge was ready for action in an instant, and another bullet was on the trail of a glimpse caught of the deer. We ran over through the grass, and there lay the largest fawn either of us had ever seen with the "spots on;" so large, indeed, that neither of us had suspected its being anything but a full-grown deer until we reached the spot where it had fallen from the effect of the first shot driven square through the heart. (Whole lot of good luck about that shot.)

While covering the two miles back to camp we were to take turns at carrying the little buck. Half way a small stream crossed our path, across which some one had fallen a small pine cut from an 8in. stump, from which tree the limbs had been but doubtfully trimmed, leaving the small knotty log anything but a sure footbridge. As we came to this I was in the lead with the deer on my shoulder; had taken perhaps the second step out on to the small end of the tree, when, partially losing my balance, in order to regain it I swung the deer around in front, but did not seem to have entirely recovered the proper equilibrium, for after two or three more steps I struck a shoe against a knot and away we went. As we tumbled off on the upper side I loosed the deer and grabbed at the tree, but somehow loosing the deer seemed to have given me a sort of rebounding motion, and instead of catching the tree I fell across it and before I could stop myself turned a full somersault over it, and brought up with a splash in the creek four feet below just as the deer came floating by. I caught a leg and floundered with the buck to the bank.

And Nick—by the time the impromptu bather had "got out of the wet" he had gone stark mad, had dropped the guns (both his and mine) and had followed them into the grass, where he was rolling and twisting about and holding his sides with both hands. He laughed and he shouted, he got up and howled, he lay down, rolled some more, and laughed till the tears came in his eyes, all the while going through maneuvres that would have given pointers to a professional contortionist, but somehow the funny part of the thing did not seem to strike me as forcibly as it did him, at any rate my risibility was not aroused to any great extent just at that time. It is possible that I did not see the joke. At any rate—

"You blank lunatic! Do you intend to make a monkey and parrot out of yourself all night?" I yelled.

"If you cou—could have see—seen yourself—"

Then he went mad again, and—so was I. "Of all the blank fools, you are the blankety blankest. D'ye suppose I've gone blind?" And I gathered the venison, and wet and shivery strode away through the bright moonlight for camp.

Nick followed, but kept a respectful distance behind and ha-ha-d all the way.

When the boys had well and sufficiently admired the spotted buck, and my clothes and skin were drying by the always cheerful camp-fire, Nick humorously described the gyrations over and under the log, and as the fire's genial warmth had somewhat of a thawing effect on my marrow bones I was forced to join in the merriment at my expense; and in truth as I think of it to-day, if some one could have secured a kodak snap shot of the performance, the which might be herewith presented to the readers of FOREST AND STREAM, it is my candid belief that that "Hough in a heap" would be "snowed under" so to speak.

A person might wonder the why and the wherefore of the chilliness of a night in August, especirlly as the heat of the day has been referred to. Remember, we were well up in the mountains and it is a positive fact that at sunrise on the morning following the occasion of the above incident there was a skim of ice on the water left over night in our camp kettle.

Next day the boys all wanted more venison, and we sallied forth on a heavy campaign with a view of obtaining some. After a short time I became separated from the others and returned with an empty bag.

The boys, however, jumped a deer and two fawns, which Nick got a shot at just as they were going around a point, and missed, and then took another shot at Ponto, who had

been making himself more conspicuous than the occasion required. Nick's wrath served a good turn—for Ponto; it being so excessive that his aim was again disturbed. Since then, whenever Nick refers to this incident he expresses his forcible opinion of that "blank fool dog."

Noon found us all in camp again; the usual hearty meal, a short rest, and then for the final afternoon's sport with leader and fly. The fishing suffered by comparison with what it was two days earlier; but it was good enough, and that evening, with what we already had, we each packed a basket full to be taken home on the morrow. Tom had caught a trout half again larger than the largest taken by any of the rest, and was, therefore, the hero of the hour.

The cub had been kept in a sack in a cool place, and had not yet been divested of his best suit of clothes, it having been our desire to take him home as he was; but upon examination that evening we found he would not stand the test, so I set about securing his dress suit in such a manner as would permit of its being mounted whole if we so wished later. We were all in the best of spirits, many and earnest were the expressions regarding the enjoyable features of the trip, and as the skinning process progressed by the light of that ever-burning big camp-fire, the cub and its slayer were made the butt of numerous jokes, which, however, did not have any possible effect on the cub. If he saw the point of any one of them he did not mention the fact.

After a time the conversation turned to the particular attitude that when mounted would be most befitting its peculiar style of beauty. A number of different postures were spoken of, but at last the one suggested by the irrepressible Tom was determined on, and that was—"Falling out of a tree, yelping, and eating huckleberries." (The taxidermist when interviewed in this regard, agreed to the attitude, provided we should furnish the "yelp" and the huckleberries.) Divers huckleberries have since been discovered that might be made to answer, but up to date we have failed to corral the required yelp, and the cub is still in statu quo.

Scarcely was the next morning's meal dispensed with when Corn appeared with the horses, and we were soon homeward bound. We reached Lothrop in due time, and five o'clock that Saturday evening the home station after a week of unalloyed enjoyment.

Summary: Finest weather, most pleasant of camps, a bear (?), a deer, birds enough, trout galore, a jolly party, and who could consistently ask for a better outing, especially in a place where there were "no birds" and where the stream had been "fished to death"? WILL CAVE.

MISSOULA, Montana.

# Natural History.

## THE TEXAS BUFFALO HERD.

THE present indications are that it may be several months before the herd of wild buffalo which were discovered last spring in the wilds of Val Verde county, will be rounded up and brought into captivity.

The expedition which Dr. J. B. Taylor, the well-known ranchman, has about completed organizing, will probably not be called upon for some time, as an investigation which the Doctor has just made shows that the animals have wandered from their old feeding ground and are now across the river in Mexico.

Dr. Taylor, in order to get the exact location of the herd before starting out with his expedition, left home several days ago and proceeded to Val Verde county, where he engaged the services of some veteran Mexican hunters and guides, and started in search of the herd. He found the valley in which they were discovered a few months ago without much difficulty, and then took up the trail of the animals. This trail, he states, was followed without difficulty, as it was made since the recent heavy rains. He and the Mexicans followed it out of the valley and through a mountain pass leading to the Rio Grande. The buffalo headed up that stream on the United States side, and were seen by a number of isolated settlers a few weeks ago as they passed along. One of these settlers, a Mexican named Gonzales, got a shot at the herd and killed one of the calves, the robe of which he kept and showed to Dr. Taylor and party as a trophy. According to the estimate of those who saw the herd, the number in it was about sixty, including about ten calves.

The party followed the trail for many miles up the river until the herd crossed into Mexico. It was followed a short distance into that country, and as it was evident that the animals were still on the go and are now probably in the Santa Rosa Mountains, the search was given up. Dr. Taylor rode across the country to Dryden, where he took the Southern Pacific train and returned to San Antonio.

Immediately upon his arrival here he wired Hon. Geo. Fulton, of Gregory, to meet him in San Antonio for the purpose of discussing what steps had best be taken toward capturing the herd. Mr. Fulton, it will be remembered, saw this same herd of buffalo about four years ago, and since its rediscovery he has evinced great interest in having the animals rounded up and placed in captivity on Dr. Taylor's ranch in Sutton county. Mr. Fulton responded promptly to the telegram, and he and the doctor met at the San Antonio Club Thursday, and held a prolonged conference as to what should be done under the circumstances toward carrying out the objects of the proposed expedition. They decided that inasmuch as the expedition had been almost fully organized it would not be advisable to disband it, and that an effort should be made to obtain permission from the Mexican government to round up the herd in that country and bring them into the United States.

It will require some time to attend to this matter, and the representative of the Smithsonian Institute, and the other distinguished persons who have been selected to comprise the expedition will be immediately notified of the situation. In the meantime Mr. Fulton will get everything in shipshape so far as equipment and supplies are concerned so that the party will have a pleasant and interesting time.

Dr. Taylor left Thursday night for St. Louis, where he will consult some of the members of the party in regard to the details of the trip. Just previous to his departure he was met by a reporter for the *Express* and asked in regard to his recent search for the buffalo.

"It is natural to suppose," said Dr. Taylor, "that these buffalo would not remain in that little valley in Val Verde county very long after rains come and grass and water become abundant. Buffalo are of a roving disposition, and this herd has remained in that valley during the past four or five years on account of the severe drouth and the lack of water and grass elsewhere. As soon as the recent abundant rains came and water and grass could be obtained outside of the valley they took up their march and followed the course of the Rio Grande to the place where they crossed, some distance above their old stamping ground."—*San Antonio Express, Oct. 6.*

### A Michigan Pelican.

HOLLAND, Mich., Oct. 17.—I have just received at my taxidermic establishment for mounting, a large American white pelican, which was shot six miles from here at Maratawa Park, Oct. 13, by J. H. Skinner of the Life Saving Station. The following card, written by one of the crew and describing the bird in nautical language, accompanied the specimen:

THE WHITE PELICAN.

DIMENSIONS:

Length over all, 5ft. 2in.

Beam, 1ft.

Centerboard, 2 "feet."

Spread of canvas, 8ft. 10½in.

Gross tonnage, 16lbs.

This card was printed by one of the local papers and in such a manner as to lead many to suppose that this was the usual way descriptions of birds are written by ornithologists. The extent of the bird from tip to tip of wings, when I measured it, 24 hours after killing, was 8ft. 7in., but immediately after shooting it was said to measure 8ft. 10½in. The bill is 14in. long, wing 24in., tail 6½in., tarsi 5in., middle toe 5in.

The story of the capture as told by two of the crew, is as follows: Frank Johnson, who first saw the bird from the lookout says: "I was looking out into Lake Michigan, when I saw a large bird in the distance, which I thought was a large gull. I watched it a while as it flew around, then looked at it through the glass, when I was struck by its large size and the immense bill. I called Mr. Skinner and we watched the bird until it alighted on the beach, when he shot it. Had I known what it was I should have gone after it myself."

J. H. Skinner says: "When I first saw the bird I knew it was something out of the ordinary and as soon as it settled on the shore I at once got my gun. The rest of the crew saw me and followed. I tried to keep them back, but as I did not tell them what I was after, they were bound to go with me. The pelican did not seem to be alarmed, for I walked right up to it, as there was no cover, and shot it with one chargeof 5s as it arose from the beach."

This is the first pelican ever captured in Ottawa county and only eight or ten have been killed in the State before.

On Oct. 8, I secured from Wm. Van Ragenmoster, a female double-crested cormorant, and on the same day Harry R. Doesburg shot a female black scoter (*Oidemia americana*), a rare accidental visitor in Michigan. This bird was one of a flock of seven. I have secured and mounted these two birds for my own collection. I now have three double-crested cormorants which were killed in the county within a year, and probably will soon get the mate to my last bird as it is frequently seen where the male was shot.

I am unable to secure the pelican for my collection.

ARTHUR G. BAUMGARTEL.

### A Novel Sparrow Trap.

IN one of the railroad yards in Oshkosh is a barrel supplied with a constant stream of water, the overflow escaping over the edges of the barrel. In winter this barrel is a great drinking resort for the English sparrows. Perched on the edge of the barrel their feet get wet, and when they fly from the barrel and alight on the iron rods of the freight cars, their feet are instantly frozen to the iron. O. H. HAMPTON.

# Game Bag and Gun.

## MUD SKIS.

MUD *skis* are thin boards 7ft. long and 6in. wide, turned up like sleigh runners at the front end, and have a toe strap at the middle to fasten them to the feet. I do not know who invented them, but who ever he was he is probably buried in some muddy place where he trusted to the *skis* to carry him safely, and, too late, found them balky.

The other day while I was shooting snipe and an occasional skulking mallard along the edge of Lake Poygan, most of the birds that were shot fell too far out on the mud to be got, and as there were a pair of these *skis* at the house I went back and got them. After trying them half an hour I thought they were a pretty good thing, for they kept on top of the mud where one could not walk without them. It is true they did not have the pleasant feel of a perfect fitting hand-sewed shoe, and their back ends interfered so often that I thought those straps must have been adjusted for some pigeon-toed man. There was some trouble, too, with the long stalks of wild rice, which was bent over at an angle of 45°, and one *ski* insisted on running under it and the other one over it, to an extent that made it quite entangling at times. There was difficulty, too, about turning round at such times, one *ski* would get across the other in a very provoking manner. But on the whole, if one had to go, one could go with them where he could not go by any other means, though it happened that I trusted them too far.

While crossing an unusually soft place a snipe arose on the left and was killed. I stood a few seconds marking where it fell, then one arose on the right, and when I tried to take out the empty shells both were stuck, and the extractor had to be used. By this time the *skis* had settled a foot deep into the mud, and every effort to pull one of them out only sank the other one deeper. These *skis* were a very forcible illustration of how the beavers keep a limb at the bottom of the pond, though I don't remember thinking of this just at the time.

I did think, though, that not long ago my wife had had a presentiment that I was not going to live till my next birthday, and now it might be verified, for there seemed little prospect for anything but to be smothered in that bottomless, thin mud, for there was no one in sight or hearing. The *skis* were slowly but steadily sinking, and in a few more minutes I would be hidden from the world.

Taking the gun by the middle with my right hand I lay down on the mud, extending the gun as far as possible and laying it across the line I wished to follow. Pulling on the gun and pushing with the other hand and both feet, I found that a little progress was made, though not much could be done with the feet, for if the legs were straightened there did not seem to be sufficient surface to support me, and the legs and feet would begin to sink in the furrow plowed by my body.

It was a long and tiresome struggle, and there was no chance to stop for rest, for the moment I stopped I began to sink. Though making progress, the uncertainty was by no means over, for there might be softer mud between me and solid ground. Crossing a hundred yards of such mud was an exhausting effort, but at last it was done, and I lay on some stiffer mud and rested. Looking at the mud-plastered clothes, I thought of one of Mr. Robinson's characters, who remarked on a certain occasion, "That was considerable of a splotteration ah." The next thought was, "If Winston Harris gets hold of this I'll never hear the last of it." And that reminds me. Winston took dinner with me not long ago, and told me a story about a shotgun and a Dutchman who was working for him. "Winston," said I, "you told me that story about three months ago, and at that time you said the hired man was a negro." "Did I?" said Winston, not a particle abashed. "Well, mebbe I did, for I never could tell a Dutchman and a nigger apart, and I never did know whether that man was a Dutchman or a nigger." "Was he white or black?" I asked. "I don't know," said Winston. "Didn't you know I went color blind after that rattler bit me? I can't see any difference between white and black." "Was this man's hair straight or woolly?" I asked. "He didn't have any hair," said Winston, "lost it in a spell of fever." "I never heard of a snake biting you," said I. "You didn't? Why, when that snake bit me, my hair was browner than yours, and you see how white it turned every hair." "How soon after the snake bite did your hair begin to turn white?" I asked. "I don't just exactly remember," said he, "but I reckon it was about forty or forty-five years."

But to return to the *skis*—that is, figuratively speaking, for I never expect to return to them in fact. I haven't any *skis* now, but have some experience, and think myself a gainer by the exchange, the experience being worth more than the *skis*. I don't really feel that I need any *skis*, anyway. O. H. HAMPTON.

OSHKOSH, Wis.

## MAINE GAME INTERESTS.

BOSTON, Oct. 13.—*Editor Forest and Stream:* As so much is being published in our papers about the result of the good game laws in the State of Maine, I cannot help putting in a line on the side of their possible shortcomings. Few people who read the papers realize the ever increasing number to shoot, and to report on the seeing of game, and also the fact that a good many of the articles are paid for by the railroads and express companies as advertisements. The woods have been full of hunters since the first part of September, few of whom (as is well known) go without meat. As far away as Eagle Lake, Penobscot waters, there was one continuous fusilade along about the middle of September, and jacklights could be seen almost any night in different parts of the shore.

The express companies have thus far this year handled over 40 tons of moose, deer and caribou, and I saw myself the first or second of October heads that were brought out in a rotten condition. This slaughter may continue for a year or two, but how any sane person can expect game to increase at this rate is a mystery to me. I myself know of five cow moose that have been killed, the bodies of one or two of which have been sold in the Boston market, and it is a well known fact among sportsmen that the larger number of deer killed toward the end of September along the lakes and rivers are does, as the bucks are back on the ridges.

I feel it is almost useless to hold out against this sort of thing until sportsmen as well as guides consider it both honorable and their duty to inform on law-breakers.

BOSTONIAN.

*Editor Forest and Stream:*

If I can possibly get time I want to write you some notes on the game situation in Maine this year. It is quite certain that deer were never so plenty in the State as this year, and there were a good many moose at the beginning of the season, but they are being slaughtered at a fearful rate, cows and calves as well as bulls, and legislative action must be promptly taken and well enforced or our noblest game park this side of the Rockies will be deprived of its noblest game. There must have been many hundreds of men hunting in Maine the first two weeks of October, and the interest has grown to be a tremendous one to the State. A.

### An Idaho Game and Fish Center.

LITTLE ROCK, Ark.—I send you a picture of a catch of 151lbs. of speckled trout, made by Dr. Turpin and myself. Dr. Turpin is the gentleman who has written sometimes over the signature of "The Lone Fisherman." They were caught in Snake River within a mile and a quarter of Hotel Bellevue, Aronger, Idaho, managed by our old friend, K. E. Hopf. Aronger is the night stage station on the road from Beaver Cañon to Yellowstone Park. The other view represents a morning's shoot. I killed 74 sage hens and was back at noon. The climate is everything that one could wish, and I can guarantee any sportsman who goes there all the sport he wants. C. A. PRATT.

### Well, That is Generous.

I WAS so proud of killing that big blue buck with my little rifle, I could not help writing of it for the FOREST AND STREAM the other day. I only wish you could have been along to have made the shot, for it always does me more good to see a friend make a good shot than to make one myself, LEW WILMOT.

## STILL-HUNTING PARTRIDGES.

THE WEIRS, N. H., Oct. 19.—*Editor Forest and Stream:* The query propounded by "Tode" in your last week's issue calls for a more than passing interest by those who are in a position such as "Tode" so effectually describes. If I am a pot-hunter because I shoot my partridge or squirrel or even quail sitting and with a small-bore rifle after having successfully outwitted them in woodcraft and getting within rifle range, then I say I am proud to be a pot-hunter, or anything else by which you may designate that particular mode of hunting; and if all those who do thus are pot-hunters, then I throw up my hat and holloa "Hurrah for pot-hunters!"

Now, different men have different opinions, and one man's opinion is as good as another's, so no doubt there be some who contemptuously ignore as a sportsman those as as "Tode" describes. Yet again, I have gone hunting with the man with the scatter gun, and have watched him stand in the woods waiting for his dog to put up a partridge and then shoot the bird either sitting or on the wing. If he brought his game down on the wing he was of course very much pleased, and forthwith delivered a rhapsody regarding the beauties of using the shotgun in preference to the rifle, and the science of shooting on the wing. The bearer of the little .22 Marlin patiently heard and said nothing.

Now, note the result: the man with the scatter gun had his satisfaction simply in a pretty, difficult shot, differing from trap-shooting only in that it brings him in a result, something to show as trophy. Probably he has also enjoyed the woods and the fresh, free air and the tramp, and has loved to see his dog work among the bushes. But the dog has entirely supplied the knowledge of woodcraft necessary for the occasion. The shotgun user no doubt has enjoyed himself in his own way.

The rifleman, clad in soft moccasins, with eye and ear strained and noiseless, elastic step, watches and listens, this time to hear the distant "drumming" of some cock grouse, hardly audible. Now it is the woodcraft of one against that of the other. It is more than a half hour's work to go step by step in the direction the sound comes from. Every nerve is strained, no less than if the game sought after were one of the antlered monarchs, until away ahead, there on that log, a little brown ball of feathers is seen majestically strutting up and down. The distance is 75yds.; and the illumination of the range is not such as to call for high scores; but the ivory bead shows well up against the grouse's body, and at the spiteful spit of the little bullet all is over. Only one who has "been there" knows the peculiar satisfying taste that lingers about a man's mouth after such a stalk and such a shot. The man with the rifle has enjoyed himself and he means every word when he says, "I would rather get one bird with the rifle than two with the shotgun." He uses no dog, yet he loves the dog quite as well as his brother of the shotgun, but he relies upon his sure woodcraft to find his game and therein finds two-thirds of his enjoyment.

But will any one show me any elemet in this mode of hunting which would justly come under the heading of "pot-hunting?" Yet I have been called a pot-hunter for doing just as described above, while the dudeling who hires a guide and the guide's dog, and whose purpose in going into the woods is often only to get material whereupon to fabricate yarns to be told at the office and the club, this dudeling would-be woodsman is a "true sportsman." True, he does not waste game; and what he takes is taken fairly; but why is he any more a "true sportsman" than the man who uses the rifle and does his own hunting? Allow me to give you my humble definition of the much-abused term "true sportsman"—a gentleman who enjoys to hunt and fish. The fish and game hog, be he ever so well bred, is neither a gentleman nor sportsman, but it is he who is always first to raise the cry of "pot-hunter." MATTERHORN.

## A MAINE GAME EXCHANGE.

*Editor Forest and Stream:*

Knowing the advanced position taken by your paper in all matters which interest sportsmen, I propose through you to tell your readers of a plan which I have to aid those who come to Maine for game. In Maine we have many things which those in other States wish to share. Those who sought our fine fishing and our beautiful scenery have been in great numbers and departed; and now with falling leaves comes the great rush of those whose only object is game, and that in the largest quantity and shortest time in which it can be obtained. The number coming may be judged when I say that the papers reported 300 ready to start into the woods from Moosehead alone Oct. 1, following fully as large a crowd of "sooners" who had "taken time by the forelock" and gone in a week before to have their game ready before the others arrived. By actual count there were thirty canoes with sixty men on Sept. 26, leaving on the P. & A. R.R. A Bangor daily reported one day last week two bears, two moose, two caribou and forty-five deer as coming in on the cars that day.

Now such a rush of necessity causes a great deal of inconvenience to the visiting sportsmen and danger to others in the woods. The sportsmen often have to submit to waiting hours at a comfortable hotel for guides to get ready. Then they are obliged to walk on carries where teams cannot be hired. Then they have to sit cramped up in canoes and endure all the hardships of sitting in chairs with only blankets to sit on, while the guide enjoys the luxury of sitting on a bare canoe bar. Then they have to wait for the guide to hunt up the game for them and often for him to kill it, or buy it for them of some native; and often when this cannot be done they are obliged to go to the Bangor markets and take just what they can get, and submit to the extortionate charges of those who take advantage of their necessity.

I do not mean that all who come here get their game in this way; but so many do that those who kill theirs fairly get no credit for it, especially as those who bag, usually take pains to give reporters more minute and thrilling accounts of the capture of their game than those who really kill what they bring in are accustomed to do. But that if all obtained game at one place no deception would be practiced.

Then again no one is safe in the woods with such an army of men of no experience, ready to fire at the first thing that moves. Every year more or less shoot themselves or others, besides killing sheep, cattle and horses.

I know that in the latter part of the season when it is cold enough for game to keep, lately a much easier and better way has been found. Then when the guides at some hunting camp have moose or other game ready killed, they telegraph and all the hunter has to do is to come for a sure thing. Then he can lie around camp and smoke, and eat venison a few days, and get his story made up so that all parts will fit nicely; then he can come out with his game and no one can dispute, but what the game is actually there to be seen; and when he tells them here he waded alone in the unbroken forests through 2ft. of snow, here he came on his victim and dropped him dead at the first shot at 250 to 300yds. (it is better to put it at least 200yds., as it reflects credit on one's rifle as well as himself), and tells of the terrible labor of getting the game to the cars; and then as his story has the first start and the guide is well-fed not to give him away, he at once becomes the hero of the hour.

Now thinking this all over and trying in the interest of all concerned to devise a way which will make things easier, I have thought that a game exchange, a kind of clearing house, might be established at Bangor, which would save visiting sportsmen no end of trouble, besides great expense. As it is now, when a large part of our best hunters are employed as guides, our people probably kill half the game carried out by the true sportsmen. Now if the guides did not have to take the sports round, they could easily kill all which would be needed, and bring it to Bangor, and get full as good pay and much less vexatious work. There could be arranged a want and supply bureau, so that a list could be kept of those wanting game; and when there was a supply, they could at once order just what they wanted. It now often happens that when one wants bear or moose, he can only get deer or caribou, which he does not wish; but by my plan any one could get the exact thing he wanted, and would know the exact cost of his trip beforehand.

If one wanted to make a big show he could board at one of the Bangor hotels and have his choice of high or low prices, instead of all the hardships of spring beds and poor mattresses in the common hunting camps. Then when ready, he could return home with his load of game fresh as a daisy. He would probably be obliged to pay a trifle higher than the same game would sell for in Boston, to prevent the market men from interfering and buying it to ship as they are now said to do; also he would probably have to "tip" the local wardens enough to make up for what they would lose by not having their accustomed share in the market men's profits for protecting them; but this would be no more than would be fair, as no one could be expected to give up their legitimate business for another's benefit without reasonable compensation, and all sportsmen will find most of our wardens good fellows and willing to do anything in reason.

Now, I claim that such an arrangement would be a great benefit to all concerned. The sportsman could know just how long he would be gone, and would be at much less expense and inconvenience. The guide could make as much and have a much more pleasant employment. There would be no danger of accidents and no irritation among settlers who have cattle shot or wounded. Farmers are a most unreasonable class, and seem to think that they have a perfect right to let their cattle roam in their pastures just where they please as long as they own the land. Now, as all our hunters can tell a calf or horse from a deer or moose, this friction, which threatens to become serious, would be entirely avoided. The wardens would approve of it, as it would give them a chance to show their willingness to suffer for the public good. In short, I do not see why every one would not be benefited by it, except a few railroads and up-river camps, and I am not planning for their benefit, but am looking solely at what will be of the greatest good to those interested in game. So along with your plank of "No sale of game," please insert another for "A Game Exchange in Maine."

EVEN DEAL.

BANGOR, Me.

## TEXAS AND THE SOUTHWEST.

### Ducks and Snipe.

SAN ANTONIO, Texas.—I had a good evening on green and blue-winged teal last week. Dr. Watts, Mr. Gillette, Postmaster Joe George, and the writer, took an afternoon at Mitchell's Lake. Knowing where there usually swims a bunch of teal in a round pond in the middle of the swamp, I strung out the party on the line of the anticipated flight and crept up to the water hole. It was full of teal that were quacking, whistling and generally enjoying themselves under the chaperonage of a few motherly sprigs, whose long necks stretched at full length to discover what that was crawling through the brush. The ducks were very tame and I had a beautiful pot-hunter chance to murder, which I did not embrace. I intended to flush the whole lot without shooting, knowing they would circle back several times. But then as the birds thundered out a pair of fat and lubberly gadwalls leaped from the cover, which was too much for me. The little 20-gauge was quickly placed ahead of the first bird, the trigger pulled, and as the first bird checked a shapeless mass in mid air the second barrel puffed a hat full of feathers out the second sprig. Then the air became alive with buzzing teal. They circled over the party strung out along the water course and I saw several fall. They came back to me and I punched the life out of nine before the flight stopped.

It was then about a half hour before sundown and we took a turn after jacksnipe, and, while they were not exceedingly plentiful, we managed to bag about twenty-five of the genus *Scolopax*.

### Evening Teal.

Just as the sun rays were cleaving the tops of the live oaks on the beautiful point at the old club house, the swift-winged and twisting teal began to come in. First in pairs, then in flocks, until the air seemed alive with them. We did not kill a great many. The gait was rather swift, but one of those swifters well killed is worth a dozen such shots as I had at the pair of fat and lazy sprigs. We killed exactly nine to each gun. Not a big killing, but the time passed was very pleasant.

On our return to the wagon, a rattlesnake was found investigating the camp. A billet of wood sent his soul to Beelzebub, and in an hour we were in the city.

### Protection Needed.

Nearly every sportsman who has been out this season after quail reports that not more than one-half the birds they flush are large enough to kill. Some coveys have been seen that are hardly able to take wing. The Texas season ought to be shortened.

### A Good Shot.

Dr. Jesse Bell, a young and prominent disciple of Æsculapius whose shingle swings in the San Antonio breeze, is an ardent sportsman, and some five years ago, in company with the writer was he visiting a friend away up in the wildest part of Edwards county. There the Messina or black quail abounds and we had some rare sport. Having climbed up the divide one morning after a big buck that we had often seen, a bevy of Bob Whites was flushed and one saucy cock alighted on the topmost limb of a convenient mesquite.

"Watch me blow his head off," said the embryo doctor; and he blazed away with the .38 Winchester. The bird even disdained to fly in recognition and the doctor quickly slipped another cartridge into the empty chamber and fired again and again with exactly the same result. "Confound that quail," quoth he of the rifle, and the bird dropped.

## CHICAGO AND THE WEST.

[*From our Staff Correspondent.*]

CHICAGO, Ill., Oct. 25.—On Monday, Oct. 22, at his residence in this city, there passed away one of the oldest, best-known and best-beloved of the sportsmen of Chicago. Mr. Joseph Card, or Uncle Joe Card, as he was universally known, was a character of rare and lovable sort. No man ever saw him otherwise than in good humor, and no one ever heard him utter an unkind word of any human being. His was a nature essentially large and charitable, and if he had faults of his own, no one in Chicago could have told what they were. In mind as well as body his whole expression was of content, god nature and generousness.

Mr. Card was one of the oldest members of the Maksaw-ba Club and a regular attendant at the grounds on the Kankakee. In his later years he became very fond of fishing, and he was always successful with the bass, nearly always having the largest and best take of the day. He was the very ideal picture of the true angler, jolly, happy and contented, rain or shine, and always with a hope for better days rather than a prophet of dark clouds. At the club house he was treated with the deference due his years and character, and it will be a long time before his quaint sayings and his oddities of expression will have passed out of quotation there.

Mr. Card was also a member of the largest Toledo ducking club, or rather the wealthiest, and he usually went to Lake Erie for the duck shooting which he liked so well. He was in comfortable circumstances, and a good type of the best modern sportsmanship, owing no man anything, and grudging no man anything.

Mr. Card's illness was of very long standing, and he knew years ago that he could never be well, but he looked the truth squarely and unflinchingly in the face, and no one ever heard him voice a feeling of rebellion or of fear. When the boys called on him he always told them he thought he was "a little better," though all the time he knew he never would be better. So last Monday the end came and he died as peacefully and contentedly as he had lived. The funeral ceremonies of last Wednesday were attended by a large number of Mr. Card's sportsmen friends, and the boys are very quiet now when they mention Uncle Joe.

### Caught in a Sink Box.

Last week I spoke of the successful termination of the litigation which has been troubling the Horicon clubs. Grady, the permit seller, has called in all his permits and retired from the field with the assurance that he will fight no more. It happened that he did not get word to all his dupes soon enough, and out of this grew an interesting bit of news. Last Sunday Percy Stone was going over the Diana grounds and heard firing in what is called the Big Lake. He and his pusher found an iron boat hid in the reeds, and this they promptly shot full of holes and sunk, confiscating the game they found in it. A little further on they discovered a man shooting from a sink box in the middle of the lake—thus committing trespass and violating a State law at the same time. Stone went up to him, asked him what he was doing there, took away his gun, removed the shells, took the man ashore and walked him off the marsh. The fellow begged lustily, and promised all sorts of things if left alone. He will be prosecuted under the State law first and then put through a little course of trespass. The fellow turns out to be a man by the name of Hanson, and is a traveling man from Cincinnati, who hangs around the shooters of Chicago and tries to pose as a sportsman. He bought a Grady permit in Chicago, and is now in a very fair way indeed to learn how worthless that is. The Horicon men will finish out all the poaching on those grounds now, and the members are jubilant this week.

Mr. Hoyt, of New York city, was at the upper club last week, though at last accounts he had not had a good day. Mr. Hoyt was one of the six New York men to join the Diana Club last year. High bag last Saturday was 26, by Mr. Weber, of Chicago. Roll Organ and myself bagged a dozen teal in a little hole we found, only shooting about twenty minutes; but for the rest of the day did not get much shooting, though Mr. Organ got half a dozen nice mallards the day before. The shooting was very light.

The snipe seem now to be working pretty well south. There were very few at Horicon. At Oconomowoc, Wis., there was fine shooting last week. Along the Kankakee the snipe are still lingering, and there should be some fun there yet a while. At Water Valley, Ind., the sport at snipe has been great for the past two weeks.

### Deer in the Settlements.

*Oct. 27.*—This week at Ashland, Wis., a deer pursued by hounds ran through the middle of the city into a private residence, bounding up stairs and at length in its fright leaping out of the second story window. In its fall it struck upon a picket fence and broke its hind leg, whereupon it was killed by members of the fire brigade. Some friends of mine were speaking of this incident and one of them said that a few years ago he was once sitting in a barber shop in Marquette, Mich., when a deer ran down the main street of the town. At the edge of the town it stopped, apparently much frightened and at a loss what to do. It finally escaped in the woods, how-

ever, as one can only wish the Ashland deer had done also.

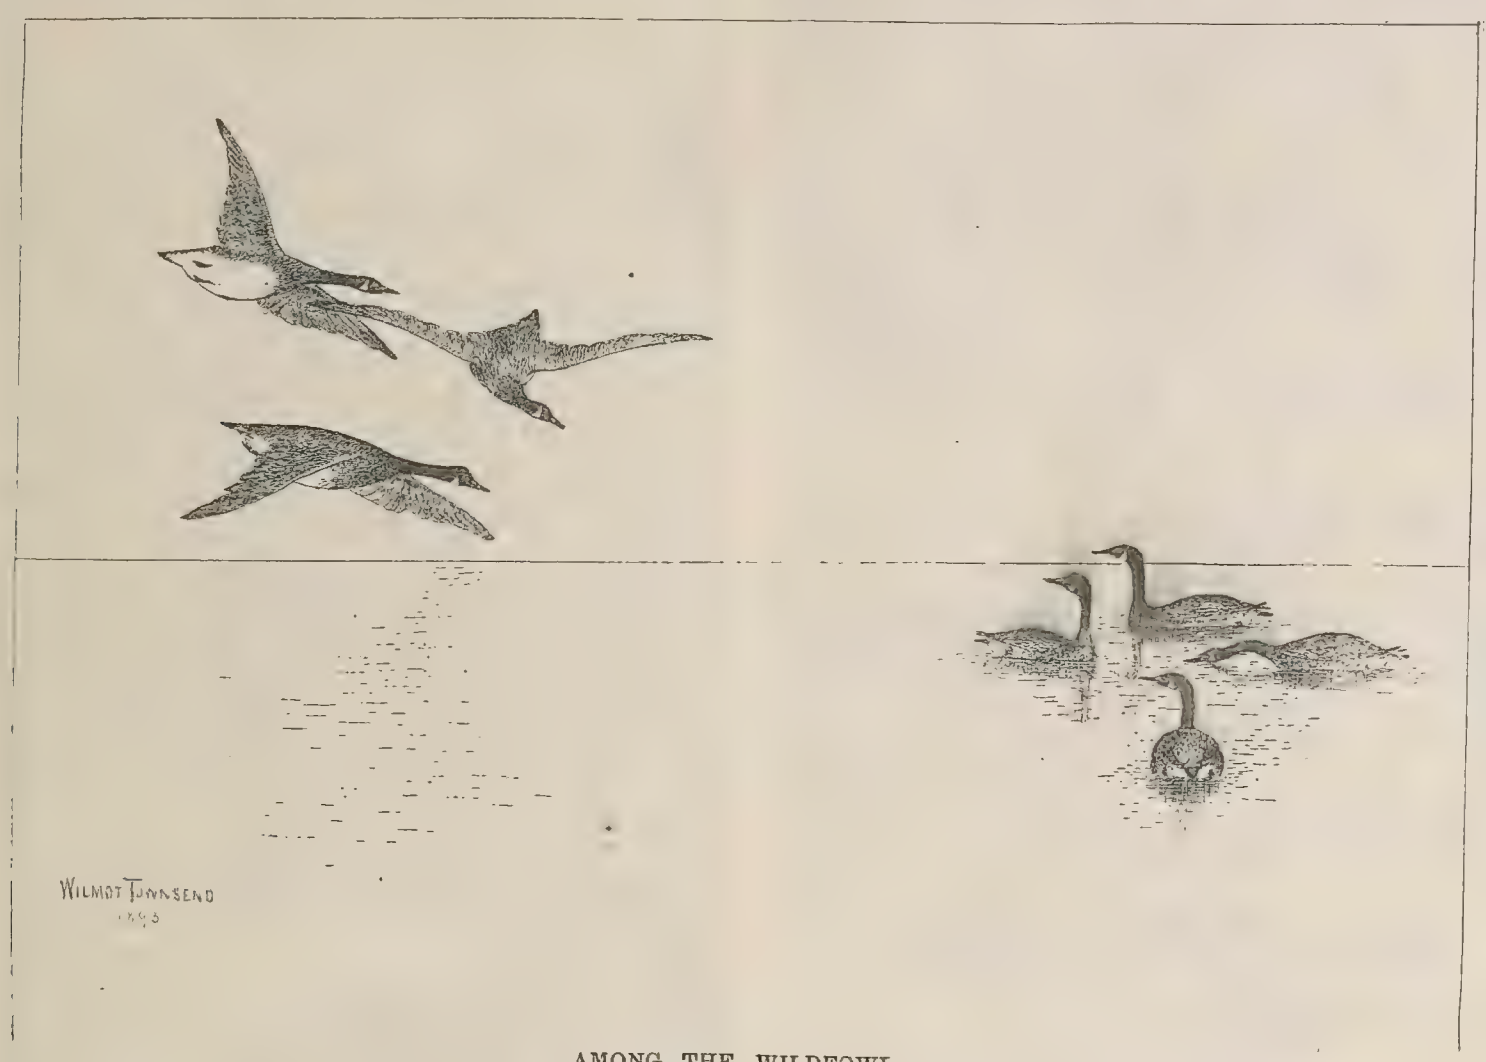
### Mustn't Jam His Centerboard.

Mr. George Gould of New York city in his private car Atlanta arrived at Kansas City Oct. 24. The despatches say that Mr. Gould and friends went quail shooting near Elgin, in Miller county, Mo., and bagged nearly 200 birds. It is not stated how many quail Mr. Gould killed, but if he can't shoot any better than he can sail he'd better stay at home. And he really mustn't jam the centerboard of his car, you know.

### Koshkonong.

Billy Mussey and Eddie Bingham, two of Chicago's finest, have gone up to Koshkonong, in Wisconsin, to entirely destroy the canvasback crop of the year.

### Strictly Business.



"I wish it plainly understood," said G. Harry Marlin, of the Marlin rifles, "that the purpose of my visit to Chicago is strictly business. I am doing nothing but selling our new .25-20 repeater, the only .25cal. repeater made and the best little rifle on earth for squirrels, woodchucks, rabbits, goslings, hippopotamuses or other small birds. Yes, sir, and I am selling a lot of 'em. Chicago is a good town. But I think I will go to San Antonio for the winter I am preparing a great historical work on the Origin, Growth and Decline of the Chile Queen."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## JERSEY SQUIRREL LAW AGAIN.

ACCORDING to the *Game Laws in Brief*, there is in New Jersey no law on gray squirrels. As we said last week, the *Brief* is correct. We also took occasion to point out the error contained in the official compilation of the New Jersey game laws published by the Fish Commission.

AMONG THE WILDFOWL.

"All's well. Will you join us?"

That error is found in this paragraph interjected without warrant into the Commission's compilation:

Unlawful to kill gray squirrels except from September fourteenth to December sixteenth.

In reply to our inquiry of Secretary H. P. Frothingham as to where this provision was found in the law itself, he has sent us a copy of this letter from the counsel of the Commission:

MT. ARLINGTON, N. J., Oct. 22.—Hon. H. P. Frothingham: Dear Sir—Your letter of the 19th inst. inclosing a letter from Mr. Charles B. Reynolds of the 17th inst. pertaining to our opinion to you of Aug. 9 last, that it is unlawful to kill gray squirrel in New Jersey except between Sept. 14 and Dec. 16, has been received.

In further substantiation of that opinion we beg leave to submit the following, and you may, if you like, send a copy of this letter to Mr. Reynolds. As far as we know, there has probably always been a law in New Jersey regulating the shooting of gray squirrels. Section 2 of the Foote Act, approved Feb. 28, 1893, stated that it was unlawful to kill gray, black or fox squirrel, except only between Sept. 14 and Dec. 16. The supplement to the Foote Act, approved May 22, 1894, provided that said Section 2 be *amended* to read the same as now appears in the pamphlet you mailed to Mr. Reynolds some days ago, which states that it is unlawful to kill black or fox squirrels except only between Oct. 31 and Dec. 16, and which says nothing whatever as to gray squirrel.

In our opinion it was evidently the intention of the person who drew the act of May 22, 1894, to leave the law as to gray squirrel the same as in the Foote Act aforesaid. As we interpret it the act of May 22, 1894, is more in the nature of an amendment to Section 2 of the Foote Act than a repealer of said Section 2 of the Foote Act. If it had been the intention of the person who drew the act of May 22, 1894, to make the law pertaining to gray squirrel different from what it was according to the second section of the Foote Act he would have stated in his law of May 22, 1894, in addition to what he did state, that "said Section 2 is hereby repealed."

Of course the matter would have been very much plainer if the person who drew the act of May 22, 1894, had stated in the act that it was unlawful to kill gray squirrel except between Sept. 14 and Dec. 16, and unlawful to kill black or fox squirrel except only between Oct. 31 and Dec. 16. In this way he could have made it to appear much more clear as to what was in his mind and as to what the law really would be after the passage of his act.

In the interpretation of other laws we frequently come across cases like this and invariably give them the interpretation that we have above, regarding no amendatory act as a repealing act unless it especially provides that it is to be a repealing act. Yours truly,

DICKINSON, THOMPSON & MCMASTER.

In comment on this opinion, it is pertinent to remark that while good intentions are reputed to make capital pavement, they are worthless to protect game. The speculations of Messrs. Dickinson, Thompson & McMaster as o the intention of the author of this law to protect gray quirrels are ingenious and interesting, but have no bearing on the subject, for that intention is not given expression in the law itself; and it is a familiar principle that we must take a penal statute as we find it, and construe it literally. In this case the text is definite and explicit; it designates "black or fox squirrels," says nothing about gray squirrels, and has no application to them.

It is also quite clear to us that in this case the amendment, being of the entire section, is in effect a repeal. The act of May 22, 1894, provides that Sec. 2, relating to squirrels, "be and the same is hereby amended to read as follows:"

2. And be it enacted, That hereafter it shall not be lawful for any person or persons to capture, kill or have unlawfully in possession after the same has been taken or killed, any black or fox squirrel, except only between the thirty-first day of October and the sixteenth day of December in any year, under a penalty of twenty dollars for each black or fox squirrel so taken, killed or had unlawfully in possession.

If the entire section is amended to read this new way it cannot read the old way; none of the old section remains; it is done away with—repealed.

If we adopt the contrary reasoning of the counsel to the Commission, and assume that the entire new reading of the section does not repeal the old reading, then we have here two conflicting Sections 2, prescribing different seasons for black and fox squirrels. And as Sections 1, 3, 4 and 25 of the game law were amended this year in precisely the same manner as Section 2, while not a one of the amendatory acts "especially provides that it is to be a repealing act," we have two conflicting seasons for deer, two for quail, two for hare, two for ruffed grouse and two for brook trout. That would be such a mess as we have never yet come to in game legislation; nor ever shall so long as we abide by the statutes and common sense and are not led astray by "opinions."

To speak frankly, the learned counsel to the Commission appear in this opinion to have advanced a line of reasoning, which, we believe, Secretary Frothingham will find will not stand the test of the courts, if on the strength of it he shall arrest gunners for killing gray squirrels. Protection for this game cannot be opinioned into the Statute; but it can be and should be put there by the next Legislature.

Meanwhile the Commission should correct its erroneous compilation of the game laws.

### Big Game in the Big Horns.

LINCOLN, Neb., Oct. 19.—*Editor Forest and Stream:* The following appeared in one of the Omaha daily papers: "Judge E. S. Dundy had a great outing in the Big Horn Mountains this summer and fall, returning Saturday evening of last week. The venerable judge outdid himself this year, securing two big grizzly bears, two black bears, fourteen elk, two bighorn sheep and a dozen blacktail deer."

Now, can any one imagine what use Judge Dundy could have for fourteen elk in the summer time, and at the same time a dozen blacktail deer? I venture the assertion that this did not comprise all the game slaughtered by the Dundy party, for he had some companions with him who were just as good rifle shots no doubt as he; but these people were not such prominent people as Judge Dundy, and didn't get their names in the paper. What a state of affairs we have to endure in this Western country in respect to the prosecution of the game laws. This Judge E. S. Dundy is no common justice of the peace, nor police judge, nor even county or district judge, but he sits on the bench and wears the robes of the great United States Circuit Court. It makes me so indignant I cannot write about it.

E. E.

[The Big Horns are in Wyoming. The Wyoming law forbids the killing of elk, mountain sheep or deer, except by residents and for immediate use as food.]

### A Wild Rice Success.

PORT ELGIN, Ont., Oct 24.—*Editor Forest and Stream:* About twelve years ago three of us here obtained from Port Hope, Ont., a half bushel of wild rice and sowed it in Arran Lake, Bruce county, Ont., since which time we have heard nothing of it until now, and find that it grew and is rapidly spreading over the lake. My reason for giving you this information is because about a year after it was sown you asked for the result.

J. C. D.

### The Pneumatic Boats and the Ducks.

ELIZABETH, N. J.—I heartily agree with J. B. Burnham in the sentiments expressed by him in the closing part of his article published in your issue of Oct. 20 on pneumatic boats, in which he says, "They (pneumatic boats) will add one more link to the chain of causes that is lessening our game supply, inasmuch as they will render heretofore inaccessible fastnesses open to assault." If this boat is the success its inventor claims for it, and should it come into use with wildfowl shooters, what opportunity will the ducks and geese have to feed and rest on their accustomed feeding grounds? They have little enough opportunity now on their migratory flights. With the pneumatic boat to go everywhere, as it is claimed, there will be no feeding grounds left undisturbed for the ducks and geese to feed and rest upon, and consequently no ducks and geese to shoot. By virtue of the game laws of New Jersey a partial, if not effectual, preventive of this evil is afforded in that State. By the law of that State passed Feb. 28, 1893, found on page 48 of the pamphlet laws of that State for that year, Sec. 20 provides:

That it shall not be lawful for any person or persons hunting or gunning after geese, duck or brant, to place the boat or sink box, or other floating vessel, in which he lies in wait to kill said geese, duck or brant at a distance of more than 100ft. from ice or from marsh, or meadow, or heaped seaweed, or sand bank not covered with water at high tide; and every person so offending against the provisions of this section, shall for each and every offense forfeit and pay the sum of twenty dollars

Section 21. That it shall not be lawful for any person or persons to sail for, to shoot or shoot at any goose, brant or duck, from any boat or boats, vessel or vessels, propelled by steam or sail; or from any boat or boats, vessel or vessels, or similar structure or structures, anchored or staked upon the waters of this State, under the penalty of twenty dollars for each and every offense.

Section 20 prohibits the pneumatic boat from being placed at a distance of more than 100ft from ice, marsh or meadow; and Section 21 prohibits the pneumatic boat from being anchored or staked upon the feeding grounds of the wildfowl, or upon any of the waters of the State. This law if enforced would virtually prohibit the use of the pneumatic boat in New Jersey; though the penalty for violating the law is far from excessive, no wildfowl shooter would care to be subjected to the annoyance or expense of a prosecution at law for violation of the statute. It behooves all game wardens in New Jersey to see to it that these provisions of the game law of the State are strictly enforced if violated; and that the feeding grounds of the wildfowl in the waters of this State are not invaded by the pneumatic boat. The insuperable objection to the pneumatic boat is, that it is a miniature battery, and batteries of all kinds for wildfowl shooting should be abolished.

ROBERT E. CHETWOOD.

### The Cape Cod Deer.

*Editor Forest and Stream:*

A note in the FOREST AND STREAM the other day told of deer in a Massachusetts town. If you were down here on the Cape you would soon learn the reason why a deer is seen roaming about the State; or if you would spend a week on the Cape and hear the dogs chase "short-tailed foxes" you would not be one bit surprised to see a deer on the main street in the city. All the game laws amount to you could put in your eye, and then see the reason they go "fox hunting." If you are on the Cape and hear a dog following toward the ponds, and hear a gun, the thing to do is get as near the place of shooting as possible, and at dark I will bet my old hat you will see the biggest fox carried home you ever saw. I do not mean that all of the fox hunting is after deer, but I am willing to say that two-thirds of them go out and would not bother with a fox at all. They are after foxy deer. Ask a friend that lives on the Cape how he likes the deer law, and what does he say? Why, that law is just what we want; we have the fun all to ourselves; we are right here where the deer are, and the law keeps outsiders out of the woods. Ask one of them where all the deer have gone, for they were quite plenty ten years ago, and what does he say to this? He shrugs his shoulders and says: "Gone with the fire." He is right; but he does not mean by forest fires; the fire with a few buckshot in front of it is what has done the business. There may have been a few killed by fires, but deer are not fools to stand and be burned when there is plenty of water handy, and there is plenty of it on the Cape, for there are more than three hundred lakes and ponds in the county where the Cape deer makes his home. Why, a Cape friend of mine pointed out to me not long ago on the street a man who had killed nine deer on the Cape in one fall, three years ago. You will do me a great favor if you will publish the main parts of this letter or all of it if you like; and I am not ashamed to sign it with the name of a constant reader,

WILLIAM WEDEN.

### Where Kansas Game is Abundant.

EMPORIA, Kan., Oct. 22.—The wild geese and cranes have been passing for a few days in large numbers. Occasionally a flock of geese alight here and stay for a little while. The ducks also begin to come in, and there will probably be a few days of good shooting whenever the cold weather sets in. Wild doves and plover have been quite plenty, but have now mostly gone southward. Jackrabbits and cottontails are fairly plenty about here, the former giving good sport with a light rifle. Fox and gray squirrels are abundant enough along the timber on the river banks to satisfy any one but a pot-hunter. There are some prairie chickens south and west of here, but only a very few in this immediate vicinity.

It has been an unusually good season for quail, as there has been no hailstorms or hard showers to kill them. In August I found two nests near the house, one with fifteen, the other with seventeen eggs; and in September I saw several flocks of small birds, so I think the old birds mostly raised two broods this season. The shooting begins next month, Nov. 1. Altogether a day spent wandering over these great plains and among the timber is one not soon forgotten, whether the game bag gets full or not, for it is "sunny Kansas" and there is a sense of freedom here unknown in the East. If any of the brethren should wander this way, the latch-string is out and they are welcome if they can put up with a bachelor's entertainment. But to one who loves the wild creatures for their own sake there is often a feeling of sadness, for the buffalo wallows still remain, and a bit of splintered horn or broken bone is occasionally picked up that once was a part of one of the "mighty that have fallen."

PINE TREE.

### The Old Ohio Home.

CALIFORNIA.—It is but twelve short years since Billy and I were wont to take our guns and in the walk of a few miles to the lake would bag a goodly number of squirrels, and on that lake with the addition of Moss and Jack to our party we would have some great sport with the wild fowl. The same water in season afforded some grand sport with the rod, for pike, bass and yellow-perch were most frequently caught. At Van Horn's, south of town, some gold-letter days have been passed with Dick and the woodcock, that bird so dear to the sportsman. West of town a tamarack swamp or two afforded some great grouse shooting, while to the south and east our days with Bob White will never be forgotten.

Since then there has been a boom; and the results while pleasing no doubt to many, have had the directly opposite effect on me. The quail have gone and at the woodcock marsh the sign (no shooting) seemed out of place where before all had been as free as air. The timberland and tamarack swamp have been converted into dollars, while the lake that afforded the boys such sport is lower by several feet and the fishing that the proprietors of two fashionable hotels had to offer consisted of one poor bass about six inches in length, which we in charity returned to the water. The companions who formed the best part of those days are gone. Billy I have not seen; Moss is in the journalistic field; Dick is well known to your readers; while the writer, like Jack, has matrimonial ties, that, while pleasant, only bring into bright relief the old days. The old home is changed so much that it is home no longer, only the place remains. One companion we have not mentioned before, but by long odds the best, the old pointer Scott, disappeared mysteriously a short time before I concluded that there were too many people there. While I have owned many dogs since then, there will always be a warm place for old Scott, the bravest and truest dog I ever knew. He no doubt succumbed to some one's ill will, but with the Rev. Adams, I often ask—"Where is my dog?" Poor old Scott; were you but alive I know that one at least would have a friendly greeting for

THE WANDERER.

### The Pennsylvania Bear and Deer Stock.

CLEARFIELD, Pa., Oct. 22.—*Editor Forest and Stream:* On last Saturday Bill and John Condron, two hunters from the Green Woods, brought to town three bears. They caught them all in one pen on last Friday night. The bears were in good order. Last year bears caught in the same country were very poor. But one deer has as yet been brought to our market, showing that deer are very scarce.

FRANK G. HARRIS.

LACKAWAXEN, Pa., Oct. 22.—*Editor Forest and Stream:* Between Barryville and Beaver Brook and Lackawaxen, hunters have captured twelve deer and one small bear this last week. More to be heard from. Rabbits are very plentiful and partridges good. Also in town of Lackawaxen last week five deer were killed. The leaves are dropping fast and good sport will be had next week.

F. H.

### A Lucky and Skillful Shot.

ONE of our local pistol "cracks" not long since left his desk for a few days' rest at the home of a friend in the hills near this city (San Francisco). He of course took his .22 Stevens target pistol along, and amused himself by climbing the hills in search of blue jays and rabbits. One forenoon while on one of his jaunts he heard in a thicket near by a tremendous crashing of brush. Remaining quiet a moment he presently saw projected from the edge of the brush successively the antlers, face, neck and chest of a large buck. Coolly leveling his little "toy" pistol he fired with careful aim at the point where the windpipe enters the chest. The animal dropped in his tracks. After being dressed the carcass weighed 100lbs. The distance was found to be thirty-seven paces. The cartridge was a .22 long rifle and the ball was recovered from the substance of one of the lungs.

ROEEL.

### Where Do You Aim?

FOR the last twenty years I have not shot at a deer's body, if I could see its head or neck, under 200yds. I miss once in a while, but I seldom cripple one.

LEW WIMOT.

### Quail Shooting in North Carolina.

The Southern Railway, "Piedmont Air Line," which controls nearly 5,000 miles south of Washington and in whose territory quail shooting is found most plentiful, inform us that they have advice from all along the line of this great system that game is very plentiful this season. They have now in the hands of the printer and will be ready for distribution November 1, a very interesting book called "Quail Shooting in the Carolinas." This book will be gotten up by the Passenger Department and will give a great deal of valuable information to those who contemplate visiting the South for quail shooting. This book will contain a list of the hotels, prices of board, stable hire for teams, kind of game to be found, whether or not lands are posted, and refers by permission to large sportsmen along the line. It is hardly necessary to call attention to the excellent service this line offers from New York and the East to the hunting grounds of Virginia, Carolinas, Georgia and the South. Two fast limited trains leave New York daily, 4:30 P. M. and 12:15 A. M. (midnight), carrying through sleeping car service New York to all principal southern cities.

For further information call on or address: R. D. Carpenter, General Agent; Alex. S. Thweatt, Eastern Passenger Agent, 271 Broadway New York, N. Y. W. A. Pearce, Agt., 228 Washington st., Boston, Mass. F. B. Brice, Agt., 32 So. Third st., Phliadelphia, Pa. Mr. L. S. Brown, General Agent Passenger Dept., Washington D. C.—*Adv.*

### Prairie Chickens.

RECENT reports received by the Chicago, Milwaukee & St. Paul Railway from stations in the prairie chicken country of Minnesota and South Dakota all indicate a prospect of the best hunting for years. Chickens are very plentiful and in fine condition. Duck shooting prospects are also good. Full information can be had by addressing Ticket Agent, Chicago, Milwaukee & St. Paul Railway 207 Clark street, Chicago.—*Adv.*

### Chickens, Ducks and Geese

are going to be very plentiful along the line of the Northern Pacific this season. Make your arrangements to go and get some of them. Send Charles S. Fee, General Passenger Agent, St. Paul, Minn., 4 cents in stamps for "Natural Game Preserves of the Northwest."—*Adv.*

### "Uncle Lisha's Shop."

TWENTY-TWO sketches of homely life in Vermont as it was a generation ago. Mr. Robinson has the art of a story teller, and the gift of portrait painting; and when now and then he touches upon the tenderer side of this homely life, he does it with a sure hand. The book is racy, but very close to the soil. It is long since we have seen so masculine a treatment, and in spite of the extreme Yankeeism of speech and phrase, the book impresses one as singularly fresh and genuine.—*Atlantic Monthly.*

## Camp-Fire Flickerings.

"That reminds me."

### An Episode of Red Rock Lake.

HELENA, Mont., Oct. 10.—*Editor Forest and Stream:* I met Judge DeWitt, of the Supreme Court of this State, to-day, who told me an incident in goose hunting which I doubt has been paralleled in any country. The Judge had just returned from the Montana Hunting Club house on Red Rock Lake, in southern Montana, one of the finest duck grounds in the State. The lake is an overflowed swamp, full of what the local sportsmen call wild celery, and said to be the same plant as the famous food of the canvasback ducks in Chesapeake Bay. How accurate this may be I do not know, but it is the fact that this lake and feeding grounds are a great resort for the canvasback, and the only place in this State where that choice bird is found in any numbers.

But for the goose incident. My judicial narrator gave me the following simple tale:

"I had pushed my boat into the tules, and had knocked down a few canvasbacks, when I was rejoiced with the near approach of a band of Canada geese. I had only No. 6 shot, and surprised myself by dropping a big honker. I pushed the boat out at once and did my own retrieving. In a moment I had lifted the Canadian alien by the neck into the boat. Do you think that was a dead goose? If it were, I would enjoy seeing some athlete hold a live one by the neck. But after a struggle and a thumping, for which my former lack of pugilistic experience had not prepared me, I subdued him. Finding that his only injury was a crease on the top of the head, it occurred to me that the best way to get even with his tribe was to use him as a decoy. The next question was as to an anchor. The shores of the lake were a swamp, with not a rock in sight, and the only article of weight in the boat was a bottle of water, which it was necessary to carry by reason of the undrinkable quality of the lake water. My irreverent companions, however, say that the contents of the bottle were brewed in Milwaukee. But whatever may be the truth in this respect, the bottle was soon fastened to the honker's leg and he was planted on the water 30yds. from my *cache*. He floated as beautifully as a painted ship upon a painted ocean, and honked a melody which soon had the effect of bringing in his friends. *Honk, honk, honk*, came from the swamp in musical chorus; and *honk, honk, honk*, replied my planted soloist. I was calmly lining up the incomers with the malign intent of getting several heads in a row, when through the inspiration of honking friends the wings of the Canadian spread, his neck stretched, the body rose, legs appeared and the bottle followed the feathers into the air.

"The moment was critical. The new geese were at long range and had turned. My branded goose was leaving with the supplies. The swamp water was unfit to drink, the club house was five miles away and the day was warm. I must stop the commissary goose at all hazards. A goose with the only drinkable fluid in sight was worth more than the unincumbered immigrants. These thoughts probably moved me, for I precipitately sent the contents of both barrels after the retreating water-carrier. Alas, for a nervous aim at a crucial moment. The first barrel missed everything, and the second smashed the bottle into a thousand fragments, and with a parting *honk* of derisive farewell the goose mounted like a balloon with the basket cut." * * *

## Sea and River Fishing.

### FISHING THE WOLF.

*(Concluded from Page 363.)*

WE were up with the sun next morning, and were more than delighted with the encouraging advice of our host, to go alone—my companion and myself—to the river that day. The severe exercise and the heat of the two previous days had been a little too much for the writer, so that, with a present headache, breakfast was ignored and an extra lunch carried. Spring water was the only thing ingested except a couple of doses of effervescent phosphocaffein compound together with five grains of antifebrin. With only this aboard, we again mounted our steeds, and accompanied by the boy to bring back the horses at the end of the two miles, W. H. Finney and myself started. Another drink at the old spring, and over the same trails as yesterday, we soon reached the river at yesterday's starting point. We decided to spend the day in each other's company and catch what fish we could, as an extra diversion. We knew that we would catch more than enough trout and saw no good in following the rapacious plan of some fishermen who try to catch the very last fish. Though posterity had done nothing for us, we thought that some other sportsman would come along and have some luck after we had gone, if fish enough were left; and though none of our fish caught were carelessly wasted, they might be if we had too many.

As soon as we had cooled off a little and our fishing rods were ready—rigged as on the day before—and after donning the thickest woollen underwear, we walked, without rubber boots, into the cold spring water. In our empty condition, and sick withal, it was a chilly job, and we decided to get outside of a pint of milk and a biscuit as quickly as possible. After this, fishing along, we soon warmed up, and as the fish were more rapidly creeled we soon felt well again. The shallow places were rapidly passed, and the deeper ones more carefully fished for the larger fish, if any there were. Though less comfortable in the water, often 3½ft. deep, yet I had pleasant companionship and better fishing than on yesterday.

When the day was half done we heard in the distance the voices of happy children apparently at play, and as we approached more nearly the unseen ones their rippling laughter kept time with the noisy brook. Still unseen, we fished along until at last the voices seemed but a step away from us beyond a curve in the stream, and we were much interested to learn whence they came. The river's bend was reached silently, and on a nearby bluff, where a clearing had been made, there at the very river's edge on the rising ground, a group of merry Indian children were at play. Save for their coppered skins, they were the same as white children in their merriment. We eyed them only a moment before they discovered us, and warned by the one who first saw us, the others for an instant looked our way and, with hushed voices, they scampered over the bluff like wild things, out of our sight. All was still again save for the trout's splash and the breaking of the brook. We regretted that our civilized presence had frightened off these children, owners of the very stream we fished. We were trespassing, not they, and they had left the field to us. I would have enjoyed to watch their play for a while had I not underestimated their eagle sight. Had I known of their intuitive fear of white intruders we would have remained hidden from their view and watched their play. We were merely curious, they were severely afraid.

From this point of the river we fished with the best luck of all. The water was deeper and reached to our middle in its narrowest places, and in such we expected to find better fish, especially where overhanging bushes offered the darkness that the large trout love. After fishing along with moderate results I cast into an eddying, deep corner and allowed the current to carry the bait beneath the bushy shade, and I felt a savage bite—the line, rod and arm thrilled from the stroke, but the connection failed, and my hook was almost baitless. My companion was at my side, and I told him to cast into the same spot, and doing so, his baited hook taking the same course as mine had done, was almost immediately seized and his rod doubled, the short line whizzing back and forth across the narrowed stream in a manner that betokened an impaled conqueror, whose actions had never before been limited in this wise, as evidenced by his frenzied thrashing from this to the other side, then up and down the stream as far as the short rod and line would permit. Around the dipping branches he would whip the line in spite of my friend's efforts, and breaking loose again would try the same tactics near the other shore. At first the fisherman looked fearful of results, but he was impatient to basket the fish, but he was encouraged to be patient and soon became used to the exciting time. As yet we had had but the faintest reflex from his shining sides as he churned the water in his efforts to escape, and we were both anxious to view his dimensions. Matters continued thus for probably twenty minutes, but hours seemed to intervene. I had dropped my rod, and with landing net in my hand watched the fisherman and the fish with undiluted pleasure, adding: "Don't hurry him." And he'd reply: "All right." We both had learned ere this that the fish was well hooked, and we knew that the tackle was new and strong. After a while the antics changed. They became less and less wild. The steady pull was there, but the rod tip was not jerked to the water's edge as at first, and we began to get better and still better glimpses of light flashed from the long sides of the now rolling and troubled fish. He was less averse to the guidance of his rushes and would permit my friend to draw him toward the net, but not yet to it without another feebler effort to break loose. He tried more and more, and his balance wheel gave out still further, so that clear upon his side he'd loll and right himself again, and nearer to the surface he would come, so that now we could see plainly his many-hued sides and admire his beauteous proportions. Gently, very gently, and yet eyeing us withal, and resting on his side he was gradually dragged across the waiting, submerged net, which later on being raised caught one of the most perfect fish on which our eyes had ever feasted. The fight was ended and a 14½in. fish, fat and beautiful, was the result, and he scaled 1½lbs. In his gluttony he had swallowed the hook, thus accounting for his certain capture. This fight alone was worth our entire trip, and completely routed any remaining disappointment. Our ill-feelings had also gone, and in such good water we felt encouraged to further effort.

After catching a few smaller fish my companion had another good bite, and, connecting firmly, played another good fish, as well as the surroundings would permit, and finally landed another tiger that weighed nearly a pound. I now began to feel as if my generosity in aiding my companion to his first big fish, had been abused by his catching the second one also, leaving me to drag in merely the smaller ones. The savage sentiment of the selfish was being awakened in my being, and to work I went to try and outdo him in the next good fish to be caught.

In the near distance I espied a lonesome and large tree trunk crossing the stream and just peeping above the water's edge. With malice aforethought I planned to get the first cast beneath its woody shade for any leviathan that probably lurked within its darkened waters. My line was a little longer than his and I dropped the hook a foot in front of the log and drew it across stream in front of the tree trunk, and got a good bite, connected and landed quickly a ¾lb. trout. I was not after him, though, and hurriedly re-cast to the shore-end of the log nearest my stand. The baited hook suddenly disappeared from view, as out from the dark waters I saw rush toward it a brown streak of life. The electric thrill was rapidly conveyed to my heart, for it beat faster and faster, and my nature seemed alive with renewed vigor as my rod bent to an almost breaking point, and my new silk line and salmon-gut leader were as taut as a piano-wire. I was bound to keep the fish out from under the tree if the heavens fell, and my rod and tackle were smashed to smithereens. A fight was on both in the water and out of it, and on my generalship and patience depended my fisherman's record—of disgrace and no big fish, or victory and a partial balancing with my companion's luck.

The stream at this point was free from dipping bushes, and there was a larger pond hole just above the log. The only cover for the fish was his loggy shade, and for this he fought. When first hooked he barely reached beneath the tree before I turned him, and in his determined effort he crossed the stream immediately in front of the tree, and, failing to get his way, he thrashed back again as quickly to his first position. The rod creaked with the strain, and I was afraid it would break, as the fish rushed up the stream toward me, and I had to elevate the rod. He turned, however, and back toward the log he went. We had not seen him yet to note his size. My friend now looked over, with net in hand, to aid me in the final act. Failing to carry his loggy point, the fish suddenly darted up stream again, and when within 3ft. of me the strain upon my rod was too great and it parted at a ferule, and the upper half dropped into the water, and the line was loose and still. "That ends it," I said, "and my reputa-

tion 's gone," as I rapidly grasped the butt end of the broken pole and drew through its rings the loosened line, till its water end pointed almost to my feet. It was held fast there by the creek's bottom, and up I pulled—a disappointed pull; but ah! it was off again, a creature of life once more, and through the rings the rapid line did run. My fish fortunately had sulked as soon as he had failed to feel the rankling barb within his flesh, and, being rested somewhat, was ready with his second wind to make a second fight. He tired soon, however, and with more force than skill, and little further pleasure, I finally dragged him over my friend's net, and found in him a fat beauty of 12in. in length. He weighed exactly 1lb. My friend and I tried to mend my rod but failed, so that my fishing for that day was at an end, and watching my companion fish the short remainder of the day's limit to the crossing of the main Indian trail, I waded along with him.

The sun's rays were fewer than in the morning, and the darkening clouds seemed to shorten the day and foreshadow a coming storm, so hurrying onward, without further incident, we reached the same old spring hole, found our horses and boy there, and rode home. Our baskets contained twenty-six and twenty-seven, or a total of fifty-three good trout, and thus ended the happiest day of the trip.

During the day the same trout was caught a moment later with the first hook in his mouth which he had broken from my companion's line. This would seem to indicate a hungry fish and that little pain is caused by the implanted hook.

During the day we had watched the trout in some light portions of the deep water, and often within 6ft. of where we stood they remained quietly at the bottom of the stream, apparently not afraid or hungry. Once during the day I saw a trout's snout beneath a shallow log and not 3ft. from me, and from curiosity I dropped my wormed hook in front of him. He took it but saw me as he rushed out, then dropped it as quickly and sped down the stream. Another fish took my coachman fly when it was dangling fully 2in. above the water, got hooked, and I landed a half-pounder. Again I heard a sudden splash behind me, and looking round I saw a half dead or groggy trout swimming off in shallow water. He had escaped from my nearly full creel.

We planned after supper that we would the next day re-fish only the deep water below the Indians' watering place or clearing, and seeing that this portion was short, and that the best fishing was in the later part of the day, we decided to sleep longer next morning, and after breakfast ride and walk leisurely to the appointed place on the river and spend our last short day there. The clouds had gathered more and more as the day ended, and our host predicted a storm as we bid him good night, and, after another bath, sought our rest. During the night we heard a severe thunder storm and the rain fell heavily for quite a time, and we feared a rainy coming day.

The morning broke with a sunless, rainy sky. We breakfasted late, and about 9 o'clock it cleared somewhat and we decided to start, and, our horses being ready, off we went as before. The air was muggy and oppressively warm, and as we neared the forest's edge a steadily increasing rain began to fall, but undaunted we would not turn back. We drank at the familiar spring once more, bid good bye to our boy, and taking the trail stepped off. The rain was now dropping from the giant trees. The atmosphere was still moister and more oppressive yet. We found the mosquitoes more troublesome than ever before because of the darker day. Plenteous and frequent applications of mosquito nauseator were required. We followed the main trail to the river and decided to walk north till we reached the Indian clearing on the opposite bank and start in there. We judged the distance to be about a mile to that place, and keeping upon the high ground with great effort we walked along, sweeping the dripping rain from the bushes on our backs.

We reached what we thought a place opposite the point we wanted and decided that one should take a fixed stand upon the high ground to act as guide while the other made a bee line to the river's bank, and after reaching there would announce it by a call. I was told off to remain stationary, and my companion disappeared from view to find the river through the swamp-like lower ground, He called back as he traveled along; I answered him with the Australian "coo-we" call—the furthest heard of any vocal sound I know of in the woods.

I waited there half an hour, and his fainter calls became again more and more distinct, and appeared to come from a point further south than where he had entered the swamp. As he came nearer I wondered why he was returning. At last he reached the spot where I rested in a rotten tree stump, and seemed more bedraggled and forlorn than even my rain-soaked and mosquito-bitten self. He reported no river approachable there and wanted to turn back to the old trail, and I would not. We were not lost I averred, it was the river that was lost, I said, and if we could not find it there we certainly could further up, and on I went, he following.

After a time we struck an old trail and as that appeared to lead one way to the river we decided to follow it, and so traversing a few hills and hollows we recognized the last dip of the trail as that leading to the river where we had started in twice before, and in a moment later found that we were right. We were water-logged, hot and weary, and much disgusted with our woodcraft. It was raining still, and the great drops were falling besides from the dripping branches into the river, and the outlook was dismal throughout. The water looked redder than heretofore, and on its surface was much floating vegetable matter, and the stretch within sight showed frequently rising trout, and it was the latter fact that decided us to fish.

It was one hour past the meridian and after a lunch of cold trout, bread and milk, we tackled up and started in. The water was very cold to us, and after fishing quite a distance with poor luck my companion was much disgusted with his lack of bites. The fish seemed to be playing on the top of the water, which was so stained that, save in the shadows, we could not see our feet this day. I had caught some fish on my dropper coachman fly, but had had few bites on the wormed hook. I then decided that what fish were feeding were after the flies that the rain storm had cast into the water. So I took off my sinker and bare hook, changed my coachman to the stretcher fly, and put on another fly as a dropper, and with my new rod and a longer line, I started in for what proved to be the most enjoyable sport I had had. The end fly the fish occasionally wanted, but the nearer fly, though I changed it often, they did not seem to care for.

On we fished in the rain, and the deer flies troubled us more than any other day, and the mosquitoes even as we waded the stream would bother us. The water got deeper and deeper in the deep places, and our lunches got wet as we suddenly stepped into a deeper hole. Mine finally broke through the paper coverings and floated from the right to the left side of the all-around pocket in my hunting coat; my milk bottle alone kept the water out.

At the Indians' clearing we at last arrived, and while there we discussed, on a log, our watery lunch. Soon our limbs regained their normal warmth, and we were again just starting into the water, now seemingly very cold, indeed, and we knew that the deeper reach yet to come would be still more disagreeable, and most probably void of good results. We neither of us wanted to fish any further, but we could not reach the trail except on the side of the Indians' clearing, and "Had we better risk the Indians' dogs by approaching their camp and asking their way to the crossing trail lower down?" was the query that was revolving in our minds, when over the cliff's edge and down the narrow path to the stream, bucket in hand, a young squaw came. I asked her if we might leave the river here and cross her clearing and follow their own road to the main Indian trail. She replied not, but hurriedly filling her bucket, started up the bank. A moment's chance was left, and I yelled sharply the same query to her. She stopped suddenly, bowed her head affirmatively, and disappeared over the bluff. That settled our plans, and out of the cold, deep water we started up the bank.

The rain had now ceased to fall and the sun was trying to perforate the banks of clouds. When we reached the summit of the river's bank we found a level area of probably ten acres of cleared ground covered with a growing crop of grain, then about 10in. high. A narrow path led to the further side of the open spot, and there we noticed a group of three log houses, two near together and a third a few rods away. A smoke cloud was lazily rising from a smudge fire in front of the cabins near together, and on a large pine log near the fire, and with his back toward us, sat an Indian. In the distance was also seen the young squaw whose acquaintance we had already made.

Along the path we went straight to the fire, and as we approached a puppy dog of mongrel breed bounded toward us, and, alternately barking and playing, aroused the camp. We had some misgivings as to our reception, and just then a surly, wiry-haired, large cur noticed our approach and started for us with an ugly growl. We were near the first house now, and our young squaw, with club in hand, struck the savage dog a direct blow on the head that resounded with a sickening thud. He dropped in his tracks and we heard no more from him. This act gave us courage, and we knew that we would suffer no harm. As we were walking, I observed the squaw walk up to the Indian on the log, speak with him, but still as a marble statue he remained, with back toward us. We walked up to him, and when a few feet away and exactly in front of him, we told him why we trespassed upon his presence, and asked him for directions to the lower trail. Not until we stopped did he elevate his eyes to our gaze. A perfect stoic he proved to be, for he replied not, but kept on digging the long blade of a black-handled clasp-knife into the log on which he sat. In gentle voice we repeated our request, and, without speaking a word, he pointed his extended hand in the direction of the third house. We could see no path, however, and again asked if we understood aright, and a feeble "Yes" with the same pointing was all he'd say to us.

While thus engaged more dogs appeared, and the children with several Indian girls had gathered around us at a few steps' distance. A young Indian came out of one of the houses, dressed in his vari-colored lumberman's blanket jacket and other old clothes. He did not come near us, however. My friend observed an old squaw in one of the houses with a babe in her arms. The Indian whom we addressed was very dark-skinned and old, yet straight in body. He looked well kept, and we afterward learned that his name wat "Honest John" because of his pretensions, but that actually he took whatever he could carry away, irrespective of ownership; that for thirty-five years past time had left him unchanged, and that he must have reached the age of seventy-five. Here he had brought his own family and their alliances, and mourned away his time over hunting grounds lost and the steady encroachment of the paleface upon his people's domain. The young women were dressed quite decently, and were ornamented around their necks with tawdry tinsel and bead strings. One was observed to have enlarged neck glands, and looked thinner than the others. The tubercle bacillus was destroying her life. Consumption is their worst disease we were told. We bade them good-bye, and following the direction given found their path to the trail, reached the latter, and were soon at its crossing of the stream.

It was now about 5 o'clock and we longed for a final cast among the active trout there seen. In about an hour we had caught nearly a dozen more good trout and enjoyed the sport immensely because here we could cast a fairly long line and could better play the fish. The shades of evening began to fall on the sheltered stream, as with a fisherman's benediction on our lips we bid farewell to the source of our recent joys, and with face homeward turned we trudged our soaking clothes along the trail to the old spring, two miles nearer the house. Here we cleaned our fish as we waited for the horses to arrive. My friend had only ten and I had killed twenty-three, nearly all of the same size, each weighing probably ¼lb. Our fishing that day had been spoiled by the rain and freshet, and that portion of the stream we had started for had not been fished. In three and a half days we had caught 334 trout without seeing any other species. They were small, it is true, and the river difficult to fish, and too inaccessible for comfort. The trips to and from the stream were very exhausting and spoiled our pleasure. Besides we were too far from the main line of the railroad to distribute our fish to advantage, and we scarcely expect to again fish the same stream, as we heard of others —the Evergreen and Oconto—through the gentlemanly officials of the Northwestern Railroad, said to contain larger trout, were more enjoyable to fish and where a camping outfit was no objection.

After resting the next day (Sunday) we started homeward the following morning, stayed off at Clintonville two days and reached Chicago on the fifteenth day of our trip. We had lived on trout for nearly ten days of this time, and the phospho-albumen of this agile fish had nourished our exhausted nerve-cells, so that with renewed vigor we were desirous to again re-enter the fight for sustenance and home.

Dr. ALFRED HINDE.

CHICAGO, Ill.

## ONE AFTERNOON LAST SUMMER.

THE veteran and the youngster were conversing on that subject which is always so interesting to disciples of Izaak Walton. For two hours the youngster had listened while the veteran had landed gleaming trout and lusty bass from the pools of memory and the ripples of the past, now and then, I fear, hooking an especially large victim in the cool, dark, well-stocked spring-runs of fiction. The conversation had turned to a neighboring pond, where many fished that did but fish in vain. The black bass were there, you might stand on the bank and see them, long, dark, rakish, pirate-looking fellows, darting up the channel or basking a yard below the surface in the water-cooled sunshine or lying in the shadows of the overhanging trees. They looked fierce and hungry enough for anything, but their looks were deceiving. No matter how large, juicy and appetizing the worm you dangled before their noses, they turned disgustedly away; they had naught but scorn for tender frog or crusty crawfish; and the grizzly-king, the brown-hackle and the royal-coachman dimpled the surface of the water all in vain. They had acquired, in fact, such reputations as connoisseurs that one fish from this pond was considered as great a catch as half a dozen hooked in any other waters.

The veteran had been whispering legends of three and four-pounders—great, rushing, resistless fellows, that, darting from beneath some old stump, had seized his bait and snapped his line with one impulsive rush; or again, after a stubborn fight of ten minutes or so, had stood erect upon their tails, and with widely gaping mouth, spat the bait scornfully out and vanished in the depths.

The youngster grew interested—nay, excited. "I'm going down to that pond this afternoon with every variety of bait obtainable, and if I don't catch some of those fish I'll— well, I believe I *can* catch some—that's all."

"That's right," said the veteran. "You get your bait; I'll meet you at the pond and we'll give them a trial."

The shadows pointed to 3 P. M. when the youngster pushed his boat from the bank and paddled out into the channel. It was a long narrow pond with high, steep, thickly wooded banks and one edge brightened by a green and lusty fringe of rushes; here and there gnarled, water-soaked logs thrust their brown noses above the surface of the water, affording basking places for long rows of shiny turtles that craned their necks and splashed noisily into the depths when an observer drew near. In the middle lay a marshy island bordered with white lily-pads, where frogs croaked and spattered and great blue herons dreamed their philosophic visions.

The youngster drifted with the lazy current, throwing his flies toward the bank beneath the overhanging branches. The tree-tops were so plainly reflected in the clear water that he almost seemed like to catch his hook in the inverted twigs, until the plashing flies changed the picture into circling ripples. And now he came abreast of a submerged tree, the ragged limbs of which protruded here and there from the water. What a likely lurking place for a wily bass. The long line straightened out behind, the three flies shot forward, settled gently and sank slowly beneath the surface—snap—whiz, and the royal coachman had firmly hooked a victim. A vain jerk, a few short runs and a three-quarter-pound fish lay flapping in the boat.

Just then a hallo and rustle in the bushes announced that the veteran had kept his appointment. As he boarded the craft he said that he had not come to fish, and didn't intend to do anything but manage the paddle and landing net. He knew all the likely haunts about the pond, and would row from one to another until each had received fair trial. The youngster reasoned against this unselfish resolve, but in vain. And now the leader, fitted with the gaudy flies, was wound about the fisherman's hat and two lively minnows were hooked upon the line.

Out toward the middle of the pond several large logs were lying at various angles one upon another, the upper ends near the surface, the butts lost to sight in the deep pool. Toward these the boat glided cautiously, and the bait dropped in their midst. Suddenly there was a jerk, a strong pull that bent the lancewood tip to the water, another sharp, short fight, and the landing net scooped in a bass a half pound heavier than the first victim. "Hurrah, boys," said the Veteran, "that's the way to snatch 'em. Put on a lively minnow and try that place again."

For a few moments all was still save for the whiz of the dragon flies that zigzagged about in the sunshine and the joyful snickerings and cachinnations of a red squirrel that made fun of the fishermen from his perch in a neighboring butternut tree. The minnow, after swimming about a little, suddenly made for the dark hole under one of the logs. My! what a pull! Whiz! goes the line—whir! sings the reel—then splash—and the great fellow bounds twice his length into the air. But the tip was lowered, the line taut, and the mad leap was in vain. Now the line cuts the water in a half-circle as he swims slowly but strongly. Reel up quick—there he comes like a flash straight for the boat. If he gets under it he's gone and the tackle with him. But the line slacked not an instant; a quick, strong turn of the wrist and he just clears the bow. Now he's in deep water, sulky, but still full of fight. Get the landing net ready, and perhaps he can be drawn within reach of it. Slowly he comes, inch by inch, until within a foot of the surface. Oh, what a rush! right for the logs—if he reaches that brush we'll never see him again. But the veteran didn't intend he should reach the brush. Quick as a flash, leaning over the side until the gunwale dipped water, he thrust the net in front of the darting fish. A quick dip—a loud splatter —a shower of shining drops and 3½lbs. of black bass dropped into the boat, while the united voices of the veteran and youngster sounded such a joyful hallelujah that a green heron was frightened into spasms of flight, and every turtle within hearing splashed hastily into the water.

After this commotion it was deemed best to seek new grounds; so the fishermen floated slowly from place to place about the pond, trying minnows here, crawfish there, and spoon and flies between; but the fish had lost their appetites and settled into their usual state of apathy.

But then, as the saying goes, "It is not all of fishing to fish," and it was pleasant to drift with the current, idly, dreamily, careless in thought as the swallows that dimpled the water's surface or the sandpipers that peeped and whistled along the brink, while the shadows lengthened and the sunlight, fading, lifted its invisible shimmer from the earth to the western sky, and the white clouds flushed to deepening crimson. The darkly gleaming water reflected the woods and sky, softening every tint and outline like a picture. The birds chirped and rustled and the bats fluttered about in quest of the indecisive moth. Splash, splash, two leaping bass narrowly missed falling into the boat. "Put on your flies quick; they're feeding," said the veteran. So the leader was again adjusted and the flies whistled through the air, dropping near the stumps and beneath the overhanging bushes. Once, twice, thrice, the gay deceits swirled under and the quick strike of the wrist hooked a giddy fish.

But the luck was short-lived, for twilight was darkening and the veteran and youngster gave over the sport and wended their way supperward, having as a result of the afternoon's experience a fair string of fish and a goodly amount of material for their own private string of yarns.

DETROIT, Mich.

## THE RANGELEY LAKE WATERS.—II.

BY MOLECHUNKAMUNK.

EXTENDING through thirty years and more of annual experience about the Rangeley Lake waters in winter and summer, and having missed only one or two years in my visitations, and having passed several months in many of my visits, I have observed some features about trout which may be of interest to fishermen, and which may throw some light upon the lives of those fish which are so gamy, beautiful and delectable.

I will simply give my experience and opinions without any intention of entering into any controversy with other fishermen whose experience, perceptiveness and conclusions may be different or superior to my own.

In referring to the Rangeley Lakes I include that chain of larger lakes situated in Oxford county, Me , commencing with the Rangeley, the Mooseluckmeguntic, the two Richardsons and the Umbagog, with the adjoining and connecting small lakes and ponds. The mentioned large lakes comprise a surface area of eighty square miles, and the principal tributary lakes and ponds, more than thirty in number, comprise an equal surface area, or a total of 160 square miles.

The drainage area tributary to the system comprises over 3,000 square miles, which is almost entirely forest. The average precipitation of rain, which includes that from melting snow, is estimated at 42in. The altitude above tide water varies from 1,200ft. to 1,600ft.

The Rangeley waters are all well stocked with trout, excepting the Umbagog, the lower lake (partly in New Hampshire), which a dozen years ago was found to contain pickerel, and have been disastrous to the trout, and in consequence have thinned out the greater proportion of the small fish, although some quite large ones are now occasionally caught. This year I heard of several being caught weighing 6 and 7lbs.

The trout of the Rangeley waters are designated as the *Salvelinus fontinalis*, and are the true speckled, carmine spotted, and of the highest type in game qualities and flavor of any which inhabit any waters, excepting those of a kindred character, and it is very difficult to find any other waters, of equally favorable characteristics. I say without prejudice, having taken trout from some forty different localities in the State of Maine, and in many other States of the Union, as well as in foreign countries, that the Rangeley Lakes trout altogether are of finer form, color and flavor, than of any other waters I know of, while for average size they surpass any of their class. Take them at any month of the year, they are fat and deliciously flavored. There will not be one in a hundred which from age or disease is out of condition for food, although I will except the spendthrift milter, in the late autumn, for, though arrayed in his most brilliant intensified suit of scarlet waistcoat with dark trimmings, mottled coat, spangled sides and white and black leggings, he has a thin sinuousness and a lacking flavor which should give him liberty and an opportunity for recuperation. I will not, however, except the full spawner, which, owing to high feed, remains in good condition, deteriorating somewhat at the termination of the spawning period, from which, however, a speedy recovery is made.

The opinion that pure water of crystal clearness is essential to the perfect existence of trout is not sustained by the condition at the Rangeley waters. Owing to the densely wooded country about, and the excessive precipitations of moisture, and the constant forest leaching which occurs, all the waters with a very few limited exceptions are somewhat opaque, having a yellowish tinge, which indicates the impregnating effect of the abundant adjoining plant life. This vegetable stain has its sequence in the furnishing of the first source of trout existence by the apparent spontaneous prodigality of infusorial life. This is clearly evident without microscopic aid, and throughout the waters, in a greater or less degree, is plainly evident to the unassisted eye, not only by sunlight in the still water, but in overcast days in winter as well as summer. This exaggerated form of animalcules, which may perhaps be more strictly classified as polygastric infusoria, is shown in multitudinous form, and in some forms which undoubtedly have never been strictly classified from the minute crustaceans invisible to the naked eye, to the prominent rotifera of two lines in breadth, which would be visible, even on a dull day, if but one-quarter of its size. On a still day with the sun's rays properly aslant, thousands of these minute representations of protoplasm may be observed in their various movements, some darting with quick movement for short distances, others whirling along with moderate speed, and others scarcely moving with invisible power, which might be mistaken for a passing current, but that they pass others from an opposite direction.

This infusoria furnishes the newly hatched trout with abundant food, as well as the small fry which become the food of larger trout, and the small fry, up to chubs and suckers of a pound or two in weight, are plentiful in the Rangeley waters, and the abundance of red fins and a dozen varieties of minnows are conspicuously noticeable.

Despite the infusoria and vegetable stain of the water it is accounted most healthful for drinking, and is as soft and silky for washing and bathing as it would be possible for a water to be.

The trout of the Rangeley Lakes probably average larger than from any other waters. I should estimate the average weight of those caught in the lakes, not ponds, at a pound. I have not kept any particular record of my catches of late years, but did until some fifteen years ago, when I had a record of over 6,000 trout, which averaged nearly a pound and a quarter, but my catches then included those of winter fishing through the ice, when the lakes were but little visited, and before it was any infraction of the law to so fish. I was very fond of those excursions of two or three weeks at the lakes, with trout for the object, and the auxiliaries of the robust open air life, the shooting, skating and other sports.

With a few companions, we would have no difficulty in securing an average of fifty pounds of trout a day, which well frozen up, were carried out for distribution among our friends. These winter trout would average a full pound and a third, seldom taking under half a pound, and up to an occasional seven or eight pounder.

Trout are not migratory in their habits, although in exceptional instances when disappointed in love affairs and driven away by successful rivals, or from a natural excess of love adventure or physical disturbances, will roam about, and oftentimes in such cases will take extended departures; otherwise they will frequent the same feeding grounds, although taking their spring and autumnal outings. We all know of the particular fellows which are found year after year in the same deep pools and by the steep rocks, which so long bid defiance to human art, but which finally yield up their liberties and lives to their unconquerable taste for the insiduous fly.

For years after years I have seen trout, so marked by their size or peculiarities as to be unmistakable, come to the same spots and defy all fair efforts against their privileges. In vain were the most dainty flies of all colors and sizes flaunted in the air, and ripple-kissed, on surface and beneath, live bait, fat worms and other delectable morsels; but all in vain. And these large fellows do not, any more than their lusty prototypes, when they have once taken possession of a first-class domicile, allow of the intrusion by other trout of their habitation, unless ousted by superior prowess. This occurs often in the season of amatory dalliance, when two are considered sufficient company, and when eternal vigilance is found to be an essential of satisfactory housekeeping, and, where robbers and tramps have to be continually chased and banged at.

Nothing can be more comical and amusing than to witness the watchfulness and incessant unrest of a worthy burger of mature years, who has taken unto himself a helpmate to regulate the domestic routine of his establishment, and to whom he has promised immunity from outside prowlers and sneak thieves. Good-natured fellow, who has grown corpulent and high-colored from numberless golden chubs, striped minnows, and viscous suckers, which his vigorous activity has secured. Now will he forth for a season in a more highly oxygenized element; he will hie for the rushing waters, and promenade among the belles of the high world. So dressing himself in his gayest colors of red, white and orange, with many delicate tinted shades and sheens, and touching up his carmine spots, he sallies forth on a rollicking tour, which leads to speedy subjugation. No lover can be more complacent and attentive than he, none more willing to shoulder the matrimonial noose, or more fiercely jealous of the intrusion of others. It is amusing when mated to witness his torturing anxiety at the approach of other trout, and his inhospitable reception of them, which is indicated by his advance toward them with open mouth. The small trout and chubs cause him no end of trouble, and he has no rest night or day. No sooner does his mate indicate her intention of depositing an egg, by her movements before the deposit, than several active chubs and small trout appear on each side eager for the delicate morsel, and while those on one side are dispersed, another daring rogue from the other side rushes in and secures the prize, and thus it goes on in particular instances throughout the spawning season, and it may be doubted if a single egg escapes to a hatching on some spawning beds. This destruction of eggs by trout themselves is a very serious evil, and is shared in by chubs and suckers, and the attending male is by no means backward in his own taste in that direction, and often when caught about the spawning bed is found with a stomach full of spawn. I incline to doubt, however, if the full charged and dispensing milter is guilty of this action, and probably not in the last stages of amatory play, as he is then very thin and flat, with most intensified colors, and when so caught has almost invariably an empty stomach.

I have observed the actions at the spawning beds a great many times, about the shores of the lakes and ponds, in the late autumn on clear, still days, and in November and December through the ice. The latter observation is the most satisfactory, and is obtained by cutting a hole a foot or two square through over the spawning beds, which may be but two or three feet below the surface. By placing a blanket or two on the ice for reclining upon, and by placing another blanket over the head, shutting out the immediate light, the trout can be observed in full play. The disturbance occasioned by cutting and clearing out the hole is over in a few minutes, and the trout below soon become entirely fearless. On some beds the spawners seem to be without particular mates, having a half dozen or more cavaliers in attendance, whose amatory distractions do not seem to interfere with their appetites, and who indiscriminately make a grand rush for the egg as soon as deposited, and it may be that there are several spawning heaps or beds immediately adjoining and half a dozen spawners at work, attended by a dozen or more males, who apparently secure every egg for digestion. I have sometimes seen fifty and even a hundred trout thus congregated in an area not over 10ft. square, and in such close proximity that there was hardly any intervening space between them. The spawning beds are generally composed of a slightly raised mound of gravel of two or three feet diameter; sometimes the beds are on the clean sand, without any coarse gravel whatever; sometimes among pebbles and a bottom grass.

The spawning beds often receive a hard scouring for eggs after the spawning season is over. It is not uncommon in the late autumn before the ice makes over the deserted beds, near the shore, to find half a dozen speckled chaps digging over the bed for some egg which may have previously escaped observation. It is not uncommon to see them digging into the beds with their bills from a horizontal position and their tails frequently flapping above the water surface, which occasions the first observation. Last of all comes the Chinaman of the lake, the sucker who works patiently at lower wages than the dominant race, who with his porcine snout makes havoc with the bed, and fairly roots it apart for the last lingering morsel which remains.

Probably nine-tenths of the Rangeley trout spawn in still water, where a moderate freshening occurs from springs. The same quarters will be occupied year after year, unless physical changes occur.

Nearly all the trout spawn between the middle of September and the middle of December, although exceptional cases occur throughout the year, and there is no time during the year but what trout can be found in spawn in a form of more or less development. I have observed them spawning through the ice well into January, and not very long ago I caught a 7-pounder in the first part of August, which was full of ripe spawn, and dripping. This fish was caught at a depth of about 30ft. on a slow troll, with a heavy sinker, with a worm added to a No. 2 fly.

## TROLLING FOR SALMON.

SEATTLE, Wash., Oct. 16.—Again I've heard the "jingle of the salmon spoon," this time very distinctly, for I was listening for it. The other day I shoved the old Siwash "canim" off of the float at the head of Elliott Bay and turned her head for Lake Union, on whose tule-ed margin my lodge is just now located. This meant a twenty-three mile trip by salt and fresh water for the day, and as silver salmon are just now disputing the right of way with the big steamboats in the sound, I thought perhaps one might run against a spoon if I had it overboard. After paddling half a mile I dropped the troll over and settled down to business. The line had hardly got the rheumatic kinks out of it before I felt something "tail on," and in about a minute I had a 5-pound salmon floundering around in the bottom of the dugout. He showed fight, but he was "small fry," I knew by the way he bit, so I just snaked him in without any preliminary foolishness, same as a Siwash does.

I struck and lost a pair before I got Five-mile Rock on the beam and then I struck one that I didn't lose. When he struck I stopped the paddle and the salmon stopped the canoe, then he had a three-ring circus all by himself for about ten minutes. He had 80ft. of braided linen line to go on and he used it. He went out of water the first move; shook his head like a terrier and made the spoon rattle and jingle like a set of sleighbells, then he started for Cape Flattery; and by the time I had 20ft. of line in, had veered round and had fairly good headway for Tacoma. I checked that plan too and I guess it made him mad, for he sulked for a few minutes and I hauled him, tail first, to within hailing distance. Then he made a rush and took out about 40ft. of line again and shot out of water like a rocket; then I heard the spoon jingle again. He played horse for about fifteen minutes before I finally got him over the gunwale. He measured 2ft. 5in., and knew how to fight for his size too. From where I hooked him to the lighthouse was about four miles, and in that distance I hooked five more; but only got two as they seemed to be striking warily, and those I did get were only slightly hooked.

Fishermen, that is net-fishers for the canneries, complain of a very small run of fish this year; but for those four miles the water seemed to be alive with fine ones; and at no time while I was paddling that distance was it possible to look in any direction without seeing salmon jumping, and you were more likely to see a half dozen at once than only one. The three that I got while going through the school weighed 10lbs. each and measured alike 2ft. 5in. Those jumping seemed to be about the same size. I was not salmon fishing to be fishing, just merely dragging a trolling line because I could do so and not interfere with my journey, yet I caught four fine salmon within an hour and then quit, for I could not use more before they would spoil. They are royal fish and no mistake, game every inch, and will fight you until gaffed just as sure as hooked. They will take a spoon every time it comes their way, and if you have a rod and line instead of an ordinary trolling line you will find out that a ten-pounder is no joke before he is brought to gaff. There are millions of them here every fall; and there is room for all the fishermen in the United States; so that devotees of the gentle art need not be backward in coming if all they want is a couple of thousand salmon for a few days' sport. If any of the family come this way I'll get a day off and go out with them, so they cannot miss the best fishing grounds if they will hunt me up.

One curious thing I noticed about my four fish was that they had nothing in the stomach nor any sign of partly digested food. They had not touched fresh water yet and there is an abundance of food all through the sound. Now why should they have empty stomachs?

### Erratic Trout.

Trout still bother me by being too erratic in their ways. For instance, two weeks ago I went out on the lake where about a dozen people were fishing, using salmon eggs for bait and getting good strings. I did likewise; that is, I got salmon eggs daubed all over me and managed to flim-flam one trout enough to get up on the wharf. All this was done in three hours' patient fishing in one of these affectionate wrap-you-in-a-wet-blanket rains which we brag about out here, keeping steady company with us. A nice cool wind from the northeast consequently direct from the few thousand glaciers over in the Cascade Mountains ruffled the lake into white-plumed wrinkles. This kind of a layout had about used up my reserve supply of patience, when I concluded I'd try a spinner on the trout; so I cut a nice slice of chub, scales, glitter and all, and shaped it into a faint resemblance to a minnow by dint of artistic carving with my pocket-knife. A good many smiles were directed toward me, and inserting my hook I consigned it to the billowy dampness of the lake and started to troll it along near the surface. I had got only a decent start when a nice big trout hit the hook in a most provoking manner and just hung right to it. I had quite a seance with him before he quit and crawled into the basket. He weighed 1¾lbs. In about an hour after that I took the car for home with eight of them "spooning it" in the wickerwork, and nearly the same size, and all but one caught on a chunk of chub cut so it would spin. When I dressed them not a single stomach showed other food than salmon eggs. There I had fished all the forenoon, wasting a lot of valu-

able time, patience, science and salmon eggs, absorbing considerable rain and a few degrees of cold, trying to feed them just what they were actually feeding on at that particular time, and they simply flirted with my hook until I jabbed it through a chunk of chub, and then had everything my own way. Brother Greene, of Portland, why is this thus? Cannot we educate these "critters" into something like steady habits?

Since that time I have worked the same *skal-lal-aye* (as the Siwash say) on them, and it is a winner every time. Therefore, ye who would coax the festive "fish of the rainbow" to your basket, paste this on your reel: When the wind blows and the heavens are overcast, when the cold hunts your marrow and your patience is nearly gone, catch a fish and cut a spinner, make it wriggle like a "minner," and if you don't get a big trout real sudden, go home, for he has evacuated the premises and gone where no bait will fetch him!

If I find out anything more I'll say so, for I've pitched my lodge within two blocks of a lake full of trout, chubs, black bass, "calico" bass (so-called), perch, goggle-eyes and a sprinkling of imported catfish of an inferior brand, and I'd rather fish than eat. EL COMANCHO.

## ANGLING NOTES.

### About Stocking the Hudson with Salmon.

THE last report of the Commissioners of Fisheries of the State of New York for the year ending Sept. 30, 1893, is an interesting one, showing the development of the fisheries of the State, and no part of it is of more special interest at this time than that part which gives the result of planting the Atlantic salmon in the Hudson River. The chapter in relation to this subject begins: "The Commissioners of Fisheries of the State of New York have for years endeavored to establish salmon in the Hudson River. The planting of fry began in 1882. * * * Since that time the following plants have been made * * * making a total of 3,094,723 of the fry of this fish that have been planted in the river since the Commissioners began this work."

But, did the Commissioners begin this work? Now that there is every prospect that the salmon in the river, as the result of those plants referred to, may become self-sustaining, the credit for the work should be placed where it properly belongs.

It would appear from the extract quoted that the credit for successfully stocking the Hudson River with salmon belonged alone to the New York Fish Commission. But let us look into the matter a little.

Commissioners change from time to time, and it is possible that one set of commissioners may not know what a previous board of commissioners did or did not do on certain particular lines. Upon taking office the members of the board find the machinery of the organization at work in a particular direction, and as everything is working well they may assume, without looking into the history of the Commission, that the efforts in the direction referred to were inaugurated by the Commission when such is not the fact. It is true that the Fish Commission of New York did make a feeble effort to introduce Atlantic salmon into the waters of the State, but not specially into the waters of the Hudson, more than twenty years ago, by obtaining 4,000 impregnated eggs from Canada, and the report for 1871 contains this record: "About 3,000 of these succeeded, and when they attained a proper age, a notice was published inviting any one to apply for them, who was willing to do so, and who had any suitable stream or river where he desired to raise them. No answer was received at this office, and no application was made for them, which is a strong endorsement of the wisdom of the action of the Commissioners in not spending money on an attempt which, we are convinced, must be futile."

The report for 1874 touches upon this subject again in these words: "Your Commissioners in their previous reports ventured the opinion * * * that salmon had never inhabited any of the rivers of the Atlantic seaboard west and south of the Connecticut. So entirely were they satisfied of this fact that they positively refused to expend money in attempting to introduce them in the Hudson, for they felt assured that it would be a waste of the public funds. In this course they incurred the disapproval of some enthusiasts in fishculture, and some ignorant individuals who wanted salmon to abound in every horse pond in the country. * * * With the California salmon, however, we expect it will be different. * * * With them, of course, the undertaking is equally an experiment, and like all such attempts has the chances of failure as five to one, to the chances of success, but the conditions are far more favorable."

The next year, 1875, the Commissioners say in their report: "Time and more careful investigation have fully demonstrated that they (the Commissioners) were right, and that the true salmon cannot be propagated in our waters."

That the waters of New York were not more favorable for California salmon than for Atlantic salmon as was prophesied, was admitted in the report of 1876.

The Commissioners' reports do not take up the salmon question again until 1882-83, at which time a radical change had taken place in the composition of the board of Commissioners. Fresh blood dominated in the Commission, progress had been made in scientific fishculture, and experience had been gained that put an entirely different face upon the question of stocking the Hudson with salmon. In the report for 1882-3 I find this: "The Commissioners have no authentic information of the existence of salmon in the Hudson River in the early history of the country, though it is probable that there were some. * * Certainly there is everything in the natural conditions of the upper Hudson to favor the visits of these fish. Therefore the Commissioners have regarded with much satisfaction the experiment of the United States Commission, by its head, Commissioner Baird, looking to the establishment, or re-establishment, of the lordly salmon in our river.

This points very clearly to the one who "began the work," for the work of successfully stocking the Hudson dates from 1882.

Familiar as I am with all that has been done in this direction since that time, I have preferred not to write of my own knowledge in what follows, and so quote from a recent letter from the present U. S. Fish Commissioner, Col. Marshall McDonald, regarding the plants of salmon subsequent to the initial one in 1882. Col. McDonald's letter is dated Sept. 29, the present year:

"The project of stocking the Hudson River with salmon was first entered upon by the New York Fish Commission, and afterward abandoned by them." (This probably refers to stocking the river with the Pacific salmon, as it can scarcely be said that the New York Commission entered upon the project of stocking the Hudson with the Atlantic salmon, for none of the 4,000 eggs obtained in Canada can be traced to the Hudson.)

"The joint work of the U S. Commission and the State of New York was the outgrowth of recommendations made by me to Prof. Baird in 1882. In my report upon the fisheries of the Hudson River, contained in the census of the fisheries industries for 1880, Sec. V., Vol. 1, pages 658-659, you will find the following: 'The sources of the Hudson are in the Adirondack Mountains. Its main tributary, the Mohawk, rises in the tableland which forms the divide between the waters that flow into Lake Ontario on the one side and into the Hudson River on the other, and flows southeast; but, breaking through the Catskills, precipitates itself at Cohoes to the level of the river valley of the Hudson by falls which are about 40ft. in height. These falls, while forming a magnificent water power for the many factories along the river's banks, present an insuperable barrier to the ascent of fish. An obstruction of this kind exists at Glens Falls, on the main river. Indeed all the tributaries are characterized by similar impediments, and this may explain the fact that the Hudson is not, and, as far as we can learn from historical data, has never been, a salmon river; and yet, strange to say, the Connecticut River, similar in physical features to the Hudson, in olden times had important and productive salmon fisheries.'

"When the views above stated were brought to the attention of Professor Baird, he promptly directed that a systematic and persistent attempt should be made to cause the Hudson to become a salmon river.

"The United States Fish Commission furnished Cold Spring Harbor station with all the Atlantic salmon eggs hatched at the station; paid the expense of feeding and distributing the fry, also a salary of $500 per annum was paid the superintendent of Cold Spring Harbor station by the U. S. Fish Commission.

"The operations were continued on the part of the United States Fish Commission until 1889, after which the United States Commission furnished eggs of the Atlantic salmon to the New York Commission, but the distribution of the fish was conducted entirely by the State of New York."

This appears to be a clear statement of facts about the experiment of stocking the Hudson up to this time, and the State and National Fish Commissions have each the credit which belongs to it.

Further on in the chapter devoted to the salmon in the report of the New York Fish Commissioners, previously mentioned, one may learn of circulars being sent out to obtain information concerning the presence of salmon in the Hudson as the result of planting the fry (and a lot of yearlings of which no mention is made), and replies to the circulars are printed.

The writers of some of these letters report having taken salmon in the Hudson, and others appear to know nothing about the fish. That these net fishermen should devote their letters to what they do not know about salmon in the Hudson, is not strange, when one remembers that it is illegal to take the fish in nets, and there are people, it seems, who do not readily confess to breaking the laws. The report states:

"Answers to this communication (the circular), although not very numerous, were the first satisfactory evidence the Commissioners have ever obtained of the existence of salmon in the Hudson River. Since 1885 or 1886 the newspapers have contained occasional reference to salmon caught in the Hudson, * * * but no accurate information has ever been obtained."

This is a queer assertion to make. Whoever wrote what I have quoted may not have known that FOREST AND STREAM was the first to furnish satisfactory evidence to its readers in June, 1886, of the existence of salmon in the Hudson, for it gave the number of fish killed, where captured, the name of the captors and the weights of the fish, and it has been giving similar evidence ever since when there was occasion for it. The most complete evidence given in reply to the circulars comes from Mechanicville, and records 22 salmon taken there in 1893, but FOREST AND STREAM gave all that in detail, and more, too, more than a year before this report was issued.

It may not be strange that all the evidence furnished by FOREST AND STREAM as to the existence of salmon in the Hudson should have been overlooked, but I cannot understand how the Commissioners could overlook evidence furnished by one of their superintendents, which evidence is the result of a careful personal examination and cross-examination of the fishermen from the Troy Dam to Gravesend Bay.

In 1888 Superintendent Mather, who has hatched all the salmon at Cold Spring Harbor, was directed by the U. S. Fish Commission to examine the Hudson with a view to learning if salmon had been captured in the Hudson, and if so, how many. Mr. Mather's report is printed in the report of the Fish Commissioners of New York for 1888, and details of the capture of 134 salmon are given, and he says that he has no doubt from what he learned "that four times this number were taken by the shad fishermen, who, as before stated, are very cautious about giving information."

I presume the New York Fish Commission will thank me for calling attention to the above facts, for I have no idea that the Commission wishes to ignore what the U. S. Fish Commission has done in this matter, any more than they wish to discredit the information furnished in FOREST AND STREAM and their own reports.

### Section 140 Appears.

I have on more than one occasion called attention to the injustice done to Warren county, N. Y., by Sec. 140 of the game laws, but the Mohican Rod and Gun Club of Glens Falls has just run against it so hard that it has left the executive committee looking at one another in amazement. It has long been believed that one "Jock" Brown has, under pretense of taking bait fish, been netting one of the best trout brooks in the State, which happens to be situated in Warren county. The Mohican Club took up the matter and then took up Jock himself, and he was charged with using a net in a trout brook. He was ready to plead guilty to avoid prosecution on other and similar complaints when it was discovered that Sec. 140 saved him for the time. He admitted taking bait fish in a net in a trout stream, but Sec. 140 says that he can at any time, because it is lawful in Warren county to fish for perch, suckers, bullheads and pickerel with nets and fykes, and spear and shoot such fish through the ice. As the club has not, up to this time, any legal evidence that Jock did net trout, he escapes for the present, but the end is not yet. A. N. CHENEY.

### Dr. Blayney's Bass Record.

FRANKFORT, Ky., Oct. 23.—*Editor Forest and Stream:* My attention has just been called to your very clever editorial in your last paper on my catch of 238 large-mouth bass in one day (weight 366lbs. instead of 336lbs.).

I sincerely appreciate the motive and temper of your critique, and entirely agree with what you say. I predicted at the time that if my performance got into the papers, anglers all over the country would brush up their arithmetic and do sums to see if the string could be done in a sportsmanlike way. And now, as our darkies say, "you've gone done it."

But you mistake in limiting the fishing day in the forests of Wisconsin to ten hours. That day actually ran from 4 o'clock in the morning to 9 at night, with but little loss of time for meals. Upon that basis your calculations will give you over four minutes to each fish, a pretty liberal allowance on the average for a pound and a half fish to play. Those who know me would hardly charge me with "yanking" fish in ordinarily, though I confess that on this occasion I did not give every one of them time to stop for meals by the way.

My motive for the day's work was rather a complex one which I think, on the whole, sportsmen would appreciate, though I cannot claim that it was quite so worthy a one as "feeding the multitudes." About half a dozen fish were injured in the hooking and kept for use in camp. With that exception the rest were turned back into the water in good condition and are still there for the editor of the FOREST AND STREAM or any other angler to enjoy some future day, or for the multitudes to feed upon if they will work as hard to catch them as I did. So that really I am not half the piscatorial butcher your good-natured comments would seem to imply.

J. MCCLUSKY BLANEY.

### New Jersey Coast Fishing.

ASBURY PARK, N. J., Oct. 25.—The past week has been one of disappointment to anglers on our shore. The prevailing east winds have made the fishing poor and casting almost an impossibility. Other than good catches of plaice periodically and a few weakfish, the sea has yielded but few of its treasures to the angler. Consequently a great many have turned their attention to pickerel and perch, which are now biting well. I wonder how many anglers know that the small white sand skipper or beach flea makes a bait that the perch takes with avidity. I have also taken several small-mouth black bass on the same bait the present season. The beaver dams at the headwaters of the Metedeconk River just now are receiving lots of visitors. There is no better pickerel fishing in our State than at that point. A friend of mine recently took forty-six in three hours' fishing, 1½ to 3½lbs. weight.

I have just cremated my fishing record which I have carefully kept for the past fifteen years. And I had always thought there was some pretty fair catches entered therein, but "Big Reel's" four days' sweep in the issue of FOREST AND STREAM of Oct. 20, made me feel that I was just a no account fisherman, and that my memoranda would in the future be but mockery to me whenever I scanned its pages, so sorrowfully I consigned them to the fire. The one recording forty-six fine blues in one afternoon gave me a severe twinge, but it could not be helped, I wanted it out of my sight forever. Even an item contributed to your pages two years ago by himself regarding a large catch of plaice I made at Avon shared the same fate. I have rubbed the whole score out and am going to begin all over and catch nothing but big fish and plenty of them. LEONARD HULIT.

### Smelt Fishing in Boston Harbor.

BOSTON, Oct. 20.—*Editor Forest and Stream:* Smelt fishing has been on in the waters adjacent to this city for some weeks, and good catches have been made in all directions. The waters about Hull, Hingham, Nantasket, Downer Landing and Quincy, have yielded the best results, but those who have not the time to make the harbor trip, but instead secured places on Dorchester and South Boston bays, have had fair fishing. Commodore John N. Roberts, an active member of the Fish and Game Protective Association, is an inveterate fisherman and is probably better rigged for the sport than any man on the south shore, if Peddick's Island can be included in that bailiwick. His "shanty" on the island is cosy and comfortable, his boats are of the best, and ditto his tackle. The latch string is always on the outside to his friends, and if the Commodore happens to be up to the city "Johnny" does the honors with hearty hospitality. I have been down three times thus far and have had good fishing on several days. Taken altogether the season has been very successful, and with good weather the tackle will not be laid away for two or three weeks.

WM. B. SMART.

### Brown Trout Dimensions.

MR. HENRY LOFTIE, of Syracuse, sends us a paper pattern of the brown trout caught out of Caledonia Spring, the New York State hatchery waters, by Monroe A. Green, Dec. 14, 1891. The weight was 9¾lbs., and the dimensions: Length 27⅛in., girth 15in. This was one of the fish developed from eggs received at the hatchery in February of 1884.

### Birch Leaves in Fish Creels.

IF my brother trout fishermen will put birch leaves in their baskets instead of grass or moss, they will thank me for giving them the hint. J. G. S.

# Fisheulture and Fish Protection.

### The Common Sense of It.

*(An Editorial in the Rochester Post-Express.)*

AT the meeting of the Genesee Valley Fish and Game Protective Association yesterday, reports were received from various officers who have been trying to protect the fish from the nets and dynamite of the poachers.

It was said that the game protectors on Irondequot Bay, Long Pond, Buck Pond and Round Pond, have been very energetic in the pursuit of offenders against the game laws and that there was less illegal fishing during the past season than ever before. The inspector who has been watching the ponds has brought forty-seven actions at law against offenders and secured convictions in all but six cases; and he captured no less than 142 nets. The inspector in charge of Conesus Lake, spoke of the difficulties in his way and complained that it was very hard to secure the conviction of offenders. There is much illegal fishing in this lake. The inspector has captured three jack lights, forty-three set lines, two large seines and twelve gill nets since spring; but these represent but a small part of the illegal devices in Conesus. At Hemlock Lake there has also been a great amount of illegal fishing and the inspector seems to have disregarded in a shameful way the duties and responsibilities of his office. Many complaints have been made of the use of set lines and of the spearing of fish, but not a single arrest has been made by the inspector and no illegal device has been captured. It was said that though the office was worth $600 a year, the inspector had done nothing to earn the money. Accordingly a resolution was passed asking for his removal and the appointment of a more efficient and faithful man. The protector in charge of the upper river and Black Creek, reported that six nets and two set lines had been captured in the creek and that seven persons had been convicted of violating the law. The inspector said that in his opinion illegal fishing in Black Creek was nearly done away with.

We give this summary of the reports in order that our readers may understand precisely what has been accomplished in this region of the State toward the protection of the streams and ponds. We think they will agree with us that the reports are encouraging, but that there is great need of increased vigilance and of more relentless pursuit of offenders.

The fact is, that the fishing in Monroe county is about as poor as it is on the dry and treeless prairies of the great West. It is simply no good.

With the expenditure of money and a strict enforcement of the law, the fishing here might be made as good as any in the world. Within a few minutes' ride from the center of the city are many streams, ponds and bays, and the river flows through the city, and the lake is easy of access. These waters are the natural homes of bass, pickerel, pike and perch. It is fun to catch such fish, and it is pleasant to eat them. These waters should be teeming with fish, so that even the most unskillful angler could catch all he wanted. Let us suppose, merely for the sake of illustration, that there are 60,000 families in Monroe county; then if each family could secure fish for one meal a week from June to November inclusive from the public waters of the county, and each meal were valued at 25 cents, the total saving would be nearly $400,000 a year in the cost of food.

How foolsih it is for this community to permit poachers to catch fish with nets and kill them with dynamite, and destroy food worth many thousands of dollars. Every person familiar with the subject knows that the poachers who use nets to capture fish of all kinds, that a few are sold and a few are consumed by the poacher's family, but that the greater number are thrown away. We have been told of a farmer who drove away from the shore of a near-by lake with a wagonload of fish of all kinds; he used a few in his family, gave away a few to his neighbors and dumped the remainder on his land! The use of dynamite is even worse than nets in destructiveness, for fish of all sizes, even those too small for the hook or the net, are killed. In streams like Black Creek and Irondequoit Creek, where the channels in places are deep and the banks high, dynamite is fearfully destructive and one discharge of the explosive has been known to kill fish enough to fill a boat. The rascally poachers gather up the largest fish as they float on the top of the water and let the small ones drift down the stream. For each fish that they secure they may kill a hundred. This lawless destruction of fish has been going on in Monroe county to the verge of extermination. We have quoted the inspector in charge of the upper river and Black Creek as saying that poaching on Black Creek has practically ceased. We do not think that from a point on the stream a mile above the aqueduct down to the mouth—a distance, as the stream runs, of three miles or so—there are a dozen fish over 4in. in length, and probably these are wormy rock bass.

A few days ago two Rochester gentlemen, eager for outdoor air and exercise, rowed from the State dam at the rapids to Black Creek, and up that stream for three miles. A dozen men were fishing on the river, ten were fishing at the mouth of Black Creek, four were strolling along the banks of the stream, and fifteen lines were soaking in the water at the acqueduct. This was a total of forty-one fishermen. Some of them, indeed most of them, had been fishing for hours. The bait was good enough, consisting of minnows, grasshoppers, crabs, frogs and earthworms; and most of the fishermen seemed to be provided with suitable tackle, and to know how to use it. And yet the forty-one men, fishing for many hours, had caught only four fish. It is no wonder that the poachers are not wasting their time on Black Creek. There are no fish there now, and on the river the fishing is poorer than in years.

On the bay and the ponds to the north the fishing has been very poor the past season. It is astonishing that the owners of hotels and other resorts at these places are not vigilant protectors of the fish. It is amazing that the owners of the railway lines do not insist upon the enforcement of the law. Thousands of dollars are expended every year for brass bands and entertainments of all sorts to attract the crowds to the resorts, but the fishing, which ought to be made the greatest attraction of all, is not improved. Irondquoit Bay might be made a wonderful reservoir of fish, and in that case it would be the most popular resort near Rochester; the railroads would make money, the hotel owners would get rich, and real estate would speedily double in value.

Money should be used in stocking all our streams and ponds, the public waters should be protected more carefully, and offenders should be prosecuted more vigorously. We think this is very important. As matters stand, fish are so high, nets are so cheap, the risk of being detected is so small and the punishment is so light that the laws are violated continually.

---

ROBERT M. STURGEON, managing editor of the Harrisburg *Call*, was fishing at beautiful Riverview last week, and took home to Harrisburg the following story, which appears in the *Call* to-day: "Al. Stoner, of York county, one of the most expert down-the-river fishermen, says that the low stage of the river and the absence of bait fish in and around the grass plots has made the bass more than usually voracious and at times they become so desperate that they leap and devour swallows. Of late this has been noticed and it has occurred about dusk when the swallows are in the habit of just skimming the water. Their failure to bite he attributes to the clearness of the water and shyness of the fish."—*York (Pa.) Daily.*

### Tick Boy in the Manitoba Trials.

*Editor Forest and Stream:*

Mr. W. B. Wells, of Chatham, Ont., gives, in a recent issue of your paper, his reason for not placing the pointer Tick Boy in the late Manitoba trials. Will you allow me a short reply?

He says had it not been for his rank piece of work in the first heat, flushing and chasing, he would have been placed higher. He also says he was told to stick to the rule that reads, "All dogs must be thoroughly broken, as a matter of course."

Now, what I wish to know is, why, if in the first heat he was so rank, he wasn't thrown out then, and not brought into the second and third series? If he flushed and chased in the first heat, and could not win anything on that account, what was to be gained by keeping him in when, no matter how good his other work should be, that rule about broken dogs was staring him in the face?

As Tick Boy ran a very good heat with the winner in the second series, and showed up well with the winner of third in the third series, showing no inclination to chase or flush willfully, if he was being kept in to see whether he was broken or not, I think he proved conclusively that he was. I know nothing of the trials except what I have read, but all reports have been very favorable to the dog.

I am not kicking against Mr. Wells's judgment, but must congratulate him on giving such general satisfaction, as but few men could judge a field trial alone and have less mistakes, if any at all.

I am interested in the pointer Tick Boy, and am willing to learn anything relating to field trials and field trial judging, and that is why I ask for an explanation.

W. L. KIDWELL.

WASHINGTON, D. C.

---

### The Montreal Kennel Association.

A LARGE and enthusiastic meeting was held in Montreal on the 26th inst., which resulted in the formation of the above-named association. It was agreed that the scope of the association should be as wide as possible. The interests of the dog in every way would be fostered as far as the society could; so that the attention of members would not be given merely to the holding of shows, local or otherwise, but mutual instruction would be a chief end, and the sympathy of the general public secured by showing that the "fancy" points of dogs did not engross the entire interests of the association.

The following officers were elected: Patron, Sir Donald Smith; Hon. Presidents, Sir Joseph Hickson and Samuel Cardson; President, Prof. Wesley Mills, M. D.; Vice-Presidents, W. H. Drummond, M. D., and Jos. Lindsay; Secretary-Treasurer, Geo. Lanigan; Executive Committee, Messrs. Wm. Robb, D.V.S.; J. C. Nichol, L.D.S.; McCullough, Smith, Pitt, Beaufield, Ekers and McNally.

A committee was appointed to draw up a constitution and by-laws. It is proposed to hold regular monthly meetings at which papers will be read, discussions held and specimens shown. L. A. Klein, president of the Eastern Township Kennel Club, was made an honorary foundation or original member.

---

### The Collie Club.

*Editor Forest and Stream:*

Some few weeks since you expressed surprise at the scarcity of Canadian members of the Collie Club. Might I ask what advantages may be obtained by joining the club? I know the club offers annually a few five and two dollar medals and two challenge cups; but the conditions under which the latter are offered are such that none but a very wealthy breeder can ever obtain posession of either. There was some talk at the last New York show of a Produce stake, but as no effort has been made to get entries it has probably been abandoned.

Practically speaking, the Collie Club is unknown and the object for which it was formed has been lost sight of entirely. The majority of the executive committee is composed of men who are but little known in the kennel world of today and are not actively interested in the breed whose interests they are elected to care for. Until this is remedied and the club shows some disposition to "promote the breeding of collies and protect and advance the interests of the breed," I do not think the scarcity of members, either Canadian or American, should cause any one surprise.

SCOTTIE.

---

### Forest and Stream Fan Pedigree Blank.

For some time past breeders of dogs have demanded a pedigree form that would afford spaces for a more extended pedigree than those hitherto published. The difficulty has been in arranging a form that, while admitting the required extension, would be compact and not too large for mailing. This difficulty has been solved in the "FOREST AND STREAM Fan Pedigree Blank" which is so arranged that a dog's pedigree can be recorded for eight generations, and the spaces radiating from a center, the reader is enabled to trace at a glance the different strains which lead from sire and dam. Spaces are also provided for recording the name of dog, its breed, color, sex, breeder and address, dates of birth and purchase, from whom purchased, E. K. C. and A. K. C. Stud Book numbers and certification. These blanks are for sale at $2.00 per hundred, 30c. per doz. by the Forest and Stream Pub. Co., 318 Broadway, New York.

---

### Eastern Field Trials.

*Editor Forest and Stream:*

The Board of Governors of the Eastern Field Trials Club have postponed the meeting until Monday, Nov. 19. The trials will commence with the Members' Stake on Monday the 19th, and on Wednesday, November 21, the regular trials open with the Derby. On conclusion of this stake the others will follow in order of running as heretofore advertised to the end of the meeting. The above has been done in consideration of the handlers who have puppies running at U. S. Trials at Bicknell, Ind., and who will attend the Eastern meeting, giving plenty of time to get to Newton and rest the puppies.

WASHINGTON A. COSTER, Sec'y and Treas.

SARATOGA SPRINGS, N. Y., Oct. 22.

### The Pointer Club of America.

*Editor Forest and Stream:*

I beg to make the following corrections regarding the sweepstakes and the Produce Stakes, to be given by the Pointer Club of America. Due to an error in not changing the MS. before going to press for publication, two misleading items occur in the notice appearing in your good paper of a former date—*i. e.*, the time of the closing of entries in the sweepstakes should read "Dec. 15" and not "Nov. 1," and the time the dam must be entered after whelping should read "15 days after," instead of "30 days."

We are pleased to state that we have a number of entries for the Sweepstakes in hand and several others pledged, and many letters asking for information. The circulars will be ready to mail in a few days to every pointer man in the country, and if any one is overlooked, and they will notify us, they will receive the literature giving information.

A singular fact is worthy of comment; 75 per cent. of the interest in these stakes is manifested by new men in the pointer ranks. If the stakes fill up with this material, some of our leading pointer breeders will be reminded that a leader is imposed with the responsibility of doing a leader's share toward advancing pointer interests, and the necessity of being identified with the advancing host. We take this opportunity to impress on all believers in the pointer and his quality and metal, the significance of these events in the pointer's history.

The Pointer Club has a membership of sixty-one, and it is not too much to expect or ask each member to make an entry in one or both stakes, as the time they cover will enable all to make preparations for so worthy an enterprise.

FREDERIC S. WEBSTER, Sec'y.

# DOG CHAT.

### New England Field Trial Club's Trials.

Mr. Sharpe, the secretary, writes us that the Members' Sweepstake of the N. E. F. T. Club will be run on the club's grounds at Assonet Neck, Mass., beginning at 8 A. M., Tuesday, Nov. 13. The train leaving Boston, N. Y., N. H. & H. R. R., Park Square depot, at 5:10 P. M., Monday, Nov. 12, will reach Taunton at 6:04 in time for supper at the City Hotel. Price of board will be $2 per day. A meeting of the club will be held Monday at 8 P. M., at which the dogs will be drawn by lot for the first series of the Members' Sweepstake and such other business as may come before the club. Suitable accommodations will be made for dogs entered in the stake. Barges will leave the City Hotel at 7 A. M. on Tuesday, reaching the grounds in time for the start. Visitors who wish to attend the trial, but do not care to spend the night in Taunton may leave Boston, Tuesday, on the 8:30 A. M. train, N. Y., N. H. & H. R. R., from Kneeland street depot, leaving the train at Dighton, Mass., from whence they will be connucted to the grounds. We have been asked if visitors, not members of the club, will be allowed to view the trials and make use of the barges. We understand that all well conducted people will be welcome.

The Wankie Kennels, we regret to hear, have lost their well known Scottish terrier Kilcree. He walked away from the house Oct. 17, and no trace of him can be found, although he has been advertised in all the local papers. Kilcree is too good a dog to lose, and we trust he will soon turn up again. If he does not the kennel still has his blood in a fine litter by him out of Culblean. Mr. Green writes: "I really don't know which is the best of the three dogs—such heads and bone, splendid bodies and coats."

A dog poisoner has been busy at Warwick, Orange county, N. Y., for days past, and a large number of valuable dogs have been killed by the miscreant. Pierre Lorillard, Jr., is said to have lost a white terrier, and a valuable trick dog, Bruno M., owned by Dr. Welch, is another victim.

Col. J. E. Thayer, so well known to the kennel world in connection with fox-terriers and deerhounds, will judge trotters and road horses at the great Horse Show to be held in New York, Nov. 12 and following days. Col. Thayer is the owner of Ralph Wilkes, 2.06½, the fastest trotting stallion in the world, with the exception of Directum, 2.05¼.

The Executive Committee of the Hamilton (Ont.) Kennel Club met last Friday night and decided to set aside $200 toward paying off the $600 deficit incurred at their show of 1891. The club also decided to hold a local show in the Armory, the first available Saturday after the inspection of the 13th battalion.

The Argyle Kennels have bought the celebrated St. Bernards LePrince and LePrincess.

# Hunting and Coursing.

### FIXTURES.

FIELD TRIALS.

Nov. 5.—Brunswick Fur Club, North Acton, Mass. Bradford S. Turpin, Dorchester, Mass., Sec'y.

Nov. 7.—Northwestern Beagle Club, at Columbus, Wis. Louis Steffen, Milwaukee, Wis., Sec'y.

Nov. 19.—National Foxhunters' Association's meet, at Olympian Springs, Ky. H. L. Means, Sec'y, Louisville, Ky.

COURSING.

Nov. 14.—California State meeting at Merced, Cal. J. R Dickson, Secretary.

### Kenmore Coursing Club's Meet.

THE second annual meet was held at Goodland, Kan., Oct. 16, and following days. The weather was propitious and hares were quite plentiful enough. A number of spectators enjoyed the sport. The judge, Mr. E H. Mulcaster, gave entire satisfaction on the first day's running, but his decisions on the second and following days were not well received. The charge was made that he favored dogs of his own breeding and one or two of the decisions were especially one-sided and not in conformity with the work done. Mr. Mulcaster has hitherto borne an excellent reputation in the saddle, and while his explanation may be satisfactory the fact remains that his decisions gave rise to a great deal of adverse comment. Mr. Ralph Taylor, of Colorado Springs, Colo., gave every satisfaction with the slips. The draw took place on Monday night at the Depot Hotel after a dinner given by the club. Among the sportsmen present were J. H. Watson of Brooklyn, Dr. Q. Van Hummell, H. C. Lowe, John Cochran, Bartels Bros., R. S. Howard, S. W. Vidler, D. C. Luse, J. H. Le Moyne, M. Kerrigan of San Francisco; J. Fields, M. Allen, J. Wills, B. Hayman and M. Porter, of Salt Lake City.

#### Kenmore Cup.

For greyhounds of all ages, at $20 each (non-members $22.50); $100 added by the town of Goodland and $50 by Dr. Van Hummell; 50 per cent. of entrance money (less non-members' extra $2.50) and $150 to the winner; 25 per cent. of entrance money (less non-members' extra $2.50) to the runner-up; remaining 25 per cent. divided between third and fourth.

*First Round.*

M. Allen ns (Warren & Fish's) fawn and white dog Glenlyon, by Glenkirk—Glida, *beat* G. Macdougall's black and white dog Twister, by Lord Neversettle—White Lips.

H. C. Lowe's black and white dog Prince Charlie, by Lord Neversettle—White Lips, *beat* Van Hummell & Le Moyne's brindled dog Lord Clifton, by Lord Neversettle—Partera.

Sunflower Coursing Kennel's white and brindled bitch Rhea, by Major Glendyne—Daisy Dublin, *beat* Eastern Coursing Kennels' black dog Royal Crest, by Greentick—Royal Rate.

H. C. Lowe's red dog Lord Douglas, by Neversettle—Partera, *beat* Sunflower Coursing Kennel's black and white dog Rear Admiral, by Major Glendyne—Lady Alice.

St. Patrick's white and black dog Boomerang, by Lord Neversettle—White Lips, *beat* Van Hummell & Le Moyne's brindled bitch Valkyrie, by Lord Neversettle—Partera.

H. C. Lowe's white and black dog St. Lawrence, by Lord Neversettle—White Lips, *beat* M. Harrison's red dog Boundaway, by Lord Neversettle—Partera.

D. C. Luse's black dog Colonel Breckenridge, by Norwegian—Dick's Darling, *beat* H. C. Lowe's black bitch Melita, by Lord Neversettle—White Lips.

GLENLYON—TWISTER.—A long slow course, Glenlyon doing about all the work.

PRINCE CHARLIE—LORD CLIFTON.—Prince Charlie led up for a short course and killed.

RHEA—ROYAL CREST.—Royal Crest led up, but Rhea gave him a beautiful go-by and killed.

BOOMERANG—VALKYRIE.—This was a fine long course, in which both scored very evenly. Boomerang won.

ST. LAWRENCE—BOUNDAWAY.—St. Lawrence did most all of the work and puss went to ground.

COLONEL BRECKENRIDGE—MELITA.—The Colonel led up and killed after a short course.

*Second Round.*

GLENLYON a bye with Master Glenkirk, Prince Charlie having been withdrawn.

RHEA—LORD DOUGLAS.—Lord Douglas led to the hare and scored heavily and killed before the bitch could offset it.

ST. LAWRENCE a bye with Lord Clifton, Boomerang being withdrawn.

COL. BRECKENRIDGE a bye with Lady P. A hard course in which Colonel had far the best of it.

*Third Round.*

GLENLYON—LORD DOUGLAS.—Very even course and a lot of work for the dogs. Glenlyon's condition told in the end and he killed and won.

ST. LAWRENCE—COLONEL BRECKENRIDGE.—St. Lawrence proved the cleverer and had rolled up a good score when the hare holed.

*Deciding Course.*

GLENLYON—ST. LAWRENCE.—St. Lawrence led to the hare and scored several times, letting in St. Lawrence, who, however, soon fell back, but came again near the finish but was unable to score. Glenlyon won.

#### Kenmore Derby.

For greyhound puppies, at $20 each, ($2.50 for non-members), with $100 added by the town of Goodland and $50 added by Dr. Van Hummell. Same division of money as in cup stake.

*First Round.*

Van Hummell and LeMoyne's brindle and white dog Van Aafke, by Lord Neversettle—Verdure Clad, *beat* M. Allen's white and black bitch Maid of Honor, by Miller's Rab—Nettlefield.

T. W. Bartels's ns. (H. B. Hersey's) brindle and white dog Baron, by Boomerang—Pearl of Pekin, *beat* M. B. Yomblin ns. (D. M. Sidle's) black bitch Lizzie Lee, by Norwegian—Dick's Darling.

H. C. Lowe's black dog High Curly, by Lord Neversettle—White Lips, *beat* Sunflower Coursing Kennels' fawn dog Extra Dry, by Glenkirk—Scandal.

Sunflower Coursing Kennels'-ns. (J. C. Peebler's) fawn dog Lambright, by Norwegian—Bueneretiro, *beat* L. C. Whiton's brindle and white bitch Princetonia, by Young Fullerton—Spinaway.

Eastern Coursing Kennels' bitch Trilby, by Royal Crest—Drytime, *beat* Van Hummell & LeMoyne's red bitch Van Lenah, by Lord Clifton—Victoria.

Van Hummell & LeMoyne's white and brindle dog Van Otjen, by Lord Neversettle—Verdure Clad, *beat* St. Patrick Kennels' brindle dog Brother Jonathan, by Dingwall—Novenery.

Van Hummell & LeMoyne's fawn bitch Van de Veen, by Glenkirk—Scandal, *beat* Sunflower Coursing Kennels' fawn dog Sorrento. by Glenkirk—Scandal.

M. Allen's red dog Fear Not, by Glenkirk—Gilda, *beat* D. C. Luse's fawn bitch Fascination, by Norwegian—Buenerittero.

VAN AAFKE—MAID OF HONOR.—Long course. Maid of Hork the first half, then Van Aafke came in and piled up a winning score.

BARON—LIZZIE LEE.—Baron led up for a long course, in which both scored well and evenly. Baron won.

HIGH CURLY—EXTRA DRY.—Extra Dry led up for a few points, High Curly then nipped and trailed the hare, not doing any good work.

LAMBRIGHT—PRINCESS NICOTINE.—Lambright led up, worked the hare alone and killed, winning hands down.

TRILBY—VAN LENAH.—A long course, with honors about equally divided. Trilby won.

VAN OTJEN—BROTHER JONATHAN.—Van had the best of a short course over bad ground.

VAN DE VEEN—SORRENTO.—Van was given this course, though in my opinion Sorrento won easily.

FEAR NOT—FASCINATION.—Fear Not was given the course, and there was much dissatisfaction over the decision, as Fascination led up and did about all the work.

*Second Round.*

Van Aafke beat Baron.
High Curly beat Lambright.
Trilby beat Otjen.
Fear Not beat Van de Veen.

*Third Round.*

High Curly beat Van Aafke.
Fear Not beat Trilby.

*Deciding Course.*

Fear Not beat High Curly and won the stake.

*Consolation Stake.*

Eight entries:

Al. Johnston's Rhaon Dhu (Major Glendyne—Daisy Double) won first, Laughed At (Norwegian—Bueneritero) second. W.

As our reporter was compelled to leave the Kenmore Coursing meet on the first day, we are indebted to Mr. C. F. Weber, of Goodland, for the report of this meeting, which, however, came too late for our last issue.

• • • •

The Western Massachusetts Fox Club will hold their seventh annual meet at Westfield, Mass., Oct. 31 and Nov. 1. The meet is expected to be a large one if the weather is at all propitious. Judging from our experience last year, the visitor will be well treated, and even if no foxes are brought to bag, the pleasure of meeting so many good sportemen is enough to repay one for the visit. The hunter's horn will sound at 5 A. M. on Wednesday for breakfast. At 6 o'clock carriages will convey the hunters to the grounds. The annual club dinner will be served to members and guests at the Town Hall at 6:30 on Wednesday evening.

### Northwestern Beagle Club's Field Trials.

*Editor Forest and Stream:*

Following is the list of entries for the Northwestern Beagle Club's second annual field trials, to be held at Columbus, Wis., beginning on Wednesday, Nov. 7.

CLASS A—ALL-AGE STAKE—FOR DOGS 13 TO 15IN.

BASE—Dillingham & Rummele's black, white and tan dog (Spelo—Gypsey Belle).

ALDERMAN—Dillingham & Rummele's black, white and tan dog (Bob—Fannie).

STORMY—F. F. Merrill's black, white and tan dog (champion Royal Krueger—Pussie).

BUCKSKIN—R. Engelmann's black, white and tan dog (Riser, Jr.—Nettie).

BLACK HAWK—B. Engelmann's black, white and tan dog (Riser, Jr.—Nettie).

ADAM—Middleton Kennels' black, white and tan dog (Sport—Trill).

MODEL—Theo. Zschetzsche, Jr.'s black, white and tan dog (Stormy—champion June M.).

RISER—Hintze Bros.' black, white and tan dog (Flute Ringwood—Zell).

TONY W—Louis Steffen's black, white and tan dog (champion Tony Weller—Topsy S.).

ROYAL ROVER—G. A. Buckstaff's black, white and tan dog (Rover—Singer G.).

CLASS B—ALL-AGE STAKE—FOR BITCHES—13 TO 15IN.

MARGUERITE—Glenrose Beagle Kennels' white, black and tan bitch (champion Fitzhugh Lee—Dido).

LOTTIE—F. W. Bencher's white, black and tan bitch (Drummer—Lofty).

MAYFLY—Dillingham & Rummele's tan, black and white bitch (Doc—Peg).

PANIC—Dillingham & Rummele's tan, black and white bitch (Doc—Peg).

RUTH C.—Dillingham & Rummele's black, white and tan ticked bitch (Base—Nellie).

LULU II.—Hintze Bros.' black, white and tan bitch (Trump—Lulu).

PEARL CAROLINE—C. Niss's black, white and tan bitch (Krueger's Judge—Krueger's Pearl).

BLOSSOM—Barrow Bros.' white, black and tan bitch (champion Little Duke—Floss).

CLASS C.—DERBY—DOGS AND BITCHES—13 TO 15IN. AND UNDER.

FANCY M.—Middleton Kennels' black, white and tan bitch, (Stormy—champion June M.).

DICK—Truman Sears's white, black and tan dog (champion Royal Krueger—Baby W.).

UMSLOPAGOUS OF GLENROSE—Glenrose Beagle Kennels' black, white and tan dog (champion Fitzhugh Lee—champion Parthenia).

ADA—Middleton Kennels' black, white and tan bitch (Adam—Little Fraud).

BUCKSKIN—R. Engelmann's black, white and tan dog (Riser, Jr.—Nettie).

BLACK HAWK—B. Engelmann's black, white and tan dog (Riser, Jr.—Nettie).

RUTH C.—Dillingham & Rummele's black, white and tan ticked bitch (Base—Nellie).

ESTHER C.—Dillingham & Rummele's black, white and tan ticked bitch (Base—Nellie).

SPOTTED CHIEF—G. A. Buckstaff's black, white and tan dog (Krueger's Bob—Pearl Caroline).

JIM LEE—T. S. Maxwell's black, white and tan dog (Scott True—Mollie).

LOUIS STEFFEN, Sec'y.

### National Beagle Club Field Trials.

HEMPSTEAD, N. Y., Oct. 29.—The annual meet of the National Beagle Club began here to-day. The club headquarters are at Roth's Hotel and among those present are H. L. Kreuder, Nanuet, N. Y.; C. W. Quynn, C. Staley Doub, R. S. Cramer, Frederick, Md.; W. S. Clark, Linden, Mass.; G. F. Reed, Barton, Vt.; Geo. Laick, Tarrytown, N. Y.; Daniel Sommers, Thorndale, Pa.; A. D. Heald, West Chester, Pa.; N. A. Baldwin, East Orange, N. J.; John Bateman, Gravesend, N. Y.; Wm. Saxby, Ilion, N. Y.; L. W. Colquitt, South Orange, N. Y.; Louis Contoit, New York, N. Y.; Jos. Lewis, Moodus, Conn.; Bradford S. Turpin, Boston, Mass., and many others.

Owing to the late arrival of many of the members and beagles it was deemed best to postpone field work till Tuesday morning, and it was late in the afternoon before the entries were called upon to fill and the drawing made. In class A, H. A. P. Smith's Louie Fitz Lee, Hempstead Farm Kennels' Glory and Music, and J. B. Lozier's Cry Baby were absent. In class B, Daniel F. Summer's Little Kit did not fill. In class C, Geo. Laick's Laick's Roy and Awashonk Kennels' Diamond failed to appear.

The drawing resulted as follows:

CLASS B.

U. A. Baldwin's Laddie with Geo. Laick's Laick's Roy.
Rockland Kennels Rags (a bye).

CLASS C.

Geo. F. Reed's Nell R. with Rockland Kennels' Clover.
Daniel F. Summer's Lucy S. (a bye).

The annual meeting of the club was held on Monday evening at 8 P. M., President Kreuder in the chair.

It was voted to change the Constitution so that the offices of secretary and treasurer should be separate.

Mr. Louis Contoit was elected to membership.

The following officers were elected on the mail ballots being counted: President, H. L. Kreuder; First Vice-President, J. W. Appleton; Second Vice-President, H. F. Schellhass; Third Vice-President, G. B. Post, Jr.; Treasurer, Geo. Laick; Secretary, Geo. W. Rogers; Executive Committee with the above officers, A. D. Lewis, N. A. Baldwin and J. B. Lozier. B.

### Beagle Lost.

*Editor Forest and Stream:*

While out exercising the beagles a week ago I had the bad luck to lose the last year's Derby winner Louie Fitz Lee in the vicinity of Long Pond, Melrose, Mass. He was entered in both the New England and National field trials, and it will be a great disappointment to his owner, Mr. Smith, of Digby, N. S., as he was very anxious to have him run up against some of the cracks this year, and from what I saw of him he would have made it very interesting. If any of your many readers should come across him or hear anything of him they will do me a great favor by notifying me. He was a white, black and tan in color, very prettily marked, about 14in. high and strongly built. It is a great disappointment to me also, as there has been so much said in the sporting papers about this dog I would have liked the beagle men to see what he could do. W. S. CLARK.

LINDEN, Mass.

## NEW ENGLAND BEAGLE CLUB'S TRIALS.

Oct. 23 to 26.

ONCE more has a beagle club demonstrated that it is entirely feasible to conduct a field trial for beagles. Not only this, but when experienced judges are officiating they are enabled to gauge to a degree the ability and accomplishments of the little hounds. This New England Club held its second annual trials at Oxford, Mass, the same venue as in 1893; and the club members must feel proud of the fact that their meeting passed off without the slightest friction. The utmost good will prevailed, and even the disappointed ones were only so because their dogs failed to do better and not on account of any unjust decision. The club had the services of two practical hunters in Messrs. C. W. Guyn and and G. B. Appleby, and they seemed to arrive at their decisions unanimously and without much delay, a condition of affairs that we believe was not entirely the case in this club's trials last year. Both judges held to the line with all the vigor of youth and experience of veterans, and the cover must have been very thick and impenetrable when one or the other failed to see the work done.

The Federal Hill, where the trials were held, affords pretty nearly every kind of going except swamp. The grounds are dry, perhaps in this instance a little too dry, as but little rain had fallen for some time previous to the meeting. Most of the hunting was in cover or rough bush-covered pasture, that in some parts was very rocky. The only drawback to the grounds is the stone walls, which are so numerous that the dogs no sooner get well started on a hot drive than the game at once seeks refuge in them. Hares were plentiful, and it was the exception when we had to tramp far without striking a warm trail.

The weather during the first two days could not have been better for hunting, cloudy, little wind and just enough dampness in the air to make scent hold good. The headquarters of the club were at Bacon's Hotel, and landlord Bacon did all in his power to make us comfortable; he fed us well and the hot lunches brought to the field were very good indeed; what more could one ask for, unless some fastidious mortal took exception to the resiliency of his bed springs. But hare-hunters are out for sport and not hair mattresses.

Among the best known beagle men present during the week were O. F. Joslin of Oxford, who owns the noted fox-hound Rock, his nephew, H. S. Joslin, the president of the club, who surely should be content with the honors the week brought him; F. W. Chapman, Orland, Me.; Geo. F. Reed (Canada Gray), Barton, Vt.; B. S. Turpin, Boston, Mass.; W. S. Clark, Linden, Mass., the able and courteous secretary; Thos. Shellcrosss, Howard Almy and F. W. Cielfield of Providence, R. I.: A. D. Fiske, Worcester, Mass.; A. H. Morse, Quinnebaug, Conn.; E. O. Cornforth, Slatersville, R. I.; H. Hanson, Fall River, Mass.; H.W. Lacy, New York; R. Leslie, Linden, Mass.; W. E. Hapgood of the Worcester *Spy*, who taught the boys a wrinkle in beagle hunting that was simply "out of sight."

But for the stormy weather on Thursday the trials would have been run off in three days; as it was there was plenty of time for the members who had beagles entered in the National trials at Hempstead, to rest both themselves and their dogs before the heavy work of this week.

The quality of the work done by the dogs was, on the whole, good, though the ability shown by Jean Val Jean, Buckshot, Blanche, Piper and Zeno and Nell R. was of a high order, especially that of the two first named. In Jean Val Jean, Mr. Joslin owns a beagle of whom he may well be proud, a tireless hunter, very careful in hunting out the likely places, but so quick in his movements while doing so that it was a difficult matter to follow him. Buckshot is a fast worker, too, and especially good on a warm drive; his casting is wide and rapid, but he scarcely shows the patience of the other in seeking out to a find in cover. This is probably owing to his style of hunting in his Vermont home, where he is hunted mostly on the swamp hare and those little "toy rabbits" as "Canada Gray" calls them, do not give him half a chance. He will probably be seen to better advantage in the open country around Hempstead. Blanche has made wonderful strides in her work since being under Mr. Reed's care, and is sure to give a good account of herself in the Hempstead trials. Miss Kreuder is the first lady to enter a dog at any field trials in America, and that her beagle won third in such hot competition must be no little satisfaction to her.

The specials were awarded as follow:
Best voice—Quaboag Belle.
Style—Lewis.
Speed—Jean Val Jean.
Best All-Age entry bred by owner—Piper.
Best Derby entry bred by owner—Zeno.
Best trailing—Zeno.
Best starter—Nell R.

The annual meeting of the club was held on Monday evening, President F. W. Chapman in the chair. After routine business was cleared off, the election of officers took place and resulted in a few changes as follows. Pres., H. S. Joslin, Oxford, Mass.; Vice-Pres., A. D. Fiske, Worcester, Mass.; Sec'y-Treas., W. S. Clark, Linden, Mass. Executive Committee: H. Hanson, Fall River, Mass., and Thomas Shellcross, with the above named officers. A telegram having been received from Mr. F. C. Bedell saying he was too sick to officiate as one of the judges—in fact he was in bed with an attack of fever, having caught cold when hunting in Vermont a week or two since, Mr. Geo. B. Appleby, a local Nimrod and mighty fox-hunter and well posted on rabbit hunting with beagles, was elected to fill Mr. Bedell's place. The meeting then adjourned. The field trial committee was then called to order and the filling of entries for Class C, the 15in. Derby, was the first and only business of importance. It was found that H. A. P. Smith's Pealer and Slip would not be able to fill. Slip was in season and Pealer lifted the 15in. standard. The drawing resulted as follows:

### Class C—The Derby—13 to 15in.

Awashonk Kennels' black, white and tan dog Bingo (Deacon Tidd—Daisy), handler, Thos. Shallcross (owner), with Geo. F. Reed's tan and ticked bitch Nell R. (Ned—Haida), handler, owner.

Awashonk Kennels' black, white and tan dog Diamond (Frank Forest, Jr.—Diamond Krueger), handler, T. Shallcross, with F. W. Chapman's black, white and tan dog Umslapogus (Fitzhugh Lee—Parthenia), handler, owner.

Awashonk Kennels' black, white and tan dog Zeno (Deacon Tidd—Daisy), handler, T. Shallcross, with A. D. Fiske's black and tan bitch Blossom (Fitzhugh Lee—Lady Novice), handler, A. H. Morse.

The meeting adjourned at a late hour and with prayers for a fine day on the morrow, the anxious owners sought their couches.

### TUESDAY.

The morning opened cloudy and it looked like rain, but happily the weather cleared toward afternoon and the sun came out in fugitive patches. It was an ideal hunting morn, with just enough dampness to hold the scent and afford the untried Derby dogs an opportunity to do their best. Hares were plentiful enough, and with this important factor assured, the meeting promised to be a success, even if the number of entries did not come up to expectations. The barge left the hotel about 8 A. M. for the Jefferson farm, two miles from town, situated on rising ground and clear of swamps. The going was mixed, but none of it so dense as to hinder a view of the dogs most of the time.

*The Derby—First Series.*

BINGO—NELL R.—This brace was put down near the farmhouse in rough pasture well covered with low bushes. At first Nell, with the perversity of her sex, was inclined to be headstrong, and Bingo showed better control. Both got down to business with a vim, and hunting independently became widely separated. Nell made the wider casts, and in doing so started the first hare of the meeting and had it holed before Bingo could hark to her. A spectator kindly put up another bunny, and Nell considered this her property, too, and ran it to a fling, which resulted in a check; neither hound could hit it off, so they were drawn to another field, where Bingo trailed prettily to a start, but was compelled to relinquish the lead to his speedier rival, who carried the trail along in a sharp run through thick cover, and making intelligent use of her nose at the turns, she showed herself decisively superior to the other both in speed and general smartness. Drawn off at 9:15.

DIAMOND—UMSLAPOGUS.—Down at 9:35 on hillside. Mr. Shellcross again looked after his own, and the namesake of Rider Haggard's mighty hunter was helped over the fences by F. W. Chapman. Umsly, as we will call him for short, though he took after his dusky namesake in size, appeared rather diffident, and did not enter into the sport with any degree of enthusiasm. He was either very shy or was not on speaking terms with his owner, for he paid little heed when he told him to go in and win. Diamond was thus enabled to show himself off to advantage, though with a smarter dog along he would have been termed a potterer at times. Judge Appleby started the fun, or rather a hare, and Diamond hit off the trail, which shortly led to a hole in the wall fence. In cover a reporter started another *lepus* and dogs were worked back to the warm trail, but neither could lift it, working off to one side. Diamond thought he was doing a lot of hunting, but he didn't get on very fast. Out of the cover across the road Diamond struck and nosing out the trail inch by inch carried us into cover again, lost, then found, and after a few checks carried the trail out of woods to a wall; a lot of desultory whimpering came from him, but nothing of any moment was done. Umsly got excited about this time, and had lots of fun, running about till he felt quite tired. He was too fat and slow for this game. There was no need to keep them down so long, as Diamond did all the work and Umsly had not a ghost of a show. Up at 10:45. Tried for gunshyness, the concussion turned Umsly round with his head toward home. Diamond stood the test, but it was some time before Umsly joined us again, his owner having walked off and left him to his fate.

ZENO—BLOSSOM.—Crossing over to another part of grounds these two were cast off at 10:55. Both were in charge of their respective owners. This couple were much of a type on the long and lean order, but were smart, industrious workers. After hunting out a lot of mixed ground without a whimper that denoted business, outside of some cover the crowd startled a hare, and the hounds were faced—nose on. Zeno opened first and Blossom harked to, and between them they made the hare hustle through the woods over the rocky brush land into thick cover where the fur proved too clever; but Blossom hit the trail eventually and carried it along at quarter speed, leaving Zeno to follow the music. Near edge of woods they missed the turn, and after ten minutes casting they failed to strike and were called off to the trail of another hare that had been sighted, but the dogs could make nothing of it, and passing through woods they ran another hare about 10yds. to a wall, and being quickly routed out of his hiding place bunny was carried to a rocky pasture field and given law. The hounds being thrown at the trail, after some casting Zeno struck the proper chord and carried us at a merry pace, with one check, to the woods and then on to a wall side where he lost again, but quickly routed the hare out at close quarters and indulged in a sight chase that set us all going after him pell mell up and down the field side. He flecked the hare once or twice but could not get a fair grip. Puss turned and got a good lead and Zeno was caught up. Time 12:22, and as the clam soup was getting cold we all strolled over to the farmhouse barn, where an appetizing lunch and a welcome rest awaited us.

At 1:05 we started again with the same brace in the rough bush patch, where a hare was soon started by the crowd. Dogs being put on Zeno was again the first to get hold of the trail properly, but it led but a short distance to a wall, Blossom marking the hole. Failing to get the game out they were soon on to another hare which led Zeno, closely backed by Blossom, to a stone heap, and they were caught up at 1:20. Both hounds worked well, but Zeno proved himself superior in his wider and more intelligent casting, and always had the speed and nose of the other. It should be said, however, that Blossom being in season, could not be expected to do herself justice. Mr. Shallcross's courtesy in allowing her to compete with his dog was sportsmanlike and commendable. Zeno was not affected by the situation and attended strictly to his duty.

*Second Series.*

ZENO—NELL R.—We expected a hustling hunt, for our Vermont friend was bent on owning this Derby, and we knew we had the winners in this brace, so took another reef in our belts and prepared for the race. Working through rocky brush land Judge Appleby stumbled on the fur, and hounds being put on we were led a merry scramble, half the fellows swallowing their chewing gum in the excitement, till bunny went to earth and Zeno tried to follow it. Getting our wind again, Nell then struck a trail outside of woods and carried it sharply to a wall, where she was joined from lower down by Zeno. The hare was seen to pass the end of the wall, and dogs being lifted on Zeno took it up, closely pressed by Nell, to a fling, and the dogs were taken up at 1:55 to be put down later.

### Class G—Bassets and Dachshunds.

To give the others a rest this class was called up, but Mr. E. A. Manice's liver and white and tan bitch Princetta, known at home as Molly Pitcher (Jay—Princess), was the only entry. Of course every one felt compelled to smile at her Highness, as properly constituted beagle men would be expected to do, but Princetta did not mind, and it takes a good deal to phase Mr. Chapman, who handled her. Down at edge of cover at 2:02. Worming, this is the correct term, into cover, Mr. Joslin obligingly jumped a hare, but Princetta didn't care about it much, so we trotted on down in the pines to where Mr. Chapman had a hare on the move, but no hound could be expected to pick up a trail on the dry pine needles at this time of day. But Princetta tried her best and getting down into a hollow among the brush she hunted assiduously and a series of sharp yelps told she was making game. She worked along at fair speed back to pine needles, where she lost her hold. Then she trailed quite a piece in rough undergrowth on to a bit of swamp, where she lost and took the back track, then hunted backward and forward and was called up at 2:55. Every one had changed their opinions on dachshunds in general and Princetta in particular, for she hunted diligently, if not intelligently, and her snaky action carried her along through some very rough close brush at a speed that was very deceiving. She is only about a year old, and under good training will make a likely hunter. As Mr. Manice pays $8 for entry and the prize was only 40 per cent. it will be seen that he had to pay for the distinction of winning with the first dachshund at an American field trial. But the glory of it!

*The Derby—Continued.*

Harking back to the beagles, Nell R. was put down at 3:05 to hunt alone—a very good idea. In open, after working out some ground, she tongued and raced to a check across a road; then in rough brush patch she hit off another trail to a check; nosed it out once more by the wall fence where puss had holed, and she was taken up.

Zeno was then put down at 3:27 in the same rough pasture. On into woods where he trailed to a start and ran the game prettily to a stone heap, where the hare holed. He showed good work in this, and it probably proved a lucky bit for him, as with this fresh in their minds the judges consulted and soon announced Zeno winner of first, Nell R. second, Blossom third, and Diamond reserve. There is little between the two winners, and on the whole of the series Nell had just as good a claim to first honors. The decision was well received. This closed the running for the day, and it was a pretty tired crowd that drove home in the gathering twilight.

### WEDNESDAY.

Good hunting weather again. The morning proved cloudy and raw, but little wind was stirring until afternoon, when a northeaster came up and did not improve the hunting conditions, while to make matters worse it commenced to rain about 4 P. M. The rendezvous was at the Jefferson farm again, and the hunting, as yesterday, on Federal Hill. Most of the spectators were members of the club and interested in the dogs. The dogs had been drawn for the All-Age Stake—13 to 15in.—last evening, and filled as follows:

### All-Age Stake—13 tp 15in.

F. W. Chapman's white, black and tan bitch Marguerite (Fitzhugh Lee—Dido), handler, owner, *with* Mark Lewis's white, black and tan bitch Mollie L. (Don—Mollie), handler, W. S. Clarke.

A. D. Fiske's white, black and tan dog Piper (Fitzhugh Lee—Lady Novice), handler, A. H. Morse, *with* Miss E. C. Kreuder's black, white and tan bitch Blanche (champion Frank Forest—Ida), handler, George F. Reed.

Pottinger Dorsey's black, white and tan bitch Dorsey's Mollie (Jack—Beauty), handler, W. S. Clark, *with* George F. Reed's black, white and tan ticked dog Buckshot (Dave—Daisy), handler, owner.

Howard Almy's white and tan dog Lewis (Bannerman—Parthenia), handler, owner, *with* H. S. Joslin's black, white and tan dog Jean Val Jean (Chubb—Mystic II.), handler, E. Barnes.

Awashonk Kennels' black, white and tan bitch Quaboag Belle (Larry—Louie), handler, T. Shallcross, *with* G. A. Buckstaff's black, white and tan, ticked dog Royal Rover (Rover—Singer G.), handler, W. S. Clarke.

Awashonk Kennels' black, white and tan dog Zeno (Deacon Tidd—Daisy), a bye, handler, T. Shallcross.

Forest Beagle Kennels' Forest Hunter and Vick R. and H. A. P. Smith's Louie Fitzhugh did not fill.

*First Series.*

MARGUERITE—MOLLIE L.—No time was wasted, and the first brace was put down at edge of woods near the farm at 8:35 A. M. Both hounds went to work in a business-like manner and soon were tongueing on some old trails that ran to a wall. Mollie's keen nose worked out a circling trail, which drew her to a diminutive leveret, and she ran it for some distance. Mr. Appleby thought this no fun, so kindly started a full-grown *lepus*, the trail of which Marguerite was first to hit, but dropped it shortly, and Mollie harking to, found, and bustled the game to a wall hole. This was a smart drive, and both bitches meant business. Dogs were then drawn to where Mr. Reed claimed to have seen game in thick cover, but neither beagle could verify his statement, and after trying a lot of ground, they were called up at 9:45. Both hunted assiduously, but did not show very keen nose. Their work was even on drives, but Mollie took the wider casts. Both under fair control.

PIPER—BLANCHE.—A move was made to another part of the grounds. Down at 10:10 in rough bush pasture; said to be the ground for sure finds. Blanche soon began tongueing, but lost directly; picked up the trail again and the next check let Piper in, but he did not seem to interest himself much but followed Blanche to another check; then both lifting the trail they hunted puss out of the cover and across the open at a hot pace, and packing well gave us the prettiest hunt so far; a wall checked the race, and it was welcomed, as it was bellows to mend for some of us. Off again over fern patch where they lost the rabbit going toward the woods. Another hare had been seen and the dogs were held to the trail, but Piper did not care for that style of hunting and allowed Blanche to do the honors, but Piper soon showed he could run, too, and between them carryied us across the woods at a merry clip to a hole in some rocks. Blanche did good work here, hitting off smartly to three flings. Up at 10:55. Blanche seemed to have the keenest nose but lacked the range of the other, and Piper had the foot of her whenever it came to a drive on equal terms. Blanche is a vastly improved bitch on her Derby form, and showed that she had been well hunted.

DORSEY'S MOLLIE—BUCKSHOT.—These were put down in the bushy patch at eleven o'clock. Molly, who seemed in whelp was in charge of W. S. Clark, but did not care to acknowledge it at times, as he was a stranger to her; Buckshot had therefore an advantage in knowing his master Mr. Reed. On a rabbit that was viewed, Mollie did some pretty trailing on the back track, but getting the line lower down the hill started well but soon lost to Buckshot who had been casting to one side and the dog carried us pell mell across the woods and open. The pace was a corker and there was little breath left in those who managed to follow. Mollie picked up a turn or two but Buck always had the speed to take the lead and did most of the driving. As the gentleman from Vermont expressed a desire for water, a request entirely without precedent at these trials, a recess was taken to accommodate him. In a quarter of an hour the dogs were cast off again and going through woods Judge Appleby spied a hare squatting; she kindly stayed so until the dogs were brought up but instead of giving her law, they were thrown almost on to her and a "spy" run was had for a few yards when puss dodged and squatted again, fooling the dogs. Mollie called the turn but Buck would not be denied and led us a cracking burst of five minutes across thick woods to the boundary wall at the roadside, where the hare holed; he could be felt but not seen and we left him for another day. It was then 12 o'clock and we walked a mile to the farmhouse for lunch. These two dogs gave us the most brilliant work of the meeting and had Mollie not been so heavy in whelp, and more acquainted with her handler, she would have done even better; as it was, Buck did the most brilliant work. He is a corker on a hot drive, being used to the swamp hares and free going, but Mollie is more careful in her trailing and is no doubt a good one under different conditions.

QUABOAG BELLE—ROYAL ROVER.—These were down at 1:20, edge of woods, in pasture. W. S. Clark looked after another stranger in Royal Rover. It is rather a thankless task handling a strange dog and must try one's patience, as one's voice and motions are not familiar to the dog, but Mr. Clark knows his business and was soon on terms with those he handled. A hare was viewed and dogs trailing prettily to it ran to woods, where they lost. This was a pretty run, the couple packing nicely, and their sweet music was brought back to us by the rising wind. Soon after Rover led off in some very tick cover and a "scratching" run ensued which was hard to follow. Dogs lost, and after desultory casts arounk the hare was started by handlers and dogs drawn on. Rover, working lower down, hit off first, the rabbit squatted but Rover was not to be fooled, got him up and struck the trail several times for some sharp bursts along the edge of woods and then deeper in the woods, the dog leading all the time, Belle, when she could catch up, content to give her encouraging babble when the other was silent. After driving the hare to a wall across the woods, the hounds were called off at 2:20 with the most credit being in favor of Rover, who gets out and hunts and has a pretty

sharp nose. Belle hunts well enough, but her tongue gets the best of her head sometimes.

LEWIS—JEAN VAL JEAN—These were put down in cover at 2:25. Both dogs hunted industriously and their work was marked by good style and intelligence, though in the latter quality Jean easily led. After a while a hare was started in a pathway and dogs brought on. Jean tongued first and led off, but lost directly; working back to top of rising ground Jean lifted the trail again and carried it to the bottoms. Here he showed some very snappy, heady work, and managed to cover a lot of ground in his casts but missing no likely spots that would hold a scent. Casting back to hill he ran the trail again, Lewis, who seemed discouraged by the snappy work of his rival, dawdling to one side. It turned out there were two hares moving, as they were seen to come out of woods. Dogs up at 2:50. Lewis began his heat well, but afterward, whether rattled by the crowd or not, he seemed to lose interest, but Jean, as stated, seemed to be in every likely spot at once and did brilliant work. Both were stylish workers and under good control.

The next heat should have been Zeno's bye, but as there was only one entry left in the All-Age under 13in., the Forest Beagle Kennels' Gypsey Forest and Viola being absent, and Mr. Hanson anxious to return home that evening, it was decided to allow his entry to run off for the prize, an account of which run will be given in due order.

ZENO (a bye) with PIPER—Having returned to the farmhouse after the 13in. walkover, this brace was cast off in rough pasture below the house, a part of the grounds we had not yet hunted over. After covering a good many acres, the spectators spied a hare and hounds were drawn on. Both tongued, but Zeno struck it right first, then both took it up in hopeful fashion, but could not hit the trail warm enough to carry them along. Then put down on hillside Zeno struck a trail and carried us at a ripping pace up the hill, followed closely by Piper. This was hot work, it is bad enough to take your hills plain, but when it comes to fighting briars and rocks in the mad race to keep within striking distance of the hounds, the result is a little demoralizing to one's temper. A welcome check gave opportunity to notice that it was raining, and the keen northeast wind boded no good either for present scent or the morrow's hunting. Circling down the hill the hounds ran well, again Piper leading quite a distance. Then as it was raining hard and getting dark the dogs were called off at 4:55. Both worked well, but it was easy seen that the Derby winner Zeno would be lost in the shuffle among the older dogs. A wet ride home ensued and the weather-wise predicted no hunting to-morrow.

### All-Age, 13in. and Under.

OLAF OF DENMARK—CLYDE.—It is four years next month since I first saw Clyde work the cotton-tails, but the little dog keeps up well and is still able to do a good day's work, and in his run here showed that there are few of his inches that can lead him. A. H. Morse handled Clyde, he having had him at his farm for some time. Cast off at 2:55 in rough pasture, Clyde found a trail, and Olaf, brought to the line, chimed in and followed Clyde for a sharp burst across brushy woods to the boundary wall, where we found both dogs trying to get up the hole where puss had disappeared. A good deal of hunting was done during the heat, and Olaf showed himself a fair to middling sort of a dog and was awarded the stake.

### THURSDAY.

Rain, rain and more rain, with wind enough to blow scent sky high. An attempt was made about 8 A. M. to carry out the day's programme, but after driving to the Jefferson farm it was found utterly impossible to continue the running, and as it was no use getting wet through for nothing, the horses' heads were turned back to the hotel, where the day was spent in keeping the stove warm and spinning such yarns that Landlord Bacon had to shake himself to be sure he wasn't dreaming.

In the afternoon President Joslyn took several of his visitors through the Joslyn shoe factory, and to those of us whose knowledge of the shoe's construction extended no further than its fit, the sight was a most interesting one. There is an old saying, "There's nothing like leather," but Yankee ingenuity gets the better of it here.

### FRIDAY.

At 6 A. M. there were several noses flattened against as many window panes in the endeavor to see the color of the skies. There was no rain, but that is as much as could be said, for the clouds hung low, and only those who were compelled to turned out to see the finish runs. A raw north wind did not add to our comfort, nor promise holding scent. The dogs for the second series of the All-Age 15in. class had been decided upon, and Dorsey's Molly, Royal Rover, Buckshot, Jean Val Jean, Piper and Blanche were left in and called in the order named.

*Second Series.*

DORSEY'S MOLLY—ROYAL ROVER.—No one expected to see much hunting, as it commenced to rain soon after starting into the woods, the only place to find game. This brace, under Mr. Clark's charge, started out at 8:35 with littte enthusiasm—as if they knew the game was not worth the candle. Rover did some very careful hunting—some might say he pottered a bit, opened a few times, but what with the rain and the wind could not follow it up. Molly, who was not in proper shape, hunted earnestly, considering the disadvantages under which she labored. After going about an hour they were called up.

BUCKSHOT—JEAN VAL JEAN.—We all knew that in these two we had the winners, and that if there was any fur above ground they would find it. They were cast off at 9:45 in the same rough ground, and started off at a 2:10 gait, Jean showing prominently in his snappy, intelligent hunting, while Buckshot made his casts wider and more after the manner of a foxhound. A hare was seen and dogs drawn on to the line. Jean took it up directly and with a check or two, first one hound and then the other leading, carried us at a merry pace through the dripping cover to a wall—no time to hole, but over into bushy ground, where the trail was lost, and then both dogs showed their good hunting sense. Mr. Turpin saw the hare and both dogs were drawn to the line, but they did not hit it off properly, Jean tongueing now and then. Buckshot tried back to the wall, and Jean followed, and working prettily, struck it hot, and Buck harking to him drove at a good pace across an orchard to a wall near a farm house, where puss got out of the wet and danger. Dogs up at 10:25.

D. MOLLY—ROYAL ROVER—Were tried again in the open where Mr. Turpin's lynx eye had spied a small rabbit. Rover was the first to open on it but lost directly. The hare was seen to go down the hollow but neither dog did good work on it, driving slowly with frequent checks, and they were taken up at 10:50, and we tramped to the Jefferson farm for

PIPER—BLANCHE.—These two were put down at edge of covert back of the barn. After thirty minutes' walking Blanche showing most hunts, A. H. Morse started fur and Blanche was the first on, drove for a little way, lost, picked it up again and then both drove nicely across the woods again to a check; picking up again to one side they hustled puss along at a lively rate, and she, using all her wiles, caused several checks in the drive to the wall, where she took refuge. Piper in this latter work finished alone. There were two rabbits on foot and this bothered Blanche to some extent. Up at 12:25. Blanche showed the most intelligence in casting, the keenest nose, and hunted very carefully. Piper had the foot of her when it came to a race. The judges seemed determined to give

MOLLY AND ROVER every chance, and had them down again after lunch, at 1 P. M. Soon after starting a hare was seen squatting by Judge Guyn, and hounds brought up did not strike at once, but casting to one side Rover hit the trail and ran for a snort distance, then Molly had her turn and treated us to a nice bit of casting, drove puss for a turn, and then relinquished the lead to Rover, who drove through the fence across a spinney to a wall where he lost, and dogs were called off shortly after, at 1:30.

*Third Series.*

BUCKSHOT—BLANCHE.—Moving to another part of grounds, our best spot in open rough pasture, these two were put down at 1:55. Very soon Blanche started fur and led a sharp burst across the open to the old stone heap, where the hare sought cover and escaped. These walls break up all the likely runs. Mr. Reed handled both these dogs and Buckshot did his share of the hunting. After running off the 13in. Derby the judges decided on this stake as follows: Jean Val Jean first, Buckshot second, Blanche third, and Piper reserve, a decision that met with every indorsement.

### Derby, 13in. and Under.

There were four entries in this stake, but Glenrose Kennels' Pride of Glenrose did not fill its engagement. They were drawn as follows:

Geo. Laick's black, white and tan dog Laick's Roy (Rover—Minnie L.), handler, Geo. F. Reed, *with* W. Randall's black, white and tan bitch Lola Lee (pedigree not published), handler, W. S. Clark.

Glenrose Beagle Kennels' black, white and tan bitch Beatrice of Glenrose (Fifer—Gypsey A.), a bye, handler, owner, F. W. Chapman.

*First Series.*

LAICK'S ROY—LOLA LEE.—These were put down in same pasture. The rain had stopped and every one felt in a better humor to appreciate the difficulties of the handlers in their efforts to make their little green ones hunt. It was soon seen that this was a hopeless task as far as Roy was concerned, for he acted as scared as the game he should have hunted. Mr. Turpin obligingly kicked up a hare, and dogs were drawn right to the line, but they would not have it. Clark in his eagerness stepped on the trail and Reed claimed a foul and the laugh that followed stirred Lola into working humor, and trailing nice and gently she followed out the old trail that led to the stone heap. Moving on to another cover Roy evidently read the sign on the gate forbidding all hunting, an order he religiously followed. Here Lola picked out a twisting trail and had quite a jolly time, with Roy joining in when he thought no one was looking at him. Up at 2:40. Lola did all the work, such as it was, and shaped quite nicely toward the end; with more opportunites she will probably make a good hunter. Roy has done well in pack work, but did not care to go it alone

BEATRICE OF GLENROSE—LOLA LEE.—Beatrice ran her bye with Lola. Both handlers of the other dogs protested Beatrice for oversize, but she was allowed to run under protest and be measured on our return, when she was found to come under the bar. Lola tongued on a trail, and both drove across the roadway to a check, Beatrice leading at the finish. Lola, however, did the hunting and picked off the turns and drove to the wall. Up at 3:30. Lola was improving all the time and was hunting very eagerly.

*Second Series.*

LAICK'S ROY—BEATRICE—Down at 3:12 in the same cover. Beatrice ran the old trail and showed up better, Ray joining in now and then. Up at 3:20 and we walked back to the Jefferson barn where the judges rendered their decisions. Lola Lee first, Beatrice of Glenrose second, third withheld.

### Champion Stake.

There was only one entry—Jean Val Jean—and he was cast off for a walkover. He showed his qualification for the title by trailing out a leveret about 2in. long, and the New England Beagle Trials were over for 1894. H. W. L.

• • • •

### How they Felt About it.

*(With Apologies to Mr. Hough.)*

*H. S. Joslin.*—No, you can't buy my dog; his price is the same now as it was before the trials.

*B. S. Turpin.*—Wish they'd put conning towers up on the grounds so that reporters could see the dogs work and not have to run so much.

*W. S. Clark.*—They ought to run these dogs coupled; how is a man to handle two hounds in one heat?

*"Canada Gray."*—I tell you it's two dollars to nothing I win at Hempstead; they can't stand a load of "Buckshot."

*H. Hanson.*—No, Olaf is not a great Dane.

*Thos. Shallcross*—You see, we don't come to the trials blowing about what our dogs can do at home; we wait till they win.

*W. E. Hapgood*—The beagle is a hound, and his eyesight is so keen he has no use for his nose. See?

*G. B. Appleby*—Fooling with beagles is all right, but I killed thirteen foxes last season. That's the stuff.

*C. W. Quyn*—Can you blow my horn? I think we got them about right.

*F. W. Chapman*—I'm no hog. I don't want to win all the time; but you look out for Umsly next year. I'll get his ears plugged.

*The Rabbits*—Say, are they gone?

## HUNTING AND COURSING NOTES.

The Northwestern Beagle Field Trials Club has an entry for its meeting of next week that the club members must be proud of. It shows that the beagle interests are in the care of the proper men, and the only regret is that the distance from the Eastern beagle men is too great to admit of the latter sending many of their dogs to compete. Mr. W. S. Clark, of Linden, Mass., will judge in place of Mr. Joe Lewis, who is unable to officiate. The club is particularly lucky in being able to secure such an able judge. At the N. E. B. C. meeting held last week there were many anxious inquiries as to the number of entries for the Columbus fixture, and considerable interest was evinced in the coming meeting. The club, however, should not lend itself to partiality in publishing the entries in the different stakes. FOREST AND STREAM has accorded the club every privilege in its power in giving publicity to the club's arrangements for the trials. In return we should have received the list of entries at the same time as other journals. Instead of this the entries were not *mailed* by the secretary until our press day, Oct. 23, and therefore received too late for our last week's issue.

The trials commence on Nov. 7, and all dogs must be at Columbus, Wis., on Nov. 6, as they will be measured at 8 P. M., and afterward the draw for the Derby will take place. The C., M. & St. Paul trains leave Milwaukee at 12:50, 5:10 and 11 A. M., and 1 and 9 P. M., for Columbus, Wis. The Hotel Tremont will be the club's headquarters, and the rates will be $1 per day for those attending the field trials. Mr. Steffen writes that rabbits are reported plentiful.

Among the list of specials are several that are quite valuable, in fact, more so than at any beagle trials yet held. The winner in Class A will get a gold medal, value $25, given by Mr. G. Pabst. The Class B winner takes a gun, value $25, and Mr. Buckstaff gives an office chair for best in Class D, and so on, the specials ranging in value from $5 to $200, the latter sum being the value of a painting given by Mr. Osthaus, of the winner in the champion class. FOREST AND STREAM gives subscription to beagle showing most hunting sense.

The National Fox Hunters' Association's first annual meeting will be held, as already announced, at Olympian Springs, Ky., Nov. 19. This resort is 144 miles from Louisville, near the Chesapeake & Ohio Railroad, and the fare from Louisville, round trip, is $5.76. All roads entering Louisville will give special rates. Arrangements have been made with the Olympian Springs management to place their hotel and cottages at the disposal of visitors, and board and lodging can be had for not more than $1.50 a day; board of horses, 50 cents a day. Good saddle horses can be had at $1.50 a day, but should be engaged in advance by writing the secretary. This promises to be the largest gathering of fox hunters ever held in the United States, and every fox hunter in the country will find a welcome for his hounds and himself. The secretary, Mr. Harry L. Means, of Louisville, will give any further information that may be required.

• • • •

Mr. L. F. Bartels went to St. Louis Oct. 18, to get his greyhound Border Ruffian which had been stolen from him March 23. He writes: "My trip to St. Lous turned out to be successful, and the dog I went after proved to be Border Ruffian. The parties who had him, in order to disguise him, had cut off the tips of his ears and had dyed him in places with nitrate of silver or some other strong solution. The dog, however, knew me the moment I spoke to him and jumped all over me with joy at seeing me again. I recognized him, although dyed and disfigured about the ears, I should have known him had he been painted all over. The replevin case was set for the 22d, but as I have the dog in my possession, I don't care about the proceedings and will compel them to fight on the replevin bond. I do not think the parties who had him will take any action, for fear of uncovering the thief." Mr. Bartels must be congratulated on the recovery of his dog. A moral may be drawn from this—you may dye the dog but the dog's affection for his master never dies while it lives.

## Yachting.

### Miramichi Y. C.

CHATHAM, N. B.

*Friday, Oct. 19.*

THE judges of the race of Oct. 11 gave the prizes to the second and third boats on the ground that the leading ones had turned a mark-boat incorrectly, and the racing fever ran so high that one more contest was agreed upon. A purse was subscribed by the yacht owners and a few others for another race on Friday, Oct. 19.

The wind blew hard from the west, but was streaky in places near the shores. The course was twice around a five-mile broad Λ off Chatham, being practically a run and a beat, with all the windward work in the teeth of a very strong ebb tide. Oriana started first, but was overpowered by the strong gusts she got on the first of the beat up, and was passed by Maude and Learig. Near the upper buoy she passed Learig and put Maude about, but the latter got a favorable slant off the south shore, while the other two were fighting for the weather gauge on the north side, and rounded nearly five minutes ahead, with Oriana next.

Oriana's topsail halliard parted and the spreader for winging out her balloonjib washed off the deck, so that she was left to make the run with nothing but her mainsail drawing. Learig passed her, but she made a better turn at the lower buoy and crossed Learig's bows on the first tack; but Learig passed both her and Maude before reaching the upper mark again. Maude's peak halliards gave way and she lost four or five minutes in bending it again, which put her out of the race, but she kept gamely on to the finish. Learig got first money and Oriana second. The wharves and shores were lined with interested spectators, and exhibitions of clever seamanship were frequently cheered.

| | Length. | Start. | Finish. | Elapsed. | Cor. |
|---|---|---|---|---|---|
| Oriana, J. L. Stewart | 23.09 | 11 57 53 | 2 53 58 | 2 56 05 | 2 52 36 |
| Maude, J. C. Miller | 23.09 | 11 59 44 | 3 00 58 | 3 01 14 | 2 57 45 |
| Learig, A. S. Burr | 27.00 | 11 59 48 | 2 48 25 | 2 48 36 | 2 48 36 |
| Starling, B. R. Bouthillier | 25.00 | 12 00 47 | Grounded. | | |

### Society of Naval Architects and Marine Engineers.

THE second general meeting of the Society of Naval Architects and Marine Engineers will take place in New York city, at 10:30 A. M. on Thursday, Nov. 15. Through the courtesy of the president and managers of the American Society of Mechanical Engineers, the meetings will be held in the auditorium of No. 12 West Thirty-first street, the sessions extending through Thursday and Friday, Nov. 15 and 16.

There will be a banquet at the Hotel Brunswick at 7 P. M., Friday, Nov. 16.

In order that suitable arrangements may be made, the executive committee request that members will notify the secretary as early as practicable of their intentions as to the banquet, and also as to the probability of their attending the meetings of the Society.

It is earnestly desired that the meetings may be fully attended, in order that the papers presented may be discussed with a thoroughness commensurate with their importance.

Members intending to propose candidates for membership are requested to notify the secretary in order that the necessary blank forms of application may be forwarded and properly filled out.

The following papers will be read:

1. "Some Suggestions of Professional Experience in Connection with the Naval Construction of the last Ten Years—1884-1894." Richard W. Meade, Rear Admiral, U. S. Navy
2. "The Use of Small Models for the Determination of Curves of Stability." Mon. E. Bertin, Director of the French Government School of Naval Design.
3. "Some Obstacles to Ship-Building and Owning in this Country." Geo. W. Dickie, Esq., Naval Architect, San Francisco, Cal.
4. "Present Status of Face-Hardened Armor." W. T. Sampson, Captain and Chief of Ordnance, U. S. Navy.
5. "Cellulose and its Application to War Ships." Mon. E. Cheneau, Philadelphia, Pa.
6. "Experience Gained with our New Steel Ships as Regards Care and Preservation." Philip Hichborn, Chief Constructor, U. S. Navy.
7. "The U. S. Triple-Screw Cruisers Columbia and Minneapolis." George W. Melville, Engineer-in-Chief, U. S. Navy.
8. "Electricity on Shipboard—Its Present Position and Future Development." S. Dana Greene, Esq., New York, N. Y.
9. "Hydraulic Power for War Ships." Albert W. Stahl, Naval Constructor, U. S. Navy.
10. "Yachts in England and America." Lewis Nixon, Esq., Naval Architect, Philadelphia, Pa.
11. "A Dynamic Steam Engine Indicator Tester." Prof. Cecil H. Peabody, and Assistant Prof. E. F. Miller, Massachusetts Institute of Technology.
12. "Steamer and Tow-Barge Efficiency and Classification of Lake Vessels." Jos. R. Oldham, Naval Architect, Cleveland, O
13. "Notes on Launching." William J. Baxter, Naval Constructor, U. S. Navy.
14. "Accessibility and Circulation of Water Tube Boilers." L. D. Davis, Esq., M. E., Erie, Pa.
15. "Recent Light-Draught Gunboats of the U. S. Navy." J. J. Woodward, Naval Constructor, U. S. Navy.

### The Mediterranean Regattas.

AS WE have already announced, Mr. Gordon Bennett and Baron de Rothschild have offered valuable prizes for sailing yachts at Nice regetta; but a hitch has occurred as to the terms of the matches. Mr. Gordon Bennett decided that the matches should be sailed under Y.R.A. rules and rating; but the Baron would not agree that his prizes should be also sailed under these rules, but under the rules and rating of the Union des Yachts Français. He has accordingly handed his prizes over to the Cannes Regatta Committee, who observe the Union rules, and the Baron's prizes are to be competed for by French owned yachts only. It does not, however, appear that the yachts must be French built as well as owned.

It seems that a curious error prevails among the French regatta officials that the length, girth and sail area rating rule is favorable to British yachts because it reduces their rating below the Y.R.A. rating. This, however, is the mere effect of the constant divisor, and acts alike on all. There is one important exception, however, and that is the case of a centerboard yacht like Vigilant. If no penalty is imposed on the centerplate her rating would be reduced by the French rule enormously, and Britannia would not even have a look in with her. However, Mr. George Gould informed us two or three weeks ago that he had abandoned his intention of sending Vigilant to the Riviera regattas. If she did go she would probably make as clean a sweep of the prizes as Britannia did last year.

The owners of the 40-raters are being gradually encouraged to send their yachts to the Riviera. We are informed that the £400 Monte Carlo prize and £250 are to be disposed of in the manner first and second prizes are in this country sometimes when the classes are mixed; that is to say, if the £400 prize is won by a yacht exceeding 40-rating, then the £250 prize will go to a yacht not exceeding 40-rating, and *vice versâ*. This, it is supposed will make the matches more interesting to the owners of class vessels; but it must be remembered that the arrangements prevents 40-raters winning both prizes, just as it prevents the large vessels doing so. We are afraid this old-fashioned method of shuffling the cards without paying more money will not have the effect the committee anticipates, although it is announced that the terms will be applied to most of the matches. Supposing there are three large vessels in competition and one 40-rater, the former would naturally not enjoy the £250 given to the 40-rater for what would be practically a sail over. As far as we know, the only English yacht owner up to the present who is certain to start his yacht in the Riviera regattas is Mr. F. W. L. Popham; and we understand the Prince of Wales has not as yet given any orders as to Britannia's movements next year.—*The Field.*

## The Skipjack Up to Date.

THE modern *fin de siècle* flyer, such as so many sailormen now covet, is a most expensive luxury, in even the smallest sizes expressed by a fraction of a rating, and quite beyond the means of the average boat sailor. The little craft here illustrated has the merits of cheapness, easy construction, well within the powers of an amateur builder, and of fair speed and good performance; added to which she has a sheer plan that might easily be mistaken for something much more elaborate and expensive, and an up to date appearance that will commend her to many. She was designed and built by Mr. W. F. Nason, of Georgetown, Mass., who writes us as follows:

*Editor Forest and Stream:*

The inclosed plans show the Myra, a 15ft. cruiser, built by my brother and myself in the summer of 1893; her performance has been so satisfactory and the construction is so simple and inexpensive, that a description may interest some of the readers of the FOREST AND STREAM. I have been a reader of your paper since 1883, and the many designs which have appeared in it have been a source of pleasure and information to me. "Canoe and Boat Building for Amateurs" taught me to build my first round bottomed boat, and since then I have built several others, all of which have turned out well. The 15ft. Wizard, in particular, is a fast boat, winning the second class championship of the American Y. C., of Newburyport, for two seasons, and being first in her class in the Gloucester open regatta for two seasons.

Myra was not built for racing, but is faster than most of the working boats about Newburyport; she steers easily on and off the wind, and is easy in a chop. My expectation was that with such a bow she would pound in a chop; but she is quite as easy as other boats of her draft.

The construction will be understood from the drawings, the keel is formed of the bedpieces of the centerboard trunk, which extend 2ft. fore and aft of the headledges; the stem and stern pieces being scarfed in between them. The bed pieces are 2×12in., the stem and stern 2×5, all of oak. Along the chine, where the sides and bottom meet, is a bilge stringer of hard pine, 2½×1¼in., into which are mortised the side timbers, 1×⅞in. The planking is of white pine, ⅝in., the bottom plank laid thwartships and stiffened by three strips of hard pine running fore and aft between the bilge and keel. The topsides run fore and aft in one width each. The deck and top of house are of ½in. pine, canvassed.

The cabin being small, necessarily the large amount of dunnage carried is stowed about the cockpit, a space on each side opening into cabin, a door in each side of the cockpit near the after end giving access to the space at the sides, while a deck hatch, inside of the coaming, leads to the space in the counter. Beneath the cockpit are two large drawers, which pull out into the cabin. The cockpit and companion are covered by a tent, and a party of five has been accommodated on the three days' trip, though three is the usual number.

The original intention was to carry from 300 to 400lbs. of ballast with a crew of three, but the boat has been sailed mainly without ballast. In this trim she is by the stern as compared with the design, but seems to sail better than when ballasted and trimmed just to the lines. With her closed cockpit and 21in. deck it is possible to heel her to a point where her speed is hindered, with no fear of a capsize. As the design is quite capable of enlargement to 18ft. l.w.l., we give two scales for both 15ft. and 18ft. l.w.l., the respective dimensions being:

| | 15ft. l.w.l. | 18ft. l.w.l. |
|---|---|---|
| Length, l.w.l. | 15ft. 2in. | 18ft. 2½in. |
| over all | 22ft. 10in. | 27ft. 4in. |
| Overhang, bow | 3ft. 3in. | 3ft. 10½in. |
| stern | 4ft. 5in. | 5ft. 3in. |
| Beam, extreme | 7ft. 0¾in. | 8ft. 6in. |
| l.w.l. | 6ft. 6in. | 7ft. 10½in. |
| Draft, hull only | 1ft. 4in. | 1ft. 7in. |
| with board | 4ft. | 4ft. 10in. |
| Freeboard, least | 1ft. 0½in. | 1ft. 3in. |
| Sheer, bow | 11½in. | 1ft. 2in. |
| stern | 7in. | 8in. |
| Mast, from fore end l.w.l. | 2ft. 9in. | 3ft. 4in. |
| deck to hounds | 16ft. 6in. | 19ft. 10in. |
| deck to truck | 22ft. | 26ft. 2in. |
| diameter at deck | 5ft. | 5½ft. |
| Bowsprit beyond end, l.w.l. | 8ft. 6in. | 10ft. 2in. |
| diameter | 2¾in. | 3½in. |
| Boom, length | 20ft. 6in. | 24ft. 6in. |
| diameter | 2½in. | 2¾in. |
| Gaff, length | 15ft. | 19ft. 10in. |
| diameter—egg-shaped | 2×3in. | 2½×3½in. |
| Mainsail area, sq. ft. | 315 | 455 |
| Jib area, sq. ft. | 73 | 104 |
| Total | 388 | 559 |

SAIL PLAN OF MYRA.

## YACHT NEWS NOTES.

There was launched, on Oct. 1, from the yard of Messrs. Ramage and Ferguson Limited, a steam auxiliary three-masted steam yacht of 755 tons Y.M., built to the order of Mr. J. B. Robinson, from designs by Mr. G. L. Watson. This vessel, which is intended for extensive foreign cruising, has been built to the highest class at Lloyd's, with several important additions to her strength in excess of their requirements; and her equipments in all respects of an unusually complete description. The principal directions are: Length over all, 190ft.; breadth, 29ft., and depth 18ft.; and the machinery, of the builders' special design, consists of a set of triple expansion engines, having cylinders 14in., 23in. and 36in. diameter by 37in. stroke. Steam is supplied to the engines by a Bellville boiler of the same type as that which is being fitted to so many war vessels at present, and as it is the first which has been fitted on board a yacht, the experiment will be watched with interest by many yachtsman, as the saving in weight is considerable. A telescopic funnel and patent Bevis feathering propeller enable those on board to quickly adapt the yacht for proceeding under sail alone, and for assisting in the handling of the sheets and halyards, steam capstans are placed fore and aft. The accommodation below is commodious, and is fitted up in a most luxurious style; and on deck there is an unusually large deckhouse for an auxiliary yacht. On leaving the ways the yacht was named La Belle Sauvage by Mrs. A. G. Ramage. It may be of interest to know that, in addition to La Belle Sauvage, the same builders have already launched and completed the following steam yachts this year: Erl King, 567 tons; Ellida, 357 tons; St. Elian, 281 tons; Zeta, 271 tons They have also just received an order from Dr. Hutchinson to build a fast steam yacht of 450 tons from their own designs.—*The Field.*

Our readers will remember a brief but interesting account of a cruise across the channel and along the French coast, by Mr. Frank Dowper, M. A., which appeared in FOREST AND STREAM about the first of the year. The complete story of the same cruise has just appeared in book form, making the third volume of Mr. Cowper's "Sailing Tour." This volume, which is considerably larger than the first, deals most thoroughly and exhaustively with waters little known to yachtsmen, and but imperfectly described and chartered for pleasure navigation, on the coast of Brittany, the Morbihan and the Lower Loire. The writer has, to all appearances, explored, noted and described these new coasts as carefully and accurately as he has the English coast in the previous volumes; and a large portion of the book is devoted to charts and elaborate sailing directions, which cannot fail to be of use to those yachtsmen who may follow in his wake in waters which he portrays as far less difficult and dangerous than commonly reputed, and along a coast which possesses many charms. The casual reader, to whom the details of tides, currents and marks are unimportant, will still find much in the book to interest him in the descriptions of the places and people; and the history of this middle ground between France and England. Mr. Cowper's antiquarian tastes have led him to search the whole shore for ruins, relics and traditions; and with good success. As may be told from his former writings, he is a strong advocate of Corinthian and single-hand cruising; and the book gives evidence of the sort of work that is possible to the experienced cruiser. It is published by L. Upcott Gill, London.

The last regular meeting of the New York Y. C. for 1894 was held on Oct. 25, with Vice-Com. Brown in the chair; only the usual routine business being transacted. The following nominating committee was elected, preparatory to the annual election: William P. Douglas, E. E. Chase, James D. Smith, J. Roger Maxwell, John R. Platt, Gouverneur Kortright, Fordham Morris, C. McK. Leosser, Harold A. Sanderson, L. Vaughan Clark.

The following gentlemen were elected to membership: D. H. Hostetter, Jordan L. Mott, Jr., George D. Widener, Richard M. Laimbeer, H. M. Dombaugh, U. S. N.; James B. Hammond, George W. Swett, Henry C. Taylor, U. S. N.; Frank F. Olney, Frank W. Duryea, John Magee Ellsworth, Hobart C. Chatfield Taylor, James W. Grace, John F. Phillips, John H. Rutherford, J. C. Colwell, U. S. N; George W. Childs Drexel, Andrew T. Long, U. S. N.; E. W. Bliss, Christian M. Meyer, Benjamin Tappan, U. S. N.; Henry T. B. Harris, U. S. N.

A communication was read from Mr. L. Vaughn Clark to the effect that the Board of Trade of New London, in conjunction with some of the yachtsmen who own summer homes there, would endeavor to hold a yachting week in that port next year to take place immediately after the college boat races.

It is practically a foregone conclusion that Vice-Com. Edward M. Brown will be the next commodore to succeed Com. Morgan, who will spend next season abroad. In this event the flagship will be the steam yacht Sylvia, which has just been purchased in England by Vice Com. Brown She is an iron vessel of 195 tons. Thames measurement, 130ft. between perpendiculars, 18ft. beam and 9ft. 5in. depth, just a little smaller than Ituna. she was designed by her builders, Messrs. A. Stephens & Sons, of Glasgow, and built in 1882. Her engines are 17×28×27. and she is rated 100A1.

Sentinel, steam yacht, Mr. Chas. Fletcher, of Providence, has been exchanged for Seneca, steam yacht, with Mr. W. C. Dickson, of Norfolk.

Mr. Howard Gould returned from Europe on Oct. 22.

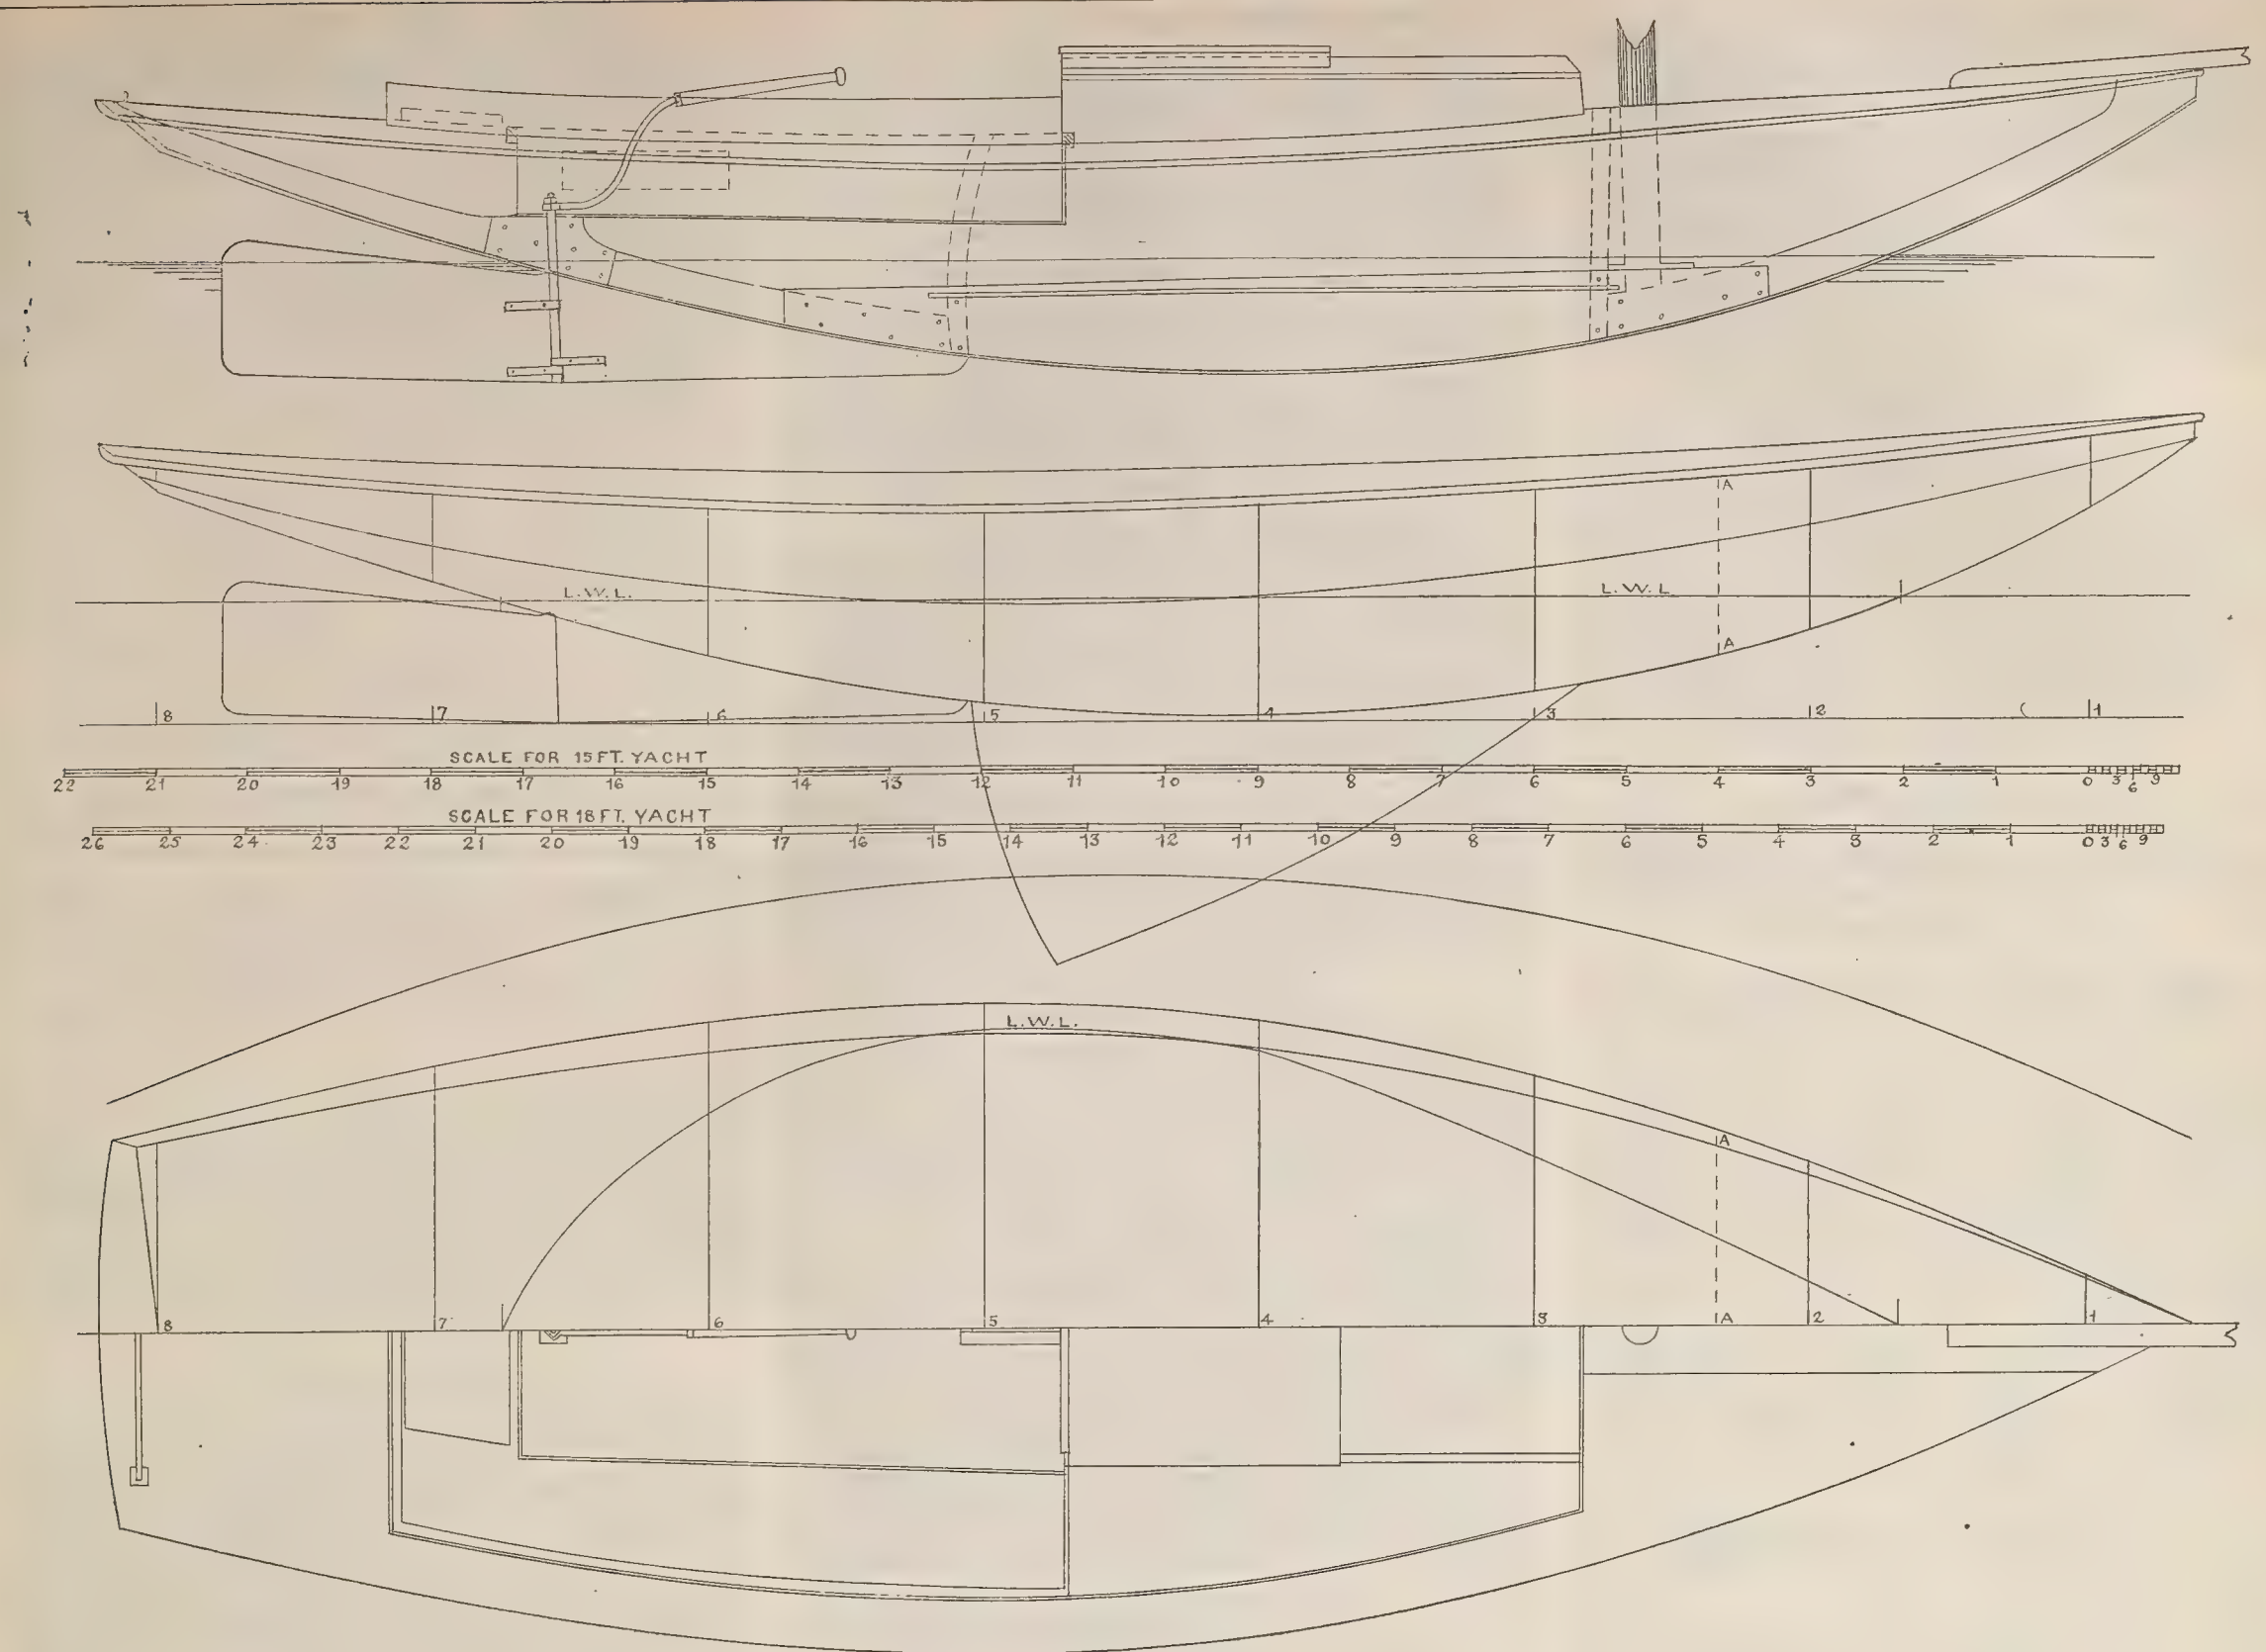
Eleanor, steam yacht, Mr. Wm. A. Slater, sailed from New London on Oct. 24 on a cruise around the world, but returned next day and anchored in the harbor, having run into bad weather outside.

The officers of the Harlem Y. C. have issued the following circular: "After many vicissitudes and considerable expenditure of energy and money, we are at last enabled to state that we have established a permanent home of our own, having purchased a large plot of land at City Island, fronting on Eastchester Bay, and erected a commodious club house, replete with all the necessary appurtenances for a yachtsman's comfort and convenience, runway, float, stage, ways, etc. Our selection of site we believe to be an excellent one, as our anchorage is well sheltered, deep and safe for temporary and permanent mooring. It is quickly reached from the city by the Harlem branch of the N.Y., N. H. & H. Railroad, with whom we have perfected arrangements for a liberal reduction in the fare for our members. We extend a cordial invitation to all yachtsmen to make use of our facilities, and we shall be pleased to entertain them either at our house at City Island or at our city house foot of East 121st street. Our ambition is to make our organization an ideal yacht club, with members thoroughly imbued with a love for legitimate yachting and a desire to design, build and equip their own yachts. At our city house and grounds we have ample facilities for members to follow their full bent in building or repairing yachts and for hauling out and storing. It has been our desire to afford all these facilities to our members at a moderate expense, and we cover it all in the initiation fee. We desire to add to our roster the right sort of people with tastes and inclinations in keeping with our own, and we offer such full and equal rights and gentlemanly companionship. Further information can be obtained by inquiry of our financial secretary at our rooms foot of East 121st street."

Messrs. C. L. Seabury & Co. are busy at their works, at Nyack, with two yachts, one for Mr. F. C. Fowler, of Moodus, Conn., length over all 120ft. l.w.l. 97ft., beam 16ft., depth 9ft., draft 6ft. 6in. The yacht is to be composite build, viz: Steel frames, deck timbers, keelsons, etc., and wood planking in two thicknesses of yellow pine. The yacht is to be flush deck, schooner-rigged, with a mahogany house on deck 16ft. long, to be used as a dining room, with bridge to steer from overhead. The accommodations will be first class. She will have two guests' staterooms, one with single berth and one with double berth. The owner's stateroom will be 6½ft. long, and extend the full width of the vessel, with bathtub, water-closet, wash basin, dressing case on one side in separate compartment, connecting with stateroom. There will be a fine large saloon with seats arranged as berths, large galley, captain's room, crew's quarters, crew's toilet room, lazarette, etc. The yacht will be first class in her appointments throughout, and will have everything aboard of her up to date. She will be thoroughly modern in every way. The machinery will consist of a Seabury triple expansion engine and two Seabury patent safety water tube boilers of latest design, which will develop sufficient power to drive her at a guaranteed speed of 15 miles per hour for three consecutive hours over a measured course. She will carry an 18ft. gig, an 18ft. launch, a 15ft. cutter and a 14ft. dinghy. She will be completed and ready for delivery by June 1, 1895. The second yacht is for a New York yachtsman. Length over all 65ft., l.w.l. 52ft., beam 11ft., draft 4ft. This yacht will be built of wood. Oak keel, frames, stempost, sternpost and deadwoods of oak, yellow pine and white cedar planking, white pine decks. She will be schooner-rigged, and will have a low trunk cabin house, with a 7ft. pilot house, all to be constructed of mahogany, finished bright, natural color; the inside finished in panel work, with tinted enamel and gold, china gloss. Forward will be arranged crew's quarters. Next aft will be the pilot house; aft of that will be owner's saloon, with toilet room on one side in separate compartment; engine and boiler room next aft; next aft is galley on port side and a toilet room on opposite side, fitted with w. c., set wash basin, towel rack, mirror, etc. Aft of these compartments is arranged the after saloon, which is fitted with transoms arranged to sleep one on each side, also has wine locker, china locker, etc.; this room is finished in tinted enamel and gold, china gloss. There will be nice deck on either side of house, also deck forward and aft. The machinery will consist of a Seabury triple expansion engine and a Seabury patent safety water tube boiler. The speed is 12 miles per hour. The yacht will be ready for delivery by May 1, 1895.

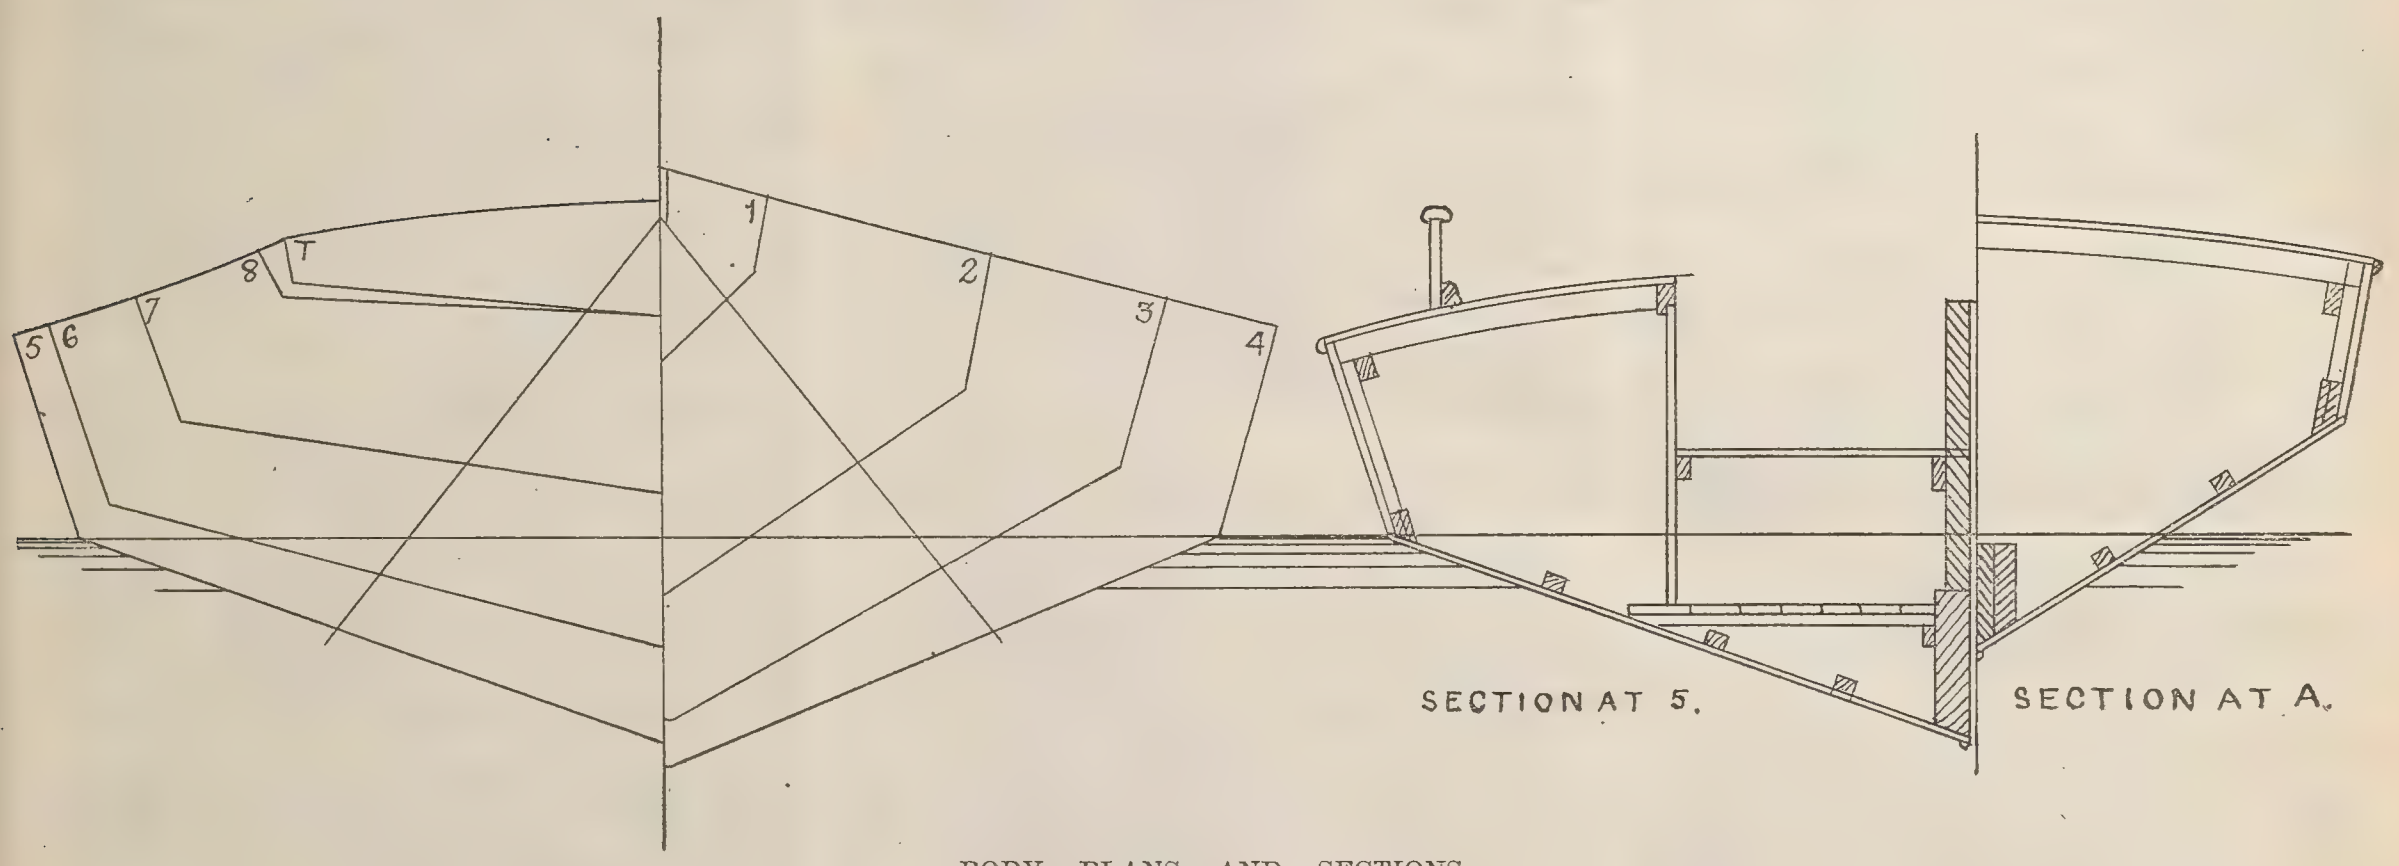
There seems to be little importance attached to an international rating rule by the mejority of yacht owners, because it may be presumed the majority are owners of small yachts, which would not be affected by such a rule At the same time, it must be remembered, if it had not been for international racing we should not have had a Genesta, Galatea, Thistle, Valkyrie or Britannia built, and possibly not a Satanita either. In fact, it may be said that the international racing of the last ten years has kept the big class going; and if this is to be so in the future, there can be no doubt about the importance of having a rating which, as now, is practically the same as the American rule.—*The Field.*

Starling, steam yacht, has been sold by David Dows to W. L. Lock hart of Cambridge, Mass.



# Canoeing.

BEING unable to witness personally the races of Mr. William Willard Howard with British canoeists, and knowing the interest which American canoeists must feel in the first visit of an American canoe to England, we have reprinted as fully as possible the reports of the races from the leading English journals, leaving them to tell the story In commenting on the races we have confined ourselves solely to the point of Yankee's qualifications as a representative American canoe, avoiding entirely other issues. We have received from Mr. Howard a letter complaining of our criticism, which letter we prefer not to publish, as in answering the charges of unfairness and prejudice we should be compelled in self-defense to discuss the whole matter of Mr. Howard's challenge and his position as a representative of the New York C. C. No possible good could come of such a discussion, and we certainly shall not enter into it unless forced to do so by Mr. Howard.



## The Future of Canoe Sailing.

WE have commented frequently within the past year or so upon the great changes which have taken place in canoe sailing and racing; changes which, one and all, are to the detriment of the sport. The following remarks on the same subject from the last issue of the *Field*, apply with equal force in this country, save as relates to the competition between the canoe-yawls and ½-raters; and the suggested new class—after the type of that mystical "Class C," whose owners are heard from in the winter, but are not seen at the meets—is applicable to America as well as England. The tendency on both sides of the ocean is to the abandonment of the extreme machine, which is about all that is left of the old-time sailing canoe:

Down Thames it is common talk, and we have it on undoubted authority from Greenhithe, Erith and Hammersmith, and there is substantial fact backing such opinion, that the ½-rater class is going to be strong next season. We are not surprised after seeing the large entries in last races, and, indeed, we have often said that for Thames work nothing larger than a good ½-rater is needed, provided day sailing is all that is contemplated. This is all well in its relation to yachting, but there is beneath it a danger menacing canoeing; and it is a growing danger which the executive officers of canoe clubs must reckon with promptly. The committees of the numerous sailing clubs seeing a large class of ½-raters growing up, will probably open the programme arms to such class, and the consequence will be a boom on the popular class; and, in the result, every canoe-yawl owner will desire to go into the sporting swim, and he will naturally desire to cast from the canoe club rules any little canoe limitation which pinches him when he enters in yacht competition. So quickly is this shown to be the case, that we already hear it openly suggested that the clubs should go with the times, and throw aside canoe definitions and canoe type, and let the rule bud forth as "Y. R. A. ½-raters,"

MYRA, CRUISER——Designed and Built by W. F. Nason, 1893

BODY PLANS AND SECTIONS.

with transom or counter stern, or indeed anything allowed to a "yacht."

If such a course is to be permitted in the case of canoe yawls, and the first-class sailing canoe is to be allowed to degenerate into a shallow saucer, with barely a tinge of canoe feature left to her, it is about time that the title "canoe" were returned to the savage, the North American Indian, and to the Canadian hunter, never again to be used in connection with craft devoid of any canoe feature.

The use of the first-class or sailing canoe may not be quite the same in all the clubs in England, but a very instructive lesson may be taken by other clubs from the state of the case as existing in the senior club, the Royal Canoe Club, at the present moment. For several years past the club has gradually played up to racing, and to racing only, simply at the expense, or to the death, of every other quality. This might be but of little harm where there is a large and substantial body of racing owners constantly augmenting, but the very reverse is the case in canoeing—a steady decrease of entries, and, just apart from the whip up and freshener of the international race or defense of the challenge cup, a stagnation in the building of canoes.

As a matter of fact, the new rule of 1894 has not been tested, as but one canoe was built thereunder, but it may fairly be questioned whether there is any real prospect or probability of its being further tested in the coming season. The reasons for such doubts are ample and sound, and they should be carefully considered by members who intend to attend the autumn meetings of the clubs, whereat the rules may be altered "for better or worse."

The case may be viewed thus: The sailing canoe, if built and fitted up to date, will probably cost her owner, when it is brought to proper starting form, not a penny less than £40; and now assume the programme of races to be the same in 1895 as it was in 1894—that is, four canoe races and three mixed (very mixed) races, all above lock on the river. The proposition set before the recruit or intending canoe owner is this: "I shall have four consecutive days' racing and three days of blanketing with canoe-yawls; that is my season, or one week out of twenty-four sailable weeks. The races all being in narrow and still waters, the canoe most suitable will be of the shallowest saucer type, and of matchbox construction as to substance; she must have the lightest of hollow spars, and be devoid of any cruising or comfort fitments. When the six or so races have been sailed, my canoe may as well be packed up and housed, for she is not of a size to fit the sailing club races, and as to cruising, or even pleasure sailing, she is at least uncomfortable, if not actually dangerous. And then, if she be not successful in her races, who would give a brass farthing for her? The net result is that the intending canoe sailer turns his attention to the other classes, and he at once finds that, by taking a ½-rater, Y. R. A., and, though spoiling her appearance by hanging a rudder at the after end of her counter, he complies with the canoe-yawl definition of the R. C. C., and finds that, because of the position of the rudder, his "boat" no longer has a "counter stern," but has become a "canoe-yawl," and he can enter that club's seven yawl races. But in addition he finds it easy to sail, within the metropolitan waters, in thirty-five other matches of sailing clubs, and also at Bourne End week, say four races, making some forty six races for the season, and, over and above the racing, he still has a craft fit for pleasure sailing or cruising with a friend, and of reasonable selling value if fairly built and fitted.

This prospect of ample sport is a powerful inducement to drop the canoe and go into the canoe-yawl; but there is also a vanishing point of even that curve of racing stability, at any rate, in the case of a numerous body of men, and that is the inconvenience and expense of a ½-rater as compared with a small sailing canoe, and such men would gladly see a half-way boat class introduced. Their point of limit is, indeed, the utmost boundary of the general idea of the nature of a canoe, its portability, hence its expensive life. Two men can lift out of the water, and carry up and house, a sailing canoe, so she is seldom left afloat, needs no watching, and runs no risks of collision or breaking adrift. Whereas a canoe yawl needs six or eight men and a truck, and, therefore, is usually left afloat at risk: and all her expenses may be roughly estimated at four times those of the canoes, to say nothing of the building cost

In relation to an intermediate class, there are in existence—the growth of recent times—quite a large fleet of semi-canoe-yawls, straggling in dimensions and fitment to such an extent as to be utterly impossible of satisfactory codification into a class for racing, yet they are a useful and popular type of boat. It takes time to form and fill a sound class; but once the class is defined, if it be not arbitrary in petty useless points, new or altered boats will soon conform to the class, and racing will follow. We may here analogize that the good-natured Thames sailing barge gives ample and exciting sport when racing against its own kind, and is at all other times useful for other purposes, and is not expensive to build and sail. But if modern racing yacht form and construction were let in to the barge matches, the racing time would be faster, but the good, useful barge would clear out from such one-sided competition, and the racing would fall. Such must be the case in canoe racing; the close at hand sailing clubs, with large programmes, will draw off all the canoe men with racing tastes who can afford the ½-rater. But, still, there will remain in the canoe class the one or two owners who are satisfied with a machine and six races for a whole season's sport, and these will effectively frighten away the cruising canoe and novices.

Apart from international competition, which this season, by the way, was a very hollow show, popular sport and keen racing within a club is chiefly a question of numbers of competitors, and number of competitors is dependent to a large extent on the general utility of the craft, beyond mere prize winning. The clear tendency of the immediate future to draw yawls into simple ½-raters, and the absence of signs of progress in the canoe class, certainly suggests that the time has come and should not be allowed to slip by, when the popular old-time canoe sailing in useful craft should be rallied up by the establishment of a new class, intermediate between canoes and yawls. Watching the tendency of the times, the lines upon which the new class should be built are evidently to embody as much of the comfort, safety and sailing power of the same canoe-yawl as can be confined in a "canoe," just the largest that two men can lift when she has been stripped of her gear. Both a maximum and minimum limitation of dimensions of hull would probably be necessary, the one to retain portability and moderate expense, the other to prevent the influx of machines of mere racing caliber.

If the proposed canoe racing council should fail to agree on the already widely differing question of what ought to constitute a canoe-yawl, but should succeed in constructing an universal new and useful class of intermediate size, though it must be a compromise of various conflicting elements, such work would be the most useful in the interests of true canoe sailing of any legislation within the past fifteen years. In order to give the class a nature distinct from yawls and from the racing canoes, we think that the most appropriate title would be that of "canoe-coble." Our east coast men, at any rate will probably share our opinion. Considering the size of the craft, the east coast coble is about the finest sea boat, easiest at rowing, driest at towing and safest at beaching in a sea, of any open boat around our coasts The round or blunt-pointed stern coble is quite of canoe form and about as good a model as could be picked for all-round cruising on varied natures of waters.

### American Canoe Association.

PORT HENRY, N. Y., Oct. 23.—The annual meeting of the executive committee and board of governors of the American Canoe Association will be held at the Kenmore Hotel, Albany, on Monday, Nov 12, at 10 A. M. It is hoped that all members of the committee will make a special effort to be present at this meeting. Attention is called to Article XII. of the constitution, requiring the publication for two weeks, of any proposed amendments. W. C. WITHERBEE, Com.
C. E. CRAGG, Sec'y-Treas.

Article XII.—Amendments—This constitution may be amended at any meeting of the executive committee, provided the amendment receive the votes of at least two-thirds of said committee, and has been published in one of the official organs of the A. C. A. at least two weeks before being voted upon, or by a writing signed by the commodore and two-thirds of the members of the executive committee after a similar publication.

### An Indian Dugout.

WHILE George Rathbone, a local fisherman, was drawing a seine in 50ft. of water in Otsego Lake, N. Y., between Sunken Island and West Wellington, the seine caught in some bulky obstacle at the bottom of the lake, and after tugging some time, it was dragged to the shore, when the object proved to be a dugout canoe, which from its manner of construction indicated a most interesting period of antiquity. The sides of the dugout canoe were all gone, but the rest of it was in excellent state of preservation The canoe had evidently been dug out of the solid log with stone implements and each end burned out, as was the customary method among the Indians in America prior to its first settlement by the white people. An interesting feature of the discovery is the fact that it was found at Sunken Island, near Tom Hutter's muskrat castle, as depicted in Cooper's famous novel, "Deerslayer." The old dugout has attracted much attention, and many people have come to see it from far and near.—*Gazette and Sun.*

### A. C. A. Membership.

THE following ladies are proposed for associate membership in the A. C. A.: Mrs. Henry V. Backus, Rochester, N: Y.; Miss Isabella Carter, Miss Ruberta Braine, Newark, N. J.; Mrs. W. C. Witherbee, Port Henry, N. Y. Atlantic Division: Augustus S. Mapes, New York.

# Rifle Range and Gallery.

### District of Columbia Outshoots New Jersey.

DURING the fall meeting at Sea Girt last September an invitation was extended by the District of Columbia team to she New Jersey team to visit Washington as the guests of the National Guard of the District of Columbia. The invitation was accepted and it was arranged that during the visit a team match should be shot off. Last week Gov. Werts and his staff, accompanied by New Jersey's crack team, started for the capital to fulfill the engagement made in September. The appended press dispatch gives the result of the match:

WASHINGTON, Oct. 27.—The rifle team of the District National Guard defeated the State team of New Jersey to-day at Marshall Hall, opposite Mount Vernon, by thirty-one points. Each team was composed of ten men, and the ranges were 200 and 500yds., with fifteen shots at each distance. Private Scott, D. C. N. G., made the highest score, 140 out of a possiblr 150. Brig.-Gen. B W. Spencer, Inspector-General of Rifle Practice, N. J. N. G., and Maj. George H. Harries, Inspector-General of Rifle Practice, D. C. N. G., commanded their respective teams. Capt. G. DeL. Walker, 6th Regiment, N. J. N. G., was range officer. The score was as follows:
